PUBLISHER'S PREFACE.

THE History of Middlesex County, contained in these volumes, has been prepared by the publishers with a due sense of the responsibility resting upon them, and with an earnest effort to meet the just expectations of the public. Their undertaking was a formidable one, involving, as it did, histories of six cities and forty-eight towns, together with histories of the county proper, with its courts and officers, and of the bench and bar, as well as notices of many of its prominent men. As far as it was possible these histories and notices have been confided to local historians of acknowledged capacity for the work, a few of them only having been prepared by other writers accustomed to historical research and possessing literary skill. The chapters relating to the county, and the bench and bar, will be found of especial value, entering, as they do, a field hitherto unexplored. In presenting these volumes, while the publishers cannot expect to wholly escape criticism, they look with hope, if not with confidence, for an approval of their work.

GENERAL HISTORY.

CHAPTER I.

MIDDLESEX COUNTY.

BY WILLIAM T. DAVIS.

THOUGH it may be assumed that the reader is familiar with the history of the settlement of Massachusetts Colony, it may be well to hastily recount its chief incidents occurring before the incorporation of the county which includes a part of its territory.

On the 20th of April, 1606, King James issued letters-patent dividing a strip of land one hundred miles wide along the Atlantic coast of North America, extending from the thirty-fourth to the forty-fifth degree of north latitude, between two companies, generally called the Southern and Northern Virginia Companies. This territory was known as Virginia, so called after Queen Elizabeth. The Southern Company was composed of knights, gentlemen, merchants and adventurers of London, and was granted all the lands between the thirty-fourth and forty-first degrees; while the Northern Company, composed of persons of the same description, was granted the lands between the thirty-eighth and forty-fifth degrees. That portion lying between the thirty-eighth and forty-fifth which was included in both grants was open to the company first occupying it; and it was stipulated that neither company should settle within one hundred miles of any previous settlement of the other company. On the 3d of November, 1620, Sir Ferdinand Gorges and his associates, the members of the Northern Virginia Company, received a new patent, which passed the seal on the 3d of the following July under the title of "The council established at Plymouth, in the county of Devon, for the planting, ordering, ruling and governing of New England in America." Under this patent the company was authorized to hold territory extending from sea to sea and in breadth from the fortieth to the forty-eighth degree of north latitude; and to make laws, appoint governors and other officers and generally to establish all necessary forms of government.

The motive inspiring the issue of this new patent seems to have been to show special favors to this com-

pany and to inflict thereby a slight on the Southern Company. The King had for some reason fallen out with Sir Edwin Sandys the governor and treasurer of the Southern Company, and forebade his re-election. The Earl of Southampton, the successor of Sir Edwin, was equally obnoxious to the King, and the new charter of the Northern Company was the consequence. The new patent included all the territory between Central New Jersey and the Gulf of St. Lawrence on the Atlantic coast and the northern part of California, Oregon and nearly all of Washington on the Pacific, with a line running through Lake Superior for its northern boundary and one through Pennsylvania, Ohio, Indiana and Illinois for its southern.

The colony settling at Plymouth in 1620 had received a patent from the Southern Company authorizing a settlement within their territory at some point south of New York harbor; but finding themselves outside of the jurisdiction of the company from whom they had received their patent, they sent by the "Mayflower," on her return, for a patent from the Northern Company. The Northern Company, under its new charter, consequently issued a patent, under date of June 1, 1621, to John Pierce and his associates in trust for the Plymouth Colony. This patent was brought to Plymouth in 1621 in the ship "Fortune," and is preserved in Pilgrim Hall in that town. It is engrossed on parchment and bears the signatures of the Duke of Lenox, the Marquis of Hamilton, the Earl of Warwick, Lord Sheffield and Sir Ferdinand Gorges. Another signature is illegible, which may be that of either Thomas, Earl of Arundel, or the Marquis of Buckingham. This is the oldest state paper in New England.

On the 30th of December, 1622, the Northern Company, which, for convenience, may be still so called, notwithstanding its new charter and change of title, granted to Robert Gorges all that part of the main land "commonly called or known by the name of the Messachusiack" situated "upon the northeast side of the Bay called or known by the name of the Messachusett." This included the shore "for ten English miles towards the northeast and thirty English miles unto the main land through all the breadth afore-

said," with all the rivers, islands, etc. This grant included a part of Middlesex County. Up to this date the only white men known to have visited this locality were John Smith, the navigator, who visited it in 1614, and a party of ten members of the Plymouth Colony who came by water from Plymouth on an expedition, partly to trade and partly to conclude peace with the Massachusetts Indians. It is probable that on this expedition Point Allerton and the Brewsters, at the entrance of Boston harbor, received their names from Isaac Allerton and William Brewster, two of the "Mayflower" Pilgrims.

John Smith, after his expedition to Virginia in 1606, in the service of the Southern Virginia Company and some years connection with the Virginia colony, returned to England, and in 1614 sailed with two ships under the auspices of English adventurers "to take whales and also to make trials of a mine of gold and copper." He anchored his vessels near the mouth of the Penobscot River and sailed with eight men in a shallop along the coast as far as Cape Cod, giving the name of New England to the country and "drawing a map from point to point, isle to isle, and harbor to harbor, with the soundings, sands, rocks and landmarks." After his return to England Prince Charles, afterwards Charles the First, attached names to many places on the coast as indicated on the map, of which only Plymouth, Charles River, named after himself, and Cape Anne, named after his mother, Anne of Denmark, still adhere to the localities then designated. Among the many other names affixed to the map by Prince Charles were Cape James for Cape Cod, Milford Haven for Provincetown Harbor, Stuard's Bay for Barnstable Bay, Point George for Branches Point, Oxford for Marshfield, London for Cohasset, Cheviot Hills for the Blue Hills, Taiot's Bay for Gloucester Harbor, and Dartmouth, Sandwich and Cambridge for places near Portland. It is possible that besides John Smith and the Pilgrim party, De Monts, with Champlain, may have also visited this locality in 1604.

Robert Gorges, having received the grant above-mentioned in 1622, was appointed by the Plymouth Council in 1623 Lieutenant-General of New England, and arrived in Massachusetts Bay in September of that year, with what are described in the record as "passengers and families." At the end of a year, after futile efforts to establish his colony, he returned to England, and at his death, which soon after occurred, his brother John, to whom his rights had descended, leased a portion of his grant to John Oldham and John Dorrill. This lease included "all the lands within the Massachusetts Bay between Charles River and Abousett (now Saugus River) containing in length by straight line five miles up the Charles River into the main land northwest from the border of said bay, including all creeks and points by the way; and three miles in length from the mouth of the aforesaid river Abousett up into the main land,

upon a straight line southwest, including all creeks and points; and all the land in breadth and length between the foresaid rivers, with all prerogatives, royal mines excepted.

In the mean time the same territory which had been granted to Robert Gorges had been granted, with other lands, to the Massachusetts Company. By this grant, dated March 19, 1627-28, the Plymouth Council issued a patent to Sir John Roswell, Sir John Young, Thomas Southcoat, John Humphrey, John Endicott, and Simon Whitcomb covering a territory extending from three miles north of the Merrimac River to three miles south of the Charles River. The following is the text of the letters-patent issued March 4, 1628-29:

"Charles By The Grace of God Kinge of England, Scotland, Fraunce and Ireland, Defendor of the Faith etc, To All to whome these Presents shall come Greeting. Whereas our most deare and royall father Kinge James, of blessed memory, by his Highness letters patents bearing date at Westminster the third day of November in the eighteenth yeare of his raigne, hath given and granted unto the Councell established at Plymouth, in the county of Devon, for the planting, ruling, ordering and governing of Newe England in America, and to their successors and assignes for ever; All that parte of America lyinge and being in breadth from forty degrees of northerly latitude from the equinoctiall lyne to forty-eight degrees of the saide northerly latitude inclusively, and in length of and within all the breadth aforesaid throughout the maine landes from sea to sea, together also with all the firme lands, soyles, groundes, havens, portes, rivers, waters, fishery, mynes and myneralls, as well royall mynes of gould and silver as other mynes and myneralls, precious stones, quarries and all and singular other comodities, jurisdiction, royalties, priviledges, franchises and preheminences, both within the said tract of lande upon the mayne and also within the islandes and seas adjoining; Provided alwayes That the said islandes or any the premises by the said letters patents intended and meant to be granted were not then actually possessed or inhabited by any other Christian Prince or State now within the bounds, lynmits or territories of the Southerne Colony then before granted by our said deare father, to be planted by divers of his loving subiects in the south partes. To Have and to holde, possesse and enjoy all and singular the aforesaid continent, landes, territories, islandes, hereditaments and precincts, seas, waters, fisherys, with all and all manner their comodities, royalties, liberties, preheminences and profits that shoulde from thenceforth arise from thence, with all and singular their appurtenances and every parte and parcell thereof unto the saide Councell and their successors and assignes forever. To the sole and proper use, benefit and behoofe of them the saide Councell and their successors and assignes forever: To be holden of our said most deare and royall father, his heires and successors as of his manner of Eastgreenewich, in the County of Kent in free and comon Soccage, and not in capite nor by knights service. Yeldinge and paying therefore to the saide late Kinge, his heires and successors, the fiftie parte of the oare of gould and silver which shoulde, from tyme to tyme and at all tymes there after, happen to be found, gotten, had and obteyned in, att or within any of the saide landes, lynmits, territories and precincts, or, in or within any parte or parcell thereof, for or in respect of all and all manner of duties, demands and services whatsoever to be don, made or payde to our saide dear father, the late Kinge, his heires and successors, as in and by the said letters patent (amongest sundrie other clauses, powers, priviledges and grauntes therein conteyned) more at large appeareth. And whereas the saide Councell established at Plymouth, in the County of Devon, for the plantinge, ruling, ordering and governing of Newe England in America, have by their deede indented under their comon seale bearing date the nynteenth day of March last past in the third year of our raigne, given, granted, bargained, soulede, enfeoffed, aliened and confirmed to Sir Henry Roswell, Sir John Young, Knights, Thomas Southcoat, John Humphrey, John Endecott and Symon Whitcombe, their heires and associates for ever, All that parte of Newe England in America aforesaid which lyes and extendes betwene a greate river there comonly called Monomack alias Merriemack and a certen other river there called Charles river, being in the bottome of a certayne bay there comonly called Massachusetts alias Mattachusetts alias Massachusets bay, and also all and singular those landes and hereditaments whatsoever lying with-

in the space of three English miles on the south parte of the said Charles river, or of any or everie parte thereof: And also all and singular the landes and hereditaments whatsoever lying and being within the space of three English myles to the southward of the southernmost parte of the said bay called Massachusetts alias Mattachusetts alias Massatusets bay: and also all those landes and hereditaments whatsoever which lye and be within the space of three English myles to the northward of the said river called Monomack alias Merrymack, or to the northward of any and every parte thereof: And all landes and hereditaments whatsoever lying within the lymitts aforesaid, north and south, in latitude and bredth, and in length and longitude, of and within all the bredth aforesaid throughout the mayne landes there, from the Atlantick and western se and ocean on the east parte, to the south sea on the west parte, and all landes and groundes, place and places, soyles, woodes and wood groundes, havens, portes, rivers, waters, fishings and hereditaments, whatsoever, lying within the said boundes and lymitts and everie parte and parcell thereof: And also all islandes lying in America aforesaid in said seas or either of them on the western or eastern coastes or partes of the said trades of lande by the said indenture, menaced to be given, granted, bargained, sold, enfeoffed, aliened and confirmed or any of them: And also all mynes and myneralls, as well royall mynes of gould and silver as other mynes and myneralls whatsoever in the said landes and premises or any parte thereof: And all jurisdictiones, rights, royalties, liberties, freedoms, immunities, privileges, franchises, preeminences and commodities whatsoever which they, the said Councell, established at Plymouth, in the County of Devon, for the planting, ruling, ordering and governing of Newe England in America, then had or might use, exercise or enjoy in and within the said landes and premises by the said indenture menaced to be given, granted, bargained, sold, enfeoffed and confirmed or in or within any parte or parcell thereof. To have and to hold the said parte of Newe England in America, which lyes and extends and is abutted as aforesaid, and every parte and parcell thereof: And all the said islandes, rivers, portes, havens, waters, fishings, mynes and myneralls, jurisdictiones, franchises, royalties, liberties, privileges, commodities, hereditaments and premises whatsoever with the appurtenances unto the said Sir Henry Roswell, Sir John Young, Thomas Southcott, John Humfrey, John Endercott and Simon Whetcombe, their heires and assigns and their associates to the onlie proper and absolute use and behoofe of the said Sir Henry Roswell, Sir John Young, Thomas Southcott, John Humfrey, John Endercott and Simon Whetcombe, their heires and assigns and their associates for evermore. To be holden of us, our heires and successors, as of our manor of Eastgreenewich in the County of Kent, in free and comon soage and not in capite, nor by Knights service, yielding and payinge therefore unto us, our heires and successors, the fiftie parte of the ounce of gould and silver which shall, from tyme to tyme and all tymes hereafter, happen to be founde, gotten, had and obtained in any of the said landes within the said lymitts or in or within any parte thereof, for and in satisfaction of all manner, duties, demands and services whatsoever, to be done, made or paid to us, our heires or successors, as in and by the said recited indenture more at large made appeare. Nowe knowe yee that wee, at the humble suite and petition of the said Sir Henry Roswell, Sir John Young, Thomas Southcott, John Humfrey, John Endercott and Simon Whetcombe and of others whom they have associated unto them, have for divers good causes and considerations as moving, granted and confirmed, And by this presents, of our own especiall grace certain knowledge and mere mocon, doe grant and confirme unto the said Sir Henry Roswell, Sir John Young, Thomas Southcott, John Humfrey, John Endercott and Simon Whetcombe, and to their associates hereafter named [vide-liet] Sir Richard Saltonstall Knight, Isaac Johnson, Samuel Aldersey, John Ven, Mathew Cradock, George Harwood, Increase Nowell, Richard Perry, Richard Bellingham, Nathaniel Wright, Samuel Vassall, Theophilus Eaton, Thomas Goffe, Thomas Adams, John Browne, Samuel Browne, Thomas Hutchins, William Vassall, William Pincheon and George Foxcroft, their heires and assigns, all the said parte of New England in America, lying and extending betwene the boundes and lymitts in the said recited indenture expressed, and all landes and groundes, place and places, soyles, woodes and wood groundes, havens, portes, rivers, waters, mynes, minerals, jurisdictiones, rights, royalties, liberties, freedoms, immunities, privileges, franchises, preeminences, hereditaments and commodities whatsoever to them, the said Sir Henry Roswell, Sir John Young, Thomas Southcott, John Humfrey, John Endercott and Simon Whetcombe, their heires and assigns and to their associates by the said recited indenture given, granted, bargained, sold, enfeoffed, aliened

and confirmed or menaced or intended thereby to be given, granted, bargained, sold, enfeoffed, aliened and confirmed. To have and to hold the said parte of Newe England in America and other the premises hereby menaced to be granted and confirmed, and every parte and parcell thereof with the appurtenances to the said Sir Henry Roswell, Sir John Young, Sir Richard Saltonstall, Thomas Southcott, John Humfrey, John Endercott, Simon Whetcombe, Isaac Johnson, Samuel Aldersey, John Ven, Mathew Cradock, George Harwood, Increase Nowell, Richard Perry, Richard Bellingham, Nathaniel Wright, Samuel Vassall, Theophilus Eaton, Thomas Goffe, Thomas Adams, John Browne, Samuel Browne, Thomas Hutchins, William Vassall, William Pincheon and George Foxcroft, their heires and assigns forever to their onlie proper and absolute use and behoofe for evermore. To be holden of us, our heires and successors as of our manor of Eastgreenewich aforesaid in free and comon soage and not in capite nor by knights service, and also yielding and payinge therefore to us, our heires and successors, the fiftie parte onlie of all ounce of gould and silver which from tyme to tyme and att all tymes hereafter shalbe there gotten, had or obtained for all services, exactions and demands whatsoever according to the tenure and reservation in the said recited indenture expressed. And further knowe yee That of our more especiall grace, certain knowledge and mere mocon wee have given and granted, And by this presents doe for us, our heires and successors, give and grant unto the said Sir Henry Roswell, Sir John Young, Sir Richard Saltonstall, Thomas Southcott, John Humfrey, John Endercott, Simon Whetcombe, Isaac Johnson, Samuel Aldersey, John Ven, Mathew Cradock, George Harwood, Increase Nowell, Richard Perry, Richard Bellingham, Nathaniel Wright, Samuel Vassall, Theophilus Eaton, Thomas Goffe, Thomas Adams, John Browne, Samuel Browne, Thomas Hutchins, William Vassall, William Pincheon and George Foxcroft, their heires and assigns, All that parte of Newe England in America which lyes and extends betwene a great river there comonlie called Monomack river alias Merrimack river and a certain other river there called Charles River, being in the bottome of a certain bay, there comonlie called Massachusetts alias Mattachusetts alias Massatusets bay: And also all those landes and hereditaments whatsoever which lye and be within the space of three English myles to the northward of the said river called Monomack alias Merrymack, or to the northward of any and every parte thereof, and all landes and hereditaments whatsoever lying within the lymitts aforesaid north and south in latitude and bredth and in length and longitude of and within all the bredth aforesaid throughout the mayne landes there from the Atlantick and western se and ocean on the east parte to the south sea on the west parte: And all landes and groundes, place and places, soyles, woodes and wood groundes, havens, portes, rivers, waters and hereditaments whatsoever lying within the said boundes and lymitts, and every parte and parcell thereof, and also all islandes in America aforesaid in the said seas or either of them on the western or eastern coastes or partes of the said trades of landes hereby menaced to be given and granted or any of them, and all mynes and myneralls whatsoever in the said landes and premises or any parte thereof and free libertie of fishing in or within any the rivers or waters within the boundes and lymitts aforesaid and the seas thereunto adjoining: And all fishes, royal fishes, whales, balan, sturgeons and other fishes of what kinde or nature soever that shall at any tyme hereafter be taken in or within the said seas or waters or any of them by the said Sir Henry Roswell, Sir John Young, Sir Richard Saltonstall, Thomas Southcott, John Humfrey, John Endercott, Simon Whetcombe, Isaac Johnson, Samuel Aldersey, John Ven, Mathew Cradock, George Harwood, Increase Nowell, Richard Perry, Richard Bellingham, Nathaniel Wright, Samuel Vassall, Theophilus Eaton, Thomas Goffe, Thomas Adams, John Browne, Samuel Browne, Thomas Hutchins, William Vassall, William Pincheon and George Foxcroft, their heires and assigns or by any other person or persons whatsoever there inhabiting by them or any of them to be appointed to fish therein, Provided alwayes that yf the said landes, islandes or any other the premises herein before menaced and by their presents intended and meant to be granted were at the tyme of the granting of the said former letters patents dated the third day of November in the eighteenth year of our said deare fathers raigue aforesaid actually possessed or inhabited by any other Christian Prince or State, or were within the boundes, lymitts or territories of that southern colony then before granted by our said late father, to be planted by divers of his loving subjects in the south partes of America, That then this present grant shall not extend to any such partes or parcells thereof soe formerly inhabited or lying within the boundes of the southern plantation as aforesaid, but as to those partes or parcells soe possessed or inhabited by such Christian

Prince or State or being within the bounders aforesaid shalbe utterly voyd, their presents or any thing therein conteyned to the contrary notwithstanding. To Have and to hold, possesse and enjoy the saide partes of Newe England in America which lye, extend and are abutted as aforesaid and every parte and parcell thereof; And all the islandes, rivers, portes, havens, waters, fishings, fishes, mynes, minerals, jurisdictions, franchises, royalties, liberties, priviledges, comodities and promyses whatsoever with the appurtenances unto the said Sir Henry Rosewell, Sir John Younger, Sir Richard Saltonstall, Thomas Southcott, John Humphrey, John Endecott, Simon Whetcombe, Isaac Johnson, Samuell Aldersey, John Ven, Mathewe Cradock, George Harwood, Increase Nowell, Richard Perry, Richard Bellingham, Nathaniel Wright, Samuel Vassall, Theophilus Eaton, Thomas Goffe, Thomas Adams, John Browne, Samuell Browne, Thomas Hutchens, William Vassall, William Pincheon and George Foxcroft, their heires and assigns forever to the onlie proper and absolute use and behoote of the said Sir Henry Rosewell, Sir John Younger, Sir Richard Saltonstall, Thomas Southcott, John Humphrey, John Endecott, Simon Whetcombe, Isaac Johnson, Samuell Aldersey, John Ven, Mathewe Cradock, George Harwood, Increase Nowell, Richard Perry, Richard Bellingham, Nathaniel Wright, Samuel Vassall, Theophilus Eaton, Thomas Goffe, Thomas Adams, John Browne, Samuell Browne, Thomas Hutchens, William Vassall, William Pincheon and George Foxcroft, their heires and assigns forevermore. To be holden of us, our heires and successors as of our manor of East-greenwich, in our Countie of Kent, within our realme of England, in free and common socage, and not in capite nor by Knight's service; and also yielding and paying therefore to us, our heires and successors the fiftte parte onlie of all ore of gould and silver which from tyme to tyme, and at all times hereafter, shalbe there gotten, had or obtained for all services, exactions and demands whatsoever, Provided alwaies and our expresse will and meaninge is That onlie one fiftte parte of the gould and silver are above mencionned in the whole and noe more be reserved or payeable unto us, our heires and successors by colour or vertue of their presents. The double reservations or recitals aforesaid or any thing herein conteyned notwithstanding. And foresomuch as the good and prosperous successe of the plantation of the saide partes of Newe England aforesaide intended by the said Sir Henry Rosewell, Sir John Younger, Sir Richard Saltonstall, Thomas Southcott, John Humphrey, John Endecott, Simon Whetcombe, Isaac Johnson, Samuell Aldersey, John Ven, Mathewe Cradock, George Harwood, Increase Nowell, Richard Perry, Richard Bellingham, Nathaniel Wright, Samuel Vassall, Theophilus Eaton, Thomas Goffe, Thomas Adams, John Browne, Samuell Browne, Thomas Hutchens, William Vassall, William Pincheon and George Foxcroft to be speedily set upon, cannot but chiefly depend next under the blessing of Almighty God and the support of our royal authoritie upon the good government of the same, To the ende that the affaires, buyssinesses which from tyme to tyme shall happen and arise concerning the said landes and the plantation of the same maie be the better managed and ordered. Wee have further, hereby, of our especiall grace, certen knowledge and mere motion given, granted and confirmed And for us, our heires and successors doe give, grant and confirme unto the saide trustee and welbelovyd subjects, Sir Henry Rosewell, Sir John Younger, Sir Richard Saltonstall, Thomas Southcott, John Humphrey, John Endecott, Simon Whetcombe, Isaac Johnson, Simon Aldersey, John Ven, Mathewe Cradock, George Harwood, Increase Nowell, Richard Perry, Richard Bellingham, Nathaniel Wright, Samuel Vassall, Theophilus Eaton, Thomas Goffe, Thomas Adams, John Browne, Samuell Browne, Thomas Hutchens, William Vassall, William Pincheon and George Foxcroft; And for us, our heires and successors wee will and ordeyne That the saide Sir Henry Rosewell, Sir John Younger, Sir Richard Saltonstall, Thomas Southcott, John Humphrey, John Endecott, Simon Whetcombe, Isaac Johnson, Samuell Aldersey, John Ven, Mathewe Cradock, George Harwood, Increase Nowell, Richard Perry, Richard Bellingham, Nathaniel Wright, Samuel Vassall, Theophilus Eaton, Thomas Goffe, Thomas Adams, John Browne, Samuell Browne, Thomas Hutchens, William Vassall, William Pincheon and George Foxcroft and all such others as shall hereafter be admitted and made free of the Company and Society hereafter mencionned shall from tyme to tyme and at all tymes for ever hereafter be by vertue of their presents one body corporate and politike, in fact and name, by the name of the Governor and Company of the Massachusetts Bay, in Newe England. And them by the name of the Governor and Company of the Massachusetts Bay in Newe England, one body politike and corporate in deed, fact and name, Wee doe for us, our heires and successors make, ordeyne, constitute and confirme by these presents, and that by that name they shall have perpetuall succession, And that by the same name they and their

successors shall and maie be capeable and enabled, as well, to implead and to be impleaded, and to prosecute, demand and answer and be answered unto on all and singular suites, causes, quarrels and accouns, of what kind or nature soever. And also to have, take, possesse, acquire and purchase any landes, tenements or heriditaments or any goods or chattells, and the same to leave, graunt, demene, alien, bargain, sell and dispose of as other our liege people of this our realme of England or any other corporacon or body politike of the same maie lawfullie doe: And further that the said Governor and Companye and their successors maie have forever one common scale, to be used in all causes and occasions of the said Company, and the same scale maie alter, change, breake and newe make from tyme to tyme at their pleasures, And our will and pleasure is, And we doe hereby, for us, our heires and successors, ordeyne and graunte That from henceforth, for ever, there shalbe one Governor, one Deputy Governor and eightene assistants of the same Company to be from tyme to tyme constituted, elected and chosen out of the freemen of the saide Company for the tyme being in such manner and forme as hereafter in their presents is expressed, Which said officers shall apply themselves to take care for the best disposing and ordering of the generall buyssines and affaires of, for and concerning the saide landes and premisses hereby mencionned to be granted, and the plantation thereof, and the government of the people there, And for the better execution of our royal pleasure, and graunt in their behalf, wee doe, by these presents, for us, our heires and successors, nominate, ordeyne, make and constitute our welbelovyd, the saide Mathewe Cradock, to be the first and present Governor of the said Company, and the said Thomas Goffe to be Deputy Governor of the saide Company, and the said Sir Richard Saltonstall, Isaac Johnson, Samuell Aldersey, John Ven, John Humphrey, John Endecott, Simon Whetcombe, Increase Nowell, Richard Perry, Nathaniel Wright, Samuell Vassall, Theophilus Eaton, Thomas Adams, Thomas Hutchens, John Browne, George Foxcroft, William Vassall and William Pincheon to be the present Assistants of the saide Company, to continue in the saide severall offices respectively for such tyme and in such manner as in and by these presents is hereafter declared and appointed. And further we will and by these presents for us, our heires and successors, doe ordeyne and graunt, That the Governor of the saide Company, for the tyme being, or, in his absence, by occasion of sicknes, or otherwise, the Deputy Governor, for the tyme being, shall have authoritie, from tyme to tyme, upon all occasions, to give order for the assembling of the saide Company and calling them together to consult and advise of the busynesses and affaires of the saide Company; And that the said Governor, Deputy Governor and Assistants of the saide Company, for the tyme being, shall or maie, once every month, or oftener, at their pleasures assemble and holde and keepe a Courte or Assemblie of themselves for the better ordering and directing of their affaires, And that any seven or more persons of the Assistants, together with the Governor or Deputy Governor, soe assembled, shalbe saide, taken, hold and reputed to be and shalbe a full and sufficient Courte or Assemblie of the saide Company for the handling, ordering and dispatching of all such buyssinesses and occurences as shall, from tyme, to tyme happen, touching or concerning the saide Company or plantacon, and that there shall or maie be held and kept by the Governor or Deputy Governor of the saide Company, and seven or more of the said Assistants, for the tyme being, upon every last Wednesday in Hilary, Easter, Trinity and Michas terms respectively, for ever, one greate generall and solenne Assemblie, which four Generall Assemblies shalbe stiled and called the Foure Greate and Generall Courts of the saide Company: In all and every or any of which said Greate and Generall Courts soe assembled Wee doe for us, our heires and successors, give and graunte to the said Governor and Company and their successors That the Governor, or, in his absence, the Deputy Governor of the saide Company, for the tyme being, and such of the Assistants and freemen of the saide Company as shalbe present or the greater number of them soe assembled, whereof the Governor or Deputy Governor and six of the Assistants at the least, to be seven shall have full power and authoritie to choose, nominate and appoint: such, and soe many others as they shall thinke fitt, and that shall be willing to accept the same to be free of the said Company and body and then into the same to admitt and to elect and constitute such officers as they shall think fitt and requisite for the ordering, manning and dispatching of the affaires of the saide Governor and Company and their successors, And to make lawes and ordinances for the good and welfare of the saide Company, and for the government and ordering of the said landes and plantacon, and the people inhabiting and to inhabit the same as to them from tyme to tyme shalbe thought meet, Soe as such lawes and ordinances be not contrarie or repugnant to the lawes and statuts of this our realme of England; And

our will and pleasure is. And we do hereby for us, our heires and successors, establish and ordeyne That yearlyly once in the yeare for ever hereafter, namely: the last Wednesday in Easter termie yearlyly the Governor, Deputy Governor and Assistants of the said Company, and all other officers of the said Company shalbe in the Generall Court or Assembly, to be held for that day or tyme newly chosen for the yeare ensueing by such greater parte of the said Company, for the tyme being, then and there present as is aforesaid; And yf it shall happen the present Governor, Deputy Governor and Assistants by their presents appointed, or such as shall hereafter be newly chosen into their roomes or any of them or any other of the officers to be appointed for the said Company to dye or to be removed from his or their severall offices or places before the saide generall day of elecon (whome we doe hereby declare for any misdemour or defect to be removeable by the Governor, Deputy Governor, Assistants and Company, or such greater parte of them in any of the publique Courts to be assembled as aforesaid), That then and in every such case it shall and maie be lawfull to and for the Governor, Deputy Governor, Assistants and Company aforesaid or such greater parte of them soe to be assembled, as is aforesaid, in any of their assemblies to procede to a new elecon of one or more others of their Company in the roomes or place, roomes or places of such officer or officers soe dying or removed according to their discrecons. And ymmediately upon and after such elecon and elecons made of such Governor, Deputy Governor, Assistant or Assistants, or any other officers of the saide Company in manner and forme aforesaid, the authoritie, office and power before given to the former Governor, Deputy Governor, or other officer and officers soe removed in whose stede and place newe shalbe soe chosen, shall as to him and them and everie of them, cease and determine. Provided also—and our will and pleasure is That as well such as are by their presents appointed to be the present Governor, Deputy Governor and Assistants of the said Company as them that shall succeed them, and all other officers to be appointed and chosen as aforesaid,—shall, before they undertake the exaction of their saide offices and places respectivelie, take their corporall oathes for the due and faithfull performance of their duties in their severall offices and places before such person or persons as are by their presents hereunder appointed to take and receive the same; That is to saie, the said Mathewe Cradock—whose is hereby nominated and appointed the present Governor of the saide Company—shall take the saide oathes before one or more of the Masters of our Courte of Chancery, for the tyme being, unto which Master or Masters of the Chancery Wee doe by this presents give full power and authoritie to take and administer the said oathe to the said Governor accordingly. And after the saide Governor shalbe soe sworne, then the said Deputy Governor and Assistants—before by this presents nominated and appointed—shall take the said severall oathes to their offices and places respectivelie belonging, before the said Mathew Cradock, the present Governor, soe formerly sworne, as aforesaid. And every such person as shalbe at the tyme of the annuall elecon, or otherwise, upon death or removeall, be appointed to be the newe Governor of the said Company, shall take the oathes to that place belonging, before the Deputy Governor or two of the Assistants of the said Company, at the least, for the tyme being. And the newe elected Deputy Governor and Assistants, and all other officers to be hereafter chosen, as aforesaid, from tyme to tyme, to take the oathes to their places respectivelie belonging, before the Governor of the said Company, for the tyme being, unto which said Governor, Deputy Governor and Assistants Wee doe by this presents give full power and authoritie to give and administer the said oaths respectivelie, according to our true meaning, herein before declared, without any comission or further warrant, to be had and obteyned of us, our heires or successors, in that behalf, And Wee doe further, of our especiall grace, certain knowledge and meere mecon, for us, our heires and successors, give and graunt to the said Governor and Company and their successors forever by this presents That it shalbe lawfull and free for them and their assignes at all and every tyme and tymes hereafter, out of any our realmes or domynions whatsoever to take, leade, cary and transport for and into their voyages, and for and towards the said plantacon in Newe England, all such and soe many of our loving subjects or any other strangers that will become our loving subjects and live under our allegiance, as shall willingly accompanie them in the same voyages and plantacon, and also shipping armour, weapons, ordnance, municon, powder, shott, corne, victuals and all manner of clothing, implements, furniture, beastes, cattle, horses, mares, merchandises and all other things necessarye for the saide plantacon, and for their use and defence, and for trade with the people there, and in passing and returning to and fro, any lawe or statute to the contrarye hereof in any wise notwithstanding, and without payeing or yield-

ing any custome, or subeddie, either inward or outward, to us, our heires or successors for the same by the space of seven years from the day of the date of this presents, Provided that none of the saide persons be such as shalbe hereafter by especiall name restrained by us, our heires or successors. And for their further encouragement of our especiall grace and favour wee doe by this presents for us, our heires and successors, yield and graunt to the saide Governor and Company and their successors and every of them their factors and assignes, That they and every of them shalbe free and quitt from all taxes, subsidies and customes in Newe England for the like space of seven years, and from all taxes and impositions for the space of twenty and one yeares upon all goodes and mens handies at any tyme or tymes hereafter, either upon importaion thither or exportaion from thence into our realme of England, or into any other our domynions by the saide Governor and Company and their successors, their deputies, factors and assignes or any of them except onlie the five poundes per centum due for custome upon all such goodes and merchandises as after the saide seven yeares shalbe expired shalbe brought or imported into our realme of England or any of our domynions according to the ancient trade of merchants, which five poundes per centum onlie beinge paid it shall be thenceforth lawfully and free for the said adventurers the same goodes and mens handies to export and cary out of our said domynions into forraie partes without any custome, tax or other dutie to be paid to us, our heires or successors, or to any other officers or ministers of us our heires and successors. Provided that the said goodes and mens handies be shipped out within thirteene monethes after their first landing within any parte of the saide domynions. And wee doe for us, our heires and successors, give and graunte unto the saide Governor and Company and their successors That whensoever or soe often as any custome or subsidie shall growe due or payable unto us, our heires or successors, according to the lymitacon and appointment aforesaid by reason of any goodes, wares, or merchandises to be shipped out or any retorne to be made of any goodes, wares or merchandise unto or from the said partes of Newe England hereby mencoed to be graunted as aforesaid or any the Landes or territories aforesaid, That then and soe often and in such case the farmers, customers and officers of our customes of England and Ireland and everie of them for the tyme being, upon request made to them by the saide Governor and Company or their successors, factors or assignes, and upon convenient security to be given in that behalf, shall give and allowe unto the said Governor and Company and their successors and to all and everie person and persons free of that company as aforesaid six monethes tyme for the payement of the one half of all such custome and subsidie as shalbe due and payable unto us, our heires and successors, for the same, For which theis our letters patents or the duplicate or the enrolment thereof shalbe unto our saide officers a sufficient warrant and discharge. Nevertheless our will and pleasure is That if any of the saide goodes, wares and merchandise which be or shalbe at any tyme hereafter landed or exported out of any of our realmes aforesaid and shalbe shipped with a purpose not to be carried to the partes of Newe England aforesaid, but to some other place, That then such payment, dutie, custome, imposition or forfeiture shalbe paid or belonge to us, our heires and successors, for the said goodes, wares and merchandise soe fraudulently sought to be transported, as yf this our graunte had not beene made nor graunted. And Wee doe further will, And by this presents our heires and successors bindie enioine and comaunde as well the Treasurer, Chamellor and Barons of the Exchequer of us, our heires and successors, as also all and singular the customers, farmers, and collectors of the customes, subsidies and imports and other the officers and ministers of us, our heires and successors, what soever for the tyme being, That they and every of them upon the showing forth unto them of these letters patents or the duplicate or exemplification of the same, without any other writ or warrant whatsoever from us, our heires or successors, to be obteyned of us, said faith, doe and shall make full, whole, entire and due allowance and cleare discharge unto the saide Governor and Company and their successors of all customes, subsidies, impositions, taxes and duties whatsoever that shall or maie be claymed by us, our heires and successors, of or from the said Governor and Company and their successors, for or by reason of the said goodes, wares, wares, merchandises and premises to be exported out of our saide domynions or any of them into any parte of the saide landes or premises hereby mencoed to be given, graunted and conferred or for or by reason of any of the saide goodes, chattells, wares or merchandises to be imported from the said landes and premises hereby mencoed to be given, graunted or conferred into any of our saide domynions or any parte thereof as aforesaid, excepting onlie the saide five poundes per centum hereby reserved and payable after the expiration of the saide tyme of seven yeares as aforesaid and not before. And this our letters patents or the enrolment, duplicate or exemplification of the same shalbe for

ever hereafter from time to time as well to the Treasurer, Chancellor and Barons of the Exchequer, of us, our heirs and successors, as to all and singular the customers, farmers and collectors of the customs, subsidies and imports of us, our heirs and successors, and all searchers and others, the officers and ministers whatsoever of us, our heirs and successors, for the time being a sufficient warrant and discharge in this behalf. And further our will and pleasure is, And Wee doe hereby for us, our heirs and successors, ordeyne, declare and graunt to the said Governor and Company and their successors, That all and every of the subjects of us, our heirs or successors, which shall goe to and inhabite within the said lands and premises hereby menconced to be graunted and every of their children which shall happen to be borne there on the seas in going thither or returning from thence shall have and enjoy all liberties and immunities of free and naturall subjects within any of the domynions of us, our heirs or successors, to all intents, constructions and purposes whatsoever as yf they and everie of them were borne within the realme of England. And that the Governor and Deputie Governor of the said Company for the time being or either of them and any two or more of such of the said Assistants as shalbe therunto appointed by the said Governor and Company at any of their courts or assemblies to be held as aforesaid shall and maie at all tymes, and from time to time hereafter, have full power and authoritie to minister and give the oathe and oathes of suprenacie and allegiance or either of them to all and everie person and persons which shall at any time or tymes hereafter goe or passe to the landes and premises hereby menconced to be graunted to inhabite the same. And wee doe, of our further grace, certen knowledg and meere mocon, give and graunt to the said Governor and Company and their successors, That it shall and maie be lawfull to and for the Governor or Deputie Governor and such of the Assistants and Freemen of the said Company, for the time being, as shalbe assembled in any of their General Courts aforesaid, or in any other Courts to be specially summoned and assembled for that purpose or the greater parte of them (whereof the Governor or Deputie Governor and six of the Assistants to be alwaies seven) from time to time to make, ordeyne and establish all manner of wholesome and reasonable orders, lawes, statutes and ordinances, direcons and instructions not contrarie to the laws of this our realme of England, as well for setting of the formes and ceremonies of government, and magistracy fit and necessary for the said plantacon and the inhabitants there, and for naming and stiling of all sortes of officers both superior and inferior which they shall find needfull for that government and plantacon, and the distinguishing and setting forth of the severall duties, powers and lymitts of every such office and place and the formes of such oathes warrantable by the laws and statutes of this our realme of England, as shalbe respectivelie ministered unto them for the execution of the said severall offices and places, as also for the disposing and ordering of the elections of such of the said officers as shalbe annuall and of such others as shalbe to succede in case of death or removal, and ministering the said oathes to the newe elected officers and for impositions of lawfull fines, mulcts, imprisonment or other lawfull correction according to the course of other corporacons in this our realme of England, and for the directing, ruling and disposing of all other matters and things whereby our said people inhabitants there maie be so religiously, peaceable and civilly governed as their good life and orderlie conversacon maie wynn, and incite the natives of country to the knowledge and obedience of the onlie true God and Saviour of mankind and the Christian fayth, which in our royal intencion and the adventurers free profession is the peacefull ende of this plantacon. Willing, commaunding and requiring and by their presents for us, our heirs or successors, ordeyning and appointing, That all such orders, lawes, statutes and ordinances, instructions and direcons as shalbe soe made by the Governor and Deputie Governor of the said company and such of the Assistants and Freeman as aforesaid and published in writing under their comon seale shalbe carefullie and duly observed, kept, plorined and putt in execution according to the true intent and meaning of the same. And these our letters patents, or the duplicate or exemplification thereof, shalbe to all and everie such officer superior and inferior, from time to time, for the putting of the same orders, lawes, statutes and ordinances, instructions and direcons in due execution against us, our heirs and successors, a sufficient warrant and discharge. And wee doe further, for us, our heirs and successors, give and graunt to the said Governor and Company and their successors by their presents, That all and everie such chiefe commanders, captaines, governors and other officers and ministers as, by the said orders, lawes, statutes, ordinances, instructions or direcons of the said Governor and Company for the time being, shalbe from time to time hereafter suppliied either in the government of the said inhabitants and plantacon or in the waye by sea thither or from thence according to the nature and lymitts of

their offices and places respectively shall from time to time hereafter forever within the precincts and partes of Newe England hereby menconced to be graunted and conformed or in the waye by sea thither or from thence, have full and absolute power and authoritie to correct, punish, pardon, governe and rule all such the subjects of us, our heirs and successors, as shall from time to time adventure themselves in any voyage thither or from thence or that shall at any time hereafter inhabe within the precincts and partes of Newe England aforesaid according to the orders, lawes, ordinances, instructions and direcons aforesaid not being repugnant to the lawes and statutes of our realme of England as aforesaid. And wee doe further, for us, our heirs and successors, give and graunte to the said Governor and Company and their successors by their presents, That it shall and maie be lawfull to and for the chiefe commanders, governors and officers of said company for the time being who shalbe resident in the said parte of Newe England in America by their presents graunted and others there inhabiting by their appointment and direcon from time to time and at all tymes hereafter for their speciall defence and safety to encounter, expulse, repell, and resist by force of armes as well by sea as by lande and by all fitting waies and means whatsoever, all such person and persons as shall at any time hereafter attempt or enterprise the destrucion, invasion, detriment or annoyance to the said plantacon or inhabitants; and to take and surprise by all waies and means whatsoever all and every such person and persons with their shippes, armour, municon and other goodes as shall in hostile manner invade or attempt the defeating of the said plantacon or the hurt of the said company and inhabitants. Nevertheless, our will and pleasure is, and wee doe hereby declare to all Christian Kinges, Princes and states that yf any person or persons which shall hereafter be of the said Company or plantacon, or any other by lycense or appointment of the said Governor and Company for the time being, shall at any time or tymes hereafter robb or spoyle by sea or by land, or doe any hurt, violence or unlawfull hostility to any of the subjects of us, our heirs or successors, or any of the subjects of any Prince or State being then in league and amytie with us, our heirs and successors, and that upon such injury don and upon just complaint of such Prince or State or their subjects Wee, our heirs or successors, shall make upon prochnacon within any of the partes within our realme of England comodious for that purpose, That the person or persons having committed any such robbery or spoyle shall within the terme lymtted by such a proclamacon make full restitution or satisfaccion of all such injuries don soe as the said Princes or others soe complainyng maie hold themselves fullie satisfied and contented. And that yf the said person or persons having committed such robbery or spoyle shall not make or cause to be made satisfaccion accordingly within such time soe to be lymtted, That then it shalbe lawfull for us, our heirs and successors, to putt the said person or persons out of our allegiance and protecon: And that it shalbe lawfull and free for all Princes to prosecute with hostilitie the said offenders and every of them, their and every of their promoters, ayders, abettors and comforters in that behalf. Provided also and our expresse will and pleasure is, and wee doe by their presents for us, our heirs and successors, ordeyne and appoint That these presents shall not in any manner emure or be taken to abridge, barr or hinder any of our loving subjects whatsoever to use and exercise the trade of fishing upon that coast of New England in America by their presents menconced to be graunted; But that they and every or any of them shall have full and free power and liberty to continue and use their said trade of fishing upon the said coast in any the seas therunto adioynyng on any armes of the seas or saltwater rivers where they have byn wont to fishe and to build and sett up upon the landes by their presents graunted such wharves, stages and workhouses as shalbe necessarie for the salting, drying, keeping and tacking up of their fish to be taken or gotten upon that coast; and to cutt downe and take such trees and other materials there growinge or being or shalbe needfull for that purpose, and fell all other necessarie cusements, helpes and advantage concerning their said trade of fishing there in such manner and form as they have byn heretofore at any time accustomed to doe without making any willfull waste or spoyle, anything in this presents contened to the contrary notwithstanding. And Wee doe further for us, our heirs and successors, ordeyne and graunte to the said Governor and Company and their successors by their presents, That theis, our letters patents, shalbe firme, good, effectfull and available in all thinges and to all intents and constructions of lawe according to our true meaning herein before declared, and shalbe construed, reputed and adindged in all cases most favourable on the behalf and for the benefit and behoofe of the said Governor and Company and their successors, although expresse mencon of the true yearly value or certenty of the premises or of any of them or of any other grantes or grantees by us or any of our progenitors or predecessors to the foresaid Governor or Company before this time,

made in their presents or not made, or any statute, acte, ordinance, provision, proclamation or restrainte to the contrarie thereof heretofore had, made, published, ordeyned or provided or any other matter, cause or thinge whatsoever to the contrarie thereof in any wise notwithstanding: In witness whereof wee have caused this our letters to be made patents, Witnes ourself at Westminster the fourth day of March, in the fourth yeare of our raigne

"Per Breve de Privato Sigillo,

"WOLSELEY.

"*Predict Matthæus Cradock Juratus est de Fide et Obedientia Regi et Successoribus suis, et de Debita Exequutione Officij Gubernatoris iuxta Tenorem Præsentium 18^o. Martij, 1628, Coram me Carolo Cesare, Milite in Cancellaria Mro.*

"CHAR. CESAR."

By this charter the claim of John Gorges, the assignee of his brother Robert, and also that of John Oldham and John Dorrill, the lessees of John, seem to have been extinguished. But another claim had, in the mean time, sprung up which it was necessary to silence before the Massachusetts Company could become unobstructed possessors under their charter. John Gorges, under the grant made to his brother by the Plymouth Council, conveyed, by a deed dated January 10, 1629, to Sir William Brereton, of Handforth, in the County of Chester, England, "all the land in breadth lying from the east side of Charles River to the easterly part off the cape called Nahant, and all the lands lying in length twenty miles northeast into the main land from the mouth of the said Charles River, lying also in length twenty miles into the main land northeast from the said Cape Nahant; also two islands lying next unto the shore between Nahant and Charles River, the bigger called Brereton and the lesser Susanna." This claim also was finally rejected by the Massachusetts Company with a proposition to the claimant, dated February 10, 1630, to join the company according to their charter and receive all courteous respect and be accommodated with land and whatever might be necessary.

Sir Henry Rosewell, Sir John Young and Thomas Southcott sold out their interest to John Winthrop, Isaac Johnson, Matthew Cradock, Thomas Goffe and Sir Richard Saltonstall, who, with John Humfrey, John Endicott and Simon Whitcomb, the remaining original grantees, formed a new company. The financial affairs of the company were at first managed in England, and Matthew Cradock, who had been named by the King as Governor, was chosen to that office. John Endicott was sent out with a company in the summer of 1628, arriving at Salem in the ship "Abigail," on the 6th of September of that year. Endicott was followed by Rev. Francis Higginson, and about two hundred persons with him, embarking in the "George Boneventure," reaching New England on the 22d of June, and the "Talbot" and "Lion's Whelp" reaching New England on the 29th. While Cradock remained the Governor of the company in England, Endicott was, in a certain sense, the Governor of the Colony, and so remained until the arrival of John Winthrop with the charter, in 1630. The "Boneventure" brought from the company a letter

to Endicott, urging him to occupy the lands about Massachusetts Bay claimed by Oldham and Brereton, which extended from Charles River to Nahant along the coast and from five to twenty miles inland. They wrote as follows:

"We fear that as he (Oldham) hath been obstinate and violent in his proceedings here, so he will per-sist and be ready to draw a party to himself there to the great hindrance of the common quiet; we have, therefore, thought fit to give you notice of his disposition to the end you may beware how you meddle with him, as also you may use the best means you can to settle an agreement with the old planters so as they may not hearken to Mr. Oldham's dangerous though vaine propositions.

"We pray you and the council there to advise seriously together for the maintenance of our privileges and peaceable government, which, if it may be done by a temperate course, we much desire it, though with some inconvenience so as our government and privileges be not brought in contempt, wishing rather there might be such an union as might draw the heathen, by our good example, to the embracing of Christ and his Gospel, than that offence should be given to the heathen and a scandal to our religion through our disagreement amongst ourselves. But if necessity require a more severe course when fair means will not prevail, we pray you to deal as in your discretion you shall think fittest for the general good and safety of the plantation and preservation of our privileges. And because we would not omit to do anything which might strengthen our right we would have you (as soon as the ships or any of them arrive with you, whereby you may have men to do it) send forty or fifty persons to Massachusetts Bay to inhabit there, which we pray you not to protract but to do it with all speed; and if any of our company in particular shall desire to settle themselves there or to send servants thither we desire all accommodation and encouragement may be given them thereunto whereby the better to strengthen our possession there against all or any that shall intrude upon us which we would not have you by any means give way unto; with this caution notwithstanding—That for such of our countrymen as you find there planted so as they be willing to live under government you endeavor to give them all fitting and due accommodation as to any of ourselves. yea, if you see cause for it, though it be with more than ordinary privileges in point of trade."

In accordance with the above instructions, on the 24th of June, only two days after the arrival of the "Boneventure," Thomas Graves and Rev. Francis Wright arrived at Charlestown from Salem, and, as it is now agreed, gave the date to the foundation of that town.

On the 20th of October, 1629, at "a Generall Court holden in England, at Mr Goffe the Deputy's House," the record states that

"Now the Court proceeding to the election of a new Governor, Deputy and Assistants, which upon serious deliberation hath been and is conceived to be for the especial good and advancement of their affairs, and having received extraordinary great commendations of Mr John Winthrop both for his integrity and sufficiency as being one every way well fitted and accomplished for the place of Governor, did put in nomination for that place the said Mr. John Winthrop, Sir R. Saltonstall, Mr. Isaac Johnson and Mr. John Humfryes; and the said Mr. Winthrop was with a general vote and full consent of this court by erection of hands chosen to be Governor for the ensuing year, to begin on this present day; who was pleased to accept thereof and thereupon Took the oath to that place appertaining. In like manner and with like free and full consent Mr. John Humfrey was chosen Deputy Governor, and

"Sir R. Saltonstall	Mr Thomas Sharpe
Mr Isaac Johnson	Mr John Revell
Mr Thomas Dudley	Mr Matt. Cradock
Mr Jo. Endicott	Mr Thomas Goffe
Mr Noell	Mr Abbersey
Mr Wm Vassall	Mr John Venn
Mr Wm Pinchon	Mr Nath. Wright
Mr Sam. Sharpe	Mr Theoph. Eaton
Mr Edw. Rossiter	Mr Tho. Adams

were chosen to be Assistants; which said Deputy and the greatest part

of the said Assistants being present took the oaths to their said places appertaining respectively."

In April, 1630, Winthrop sailed from England and arrived in Massachusetts on the 12th of June, at once assuming power in the place of Endicott as Governor under the charter which he had brought with him.

The first Court of Assistants, according to a statement of Johnson, in "Wonder-Working Providence," was held at Charlestown, August 23d, on the ship "Arbella." The date mentioned is probably correct, but the place of the meeting has been doubted by antiquaries. At that meeting it was ordered that the next meeting should be held at the Governor's house on the 7th of September and the third meeting was held at the same place September 28th.

On the 19th of October the first General Court was held in Boston, and at its first session an important change was made in the form of government. The record states that at this General Court "it was pronounced if it were not the best course that the freemen should have the power of choosing assistants when they are to be chosen, and the assistants from amongst themselves to choose a Governor and Deputy Governor, who with the assistants shall have the power of making laws and choosing officers to execute the same. This was fully assented unto by the general vote of the people and erection of hands." Thus the only power retained by the freemen or people was the power to choose Assistants.

At a General Court held at Boston on the 9th of May, 1632, another change was made, and "it was generally agreed upon by erection of hands that the Governor, Deputy Governor and assistants should be chosen by the whole court of Governor, Deputy Governor, Assistants and freemen, and that the Governor shall always be chosen out of the assistants."

At a General Court held on the 14th of May, 1634, still more power was assumed by the people. "It was agreed that none but the General Court hath power to choose and admit freemen." "That none but the General Court hath power to make and establish laws nor to elect and appoint officers as Governor, Deputy Governor, Assistants, Treasurer, Secretary, Captain, Lieutenants, Ensigns or any of like moment, or to remove such upon misdemeanor, as also to set out the duties and powers of the said officers." "That none but the General Court hath power to raise moneys and taxes and to dispose of lands, viz., to give and confirm proprieties." An important change was also made at this court in the constitution of the court itself. It was ordered "that it shall be lawful for the freemen of every plantation to choose two or three of each town before every General Court to confer of and prepare such public business as by them shall be thought fit to consider of at the next General Court, and that such persons as shall be hereafter so deputed by the freemen of the several plantations to deal in their behalf in the public affairs of the Commonwealth shall have the full power and voices of all the said

freemen derived to them for the making and establishing of laws, granting of lands, etc., and to deal in all other affairs of the Commonwealth wherein the freemen have to do, the matter of election of magistrates and other officers only excepted, wherein every freemen is to give his own voice."

For the election of officers the whole body of freemen met annually in the meeting-house in Boston, but at last the inconvenience of this arrangement was found to be so great that it was provided that Salem, Ipswich, Newbury, Saugus, Weymouth and Hingham might retain as many of their freemen at home at the annual elections as the safety of the towns required, and that the votes of them might be sent by proxy. A general law was passed at a later date to the same effect applicable to all the freemen in all the towns.

Through all these changes such judicial power as existed was in the hands of the Court of Assistants. At first the Assistants and Deputies met together, but in 1644 it was agreed that the two branches should sit apart and that each should have a negative on the other. Under this new arrangement the Governor presided in the Court of Assistants and the office of Speaker was appointed for the popular branch, which had now become a Court of Deputies. In this form the General Court became the model from which the General Court of our own day took its shape.

During the colonial period the Governors were: John Endicott, 1629, 1644 to 1645, 1649 to 1650, 1651 to 1654, 1655 to 1665; John Winthrop, 1630 to 1634, 1637 to 1640, 1642 to 1644, 1646 to 1649; Thomas Dudley, 1634 to 1635, 1640 to 1641, 1645 to 1646, 1650 to 1651; John Haynes, 1635 to 1636; Henry Vane, 1636 to 1637; Richard Bellingham, 1641 to 1642, 1654 to 1655, 1665 to 1672; John Leverett, 1672 to 1679; Simon Bradstreet, 1679 to 1686, 1689 to 1692. From 1686 to 1689 Joseph Dudley and Edmund Andros had jurisdiction over New England by appointment of the King.

The Deputy Governors were: Thomas Dudley, 1629 to 1634, 1637 to 1640, 1646 to 1650, 1651 to 1653; Roger Ludlow, 1634 to 1635; Richard Bellingham, 1635 to 1636, 1640 to 1641, 1653 to 1654, 1655 to 1665; John Winthrop, 1636 to 1637, 1644 to 1646; John Endicott, 1641 to 1644, 1650 to 1651, 1654 to 1655; Francis Willoughby, 1665 to 1671; John Leverett, 1671 to 1673; Samuel Symonds, 1673 to 1678; Simon Bradstreet, 1678 to 1679; Thomas Danforth, 1679 to 1686, 1689 to 1692. During the careers of Dudley and Andros, 1686 to 1689, there was no Deputy-Governor,

The assistants were: Humphrey Atherton, Samuel Appleton, Isaac Addington, Simon Bradstreet, Richard Bellingham, Robert Bridges, Peter Bulkeley, William Browne, William Coddington, Thomas Clarke, Elisha Cooke, Thomas Dudley, Joseph Dudley, Richard Dummer, Daniel Denison, Thomas Danforth, Humphrey Davy, John Endicott, Thomas Flint, Daniel Fisher, Edward Gibbons, John Glover, Daniel

Gookin, Bartholomew Gedney, Elisha Hutchinson, John Humphrey, John Haynes, Atherton Hough, Roger Harlakenden, William Hibbens, William Hawthorne, John Hull, John Hawthorne, Isaac Johnson, William Johnson, Roger Ludlow, Eliezer Lusher, John Leverett, Increase Nowell, Samuel Nowell, Robert Pike, William Pynchon, Herbert Pelham, John Pynchon, Oliver Purchase, Edward Rossiter, Richard Russell, John Richards, Samuel Sewall, Thomas Savage, Richard Saltonstall, Richard Saltonstall, Jr., Thomas Sharp, Israel Stoughton, William Stoughton, Samuel Symonds, Nathaniel Saltonstall, John Smith, Edward Tyng, Peter Tilton, William Vassall, Henry Vane, John Woodbridge, Francis Willoughby, Thomas Wiggin, Simon Willard, John Winthrop, John Winthrop, Jr.

The Speakers of the House of Deputies during the same period, beginning May 29, 1644, were: William Hawthorne, May 29, 1644, to October 2, 1645, May 6, 1646, to November 4, 1646, May 10, 1648, to October 18, 1648, May 23, 1650, to October 15, 1650, May 6, 1657, to May 19, 1658, May 22, 1661, to May 7, 1662; George Cooke, October 2, 1645, to May 6, 1646; Robert Bridges, November 4, 1646, to May 26, 1647; Joseph Hill, May 26, 1647, to October 18, 1647; Richard Russell, October 18, 1647, to May 10, 1648, October 18, 1648, to May 2, 1649, May 3, 1654, to May 23, 1655; May 14, 1656, to May 6, 1657, May 19, 1658, to May 11, 1659; Daniel Denison, May 2, 1649, to May 23, 1650, October 14, 1651, to May 27, 1652; Daniel Gookin, May 7, 1651, to October 14, 1651; Humphrey Atherton, May 18, 1653, to May 3, 1654; Edward Johnson, May 23, 1655, to May 11, 1656; Thomas Savage, May 11, 1659, to May 22, 1661, May 31, 1671, to May 15, 1672, May 24, 1677, to May 28, 1679; Thomas Clarke, May 7, 1662, to May 27, 1663, May 3, 1665, to May 23, 1666, May 19, 1669, to May 31, 1671; John Leverett, May 27, 1663, to May 3, 1665; Richard Waldron, May 23, 1666, to May 19, 1669, May 7, 1673, to January 6, 1673-74, May 27, 1674, to February 21, 1675-76, May 28, 1679, to February 4, 1679-80; Joshua Hubbard, January 6, 1673-74, to May 27, 1674; Peter Bulkley, February 21, 1675-76, to May 24, 1677; John Richards, February 4, 1679-80, to May 19, 1680; Daniel Fisher, May 19, 1680, to May 16, 1683; Elisha Cooke, May 16, 1683, to May 7, 1684; John Wayt, May 7, 1684, to May 27, 1685; Isaac Addington, May 27, 1685, to May 12, 1686; John Saffin, May 12, 1686.

The other officers of the Colony provided for at an early date were treasurer, commissioners of the United Colonies, secretary and beadle or marshal. The treasurers were: Richard Bellingham, May 17, 1637, and June 6, 1639; Wm. Coddington, May 14, 1634; Richard Dummer, May 25, 1636; William Pynchon, Sept. 4, 1632; William Tyng, May 13, 1640-June 2, 1641; Richard Russell, November 13, 1644; John Hull, May 3, 1676; James Russell, May 9, 1680; Samuel Nowell, May 11, 1686; John Usher, June 1, 1686.

The secretaries were: William Burges, chosen May 13, 1629; Simon Bradstreet, 1630; Increase Nowell, June 6, 1639, May 13, 1640, June 2, 1641; Edward Rawson, May 22, 1650; Edward Randolph, September 21, 1685.

The commissioners of the United Colonies of Plymouth, Massachusetts, Connecticut and New Haven were: John Winthrop, chosen 1613-45; Thomas Dudley, 1643, '47-49; Simon Bradstreet, 1644, '48-54, '56-61, '63-67; William Hathorne, 1644, '50-54, '73; Herbert Pelham, 1645; Daniel Denison, 1655-57, '59-62; John Endicott, 1646-48, '58; Thomas Danforth, 1662-79; John Leverett, 1668-69; William Stoughton, 1674-76, '80-86; Joseph Dudley, 1677-79; Peter Bulkley, 1682-83; Samuel Nowell, 1684-86.

The beadles or marshals, who were somewhat analogous to the sheriffs of the present day, were: James Penn, appointed by the Court September 25, 1634; Edward Michelson, who is mentioned in the records of the Court May 27, 1668, as having occupied the office "divers years;" John Greene, chosen May 27, 1681; and Samuel Gookin, appointed in 1691.

The above lists are confined to officers appointed or chosen after the Massachusetts Company was established in New England, and are inserted by the writer in this sketch of Middlesex County, together with other matters relating to the early history of the Colony, to show the ground-work and foundation on which the counties into which the Colony became divided rested.

Until 1639 the whole judicial power rested with the Court of Assistants. On the 9th of September of that year it was enacted by the General Court that "for as much as the businesses of the ordinary Court of Assistants are so much increased as they cannot be despatched in such season as were fit, it is therefore ordered that such of the magistrates as shall reside in or near to Boston or any five, four or three of them, the Governor or Deputy to be one, shall have power to assemble together upon the last fifth day of the eighth, eleventh, second and fifth months every year, and then and there to hear and determine all civil causes whereof the debt or trespass and damages shall not exceed twenty pounds, and all criminal causes not extending to life or member or banishment according to the course of the Court of Assistants, and to summon juries out of the neighbor towns, and the marshal or necessary officers are to give their attendance as at other Courts."

It had been previously been enacted on the 3d of March, 1635-36, that

"there shall be four courts kept every quarter, one at Ipswich, to which Newbury shall belong; two at Salem, to which Saugus shall belong; two at Newtown to which Charlton (Charlestown), Concord, Medford and Watertown shall belong; four at Boston, to which Roxbury, Dorchester, Weymouth and Hingham shall belong.

"Every of these courts shall be kept by such magistrates as shall be dwelling in or near the said towns, and by such other persons of worth as shall from time to time be appointed by the General Court so as no court shall be kept without one magistrate at the least, and that none of the magistrates be excluded who can and will attend the same, yet

the General Court shall appoint which of the magistrates shall specially belong to every of the said court. Such persons as shall be joined as associates to the magistrates in the said court shall be chosen by the General Court out of a greater number of such as the several towns shall nominate to them so as there may be in every of the said courts so many as (with the magistrates) may make five in all. These courts shall try all civil cases whereof the debt or damage shall not exceed ten pounds, and all criminal causes not concerning life, member or banishment. And if any person shall find himself grieved with the sentence of any of the said courts he may appeal to the next great quarter court provided that he put in sufficient caution to present his appeal with effect and to abide the sentence of the magistrates in the said great quarter court, who shall see that all such that shall bring any appeal without just cause be exemplarily punished.

"There shall be four great Quarter Courts kept yearly in Boston by the Governor and the rest of the magistrates: the first, the first Tuesday in the fourth month, called June; the second, the first Tuesday in September; the third, the first Tuesday in December; the fourth, the first Tuesday in the first month, called March."

It must be remembered that the assistants were called magistrates, and therefore still retained after the above enactments judicial power. On the 25th of May, 1636, the following magistrates and other persons were appointed by the General Court to hold the courts referred to in the above enactment of the previous March, to wit: For Salem and Saugus, John Humphrey, John Endicott, magistrates or assistants, Capt. Turner, Mr. Scruggs and Mr. Townsend Bishop, associates; for Ipswich and Newbury, Thomas Dudley, Richard Dummer, Simon Bradstreet, magistrates, and Mr. Saltonstall and Mr. Spencer, associates; for Newtown, Charlestown, Medford and Concord, John Haynes, Roger Harlakenden, Increase Nowell, magistrates, and Mr. Beecher and Mr. Peakes, associates; for Boston, Roxbury, Dorchester, Weymouth and Hingham, Richard Bellingham, William Coddington, magistrates, and Israel Stoughton, William Hutchinson and William Heath, associates.

On the 6th of June, 1639, it was enacted that "for the more speedy dispatch of all causes which shall concern strangers who cannot stay to attend the ordinary courts of justice, it is ordered that the Governor or Deputy, being assisted with any two of the magistrates (whom he may call to him to that end), shall have power to hear and determine (by a jury of twelve men or otherwise, as is used in other courts) all causes which shall arise between such strangers or wherein any such stranger shall be a party, and all records of such proceedings shall be transmitted to the secretary (except himself be one of the magistrates who shall assist in hearing such causes), to be entered as trials in other courts at the charge of the parties. This order to continue till the General Court in the seventh month come twelve month and no longer."

These various enactments show the condition of governmental affairs and the distribution of judicial powers at the time of the division of the Massachusetts Colony into counties in 1643. On the 10th of May in that year it was enacted "that the whole plantation within this jurisdiction is divided into four shires.

"*Essex* shire—Salem, Lynn, Enon, Ipswich, Rowley, Newbury, Gloucester and Chochicawick.

"*Middlesex*—Charlestown, Cambridge, Watertown, Sudbury, Concord, Woburn, Medford, Linn Village.

"*Suffolk*—Boston, Roxbury, Dorchester, Dedham, Braintree, Weymouth, Hingham, Nantasket.

"*Norfolk*—Salisbury, Hampton, Haverhill, Exeter, Dover, Strawberry Bank."

In order that the reader may not be misled it is proper to state that the Norfolk County as above formed was extinguished by the General Court on the 4th of February, 1679-80, after New Hampshire became a royal province, and its Massachusetts towns were annexed to Essex County. In Middlesex County the towns forming it were incorporated or founded as follows: Charlestown, June 24, 1629; Cambridge, Sept. 8, 1633; Watertown, Sept. 7, 1630; Sudbury, Sept. 4, 1639; Concord, Sept. 2, 1635; Woburn, May 18, 1642; Medford, Sept. 28, 1630; Linn Village, which was incorporated as Reading after the county was formed, May 29, 1684. Of these, Charlestown was incorporated as a city February 22, 1847, and annexed to Boston May 14, 1873; and Cambridge was incorporated as a city March 17, 1846.

In Essex County, Salem was incorporated June 24, 1629, as a town, and as a city March 23, 1836; Lynn (formerly Saugus), Nov. 20, 1637, as a town, and as a city April 10, 1850; Enon (now Wenham), was incorporated May 10, 1643; Ipswich, Aug. 5, 1634; Rowley, Sept. 4, 1639; Newbury, May 6, 1635; Gloucester, as a town May 22, 1639; as a city May 26, 1871; and Chochicawick (now Andover), May 6, 1646.

In Norfolk County, Salisbury was incorporated Oct. 7, 1640; Haverhill as a town in 1645, and as a city March 10, 1869. Hampton, Exeter, Dover and Strawberry Bank (now Portsmouth), were included within the limits of New Hampshire.

In Suffolk County, Boston was incorporated as a town Sept. 7, 1630, as a city Feb. 23, 1822; Roxbury, as a town Sept. 28, 1630, as a city March 12, 1846, annexed to Boston June 1, 1867; Dorchester, Sept. 7, 1630, annexed to Boston June 4, 1869; Dedham, Sept. 8, 1636; Braintree, May 13, 1640; Weymouth, Sept. 2, 1635; Hingham, Sept. 2, 1635; and Nantasket (now Hull), May 29, 1644.

When the present Norfolk County was incorporated, March 26, 1793, all the towns above mentioned in Suffolk County, except Boston, were included in the new county. Hingham and Hull, being dissatisfied with their new connection, were subsequently, at the same session of the General Court, exempted from the act of incorporation, and were finally annexed to Plymouth County.

In addition to the towns above mentioned as a part of Middlesex County, Acton was incorporated July 3, 1735; Arlington, February 27, 1807 (name changed from West Cambridge, April 30, 1867); Ashby, March 5, 1767; Ashland, March 16, 1846; Ayer, February 14, 1871; Bedford, September 23, 1729; Belmont, March 18, 1859; Billerica, May 29, 1655; Boxborough, February 25, 1783; Brighton, February 24, 1807; Bur-

lington, February 28, 1799; Carlisle, April 28, 1780; Chelmsford, May 29, 1655; Dracut, February 26, 1701; Dunstable, October 15, 1673; East Sudbury, April 10, 1780 (name changed to Wayland, March 11, 1835); Everett, March 9, 1870; Framingham, June 25, 1700; Groton, May 25, 1655; Holliston, December 3, 1724; Hopkinton, December 13, 1715; Hudson, March 19, 1866; Lexington, March 29, 1712; Lincoln, April 19, 1754; Littleton, November 2, 1714; Lowell as a town, March 1, 1826 (as a city, August 5, 1836); Malden as a town, May 2, 1619 (as a city, March 31, 1881); Marlborough, May 31, 1660; Maynard, April 19, 1871; Melrose, May 3, 1850; Natick as a district in 1762 (as a town February 10, 1781); Newton as a town, January 11, 1688 (as a city, June 2, 1873); North Reading, March 22, 1853; Pepperell, April 6, 1753; Sherborn, May 27, 1764; Shirley, January 5, 1753; Somerville as a town, March 3, 1842 (as a city, April 14, 1871); South Reading, February 25, 1812 (name changed to Wakefield, June 30, 1868); Stoneham, December 17, 1725; Stow, May 16, 1683; Tewksbury, December 23, 1734; Townsend, June 29, 1732; Tyngsborough as a district, June 22, 1789 (as a town, February 23, 1809); Waltham as a town, January 4, 1737 (as a city, June 2, 1884); Wayland, April 10, 1780; Westford, September 23, 1729; Weston, January 1, 1712; Wilmington, September 25, 1730; Winchester, April 30, 1850.

The town of Acton contains a part of Concord; Arlington of Cambridge; Ashby of Townsend, Fitchburg and Ashburnham; Ashland of Hopkinton, Framingham and Holliston; Ayer of Groton and Shirley; Bedford of Billerica and Concord; Belmont of Arlington, Watertown and Waltham; Boxborough of Stow, Harvard and Littleton; Brighton of Cambridge; Burlington of Woburn. Cambridge has had annexed to it parts of Charlestown and Watertown; Carlisle of Concord, Acton, Chelmsford and Billerica. Charlestown has had annexed to it part of Medford; Dunstable of Groton; Everett of Malden; Framingham of Holliston; Groton of Pepperell; Holliston of Sherborne; Hudson of Marlboro', Bolton and Stow; Lexington of Cambridge and Burlington; Lincoln of Concord, Lexington and Weston; Lowell of Chelmsford, Tewksbury and Dracut; Malden of Medford; Marlborough of Framingham and Southborough; Maynard of Stow and Sudbury; Medford of Malden and Everett; Melrose of Malden and Stoneham; Natick of Sherburne; Newton part of Boston; North Reading of Reading; Pepperell of Groton; Shirley of Groton; Somerville of Charlestown; Stoneham of Charlestown; Tewksbury of Billerica; Tyngsborough of Dunstable; Wakefield of Reading; Waltham of Watertown and Newton; Wayland of Sudbury; Westford of Chelmsford; Weston of Watertown; Wilmington of Woburn and Reading; Winchester of Woburn, Medford and West Cambridge.

A large part of Middlesex County in the earliest colonial times was occupied by two Indian nations:

the Pawtucket and the Massachusetts. The Massachusetts, whose chief sachem was Chikataubut, had been a powerful nation and occupied a territory extending from Charles River on the north and west to Weymouth and Canton on the south and east. At the time of the arrival of Winthrop its numbers had much diminished, having suffered from the same scourge which had carried off the tribes in and about Plymouth in 1616, and from the effects of which it had never recovered. The Pawtuckets extended from Charles River as far as Piscataqua on the east, and Concord, New Hampshire, on the north. Their nation included the Pennakooks or Concord Indians; the Agawomes or Ipswich Indians; the Naumkeeks about Salem; the Pascatawayes and Accomentas at York, and along the coast of Maine. The sachem of the Pawtuckets was Nanepashemit, or the New Moon, who lived in the neighborhood of what is now Lynn. In 1637 the squaw sachem or widow of Nanepashemit, who had continued his government, conveyed to the English a large tract of land, and in 1639 a tract of land, which is now within the limits of Charlestown and Somerville, was conveyed by her to the town of Charlestown. In 1614 she, with other sachems, submitted themselves to the jurisdiction of Massachusetts.

Since the incorporation of the county the following changes in the county lines have been made: The incorporation of the town of Ashby, March 5, 1767, took a portion of Ashburnham and Fitchburg, in Worcester County; the incorporation of Boxborough, February 25, 1783, took a portion of Harvard, in Worcester County. The annexation of Charlestown to Boston, May 11, 1873, and the annexation of Brighton to Boston, May 21, 1873, added those places to Suffolk County; the incorporation of Harvard, in Worcester County, gave a portion of Groton and Stow to Worcester; a part of Holliston was annexed to Milford, in Worcester County, April 1, 1859; the incorporation of Upton, in Worcester County, June 14, 1735, gave a part of Hopkinton to Worcester; the incorporation of Bolton, June 24, 1738, Northborough, January 24, 1766, and Southborough, July 6, 1727, gave a part of Marlborough to Worcester. There were some definitions of town boundaries which may have slightly changed the county lines. These were the lines between Holliston, Hopkinton and Medway, March 27, 1835; between Natick and Wayland, April 29, 1850; between North Reading and Lynnfield, May 27, 1857; between Wakefield and Lynnfield, April 2, 1870.

Middlesex County, of which Cambridge and Lowell are the shires, is situated in the northeast central part of Massachusetts, and has an area of a little more than eight hundred square miles. It is bounded on the north by Essex County and the State of New Hampshire, on the east by Essex and Suffolk Counties, on the south by Norfolk County, and on the west by Worcester County. It is watered by the Charles, Concord, Merrimack and Nashua Rivers and several

smaller streams, and is so thoroughly intersected by railroads as to make Boston easily accessible to almost every town. The business of the county is chiefly manufacturing and agricultural, though the latter interest is showing symptoms of a positive decline. Market gardening has largely increased in the towns near Boston, and this branch of agricultural industry never was more prosperous than to-day. The field of its activity has been pushed, however, farther from the city as the city grows and available lands near its limits become needed for residences of city business-men. The conversion of farms into town lots has largely enhanced their value and made owners who for many years struggled for a livelihood men of wealth and ease. The following list shows the population and property valuation of each town according to the census of 1885 :

	POP.	VAL.		POP.	VAL.
Acton	1785	\$1,372,254	Maynard	2702	\$2,013,558
Arlington	4673	5,136,780	Medford	9042	8,850,274

In 1643, at the time of the incorporation of Middlesex County, as has been stated, the judicial power was vested in the General Court, the Court of Assistants (or Great Quarter Court), the Quarter Courts and the Stranger's Courts. After the formation of the county the above courts continued, though the Stranger's Courts were modified, and the Quarter Courts in their respective counties were called County or Inferior Quarter Courts. It had also been provided before the above date, by an act passed September 3, 1639, that records be kept of all wills, administrations and inventories of every marriage, birth and death, and of all men, houses and lands. It had before the last date been provided, by a law passed April 1, 1631—

" that the constable and four or more of the chief inhabitants of every town (to be chosen by all the freemen there at some meeting there), with the advice of some one or more of the next assistants, shall make a surveying of the houses, backlands, cornfields, mowing ground, and other lands improved or inclosed or granted by special orders of the

court, of every free inhabitant there, and shall enter the same in a book (fairly written in words at length and not in figures), with the several bounds and quantities by the nearest estimation, and shall deliver a transcript thereof into the court within six months now next ensuing, and the same so entered and recorded shall be a sufficient assurance to every such free inhabitant, his and their heirs and assigns, of such estate of inheritance or as they shall have in any such houses, lands or frank tenements. The like course shall be taken for assurance of all houses and town lots of all such as shall be hereafter enfranchised, and every sale or grant of such houses or lots as shall be from time to time entered into the said book by the said constable and four inhabitants or their successors (who shall be still supplied upon death or removal), for which entry the purchasers shall pay sixpence and the like sum for a copy thereof under the hands of the said surveyors or three of them."

A further provision of law concerning lands and titles was made on the 7th of October, 1640, as follows :

" For avoiding all fraudulent conveyances, and that every man may know what estate or interest other men may have in any houses, lands or other hereditaments they are to deal in, it is therefore ordered that after the end of the month no mortgage, bargain sale or grant hereafter to be made of anyhouses, lands, rents or other hereditaments, shall be of force against any other person, except the grantor and his heirs, unless the same be recorded as is hereafter expressed ; and that no such bargain, sale or grant already made in way of mortgage where the grantor remains in possession, shall be of force against any other but the grantor or his heirs, except the same shall be entered as is hereafter expressed within one month after the end of this court, if the party be within this jurisdiction, or else within three months after he shall return. And if any such grantor, etc., be required by the grantee, etc., to make an acknowledgment of any grant, etc., by him made, shall refuse so to do, it shall be in the power of any magistrate to send for the party so refusing and commit him to prison, without bail or maynprise, until he shall acknowledge the same.

" And the grantee is to enter his caution with the recorder, and this shall save his interest in the meantime ; and if it be doubtful whether it be the deed or grant of the party, he shall be bound with sureties to the next court and the caution shall remain good as aforesaid.

" And for recording of all such bargains, etc., it is further ordered that there shall be one appointed at Ipswich, for which Mr. Samuel Symonds is chosen for that court to enter all such bargains, sales, etc., of all lands, etc., within the jurisdiction of that court ; and Mr. Edmund Dowling is chosen in like part for the jurisdiction of the court of Salem ; and all the rest to be entered by Mr. Stephen Winthrop, the recorder of Boston."

This condition of things of course ceased on the formation of counties in 1643, and then the clerk of the court in each county became the recorder of deeds.

After the incorporation of the counties it was provided by law that " there shall also be county courts held in the several counties by the magistrates living in the respective counties, or any other magistrates that can attend the same, or by such magistrates as the General Court shall appoint from time to time, together with such persons of wealth, where there shall be need, as shall from time to time be appointed by the General Court (at the nomination of the freemen of the county), to be joined in commission with the magistrates so that they may be five in all, three whereof may keep a court provided there be one magistrate ; every of which courts shall have full power to hear and determine all causes civil and criminal not extending to life, member or banishment (which, with causes of divorce, are reserved to the Court of Assistants), and to make and constitute clerks and other needful officers and to summon juries of inquest and trials out of the towns of the county." These

County Courts, besides the jurisdiction given to them in the preceding law, retained that which had been held by the Inferior Courts before the formation of counties.

On the 6th of September, 1638, another class of courts was established which continued after the counties were formed. At that date it was ordered "that for avoiding of the county's charge by bringing small causes to the Court of Assistants that any magistrate in the town where he dwell may hear and determine by his discretion all causes wherein the debt or trespass or damage, etc., doth not exceed twenty shillings, and in such town where no magistrate dwells the General Court shall from time to time nominate three men; two thereof shall have like power to hear and determine all such actions under twenty shillings; and if any of the parties shall find themselves grieved with any such end or sentence, they may appeal to the next Quarter Court or Court of Assistants.

"And if any person shall bring any such action to the Court of Assistants before he hath endeavored to have it ended at home (as in this order is appointed), he shall lose his action and pay the defendant's costs."

It was further enacted in 1647 and 1649, for the purpose of more clearly defining and enlarging the jurisdiction of this petty court, that "any magistrate in the town where he dwells may hear and determine by his discretion (not by jury), according to the laws here established, all causes arising in that county wherein the debt, trespass or damage doth not exceed forty shillings, who may send for parties and witnesses, by summons or attachment directed to the marshal or constable, who shall faithfully execute the same." And "that in such towns where no magistrate dwells the Court of Assistants or County Court may from time to time, upon request of the said town signified under the hand of the constable, appoint three of the freemen as commissioners in such cases, any two whereof shall have like power to hear and determine all such causes wherein either party is an inhabitant of that town, who have hereby power to send for parties and witnesses by summons or attachment directed to the constable, as also to administer oaths to witnesses and to give time to the defendant to answer if they see cause; and if the party summoned refuse to give in his bond or appearance, or sentenced refuse to give satisfaction where no goods appear in the same town where the party dwells, they may charge the constable with the party to carry him before a magistrate or shire court (if then sitting), to be further proceeded with according to law, but the said commissioners may not commit to prison in any case. And where the parties live in several towns the defendant shall be liable to be sued in either town at the liberty of the plaintiff."

And "that in all small causes as aforesaid, where only one magistrate dwells in the town and the cause concerns himself, as also in such towns where no magistrate is, and the cause concerns any of the three

commissioners, that in such cases the selectmen of the town shall have power to hear and determine the same, and also to grant execution for the levying and gathering up such damages for the use of the person damaged as one magistrate or three commissioners may do. And no debt or action proper to the cognizance of one magistrate or the three commissioners as aforesaid shall be received into any county court but by appeal from such magistrate or commissioners, except in cases of defamation and battery."

The selectmen were also authorized to try offences against their own by-laws where the penalty did not exceed twenty shillings provided the offence was not, as it was called, a criminal one.

Up to the year 1685 the judicial system of the Province of Massachusetts continued as has been above narrated. First, there was the General Court, with legislative powers and a limited appellate jurisdiction from the Court of Assistants; second, the Court of Assistants or Great Quarter Court, with exclusive jurisdiction in all criminal cases involving life, member or banishment and concurrent jurisdiction with the County Courts in civil cases involving not more than one hundred pounds and appellate jurisdiction from the County Courts; third, the County Courts or Inferior Quarter Courts, with jurisdiction in civil and criminal cases, except cases of divorce and cases involving life, member or banishment, having power to summon grand and petit jurors and to appoint their own clerks and other necessary officers, to lay out highways, license taverns, see that a proper ministry was supported, and have general control of probate matters, prove wills, grant administration, record deeds and mortgages and have appellate jurisdiction from the Commissioners' Courts; fourth, Strangers' Courts held at first by the Governor or Deputy-Governor and two magistrates, or in the absence of the Governor and Deputy, by three magistrates, with the same jurisdiction as the County Courts so far as strangers were concerned, and whose judgments were final; fifth, Commissioners' Courts, and sixth, Selectmen's Courts.

On 18th of June, 1684, a judgment vacating the charter of the Province of Massachusetts Bay was issued, and a copy was received by the Colonial Secretary, Edward Rawson, on the 2d of July of the next year. Joseph Dudley was thereupon appointed by the King, President of Massachusetts, Maine, New Hampshire and the Narragansett country, and received his commission May 15, 1686. The King also appointed as members of the Council, Simon Bradstreet, Robert Mason, John Fitz Winthrop, John Pyncheon, Peter Bulkley, Edward Randolph, Wait Still Winthrop, Richard Wharton, John Usher, Nathaniel Saltonstall, Bartholomew Gedney, Jonathan Tyng, Dudley Bradstreet, John Hincks, Francis Champenon and Edward Tyng; of whom Simon and Dudley Bradstreet, Nathaniel Saltonstall and Francis Champenon declined. The President and Council possessed no leg-

islative power, except to establish such courts as might be necessary. They were a court of themselves and had authority to appoint judges. They established a Superior Court with three sessions a year at Boston, and "Courts of Pleas and Sessions of the Peace" in the several counties. The President assumed probate jurisdiction, but in some counties appointed judges of probate. William Stoughton was appointed to preside in the County Courts of Middlesex, Suffolk and Essex, and John Richards and Simon Lynde were appointed assistants. The appointments were made July 26, 1686, and appeals could be had from these courts to the President and Council. Before the year 1686 had expired, Edmund Andros arrived in Boston, on the 19th of December, and, as Governor, assumed jurisdiction over the whole of New England, including the Plymouth Colony, which was not included in the commission of Dudley.

He appointed thirty-nine members of his Council, and he assumed for the Governor and Council the exclusive power of making and executing the laws, subject only to the royal approval. He gave to justices of the peace civil jurisdiction in cases not affecting lands and not involving a sum exceeding forty shillings. He established the "Quarterly Sessions Court," held by the several justices in their respective counties, and "the Inferior Court of Common Pleas," to be held in each county by a single judge assisted by two or more justices of the county. Their jurisdiction was limited to cases involving sums not exceeding ten pounds, and no question of freehold except in Boston, where the limit was twenty pounds. He established, finally, a Superior Court of Judicature, in which no action could be begun involving less than ten pounds, unless it concerned a question of freehold, and this court was to be held in Boston, Cambridge, Charlestown, Plymouth, Bristol, Newport, Salem, Ipswich, Portsmouth, Falmouth (Portland), Northampton and Springfield. Joseph Dudley was appointed chief justice of this court.

The act establishing these courts was passed by the Governor and Council March 3, 1687. Though the judiciary system thus established was a complete reversal of the old court system, it was a vast improvement on the old and became the model on which the judicial system under the Provincial charter was finally shaped. A Court of Chancery was also created with full equity powers, to be held by the Governor or by a chancellor of his appointment, to be assisted by five or more of the Council. Special Courts of Oyer and Terminer were also created for the trial of offenders. The Commissioners' Courts were retained. Appeals lay from the Quarter Sessions and the Court of Common Pleas to the Superior Court, from the Superior Court to the Governor and Council, and from the Governor and Council and the Court of Chancery to the King.

The Superior Court was organized with Joseph Dudley, chief justice, and William Stoughton and

Peter Bulkley associates. At a later time Samuel Shrimpton, Simon Lynde and Charles Lidget are mentioned as having sat as associates. John Palmer sat as chief justice in 1688. The courts, however, during the administration of Andros were mere mockeries of justice. As the supple tool of a tyrant, his whole career while Governor served to exasperate the people and to lay one of the stones in the foundation of a structure which was destined, under the pressure of tyrannical hands, to become a free and independent republic. When the news of the landing of the Prince of Orange in England reached Boston, a revolution broke out on the 18th of April, 1689, and Andros was seized and imprisoned. In February, 1690, he was sent back to England, and in 1692 was appointed Governor of Maryland and Virginia. From this last position he was removed in 1698, and, returning home, died in 1714. After the overthrow of Andros and his government the old judiciary system which had existed under the charter was resumed, and continued in operation until the union of the Colonies, in 1692.

On the 7th of October, 1691, a new charter was issued, which embraced Massachusetts, Plymouth, Maine, Nova Scotia, with intervening territories, together with Nantucket and Martha's Vineyard, which had previously belonged to New York, under the name of the "Province of the Massachusetts Bay in New England." This charter reached Boston on the 14th of May, 1692, and under its provisions the government consisted of a Governor, Deputy-Governor and Secretary, appointed by the King and Councillors, chosen by the General Court, and a House of Representatives, chosen annually by the people. The Governor had the power of veto, and all acts and elections by the General Court must, in order to be valid, receive the approval of the King. The General Court was authorized "to erect and constitute judicatories and courts of records or other courts," and the Governor and Council could appoint judges, sheriffs, justices of the peace and other officers of the courts. The charter gave to the Governor and Council the control of probate matters, but this control was delegated by them in each county to judges of their appointment. No judicial power remained in the hands of the General Court, as under the colonial charter. The first court organized under the new charter was a special Court of Oyer and Terminer, created by William Phipps, the first Provincial Governor, for the purpose of trying persons charged with witchcraft. On the 2d of June, 1692, the Governor issued his commission appointing William Stoughton chief justice; Nathaniel Saltonstall, John Richards, Bartholomew Gedney, Wait Winthrop, Samuel Sewall and Peter Sergeant, associate justices; Stephen Sewall, clerk; Thomas Newton, attorney-general, and George Corwen, sheriff. Nathaniel Saltonstall declined, and Jonathan Curwin was appointed in his place, and Thomas Newton was succeeded as attorney-

general on the 22d of July by Anthony Checkley. Nathaniel Saltonstall seems to have been a man of sagacity and prudence. He had declined to serve as a member of Dudley's Council, and now evidently avoided the precarious complications of the prevailing witchcraft mania. The first meeting of this court was at Salem, on the 2d of June, 1692. Its subsequent meetings were on the 28th of June, the 3d of August, and 9th and 17th of September, after which the court dissolved. During this period nineteen persons were tried, condemned and hung for witchcraft, and one was pressed to death. There is nothing in the history of New England so revolting as the record of this court. That men like Samuel Sewall, called by his eulogists a man of "learning, integrity and piety," should have been carried away by such an infatuation impresses us with the conviction that human nature, in all the centuries, is the same, and that what are called the barbarities of a dark age can be fully paralleled by the atrocities of an age of boasted civilization. If we seek an apology for the mania it is possible that we may find a shadow of one in the fact that our fathers believed in the verbal inspiration from God of the Scriptures which inculcated a belief in witchcraft, and which declared, in the 18th verse of the 22d chapter of Exodus: "Thou shalt not suffer a witch to live."

The first meeting of the General Court under the new charter was held on the 28th of June, 1692. Its first act was the following, continuing the local laws to stand in force till November the 10th, 1692:

"Be it ordered and enacted by the Governor, Council and Representatives convened in General Assembly, and it is hereby ordered and enacted by the authority of the same, that all the local laws respectively ordered and made by the late Governor and company of the Massachusetts Bay and the late government of New Plymouth being not repugnant to the laws of England, nor inconsistent with the present constitution and settlement by their majesties royal charter, do remain and continue in full force in the respective places for which they were made and used, until the tenth day of November next; except in cases where other provision is or shall be made by this court or assembly.

"And all persons are required to conform themselves accordingly and the several justices are hereby empowered to the execution of said laws as the magistrates formerly were."

A subsequent act was passed continuing the local laws in force until the General Assembly should otherwise order. On the 25th of November, 1692, an act was passed entitled "An Act for the Establishing of Judicatories and Courts of Justice within this Province," from which the following are extracts:

"Sec. 1. Be it enacted and ordained by his excellency, the Governor, council and representatives convened in General Assembly, and it is hereby enacted and ordained by the authority of the same, that all manner of debts, trespasses and other matters not exceeding the value of forty shillings, wherein the title of land is not concerned, shall and may be heard, tried, adjudged and determined by any of their majesties' justices of the peace of this Province within the respective counties where he resides; who is hereby empowered, upon complaint made, to grant a warrant or summons against the party complained of seven days before the day of trial or hearing, etc.

"Sec. 2. Be it further enacted and ordained by the authority aforesaid that there shall be held and kept in each respective county within

this Province yearly, at the times and places hereafter named and expressed four courts or quarter sessions of the peace by the justices of the peace of the same county, who are hereby empowered to hear and determine all matters relating to the conservation of the peace and punishment of offenders and whatsoever is by them cognizable according to law, that is to say, For the county of Suffolk, at Boston, on the first Tuesdays in March, June, September and December. For the county of Plymouth, at Plymouth, on the third Tuesdays in March, June, September and December. For the county of Essex, at Salem, on the last Tuesdays in June and December; at Ipswich on the last Tuesday in March; and at Newbury on the last Tuesday in September. For the county of Middlesex, at Charlestown, on the second Tuesdays in March and December; at Cambridge on the second Tuesday in September and at Concord on the second Tuesday of June. For the county of Barnstable, at Barnstable, on the first Tuesdays in April, July, October and January. At Bristol for the county of Bristol on the second Tuesdays in April, July, October and January. For the county of York, at York, on the first Tuesdays in April and July; and at Wells on the first Tuesdays in October and January. And for the county of Hampshire, at Northampton, on the first Tuesdays in March and June; at Springfield on the last Tuesdays in September and December. And that there be a general sessions of the peace held and kept at Edgartown, upon the island of Chipawick, alias Martha's Vineyard, and on the island of Nantucket respectively upon the last Tuesday in March and on the first Tuesday of October yearly, from time to time.

"Sec. 3. And it is further enacted by the authority aforesaid, That at the times and places above-mentioned there shall be held and kept in each respective county and islands before named within this Province an Inferior Court of Common Pleas, by four of the justices of, and residing within the same county and islands respectively to be appointed and commissioned thereto; any three of whom to be a quorum for the hearing and determining of all civil actions arising or happening within the same, triable at the common law, of what nature, kind or quality soever; and upon judgment given therein to award execution, etc.

"Sec. 4. And it is further enacted by the authority aforesaid that there shall be a Superior Court of Judicature over this whole Province, to be held and kept annually at the respective times and places hereafter mentioned by one Chief Justice and four other justices to be appointed and commissioned for the same; three of whom to be a quorum, who shall have cognisance of all pleas, real, personal or mixed, as well in all pleas of the crown and in all matters relating to the conservation of the peace and punishment of offenders, as in civil causes or actions between party and party and between their majesties and any of their subjects, whether the same do concern the realty and relate to any right of freehold and inheritance or whether the same do concern the personality and relate to matter of debt, contract, damage or personal injury; and also in all mixed actions which may concern both realty and personality; and after deliberate hearing to give judgment and award execution thereon. The said Superior Court to be held and kept at the times and places within the respective counties following; that is to say, Within the county of Suffolk, at Boston, on the last Tuesdays of April and October. Within the county of Middlesex, at Charlestown, on the last Tuesdays of July and January. Within the county of Essex, at Salem, on the second Tuesday of November; and at Ipswich on the second Tuesday of May. Within the counties of Plymouth, Barnstable and Bristol at Plymouth, on the last Tuesday of February and at Bristol on the last Tuesday of August.

"Sec. 12. And it is hereby further enacted by the authority aforesaid, that there be a High Court of Chancery within this Province, who shall have power and authority to hear and determine all matters of equity of what nature, kind or quality soever, and all controversies, disputes and differences arising between co-executors, and other matters proper and cognizable to said court to be triable by common law; the said court to be holden and kept by the Governor or such others as he shall appoint to be Chancellor, assisted with eight or more of the Council, who may appoint all necessary officers to the said Council."

This act continued in force until advice of its disallowance or repeal by the Privy Council was received. The repeal was dated August 22, 1695, and its reasons were expressed in the following words: "Whereas, by the act, etc., divers courts being established by the said act, it is hereby further provided that if either party not being satisfied with ye judge-

ment of any of ye said courts in personall actions not exceeding £300 (and no other), they may appeal to His Majesty in Councill, which proviso not being according to the words of the charter, and appeals to the King in Councill in reall actions, seeming thereby to be excluded, it hath been thought fit to repeal the said act."

On the 19th of June, 1697, another act was passed establishing courts, which was disallowed Nov. 24, 1698, because it provided, among other things, "that all matters and issues in fact shall be tried by a jury of twelve men," which proviso was looked upon as directly contrary to the intention of the Act of Parliament entitled An Act for preventing frauds and regulating abuses in the plantation trade, by which it was provided that all causes relating to the breach of the Acts of Trade might, at the pleasure of the officer or informer, be tried in the Court of Admiralty in which court trials were not held with juries of twelve men.

On the 26th of June, 1699, three acts were passed establishing a Court of General Sessions of the Peace, and an Inferior Court of Common Pleas in each county and a Superior Court of Judicature for the Province. The Court of General Sessions of the Peace was required to be held in each county, yearly, at specified times and places by the justices of the peace of said county, who were empowered to hear and determine all matters relating to the conservation of the peace and punishment of offenders. The Inferior Court of Common Pleas was to be held in each county by four substantial persons to be commissioned as justices, any three of whom were to be a quorum who should have cognizance of all civil actions arising or happening within the county triable at common law, provided that no action under forty shillings be brought into said court unless where freehold was concerned, or upon appeal from a justice of the peace. The Superior Court of Judicature was to be held at specified times and places in the Province by one chief justice and four other justices, who should have cognizance of all pleas, real, personal or mixed, as well as all pleas of the crown and all matters relating to the conservation of the peace and punishment of offenders. It was to be held at Boston for the county of Suffolk on the first Tuesdays of November and May; for the county of Middlesex at Cambridge on the last Tuesday in July, and at Charlestown on the last Tuesday of January; for the county of Hampshire at Springfield on the second Tuesday of August; for the county of York at Kittery on the Thursday before the Ipswich Court; for the counties of Plymouth, Barnstable and Dukes at Plymouth on the last Tuesday of March; and for the county of Bristol at Bristol on the second Tuesday of September.

The Court of Chancery established by the act of November 25, 1692, was re-established by a separate act in 1693, and Admiralty jurisdiction, as has been already stated, was reserved for the King. Besides these courts, and completing the list of courts, was the Court

of Justices of the Peace. The disallowed act of 1692 gave the justices of the peace jurisdiction "in all manner of debts, trespasses and other matters not exceeding forty shillings in value, wherein the title of land was not concerned." In 1697 a special act was passed re-enacting substantially the provisions of the act which had been disallowed, so far as the civil jurisdiction of the justices was concerned. From time to time subsequently, the powers of justices, both in civil and criminal matters, were enlarged. But one other important court remains to be mentioned, but one established not by any law of the General Court, but by the Governor and Council under the charter. In probate matters jurisdiction had been exercised during the colonial period by the common law courts. During the administration of Andros it was assumed by the Governor, but by the charter it was conferred on the Governor and Council, who, claiming the power of substitution, delegated these powers to a judge of probate of their own appointment in each county, reserving to themselves appellate jurisdiction.

The Superior Court of Judicature, which was permanently established June 20, 1699, continued until February 20, 1781, during which time the following appointments of justices were made:

1692, William Stoughton (chief justice), Thomas Danforth, Waitstill Winthrop (chief justice 1708), John Richards, Samuel Sewall (chief justice 1718); 1695, Elisha Cooke; 1701, John Wadley; 1701, John Saffin; 1702, Isaac Addington (chief justice 1703), John Hathorne, John Leverett; 1708, Jonathan Curwin; 1712, Benjamin Lynde (chief justice 1728), Nathaniel Thomas; 1715, Addington Davenport; 1718, Edward Quincy, Paul Dudley (chief justice 1745); 1728, John Cushing; 1733, Jonathan Remington; 1736, Richard Saltonstall; 1738, Thomas Graves; 1739, Stephen Sewall (chief justice 1752); 1745, Nathaniel Hubbard, Benjamin Lynde (chief justice 1771); 1747, John Cushing; 1752, Chambers Russell; 1756, Peter Oliver (chief justice 1772); 1760, Thomas Hutchinson (chief justice 1760); 1767, Edmund Trowbridge; 1771, Foster Hutchinson; 1772, Nathaniel Ropes; 1774, William Brown; 1775, William Cushing (chief justice 1777), John Adams (chief justice 1775), Nathaniel P. Sargeant, William Reed, Robert Treat Paine; 1776, Jedidiah Foster, James Sullivan; 1777, David Sewall.

Of these, Thomas Danforth, Chambers Russell and Edmund Trowbridge may be said to have been Middlesex County men.

On the 20th of February, 1781, an act was passed by the General Court of Massachusetts, establishing the Supreme Judicial Court as the successor of the Superior Court of Judicature. It was established with one chief justice and four associates. In the year 1800 the number of associates was increased to six and the State was divided into two circuits, the east including Essex County and Maine, and the west including the remainder of the State except Suffolk County. In 1805 the number of associates was reduced to four, and in 1852 was increased to five. In 1873 the number of associates was increased to six, and the court has continued up to this time with one chief justice and six associates. The justices of this court have been:

Increase Sumner, 1782 to 1797; Francis Dana, 1785 to 1806 (chief justice 1791); Theophilus Parsons, 1806 to 1813 (chief justice 1806); Robert Treat Paine, 1790 to 1801; Nathan Cushing, 1790 to 1800;

Thomas Dawes, 1792 to 1802; Theophilus Bradbury, 1797 to 1801; Samuel Sewall, 1800 to 1828 (chief justice 1811); Simon Strong, 1801 to 1805; George Thacher, 1801 to 1821; Theodore Sedgwick, 1802 to 1813; Isaac Parker, 1806 to 1830 (chief justice 1814); Charles Jackson, 1813 to 1823; Daniel Dewey, 1814 to 1815; Samuel Putnam, 1814 to 1812; Samuel Sumner Wilder, 1815 to 1850; Levi Lincoln, 1824 to 1825; Marcus Morton, 1825 to 1810; Lemuel Shaw, 1830 to 1860 (chief justice 1830); Charles Augustus Dewey, 1837 to 1866; Samuel Hubbard, 1842 to 1847; Charles Edward Forbes, 1848 to 1848; Theron Metcalf, 1848 to 1865; Richard Fletcher, 1848 to 1853; George Tyler Bigelow, 1850 to 1868 (chief justice 1860); Caleb Cushing, 1852 to 1853; Benj. Franklin Thomas, 1853 to 1859; Phny Metrick, 1853 to 1864; Ebenezer Rockwood Hoar, 1859 to 1869; Reuben Atwater Chapman, 1860 to 1873 (chief justice 1868); Horace Gray Jr., 1861 to 1882 (chief justice 1873); James Denison Colt, 1865 to 1866; Dwight Foster, 1866 to 1869; John Wells, 1866 to 1875; James Denison Colt, 1868 to 1881; Seth Ames, 1869 to 1881; M. Morton, 1869 (chief justice 1882 to 1890); W. C. Endicott, 1873 to 1882; Charles Devens, Jr., 1873 to 1877; Otis Phillips Lord, 1875 to 1882; A. L. Soule, 1877 to 1881; W. A. Field, 1881 (chief justice 1890); Charles Devens, 1881; William Allen, 1881; Charles Allen, 1882; Waldo Colburn, 1882 to 1885; Oliver Wendell Holmes, Jr., 1882; Wm. Sewall Gardner, 1885 to 1887; Marcus Perrin Knowlton, 1887; James M. Morton, 1890.

Of these justices, Francis Dana, George Tyler Bigelow, Ebenezer Rockwood Hoar, Seth Ames and Charles Devens, Jr., were Middlesex men, and reference to them will be made in the chapter on the Bench and Bar.

The judges of the Inferior Court of Common Pleas for the county of Middlesex were as follows:

John Phillips, December 7, 1692, to December 9, 1715; James Russell, December 7, 1692, to April 28, 1709; Joseph Lynde, December 7, 1692, to June 27, 1719; Samuel Hayman, December 7, 1692, to June 29, 1702; Jonathan Tyng, June 29, 1702, to June 27, 1719; Francis Foxcroft, June 23, 1709, to June 27, 1719; Jonathan Remington, December 9, 1715, to June 22, 1733; Jonathan Dowse, June 27, 1719, to July 21, 1741; Charles Chambers, June 27, 1719, to December 21, 1739; Francis Fulham, June 27, 1719, to June 29, 1755; Thomas Greaves, June 22, 1733, to March 9, 1737-38; Francis Foxcroft, March 9, 1737-38, to March 7, 1764; Thomas Greaves, December 21, 1739, to August 19, 1747; Samuel Danforth, July 21, 1741; Chambers Russell, August 19, 1747, to April 7, 1752; Andrew Boardman, April 7, 1752, to May 20, 1769; William Lawrence, June 26, 1755, to September 7, 1763; John Tyng, September 7, 1763; Richard Foster, March 7, 1764, to May 16, 1771; Joseph Lee, May 21, 1769; James Russell, May 16, 1771.

The special justices of this court were:

Elisha Hutchinson, appointed June 8, 1705, and February 25, 1708; John Foster, June 8, 1705, and February 25, 1708; John Higginson, June 8, 1705, and February 25, 1708; Penn Townsend, February 25, 1708; Jonathan Tyng, February 25, 1708; Jonathan Dowse, December 3, 1718; Jonas Bond, December 3, 1718, and September 6, 1723; Nathaniel Carey, November 25, 1719; Spencer Phips, September 6, 1723, July 18, 1726, and July 9, 1731; Thomas Greaves, November 25, 1719, and July 9, 1731; Henry Phillips, August 3, 1729; Francis Foxcroft, March 19, 1729-30, and July 9, 1731; Habijah Savage, December 15, 1732; Samuel Wells, December 15, 1732; Samuel Danforth, December 15, 1732; Jacob Wendell, December 29, 1736; Benjamin Prescott, December 29, 1736; Simon Tufts, July 25, 1741; Ephraim Curtis, July 25, 1741; William Lawrence, August 12, 1749, and June 21, 1751; John Tyng, July 19, 1762; Oliver Fletcher, July 29, 1762; Joseph Lee, March 7, 1764; Samuel Livermore, September 7, 1768; Charles Prescott, September 7, 1768.

The last term of this court under the Province charter was held May 21, 1774. On the 2d of November, 1775, commissions were issued to John Tyng, Henry Gardner, John Remington and Samuel P. Savage, which superseded the old commissions held by John Tyng, Samuel Danforth, Joseph Lee and James Russell. The court continued in its old form until July 3, 1782, when the Court of Common Pleas

was established, to be held within each county at specified times and places, with four judges appointed by the Governor from within the county. The justices of this court, which continued until June 21, 1811, were the following: John Tyng, Henry Gardner, John Remington, Samuel Phillips Savage, Abraham Fuller, James Prescott, Nathaniel Gorham, James Winthrop, William Hull and Ephraim Wood. The special justices were: Josiah Stone, Ebenezer Bridge, John Pitts, Eleazer Brooks, James Winthrop, William Hull, Ephraim Wood, Joseph B. Varnum, Loammi Baldwin, Abiel Hayward, Phillips Payson, Joseph Cordes, Joseph Heald and Asahei Stearns. At the last-mentioned date an act was passed dividing the Commonwealth—except Nantucket and Dukes County—into six circuits, as follows: the Middle Circuit, consisting of the counties of Suffolk, Essex and Middlesex; the Western Circuit, consisting of the counties of Worcester, Hampshire and Berkshire; the Southern Circuit, consisting of the counties of Norfolk, Plymouth, Bristol and Barnstable; the Eastern Circuit, consisting of the counties of York, Cumberland and Oxford; the Second Eastern Circuit, consisting of the counties of Lincoln, Kennebec and Somerset, and the Third Eastern Circuit, consisting of the counties of Hancock and Washington. The act provided that there should be held in the several counties, at the times and places appointed for holding the Courts of Common Pleas, a Circuit Court of Common Pleas, consisting of one chief justice and two associate justices, to whom were to be added two sessions justices from said county, to sit with the court in their county.

The Court of General Sessions of the Peace, which was established in 1692, remained without material change during the Provincial period, and up to June 19, 1807, when an act was passed providing that it should consist of one chief justice and a specified number of associates for the several counties, to be appointed by the Governor. These justices were to act as the General Court of Sessions instead of the justices of the peace in each county. On the 19th of June, 1809, the jurisdiction of the General Court of Sessions was transferred to the Court of Common Pleas, and, on the 25th of June, 1811, a law was passed providing "that from and after the first day of December next an act made and passed the 19th of June, entitled 'an Act to transfer the powers and duties of the Courts of Sessions to the Courts of Common Pleas,' be and the same is hereby repealed, and that all acts or parts of acts relative to the Courts of Sessions which were in force at the time the act was in force which is hereby repealed, be and the same are hereby revived from and after the said first day of September next."

Again, on the 28th of February, 1814, it was enacted that the act of June 25, 1811, reviving the Courts of Sessions, be repealed except so far as it relates to the counties of Suffolk, Nantucket and Dukes County, and that all petitions, recognizances, warrants, orders,

certificates, reports and processes made to, taken from, or continued or returnable to the Court of Sessions in the several counties, except as aforesaid, shall be returnable to and proceeded in and determined by the respective Circuit Courts of Common Pleas, which were established, as above mentioned, June 21, 1811. The act containing the above provision also provided "that from and after the first day of June next the Circuit Courts of Common Pleas shall have, exercise and perform all powers, authorities and duties which the respective Courts of Sessions have, before the passage of this act, exercised and performed, except in the counties of Suffolk, Nantucket and Dukes County, and that the Governor, by and with the advice of the Council, be authorized to appoint two persons in each county, who shall be session justices of the Circuit Court of Common Pleas in their respective counties, and sit with the justices of said Circuit Court in the administration of the affairs of the county and of all matters within said county of which the Courts of Sessions had cognizance."

The administration of county matters was in the hands of the Circuit Court of Common Pleas until February 20, 1819, when an act was passed repealing the act which transferred the powers and duties of the Courts of Sessions to that court, and providing that "from and after the first day of June next the Court of Sessions in the several counties shall be held by one chief justice and two associates, to be appointed by the Governor, with the advice and consent of the Council, who shall have all the powers, rights and privileges, and be subject to all the duties which are now vested in the Circuit Courts of Common Pleas relative to the erection and repair of jails and other county buildings, the allowance and settlement of county accounts, the estimate, apportionment and issuing warrants for assessing county taxes, granting licenses, laying out, altering and discontinuing highways, and appointing committees and ordering juries for that purpose."

The Court of Sessions continued as above described until March 4, 1826, when the jurisdiction over highways was vested by law in a board of "Commissioners of Highways." The act providing for this board enacted "that for each county in the Commonwealth, except the counties of Suffolk and Nantucket, there shall be appointed and commissioned by His Excellency the Governor, by and with the advice and consent of the Council, to hold their offices for five years, unless removed by the Governor and Council, five commissioners of highways, except in the counties of Dukes and Barnstable, in which there shall be appointed only three, who shall be inhabitants of such county, one of whom shall be designated as chairman by his commission." The proceedings of the commission were to be reported to the Court of Sessions for record, and that court was to draw its warrant on the county treasurer for expenses incurred in the construction of roads laid out by the commissioners.

Such was the condition of county affairs until the 26th of February, 1828, when a law was passed providing "that the Act entitled 'An Act to establish Courts of Sessions, passed February 20, 1819;' also an Act in addition thereto passed February 21, 1820; also an Act entitled 'An Act increasing the numbers and extending the powers of Justices of the Courts of Sessions,' passed February 6, 1822; also an Act entitled 'An Act in addition to an Act directing the method of laying out highways,' passed March 4, 1826, be and the same are hereby repealed." It provided for the appointment by the Governor of four persons to be county commissioners for each of the counties of Essex, Middlesex, Norfolk and Worcester, and three persons to be county commissioners for each of the other counties of the Commonwealth, except the county of Suffolk; that the clerks of the Courts of Common Pleas within the several counties should be the clerks of the commissioners, and that for each of the counties except Suffolk, Middlesex, Essex, Worcester, Norfolk and Nantucket, two persons should be appointed to act as special commissioners.

The first meeting of the Board of County Commissioners appointed under the above act was held May 13, 1828, and the board consisted of Caleb Butler, Augustus Tower, Benjamin F. Varnum and David Townsend. In 1831 Abner Wheeler was appointed in the place of Mr. Varnum, and no other change occurred on the board while the appointment of its members rested with the Governor and Council.

On the 8th of April, 1835, a law was passed providing that in every county except Suffolk and Nantucket the Judge of Probate, Register of Probate and clerk of the Common Pleas Court should be a board of examiners, and that on the first Monday of May in the year 1835, and on the first Monday of April in every third year thereafter, the people should cast their votes for three county commissioners and two special commissioners. This law remained in force until 1854. Under its operation the board consisted of the following members, chosen in the years set against their respective names: 1835, Caleb Butler, David Townsend, Abner Wheeler; 1838, Caleb Butler, Abner Wheeler, Timothy Fletcher; 1841, Leonard M. Parker, Timothy Fletcher, Seth Davis; 1844, Josiah Adams, Timothy Fletcher, Josiah B. French; and Ebenezer Barker was chosen in 1845 to fill a vacancy; 1847, Josiah Adams, Ebenezer Barker, Joshua Swan; 1850, Daniel S. Richardson, Ebenezer Barker, Leonard Huntress; 1853, Leonard Huntress, Daniel S. Richardson, John K. Going.

On the 11th of March, 1854, the law in force at the present time was passed, providing that the county commissioners then in office in the several counties, except Suffolk and Nantucket, should be divided into three classes—the first class holding office until the next annual election for Governor—the second class until election day in 1855, and the third class until election day in 1856, the commissioners then in office

determining by lot to which class each should belong, and that at each annual election thereafter one commissioner be chosen for three years. The commissioners since that time have been the following: Leonard Huntress, John K. Going, Paul H. Sweetser, Edward J. Collins, J. H. Waitt, Harrison Harwood, Daniel G. Walton, J. Henry Reed, William S. Frost, Alphonzo M. Lunt and Samuel O. Upham.

The commissioners of Middlesex County include within their jurisdiction Chelsea, North Chelsea and Winthrop, which belong to Suffolk County. Chelsea and North Chelsea were placed under their jurisdiction by an act passed May 3, 1850, and when Winthrop was set off from North Chelsea, March 27, 1852, it continued within its old jurisdiction. It was provided by law, April 30, 1852, that for expenses applicable to those towns they should pay in such proportions as the commissioners should decide.

The Circuit Court of Common Pleas, which was established June 21, 1811, was abolished on the 14th of February, 1821. The justices of this court, during its continuance, for the middle circuit, consisting of Suffolk, Middlesex and Essex Counties, were Samuel Dana, chief justice; William Wetmore and Stephen Minot, associate justices. The first session of this court was held at Cambridge December 16, 1811, and its last at Concord, June 11, 1821. The Court of Common Pleas was established at the above date with a chief justice and three associate justices, and the first session in Middlesex County was held at Cambridge September 10, 1821. On the 1st of March, 1843, the number of associates was increased to four, on the 18th of March, 1845, to six, and on the 24th of May, 1851, to seven. This court continued until the establishment of the present Superior Court, by a law passed April 5, 1859. During its continuance the following judges sat upon the bench:

Artemas Ward, 1821 to 1839 (chief justice 1821); Solomon Strong, 1821 to 1842; John Mason Williams, 1821 to 1844 (chief justice 1839); Samuel Howe, 1821 to 1828; David Cummins, 1828 to 1844; Charles Henry Warren, 1839 to 1844; Charles Allen, 1842 to 1844; Phiny Merrick, 1843 to 1848; Daniel Wells, 1844 to 1854 (chief justice 1844); Joshua Holyoke Ward, 1844 to 1848; Emory Washburn, 1844 to 1847; Luther Stearns Cushing, 1841 to 1848; Harrison Gray Ols Colby, 1845 to 1847; Charles Edward Forbes, 1847 to 1848; Edward Mellen, 1847 to 1859 (chief justice 1854); George Tyler Bigelow, 1848 to 1850; Jonathan Cogswell Perkins, 1848 to 1859; Horatio Byington, 1848 to 1856; Thomas Hopkinson, 1848 to 1849; Ebenezer Rockwood Hoar, 1849 to 1853; Phiny Merrick, 1850 to 1851; Henry Walker Bishop, 1851 to 1859; George Nixon Briggs, 1853 to 1859; George Partridge Sanger, 1854 to 1859; Henry Morris, 1855 to 1859; David Aikin, 1856 to 1859.

Of these, Edward Mellen, George T. Bigelow, Thomas Hopkinson and Ebenezer Rockwood Hoar were Middlesex men.

On the 5th of April, 1859, the Superior Court was established as the successor of the Court of Common Pleas, with ten justices, which number was increased, May 19, 1875, to eleven, and February 27, 1888, to fourteen. The justices of this court have been as follows:

Charles Allen, 1859 to 1867 (chief justice 1859); Julius Rockwell,

1859 to 1886; Otis Phillips Lord, 1859 to 1875; Marcus Morton, Jr., 1859 to 1869; Seth Ames, 1859 to 1869 (chief justice 1867); Ezra Wilkinson, 1859 to 1882; Henry Vose, 1859 to 1869; Thomas Russell, 1859 to 1867; John Phelps Putnam, 1859 to 1882; Lincoln Flagg Brigham, 1859 (chief justice 1869 to 1890); Chester I. Reed, 1867 to 1871; Charles Devens, Jr., 1867 to 1873; Henry Austin Scudder, 1869 to 1872; Francis Henshaw Dewey, 1869 to 1881; Robert Carter Putnam, 1869; John William Bacon, 1871 to 1885; William Allen, 1872 to 1881; Peleg Emory Aldrich, 1873; Waldo Colburn, 1875 to 1882; Wm. Sewall Gardner, 1875 to 1885; Hamilton Barclay Staples, 1881; Marcus Perrin Knowlton, 1881 to 1887; C. Blodgett, 1882; A. Mason, 1882 (chief justice 1890); J. Madison Barker, 1882; Charles P. Thompson, 1885; John Wilkes Hammond, 1886; Justin Dewey, 1886; Edgar J. Sherman, 1887; John Lathrop, 1888; James R. Dunbar, 1888; Robert R. Bishop, 1888.

Of these, Seth Ames, Charles Devens, Jr., John William Bacon, John W. Hammond, Wm. Sewall Gardner and Robert R. Bishop were Middlesex men.

During the Colonial period under the charter, Probate matters as has been stated, were in the hands of the County Court. During the presidency of Dudley he assumed Probate jurisdiction but delegated it in some of the counties to judges of Probate whom he appointed. During the administration of Andros the settlement of estates exceeding fifty pounds he personally directed, delegating others to judges of his appointment. After the deposition of Andros the colonial method was resumed, and continued until the union of the Colonies, in 1692. Though the Provincial charter conferred the jurisdiction of Probate affairs on the Governor and Council, they claimed and exercised the right to delegate their powers to judges and registers of Probate in the several counties. There was no regular Probate Court established by law until March 12, 1784, when it was provided that a judge and register should be appointed by the Governor and Council. Under an amendment of the Constitution ratified by the people on the 23d of May, 1855, it was provided that at the annual election in 1856, and in every fifth year thereafter, the register should be chosen by the people for a term of five years. The judge remained as the appointee of the Governor. In 1856 a Court of Insolvency in each county was established by law, with a judge and register, and in 1858 the judge and register of this court were abolished, as well as the judge and register of Probate, and the offices of judge and register of Probate and Insolvency were created. In the same year, 1858, it was provided that the register of Probate and Insolvency should be chosen at the annual election in that year and every fifth year afterwards for a term of five years.

The following persons have filled the offices of judge and register of Probate, judge and register of Insolvency, and judge and register of Probate and Insolvency since the union of the Colonies, in 1692:

Judges of Probate.—James Russell, appointed June 18, 1692; John Leverett, appointed Oct. 23, 1702; Francis Foxcroft, appointed July 8, 1708; Jonathan Remington, appointed Sept. 30, 1725; Samuel Danforth, appointed Dec. 20, 1745; John Winthrop, appointed Sept. 6, 1775; Oliver Prescott, appointed about July, 1779; James Prescott, appointed Feb. 1, 1805; Samuel Phillips, Prescott Fay, appointed May 9, 1821; William Adams Richardson, appointed April 7, 1856, and held until July 1, 1858; Luther J. Fletcher, appointed judge of Insolvency 1857; William Adams Richardson, appointed judge of Probate and Insolvency May

13, 1858, to take office July 1, 1858; George M. Brooks, appointed judge of Probate and Insolvency, 1872.

Registers of Probate.—Samuel Phipps, appointed June 18, 1692; Thomas Swan, appointed Oct. 23, 1702; Nicholas Fossenden, appointed Sept. 15, 1706; Daniel Foxcroft, appointed Dec. 28, 1709; Thomas Foxcroft, appointed Dec. 9, 1715; Francis Foxcroft, appointed July 3, 1729; Samuel Danforth, appointed July 9, 1731; Andrew Boardman, appointed Dec. 20, 1745; Andrew Boardman, Jr., appointed special register on death of his father, 1769; William Kneeland, appointed May 29, 1769; James Winthrop, appointed Sept. 6, 1775; James Foster, appointed May 26, 1817; Isaac Fiske, appointed Oct. 29, 1817.

Registers of Insolvency.—Monzo A. Lynde, appointed July 1, 1831; Alfred A. Prescott, appointed March 10, 1833; Joseph H. Tyler, appointed register of Insolvency 1836; Joseph H. Tyler, appointed register of Probate and Insolvency Nov. 1, 1858; Isaac F. Jones, appointed assistant register of Probate and Insolvency January, 1859; Samuel H. Folsom, appointed assistant register of Probate and Insolvency 1877.

During the period of the Colony the officer corresponding to the sheriff of later times was called marshal. The names of the marshals of the Colony have already been given. Since the charter creating the Province of Massachusetts Bay the sheriffs of the county have been the following:

Sheriffs. Timothy Phillips, appointed 1692; Samuel Gookin, appointed 1702; Edmund Goffe, appointed 1715; Samuel Gookin, appointed 1728; Samuel Dummer, appointed 1729; Richard Foster, Jr., appointed 1731; Richard Foster, appointed 1761; David Phipps, appointed 1764; James Prescott, appointed 1779; Leammie Baldwin, appointed 1781; Joseph Hosmer, appointed 1791; William Hildreth, appointed 1808; Nathaniel Austin, Jr., appointed 1813; Benjamin F. Varnum, appointed 1831; Samuel Chandler, appointed 1841; Fisher A. Hildreth, appointed 1851; John S. Keyes, appointed 1853.

Under the nineteenth article of amendments to the Constitution, ratified in 1855, a law was passed in 1856 providing that at the annual election in that year, and in every third year thereafter, a sheriff should be chosen in each county by the people. Under that law the following sheriffs have been chosen:

John S. Keyes, 1856; Charles Kimball, 1859, '62, '65, '68, '71, '74, '77; Ebenezer W. Fiske, 1880; Henry G. Cushing, 1883, '86, '89.

Up to the year 1654 the treasurer of the Colony acted as treasurer for the county. In that year, and by renewal in 1692, a law was passed providing that in each county a treasurer should be annually chosen by the people. A similar law remained in force until 1855. The following treasurers have held office in Middlesex County:

Thomas Danforth, until 1657; Edward Goffe, until 1658; John Stedman, until 1683; Samuel Andrew, until 1700 (except during the administration of Andros); Ebenezer Bridge, until 1807; John L. Tuttle, until 1813; John Keyes, until 1857; Stedman Buttrick, until 1855.

In 1855 it was enacted that a county treasurer should be chosen in that year in each county, and every third year thereafter, for the term of three years. Under the new law the following were chosen:

Amos Stone, 1855, '58, '61, '64, '67, '70, '73, '76, '79, '82; Joseph O. Hayden, 1885, '88.

During the Colonial period the clerks of the courts were appointed by the courts. During the Provincial period the clerks of the County Courts and those of the Superior Court of Judicature, and afterwards, until 1797, of the Supreme Judicial Court, were dis-

tinget, and the latter two clerks had their offices in Boston. Until 1811 the appointment of clerks lay with the courts, when it was vested in the Governor and Council and so remained until 1814, when it was given to the Supreme Judicial Court. In 1856 it was provided by law that in that year and every fifth year thereafter, clerks should be chosen by the people in the several counties. The following is probably a correct list of clerks from the incorporation of the county, in 1643, to the present time:

Thomas Danforth, under the Colonial charter; Samuel Phipps, 1689; Francis Foxcroft, 1721; John Foxcroft, 1766; Thaddeus Mason, 1774; Thaddeus Mason and Wm. Swan, 1785; Abraham Biglow, 1790; Elias Phinney, 1831; Seth Ames, 1854, '56; Marshall Preston, assist. clerk, 1852; Benjamin F. Ham, 1861, '66; Theodore C. Hurd, 1871, '76, '81, '86; John L. Ambrose, second assist. clerk, 1880.

During the Colonial period, and until 1715, the clerks of the courts were registers of deeds, but in that year it was provided "that in each county some person having a freehold within said county to the value of at least ten pounds, should be chosen by the people of the county. As officers of the court the clerks were under the Colonial charter called recorders, and as recorders kept the registry of deeds. Up to the present time the registers of deeds have been as follows:

Thomas Danforth until 1689; Samuel Phipps until 1721; Francis Foxcroft until 1766; John Foxcroft until 1776; Ebenezer Bridge until 1781; Thaddeus Mason until 1786; William Winthrop until 1796; Samuel Bartlett until 1819; Isaac Fiske until 1820; Samuel Bartlett until 1822; William F. Stone until 1846; Caleb Hayden until 1855.

In 1855 it was provided by law that in that year, and every third year afterwards, a register of deeds should be chosen for three years in each county, and in the county of Middlesex two registers, one for Cambridge and one for Lowell. Under the law the registers have been:

Caleb Hayden, for Cambridge, 1855, '58, '61, '64; Asahel B. Wright, for Lowell, 1855, '58, '61, '64; Charles B. Stevens, for Cambridge, 1867, '70, '73, '76, '79, '82, '85, '88; Ithamar W. Beard, for Lowell, 1867-70; Joseph P. Thompson, for Lowell, 1873, '76, '79, '82, '85, '88.

Under a law passed March 3, 1635-36, Cambridge was designated as one of the four towns in which courts were to be held. Ipswich, Salem and Boston were the other three. When Middlesex County was incorporated, in 1643, Cambridge continued the shire-town of the county. On the 19th of October, 1652, it was ordered by the General Court that two sessions of the courts besides those held at Cambridge should be held at Charlestown. A court-house and jail were built, and the courts at some of their terms were held there until the Revolution. Precisely when the first court-house was built in Cambridge is not known. It was burned in 1671, and there is no positive knowledge of any other court-house until 1708, when one was built in Harvard Square. Another was built in Harvard Square in 1757 or 1758.

Under the administration of Andros, Captain Lawrence Hammond, of Charlestown, was appointed clerk of the courts and register of probate and of deeds.

He removed all the records from Cambridge to Charlestown, and after the Revolution of 1688 refused to surrender them. On the 18th of February, 1689-90, the General Court ordered "that Capt. Lawrence Hammond deliver to the order of the County Court for Middlesex the records of that county; that is to say, all books and files by him formerly received from Mr. Danforth, some time Recorder of that county, as also all other books of record and files belonging to said county in his custody." On the 4th of February 1690-91, the order not having been obeyed, the marshal-general was directed to arrest Mr. Lawrence. The records remained in Charlestown until 1717. On the 11th of May, 1716, the town of Cambridge passed the following vote: "Whereas the Register's office in the county of Middlesex is not kept in our town of Cambridge, which is a grievance unto us, voted that our Representative be desired to represent said grievance to the Honorable General Court and secure, if possible, the passage of an Act of said Court that said office may forthwith be removed into our town according to law, it being the shire-town in said county." The town of Charlestown objected to the removal and contested it in the General Court. Finally, as Mr. Richard Frothingham states in his "History of Charlestown," the question came squarely up before the Council on the 12th of June, 1717, whether Cambridge or Charlestown should be considered the shire-town. "Mr. Auchmuty pleaded very well for Charlestown. His discourse was very well worth hearing. Mr. Remington alleged and proved for Cambridge very pertinently and fully." On the 13th the Council decided in favor of Cambridge. The next day there was a spirited contest in the House of Deputies on the question of concurring with the Council. Sewall writes: "Could not tell by lifting up the hands—were fain to divide the House. They for Cambridge went to the north side—they for Charlestown to the south. Cambridge had forty-six—Charlestown forty-one." The registries were consequently removed to Cambridge, and that town has continued to the present time a shire of the county. The courts continued to be held in what is commonly called Old Cambridge until 1816. On the 3d of March, 1810, the General Court incorporated Thomas Handasyde Perkins, James Perkins, William Payne, Ebenezer Francis and Andrew Cragie as the "Lechmore Point Corporation." This was a land corporation, ambitious, active and thrifty, like all such before and since. One of the schemes devised to promote its interests was the removal of the county buildings to East Cambridge, where its property was situated. On the 1st of November, 1813, the company offered to convey to the county a square bounded by Otis, Second, Thorndike and Third Streets, together with a lot seventy-five feet in width across the westerly side of the square bounded by Thorndike, Second, Spring and Third Streets, and build a court-house and jail at a cost not exceeding \$24,000, on condition that they should be

used by the county when finished. The Court of Sessions, at its December term, in that year, accepted the proposal, and at the March term of the court, in 1816, a committee reported the buildings finished at a cost exceeding the proposed expenditure by the company by the sum of \$4191.78, which sum was paid by the county. The old court-house in Harvard Square was used for town and other purposes until April 19, 1841, and was afterwards removed to Palmer Street.

The court-house at East Cambridge was enlarged by the addition of two wings in 1816, and on the 27th of March, 1877, the county commissioners were authorized by the Legislature to borrow the sum of forty thousand dollars for a new building for the registry of deeds. The building, still proving too small, was moved back from its old site and enlarged by the addition of the structure now approaching completion.

The courts were first held at Concord in 1692, under the law establishing courts under the Provincial charter. Until 1719 they were held in the old meeting-house, but in that year a court-house was built which, according to the specifications, was to be thirty-four feet by twenty-six and not less than fourteen nor more than sixteen feet between joists. In 1754 a jail was built and in 1794 a new court-house, which continued in use as long as Concord remained a shire. On the 9th of November, 1775, the Charlestown sessions of the courts were ordered to be held at Concord, and Charlestown ceased to be a shire. For many years after it was settled by the Provincial Court that Cambridge should be the chief shire and the depository of the county records considerable dissatisfaction existed in that part of the county of which Concord had become a more convenient and accessible centre.

This dissatisfaction finally displayed itself in an attempt to form a new county, of which Concord should be the shire-town. After the incorporation of Worcester county, in 1734, which seemed to furnish a favorable opportunity for some decisive movements, a convention of delegates from various towns was held at Concord, whose deliberations culminated in an agreement, May 26, 1732, to petition the General Court to incorporate a new county, with Concord the shire, to include the towns of Concord, Sudbury, Framingham, Marlboro', Groton, Chelmsford, Billerica, Stow, Littleton, Bedford, Dunstable, Westford, Dracut and Northtown. The movement of course failed, and time finally dissipated the uneasiness of the towns in the central and upper parts of the county. Concord remained a shire until the 7th of May, 1867, when a law was passed providing that the session of the courts which had before that time been held in that town, should be transferred to Cambridge, and authorizing the county commissioners to sell the court-house to the town. The conveyance was made May 24, 1867.

A law was passed April 16, 1836, making Lowell a shire, to take effect on the condition that the town should, before the 1st day of March, 1837, provide a suitable court-room and a jail, the expense of which jail should not exceed \$10,000, and execute and deliver to the county a sufficient lease or other instrument to secure the use thereof for the purposes aforesaid permanently to the county. A supplementary act was passed March 24, 1837, reviewing the above act but providing that it should be void unless the city of Lowell, on or before the 1st of the ensuing April, should pay to the commissioners the sum of \$10,000, to be expended by them in the erection of a jail, and should also before said day finish the court-room then begun, and make the lease or conveyance required in the act of 1836. Until 1855 no registry of deeds was established at Lowell. On the 24th of March in that year a law was passed providing that Lowell, Dunstable, Tyngsboro, Dracut, Tewksbury, Billerica, Chelmsford, Carlisle, Wilmington and Westford should constitute the Northern Registry District of Middlesex County. It also provided that the Governor should appoint on or before the 1st day of July, a register of that district, to hold office until the November election of that year. On the 23d of March, 1886, the county commissioners were authorized to have all records prior to said July 1st copied and deposited in the Northern Registry.

The list of courts will of course be incomplete without a reference to the Police and District Courts in different parts of the county. Of Police Courts there are four—

Lowell: with Samuel P. Hadley, justice; John J. Pickman and John F. Frye, special justices; James F. Savage, clerk.

Marlborough: with Edward F. Johnson, justice; James W. McDonald and Wm D. Burdett, special justices; James F. J. Otterson, clerk.

Newton: with John C. Kennedy, justice; Henry H. Mather and Edward H. Mason, special justices; Edward W. Cate, clerk.

Somerville: with Isaac Story justice; Charles G. Pope and John Haskell Butler, special justices; Herbert A. Chapin, clerk.

Of District Courts there are seven—

First Northern Middlesex, held at Ayer, with jurisdiction in Ayer, Groton, Pepperell, Townsend, Ashby, Shirley, Westford, Littleton and Boxborough. Levi Wallace, justice; John Spaulding and Warren H. Atwood, special justices; George W. Sanderson, clerk.

First Southern Middlesex, held at Framingham, with jurisdiction in Ashland, Framingham, Holliston, Sherborn, Sudbury and Wayland. Willis A. Kingsbury, justice; Lucius H. Wakefield and Walter Adams, special justices; Joseph H. Ladd, clerk.

First Eastern Middlesex, held at Malden and Wakefield, with jurisdiction in North Reading, Reading, Stoneham, Wakefield, Melrose, Malden, Everett and Medford. John W. Pettingill, justice; Thomas S. Barlow and Solon Bancroft, special justices; William N. Tyler, clerk.

Second Eastern Middlesex, held at Waltham, with jurisdiction in Waltham, Watertown and Weston. Enos T. Lane, justice; Henry S. Milton and Samuel P. Abbott, special justices; Albert O. Delano, clerk.

Third Eastern Middlesex, held at Cambridge, with jurisdiction in Cambridge, Arlington and Belmont. Chester F. Sanger, justice; Samuel W. McDaniel and Jabez Fox, special justices; Emerson W. Law, clerk.

Fourth Eastern Middlesex, held at Woburn, with jurisdiction in Wilmington, Woburn, Winchester and Burlington. Parker L. Converse, justice; George S. Littlefield and Charles D. Adams, special justices; Edward E. Bond, clerk.

Central Middlesex, held at Concord, with jurisdiction in Acton, Bedford, Carlisle, Concord, Lincoln, Maynard, Stow and Lexington. John

S. Keyes, justice; Charles Thompson and Robert P. Clapp, special justices; no clerk.

The officers of the county in 1889 were as follows:

Judge of Probate and Insolvency: George M. Brooks, of Concord. Register of Probate and Insolvency: Joseph H. Tyler, of Winchester. Assistant Register of Probate and Insolvency: Samuel H. Folsom, of Winchester. Sheriff: Henry G. Cushing, of Lowell. Clerk of Courts: Theodore C. Hurd, of Cambridge. Assistant Clerks of Courts: John L. Ambrose, of Somerville; Wm. C. Billingham, of Malden. Treasurer: Joseph O. Hayden, of Malden. Registers of Deeds: Northern District, Joseph L. Thompson, of Lowell; Southern District, Charles B. Stevens, of Cambridge. County Commissioners: Wm. S. Frost, of Marlborough; J. Henry Read, of Westford; Samuel O. Upham, of Waltham. Special Commissioners: Edward E. Thompson, of Woburn; Lyman Pike, of Stoneham. Commissioners of Insolvency: Frederick T. Greenhalge, of Lowell; John C. Kennedy, of Newton; George J. Burns, of Ayer. Masters in Chancery: Walter Adams, of Framingham; Samuel L. Powers, of Newton; Joseph H. Tyler, of Winchester; Charles H. Conant, of Lowell; Gilbert A. A. Pevey, of Cambridge; Robert P. Clapp, of Lexington; Wm. H. Bent, of Lowell. Trial Justices: James T. Joslin, of Hudson; William Nutt, of Natick; George L. Hammenway, of Hopkinton.

The sessions of the Supreme Judicial, Superior and Probate Courts, as now provided, by law are:

Supreme Judicial Court: Law Term for Barnstable, Middlesex, Norfolk and Suffolk, at Boston on the first Wednesday of January in each year. Jury Terms at Lowell on the third Tuesday of April, and at Cambridge on the third Tuesday of October.

Superior Court: Civil Business, at Lowell on the second Monday of March and the first Monday of September; and at Cambridge on the first Monday of June and the second Monday of December. Criminal Business, at Cambridge on the second Monday of February and the first Monday of June; and at Lowell on the third Monday of October.

Probate Court: at Cambridge on the first, second and fourth Tuesdays; and at Lowell on the third Tuesday of every month except August.

The records of admissions to the bar of Middlesex County is very incomplete. A perfect record can only be obtained by searching the records of the different courts. Such a search is now being made under the direction of the county clerk, but the following partial list of admissions is given as the best that can at present be obtained:

Julian Abbot, Dec., 1839.	Clark A. Batchelder, April, 1873.
Caleb F. Abbott, Sept., 1835.	Ellbridge Gerry Austin, Oct., 1834.
James C. Abbott, June, 1849.	Henry D. Austin, Sept., 1842.
John W. P. Abbott, June, 1839.	William Austin, Nov., 1843.
Henry Adams, June, 1805.	Luman W. Aldrich, July, 1878.
Josiah Adams, June, 1807.	George Bancroft, April, 1842.
Shubael P. Adams, Dec., 1848.	John W. Bacon, June, 1846.
John F. K. Adams, Sept., 1851.	Loammi Baldwin, Sept., 1843.
John R. Adams, Sept., 1821.	Stephen Bean, March, 1844.
Joel Adams, Sept., 1823.	James O. Boswell, June, 1860.
John E. Avery, June, 1872.	Itamar W. Beard, Sept., 1844.
Henry Adams, Sept., 1826.	Ninian C. Betton, Nov., 1819.
Joseph Adams, Sept., 1826.	Charles C. Barton, April, 1873.
Wm. George Alden, March, 1872.	Charles Bemis, Oct., 1832.
Hiram A. Alger, June, 1850.	Alpheus W. Buell, March, 1876.
Alpheus Brown Alger, June, 1877.	Isaac Benis, Jr., Oct., 1821.
Edwin A. Alger, Sept., 1845.	Leonard Blake, May, 1875.
John W. Allard, Dec., 1883.	Wm. P. Barry, July, 1885.
John H. Appleton, July, 1878.	Alpheus Bigelow, Oct., 1821.
John H. Atwood, Oct., 1884.	George T. Bigelow, Dec., 1833.
Amos Allen, Oct., 1817.	Wm. P. Bigelow, Oct., 1820.
Seth Ames, Oct., 1830.	Joseph O. Burdett, April, 1873.
Elgin A. Angell, Sept., 1775.	Tyler Bigelow, June, 1824.
Isaac Angell, June, 1872.	Edward C. Billings, Oct., 1855.
Wm. T. Andrews, Oct., 1822.	Charles R. Blaisdell, Oct., 1859.
Benjamin H. Andrews (no date).	Harrison C. Blaisdell, March, 1846.
Christopher C. Andrews, Oct., 1850.	Frank T. Benner, June, 1877.
Arthur W. Austin, Sept., 1828.	Benjamin F. Blood, March, 1843.
Nathaniel Austin, Jr., June, 1833.	Francis E. Bond, Dec., 1831.

- Charles T. Bond, July, 1880.
 Arthur P. Bonney, Sept., 1848.
 James Bowdoin, Nov., 1819.
 Francis Brinley, Jr., March, 1825.
 William Brigham, Oct., 1834.
 Elias Bullard, Oct., 1828.
 Edward Blake, Oct., 1831.
 James O. Boswell, June, 1860.
 Benjamin F. Butler, Sept. 1840.
 Caleb Butler, Oct., 1819.
 Ephraim Buttrick, March, 1825.
 George A. Butterfield, Sept., 1813.
 Anson Burlingame, Sept., 1846.
 Willard Brown, March, 1880.
 William Locke Brown, June, 1850.
 Alphens B. Brown, Sept., 1839.
 Wm. L. Brown, June, 1850.
 Samuel R. Brown, Oct., 1841.
 Charles Burrell, Sept., 1858.
 Nathan Brooks, Oct., 1877.
 Geo. Merriek Brooks, Sept., 1847.
 Harry A. Brown, Feb., 1881.
 Charles H. Bordis, June, 1862.
 George J. Burns, July, 1878.
 George A. Bruce, April, 1866.
 Charles M. Bennett, April, 1869.
 Benjamin E. Bond, Oct., 1870.
 Charles F. Blandin, Oct., 1870.
 George H. Ball, June, 1871.
 John Cahill, Dec., 1874.
 George H. Clement, Jan., 1888.
 James H. Carmichael, July, 1880.
 Z. B. Caverly, Dec., 1846.
 Andrew J. Carr, April, 1852.
 Jonathan Chapman, Jr., Oct., 1830.
 Wm. L. Chaplin, June, 1829.
 Henry M. Chamberlain, Dec., 1832.
 John M. Cheney, Sept., 1828.
 Albe C. Clark, Oct., 1832.
 Hobart Clark, Dec., 1808.
 Ira Cleveland, Oct., 1832.
 Edwin Coburn, March, 1844.
 Lemuel D. Cole, Feb., 1886.
 Felix Conlan, July, 1880.
 Joshua P. Converse, June, 1847.
 Charles Cowley, April, 1856.
 Charles C. Colton, Sept., 1840.
 Horatio G. F. Corlies, Sept., 1834.
 Timothy A. Crowley, Oct., 1860.
 Timothy D. Crocker, Dec., 1847.
 Francis B. Crowninshield, Octbr., 1833.
 Francis P. Currau, July, 1885.
 Peter J. Carey, June, 1883.
 Isaac Jones Cutler, Oct., 1855.
 Luther Stearns Cushing, March, 1827.
 Alfred D. Chandler, Dec., 1869.
 James P. Campbell, March, 1876.
 Edward W. Cate, July, 1878.
 John S. Cram, June, 1875.
 John Conlan, July, 1878.
 Wm. F. Courtney, July, 1878.
 Timothy A. Crowley, Oct., 1860.
 Charles H. Conant, March, 1873.
 James C. Catter, Jan., 1874.
 Samuel Dexter, Oct., 1821.
 E. H. Derby, Oct., 1831.
 John Devereux, Oct., 1823.
 Chas. De Blanc, Jr., Dec., 1848.
 James Dana, Dec., 1833.
 Benjamin Dean, Oct., 1845.
 Wm. N. Davenport, June, 1883.
 Robins Dinmore, Sept., 1845.
 James Dinmore, April, 1846.
 Epes S. Dixwell, Oct., 1835.
 Henry R. Dennis, June, 1836.
 William Draper, Sept., 1856.
 Alexander Dustin, Dec., 1854.
 Thomas Dwight, Dec., 1832.
 Richard J. Dwyer, Jan., 1888.
 Joshua E. Dodge, Oct., 1877.
 Warren P. Dudley, Oct., 1877.
 Isaac S. Daley, July, 1878.
 William H. Drury, June, 1872.
 Samuel C. Eastman, April, 1859.
 Thos. J. Enwright, Oct., 1884.
 Luke Eastman, Oct., 1829.
 Samuel C. Eastman, April, 1859.
 Pierce Evans, Feb., 1874.

The above list is not only incomplete so far as admissions to the bar are concerned, but it is by no means confined to lawyers living or intending to settle within the county. It is presented in this chapter, rather than in that on the Bench and Bar, for the reason that it includes many who never intended to practice within the county, but who were admitted at its different courts on account of their proximity to the Dane Law School at Cambridge, or the private offices in which they had pursued their studies.

There is little that can be added to this sketch of Middlesex County, which has already extended beyond the limits assigned to it in these volumes. The special industries, many of them of large proportions, which abound in the county, the various charitable and reformatory institutions established within its boundaries, the highways and bridges laid out and built under county supervision, will all be referred to in the histories of the towns, to which this sketch may be considered a preface. The following chapter though entitled a sketch of the Bench and Bar, is separated from this by only an arbitrary line, and may properly be considered the second chapter of the History of the County.

CHAPTER II.

BENCH AND BAR.

BY WILLIAM T. DAVIS.

IN the earlier days of Middlesex County the bar was divided into two classes, barristers and attorneys, and this division continued until 1836, though after 1806, under a rule of court, counselors were substituted for barristers. In the earliest days the lawyers were chiefly uneducated men, and of the judges few were educated to the law. Edward Randolph wrote home to England in January 1687-88, "I have wrote you of the want we have of two or three honest attorneys (if any such thing in nature); we have but two; one is West's creature, come with him from New York and drives all before him. He also takes extravagant fees, and for want of more the country cannot avoid coming to him, so that we had better be quite without them than not to have more." These two attorneys were very likely George Farwell and James Graham, the former of whom was clerk of the Superior Court, and until June 20, 1688, attorney-gen-

eral, when he was succeeded by the latter. Little is known of the barristers before 1768. In that year there were twenty-five barristers in Massachusetts. Of these, eleven were in Suffolk—Richard Dana, Benjamin Kent, James Otis, Jr., Samuel Fitch, William Read, Samuel Swift, Benjamin Gridley, Samuel Quincy, Robert Auchmuty, Jonathan Adams and Andrew Cazeneau. Five were in Essex—Daniel Farnham, William Pynchon, John Chipman, Nathaniel Peaselee Sergeant and John Lowell. Two were in Worcester—James Putnam and Abel Willard. One was in Middlesex—Jonathan Sewall. Two were in Plymouth—James Hovey and Pelham Winslow. Three were in Boston—Samuel White, Robert Treat Paine and Daniel Leonard, and Hampshire had one, John Worthington. According to Washburn's "History of the Judiciary of Massachusetts," from whom the writer quotes, sixteen other barristers were made before the Revolution—John Adams and Sampson Salter Blowers, of Boston; Moses Bliss and Jonathan Bliss, of Springfield; Joseph Hawley, of Northampton; Zephaniah Leonard, of Taunton; Mark Hopkins, of Great Barrington; Simeon Strong, of Amherst; Daniel Oliver, of Hardwick; Francis Dana, of Cambridge; Daniel Bliss, of Concord; Joshua Upham, of Brookfield; Shearjashub Bourne, of Barnstable; Samuel Porter, of Salem; Jeremiah D. Rogers, of Littleton, and Oakes Angier, of Bridgewater.

It is by no means generally known what constituted a barrister in New England. The term is derived from the Latin word *barra*, signifying bar, and was applied to those only who were permitted to plead at the bar of the courts. It was necessary in England that a barrister before admission should have resided three years in one of the Inns of Court, if a graduate of either Cambridge or Oxford, and five years if not. These Inns of Court were the Inner Temple, the Middle Temple, Lincoln's Inn and Gray's Inn. Up to the time of the Revolution the English custom was so far followed as to make a practice of three years in the Inferior Courts a qualification for admission as barrister. John Adams says in his diary that he became a barrister in 1761, and was directed to provide himself with a gown and bands and a tie-wig, having practiced according to the rules three years in the Inferior Courts.

After the Revolution the appointment of barristers continued, and the following entry has been found by the writer in the records of the Superior Court of Judicature:

"Suffolk SS. Superior Court of Judicature at Boston, third Tuesday of February, 1781, present Wm. Cushing, Nathaniel P. Sargeant, David Sewall and James Sullivan, Justices: and now at this term the following rule is made by the Court and ordered to be entered, viz.: whereas, learning and literary accomplishments are necessary as well to promote the happiness as to preserve the freedom of the people, and the learning of the law, when duly encouraged and rightly directed, being as well peculiarly subservient to the great and good purpose aforesaid as promotive of public and private justice; and the Court being, at all times, ready to bestow peculiar marks of approbation upon the gentlemen of the bar who, by a close application to the study of the science they pro-

cess, by a mode of conduct which gives a conviction of the rectitude of their minds and a fairness of practice that does honor to the profession of the law, shall distinguish as men of science, honor and integrity. Do order that no gentleman shall be called to the degree of barrister until he shall merit the same by his conspicuous bearing, ability and honesty; and that the Court will, of their own mere motion, call to the bar such persons as shall render themselves worthy as aforesaid, and that the manner of calling to the bar shall be as follows: The gentleman who shall be a candidate shall stand within the bar; the chief justice, or in his absence the senior justice, shall, in the name of the Court, repeat to him the qualifications necessary for a barrister-at-law, shall let him know that it is a conviction in the mind of the Court of his being possessed of those qualifications that induce them to confer the honor upon him; and shall solemnly charge him so to conduct himself as to be of singular service to his country by exerting his abilities to the defence of her Constitutional freedom; and so to demean himself as to do honor to the court and bar."

The act establishing the Supreme Judicial Court, July 3, 1782, provided that the court should and might from time to time make, record and establish all such rules and regulations with respect to the admission of attorneys ordinarily practicing in the said court, and the creating of barristers-at-law. The following rule was adopted and entered on the records of that court:

"Suffolk SS. At the Supreme Judicial Court at Boston, the last Tuesday of August, 1783, present William Cushing, Chief Justice; and Nathaniel P. Sargeant, David Sewall and Increase Sumner, Justices, ordered that barristers be called to the bar by special writ, to be ordered by the Court, and to be in the following form:

"COMMONWEALTH OF MASSACHUSETTS.

"To A. B., Esq., of ———, Greeting: We, well knowing your ability, learning and integrity, command you that you appear before our Justices of our Supreme Judicial Court next to be holden at ———, in and for our county of ———, on the ——— Tuesday of ———, then and there in our said Court to take upon you the state and degree of a Barrister-at-Law. Hereof fail not. Witness ———, Esq., our Chief Justice at Boston, the ——— day of ———, in the year of our Lord ———, and in the ——— year of our Independence ———. By order of the Court, ———, Clerk."

which writ shall be fairly engrossed on parchment and delivered twenty days before the session of the same Court by the Sheriff of the same county to the person to whom directed, and being produced in Court by the Barrister and there read by the Clerk and proper certificate thereon made, shall be redelivered and kept as a voucher of his being legally called to the bar; and the Barristers shall take rank according to the date of their respective writs."

It is probable that no barristers were called after 1781, and in 1806, by the following rule of court, counsellors seem to have been substituted in their place:

"Suffolk SS. At the Supreme Judicial Court at Boston for the counties of Suffolk and Nantucket, the second Tuesday of March, 1806, present Francis Dana, Chief Justice, Theodore Sedgwick, George Thatcher and Isaac Parker, Justices, ordered: First, No Attorney shall do the business of a Counsellor unless he shall have been made or admitted as such by the Court. Second, All Attorneys of this Court, who have been admitted three years before the setting of this Court, shall be and hereby are entitled to all the rights and privileges of such. Third, No Attorney or Counsellor shall hereafter be admitted without a previous examination, etc."

In 1836 (Chapter 88, Section 23 of the Revised Statutes) it was provided by law that "every person admitted to practice in any court may practice in every other court in the state, and there shall be no distinction of counsellor and attorney." The rule of court above mentioned, adopted by the Superior Court of Judicature in 1781, was probably made necessary by the new order of things brought about

by the Revolution, and was probably only a new declaration concerning barristers of a rule which had existed in the Provincial courts. It has been thought by some that until 1781 the English rule prevailed requiring a probation in one of the Inns of Court, but it is absolutely certain that many of the barristers of 1767, a list of whom has been given, had never been in England.

Among those on the bench in the Massachusetts Colonial and Provincial periods, as has already been said, few of the judges were trained to the law. Up to the Revolution only four judges educated as lawyers had been appointed to the bench of the Superior Court of Judicature—Benjamin Lynde, Paul Dudley, Edmund Trowbridge and William Cushing. Of these, Edmund Trowbridge alone was a Middlesex County man. Mr. Trowbridge was born in Newton in 1709, and graduated at Cambridge in 1728. In 1749 he was appointed by Governor Shirley Attorney-General, and in 1767 a justice of the Superior Court, resigning his office in 1772. He presided at the trial of English soldiers charged with murder at the Boston massacre and won great credit for his ability and impartiality. Though a Loyalist, he held the confidence and respect of all parties until his death, which occurred at Cambridge, April 2, 1783. It seems surprising at this day, when the highest and profoundest legal attainments are sought for the bench, to find how little legal knowledge the judges of the highest courts in the early days must have possessed, and how strikingly unfitted by temperament and education many of them must have been for the occupation in which they were engaged. William Stoughton was the chief justice of the Court of Oyer and Terminer, created as a special tribunal "assigned to enquire of, hear and determine for the time all and all manner of felonies, witchcraft, crimes and offences how or by whomsoever done, committed or perpetrated within the several counties of Suffolk, Essex, Middlesex or, either of them." Its special mission was to try the cases of witchcraft then pending in Essex. Mr. Stoughton was born in Dorchester in 1631 and graduated at Harvard in 1650. He was educated for the ministry, became a fellow at Oxford and preached in England and in New England after his return. In 1668 he preached the annual election sermon, and, though never settled, continued in the ministry until 1671. Nathaniel Saltonstall, one of the associate justices of the court, was a military man, but declined to act, and was succeeded by Jonathan Curwin, a merchant, and the other justices were Samuel Sewall, a clergyman; John Richards, a merchant; Waitstill Winthrop, a physician; Peter Sergeant, probably a merchant, and Bartholomew Gedney, a physician. The strong men on the bench were undoubtedly Stoughton and Sewall, and on them, more than the others, the responsibility must rest for the barbarous results of the trials in which they were engaged.

Of the Court of Assistants, which existed during the Colony of Massachusetts, there were some who, as Middlesex men, should be mentioned in this narrative.

THOMAS DUDLEY, an assistant in 1635, '36, '41, '42, '43, '44, was one of the founders of Cambridge in 1631. He remained there, however, only a few years, and after a short residence in Ipswich became a resident of Roxbury in 1636, before the county of Middlesex was incorporated. He was Deputy-Governor from 1629 to 1634, from 1637 to 1640, from 1646 to 1650, and from 1651 to 1653. He was also Governor in 1634, 1640, 1645 and 1650; commissioner of the four colonies of Plymouth, Massachusetts, New Haven and Connecticut in 1643, 1647 and 1649. While in Cambridge Mr. Paige, in his history of that town, states that he lived on the northwesterly corner of Dunster and South Streets. He died in Roxbury, July 31, 1653.

SIMON BRADSTREET, assistant from 1630 to 1678, was also one of the original founders of Cambridge, but became a resident of Andover in 1644. He married, in England, Ann, daughter of Thomas Dudley, and while in Cambridge, as Mr. Paige also states, lived on the easterly corner of Brighton Street and Harvard Square. He died in Salem, March 27, 1697.

JOHN HAYNES, an assistant in 1634 and 1636, came to New England in 1633, and lived a short time in Cambridge on the westerly side of Winthrop Square, removing thence to Connecticut in 1637, of which State he was the first Governor. He was also Governor of Massachusetts Colony in 1635. He died in 1654.

ROGER HARLAKENDEN, an assistant from 1636 to 1638, came to Cambridge in 1635 and lived on the Dudley estate, where he died of small-pox, November 17, 1638.

INCREASE NOWELL, who for many years was an assistant, came to New England with Winthrop in 1630 and was secretary of the Colony from 1636 to 1649. He was a founder of the church in Charlestown in 1632, and died in Charleston, November 1, 1655.

HERBERT PELHAM, an assistant from 1645 to 1649, though he remained in the country only a few years, was during his stay a Middlesex man. His grandfather, Edward Pelham, of Hastings, in Sussex England, was a member of Parliament, who was admitted at Gray's Inn in 1563, called to the bar in 1579, knighted and made Lord Chief Baron of the Exchequer of Ireland, and died in 1606. His son, Herbert Pelham, of Michelham Priory, was admitted to Gray's Inn in 1588, and his son, the emigrant to New England, bore his father's arms in the Hastings muster-roll in 1619. The last Herbert, the subject of this short sketch, born in 1601, graduated at Oxford in 1619 and came to Massachusetts in 1638 and settled in Sudbury. He was the first treasurer of Harvard College, and returned to England in 1649, where he died in 1673. His will, proved in London, March 13,

1677, calls him of Bewers Hamlet, Essex, and speaks of Thomas Bellingham as the husband of his sister. By a first wife he had a son, Edward, and a daughter, Penelope, who married, in 1651, Governor Josiah Winslow, of the Plymouth Colony. The son, Edward, married a daughter of Governor Benedict Arnold, of Rhode Island, and died in Newport in 1720, leaving three children—Elizabeth, Edward and Thomas. Mr. Pelham, the assistant, married for a second wife Elizabeth, widow of Roger Harlakenden, who was also an assistant from 1634 to 1638, inclusive. The Pelham house in Hastings, built in 1611, was standing in 1862, the oldest house in the town.

FRANCIS WILLOUGHBY, another assistant, was the son of Colonel William Willoughby, and was born in Portsmouth, England. He was admitted a freeman at Charlestown August 22, 1638, and was in public service almost continuously until his death, which occurred April 4, 1671. He was selectman of his adopted town seven years, was the representative two years, was assistant four years and Deputy-Governor from 1665 until his death. He was a successful merchant, leaving at his death an estate valued at about £4000, of which he gave 300 acres of land to the schools of Charlestown.

DANIEL GOOKIN, another Middlesex assistant, was in various ways a prominent man. He was born in Kent, England, about 1612, and died in Cambridge March 19, 1687. He emigrated to Virginia from England in 1621 with his father, and came to New England in 1644. He was a captain in the militia, a deputy to the General Court from Cambridge and assistant from 1652 until 1686 inclusive. He was at different times superintendent of the Indians, licenser of the press and marshal-general of the Colony. He was the author of "Historical Collections of the Indians of Massachusetts," which were published by the Massachusetts Historical Society in 1792. He married, in 1639, in England, Mary Dolling, of St. Dunstan in the West, London.

SIMON WILLARD, who was an assistant from 1654 to 1675, was born in Kent, England, about 1605 and died while holding court at Charlestown April 24, 1676. He came to New England in 1634 and lived many years in Concord, Lancaster and Groton, finally removing to Salem, of which place he was a resident at the time of his death. He was connected with the militia and wore the title of major.

RICHARD RUSSELL, an assistant from 1659 to 1676, came to New England from Hereford, in Herefordshire, England, and was admitted a freeman at Charlestown in 1640. He was a selectman of that town twenty-six years, a deputy to the General Court ten years, an assistant sixteen years, Speaker of the House of Deputies five years and twenty years the colonial treasurer. He was a merchant by profession and accumulated a fortune that was large for the times. He died May 14, 1676, giving by his will £100 to his church, £50 towards a parsonage house,

£200 to the town for the benefit of the poor and £100 to Harvard College. By a wife, Maud, whom he probably married in New England, he had James, born in 1640; Daniel, who graduated at Harvard in 1669 and died in Charlestown after his acceptance of an invitation to become its settled minister January 4, 1678; Catharine, who married William Roswell, of Connecticut; Elizabeth, who married Nathaniel Graves and John Herbert.

THOMAS DANFORTH, an assistant from 1659 to 1678, was the son of Nicholas Danforth, of Cambridge, and was born in Suffolk, England, in 1622 and came to Massachusetts with his father in 1631. He was admitted a freeman in 1643 and in 1657 was a deputy to the General Court from Cambridge. In 1659 he was promoted from assistant to Deputy-Governor and remained in office until 1686. In 1679 he was appointed by the General Court president of the Province of Maine, and a General Court for that Province was held at York in 1681. He continued in that office until the arrival of Dudley, in 1686, and after the old charter was resumed, upon the retirement of Andros, he was again made Deputy-Governor and continued in office until the union of the Colonies, in 1692, and the establishment of the Province. Under the Provincial charter he was made one of the Judges of the Superior Court of Judicature, and continued on the bench until his death, which occurred at Cambridge November 5, 1699.

PETER BULKLEY, an assistant from 1677 to 1684, was the son of Rev. Peter Bulkley, of Concord, and was born August 12, 1643. He graduated at Harvard in 1660, and, though educated for the ministry, became an active man in the affairs of the Massachusetts Colony. He was a deputy to the General Court from Concord from 1673 to 1676, and in the latter year was Speaker. He was one of the judges of the Superior Court under Dudley at Concord May 24, 1688. He married, April 16, 1667, Rebecca, daughter of Lieutenant Joseph Wheeler, who, as his widow, married Jonathan Prescott. Peter Prescott a son of Jonathan, born April 17, 1709, dealt largely in wild lands in New Hampshire, and gave the name to 'Peterboro,' in that State. He commanded a company at Crown Point in 1758, and before the Revolution removed to Nova Scotia, where he was appointed clerk of the courts, and died in 1781.

THOMAS FLINT, an assistant from 1642 to 1651 and in 1653, came from Matlock, in Derbyshire, England, and settled in Concord in 1638. He was a man of wealth for New England, and is said to have brought with him £4000. He was a representative to the General Court four years, as well as being an assistant. It was said of him that he was "a sincere servant of Christ who had a fair yearly revenue in England, but having improved it for Christ by casting it into the common treasury, he waits upon the Lord for doubling his talent, if it shall seem good unto him so to do, and the meantime spending his person for

the good of his people in the responsible office of magistrate."

JAMES RUSSELL, an assistant from 1680 to 1686 inclusive, was the son of Richard Russell, who has already been mentioned in the list of assistants. He was born in Charlestown, October 4, 1640, and married a daughter of John Haynes, who was Governor of the Colony from May 5, 1635, to May 25, 1636, and was succeeded by Henry Vane. Mr. Russell was a deputy to the General Court, one of the Council of Safety at the deposition of Andros, and colonial treasurer from May 19, 1680, to May 11, 1686. Under the Provincial charter he was named as one of the Council. He died April 28, 1709.

On the 7th of October, 1691, the Massachusetts Colony ceased to exist, as on that date a new charter passed the great seal embracing Massachusetts, Plymouth, Maine, Nova Scotia, Nantucket and Martha's Vineyard in a new government by the name of the "Province of Massachusetts Bay." Under this charter, which reached New England in 1692, the General Court was authorized to establish courts with power to try all kinds of civil and criminal causes. Before, however, the General Court had met under the new charter, Sir William Phipps, who had been appointed the first Governor of the Province, created the special Court of Oyer and Terminer, already referred to, for the purpose of trying persons charged with witchcraft. The judges commissioned for this court June 2, 1692, were only a short time in service, and in August or September of the same year the court was dissolved. None of the judges were Middlesex men, and consequently they have no place in this record.

The courts, as has been already mentioned, permanently established under the charter were the Superior Court of Judicature, the Inferior Court of Common Pleas, a Court of Chancery, and the lower courts of Quarter Sessions of the Peace and of Justices of the Peace. The Superior Court of Judicature consisted at first of William Stoughton, chief justice; Thomas Danforth, Waitstill Winthrop, John Richards and Samuel Sewall, associates. Of these, Thomas Danforth, the only Middlesex man, has already been sufficiently referred to as one of the Colonial Court of Assistants.

JOHN LEVERETT, a justice on the bench of the Superior Court from 1702 to 1708, who was for many years a resident of Middlesex County, was born in Boston, August 25, 1662. He was a grandson of John Leverett, who was from 1671 to 1673 Deputy-Governor of the Massachusetts Colony. He graduated at Harvard in 1680 and became president of the college on his retirement from the bench, which office he held until his death, which occurred on the 2d of May, 1721. He lived in Cambridge some years before his accession to the presidency of the college, and represented that town in 1700 in the General Court, of which he was Speaker. For some years before his appointment to the college he held the offices of judge

of the Superior Court, judge of Probate and counselor.

JONATHAN REMINGTON, a judge of the Superior Court from 1733 to 1745, was born in Cambridge and graduated at Harvard in 1696. Before his accession to the Superior bench he had been a judge of the Common Pleas for Middlesex from 1715 to 1733 and judge of Probate for that county from 1725 to 1731. He died September 20, 1745.

THOMAS GREAVES, a judge of the Superior Court in 1738, was born in Charlestown in 1684 and graduated at Harvard in 1703. He studied and practiced medicine in the place of his birth. Before his appointment to the Superior Court he acted in 1731 as special judge of the Middlesex Court of Common Pleas, in 1735 as special judge of the same court in Suffolk, and in 1737 as special judge of the Superior Court for Essex. In 1733 he was appointed a judge of the Common Pleas Court, on which bench he remained until his appointment to the Superior Court in 1738. In 1739, after leaving the Superior Court, having been superseded by Stephen Sewall on the 16th of May in that year, he was reappointed to the Common Pleas and remained on its bench until his death, which occurred June 19, 1747.

CHAMBERS RUSSELL, son of Daniel Russell, a judge on the bench of the Superior Court from 1752 to 1766, was born in Charlestown in 1713, and graduated at Harvard in 1731. He settled in Concord, in that part of the town which afterwards became a part of Lincoln, and remained a resident of the new town after its incorporation in 1754. He was appointed a judge of the Court of Common Pleas in 1747 and continued on that bench until April 6, 1752, when he was commissioned to the Superior Court. In 1747 he was also appointed judge of vice-admiralty over New Hampshire, Massachusetts and Rhode Island, and held the office until his death, which occurred at Guilford, England, November 24, 1767. The family of which Mr. Russell was a member was a distinguished one during many generations. He was the great-grandson of Richard Russell, already referred to as one of the Court of Assistants from Middlesex County during the life of the Colony. James Russell, a brother of Chambers, who died in 1798, wrote as follows to his son, Thomas Russell, an eminent merchant of Boston: "Our family has great reason to bless God that the reputation of it has been preserved. You are the fifth generation. In the year 1646 Richard Russell entered into public life. From that time to the present I may say the family have had every office of profit and honor which the people could give them, in the town of Charlestown, in the county of Middlesex, and the State of Massachusetts; and I do not find that there was any one left out of office for misbehavior."

EDMUND TROWBRIDGE, who was a judge of the Supreme Court from 1767 to 1772, has already been referred to.

A list of the judges of the Court of Common Pleas during the life of the Province and during the Revolution has been already given in the preceding chapter, but some special mention of each should be made in a sketch of the Bench and Bar.

JOHN PHILLIPS, commissioned a judge of the court December 7, 1692, and remaining on the bench until 1715, was born in Charlestown in 1631, and died March 20, 1725. He was also judge of the Admiralty Court, treasurer of the Province, and from 1689 to 1715 colonel of a regiment. He was a member of the House of Representatives from 1683 to 1686, and at the time of the Revolution was one of the Committee of Safety.

JAMES RUSSELL, judge of the Common Pleas Court from December 5, 1692, to 1707, has already been sketched as one of the Colonial Court of Assistants.

JOSEPH LYNDE, a judge of the same court from Dec. 7, 1692, to 1719, was born in Charlestown in June, 1636, and died January 29, 1727. It is doubtful whether he was ever, as stated by Washburn, one of the assistants under the Colonial charter. Under the charter of the Province he was named as one of the counselors, and previous to that had been one of the Committee of Safety in 1689, after the deposition of Andros.

SAMUEL HAYMAN, also one of the judges of the court at its organization, Dec. 7, 1692, continued on the bench until 1702. He was born in Charlestown, but probably removed to Watertown after his appointment to the bench. He had been a representative to the Colonial General Court and a member of the Provincial Council. It has been noticed by the writer that the surname Hayman has been corrupted into Heman, and in that form has been often used as a Christian name by persons connected with the Hayman family.

JONATHAN TYNG, a judge from July, 1702, to 1719, was the son of Edmund Tyng, and was born in 1642. He had been a member of the Councils of Dudley and Andros, and received his commission from Dudley when he came into power in 1702. He lived in Woburn, and died January 19, 1724. It is stated by Washburn, erroneously, that Edmund Tyng was the ancestor of the families of that name in New England. Rev. Dr. Stephen Higginson Tyng, of Newburyport and New York, Rev. Stephen Higginson Tyng, Jr., of New York, and Rev. Dr. Dudley Atkins Tyng were the sons and grandsons of Dudley Atkins Tyng, a distinguished lawyer of Newburyport, who was the son of Dudley Atkins, and a descendant of Governor Dudley. He changed his name on his inheritance of the estates of James Tyng, of Tyngsborough, and has been well known as the reporter of the Supreme Judicial Court and editor of seventeen volumes of the reports, covering a period from September, 1804, to March, 1822.

FRANCIS FOXCROFT, judge of the Court of Common Pleas from 1707 to 1719, and judge of Probate

from 1708 to 1725, was born in Cambridge in 1658. He was a commissioned judge under Andros, and opposed to the Revolution of 1688, maintained his opposition to the new order of things until he was finally rewarded by Dudley by a seat on the bench. He died in Cambridge Dec. 31, 1727.

JONATHAN REMINGTON, who was judge from 1715 to 1733, has already been sufficiently referred to as a judge of the Superior Court.

JONATHAN DOWSE, a judge of the court from 1713 to 1741, was a Charlestown man, and a graduate at Harvard in 1715. For many years he was prominent in town affairs. He was one of a committee of eleven to build a new meeting-house in his native town in 1716, and in 1717, when a motion was made in town-meeting "to have the lecture at Charlestown begin an hour sooner than heretofore," he was appointed, with Michael Gill, a committee "to treat with the ministers, and to signify to them the town's consent." Little is known of Judge Dowse, and the year of his death is unknown to the writer.

CHARLES CHAMBERS, who was judge from 1719 to 1739, was the grandfather of Chambers Russell, already alluded to as a judge of the Superior Court. He was a resident of Charlestown, and held his seat on the bench until his resignation, in the year above mentioned.

FRANCIS FULLAM, a judge from 1719 to 1755, was a resident of Weston, and besides presiding as chief justice on the bench of this court, he was a colonel in the militia and a member of the Council. It is interesting to observe how many of the judges of the courts during the Provincial period were military men. It is not uncommon in our own day to find on the bench men who have, before receiving their commission, been in active military life, but none ever continue in the service after entering on their judicial duties. Chief Justice Wigham, of our Superior Court, and Chief Justice Bigelow, of the Supreme Judicial Court, were at one time one a captain and the other a colonel in the Massachusetts Militia, and Judge Devens, of the Supreme Court, if not a militia officer, was at least in the volunteer service during the War of the Rebellion. Judge Fullam died Jan. 18, 1758, at the age of eighty-seven.

SAMUEL DANFORTH, son of Rev. John Danforth and great-grandson of Nicholas Danforth, the family ancestor, was born in Dorchester Nov. 12, 1696, and graduated at Harvard in 1715. He removed to Cambridge in 1724 as a schoolmaster, and lived on the easterly side of Dunster Street, between Harvard and Mt. Auburn Streets, as Mr. Paige states. He was selectman in Cambridge from 1633 to 1639, representative from 1634 to 1638, a Councilman from 1639 to 1674, register of Probate from 1731 to 1745, judge of Probate from 1745 to 1775, and judge of the Court of Common Pleas from 1741 to 1775. He died in Boston Oct. 27, 1777.

THOMAS GREAVES, judge of the Common Pleas

Court from 1733 to 1747, with the exception of one year when he sat on the bench of the Superior Court, has already been referred to in connection with that court.

FRANCIS FOXCROFT, the second son of Judge Foxcroft, above mentioned, and judge of the Common Pleas Court from 1737 to 1764, was born in Cambridge, January 26, 1694-95. He graduated at Harvard in 1712, and was judge of Probate for Middlesex as well as Common Pleas judge. He died March 28, 1768.

Next in order to be mentioned are the judges of the Supreme Judicial Court who were residents of Middlesex County, or who by birth may properly be considered Middlesex County men.

FRANCIS DANA was appointed judge of this court in 1785, and in 1791 was made chief justice, and held that position until his resignation in 1806. He was the son of Richard Dana, of Charlestown, and was born in that town June 13, 1743, and graduated at Harvard in 1762, in the class with Elbridge Gerry, Andrew Eliot, George Partridge and Jeremy Belknap. He studied law with Edmund Trowbridge and was admitted to the bar in 1767. He was a delegate to the Provincial Congress in September, 1774, a member of the Executive Council from 1776 to 1780, a delegate to Congress in 1776, 1778 and 1789, a member of the Board of War in 1777, secretary of legation with John Adams in Paris in 1779, and Minister to Russia from 1780 to 1783. He died at Cambridge April 25, 1811.

GEORGE TYLER BIGELOW, son of Tyler Bigelow, was born in Watertown October 6, 1810, and graduated at Harvard in the famous class of 1829, which contained among its members William Brigham, William Henry Channing, James Freeman Clarke, Francis B. Crowninshield, Benjamin R. Curtis, George T. Davis, Joel Giles, William Gray, Oliver Wendell Holmes, Samuel May, Benjamin Pierce, Chandler Robbins, Edward D. Sohler and Joshua Holyoke Ward. He received the degree of Doctor of Laws from his *Alma Mater* in 1853. He was admitted to the bar in Cambridge, and for a number of years practiced law in Boston in partnership with the late Manlius Clark. In the early days of his professional life he was active in the militia and at one time commanded the New England Guards of Boston, and was colonel of one of the Boston regiments. In 1847-48 he was a member of the Massachusetts Senate, and in 1848 was appointed one of the justices of the Common Pleas Court. He held this position until 1850, when he was appointed to the bench of the Supreme Judicial Court. On his accession to that bench his associates were Lemuel Shaw, chief justice; Charles Augustus Dewey, Theron Metcalf and Richard Fletcher, associate justices. On the resignation of Lemuel Shaw in 1860 he was made chief justice, and resigned in 1868. During his service on the bench of this court his various associates included Judge Dewey, who died in 1866; Judge Metcalf, who resigned in

1865; Judge Fletcher, who resigned in 1853; Caleb Cushing, who was appointed in 1852 and resigned in 1853; Benjamin Franklin Thomas, appointed in 1853 and resigned in 1859; Pliny Merrick, appointed in 1853 and resigned in 1864; Ebenezer Rockwood Hoar, appointed in 1859 and resigned in 1869; Reuben Atwater Chapman, appointed in 1860, appointed chief justice in 1868 and died in 1873; Horace Gray, Jr., appointed in 1864, appointed chief justice in 1873 and resigned in 1882; James Denison Colt, appointed in 1865, resigned in 1866, reappointed in 1868 and died in 1881; Dwight Foster, appointed in 1866 and resigned in 1869; John Wells, appointed in 1866 and died in 1875. After his resignation Judge Bigelow was appointed actuary of the Massachusetts Hospital Life Insurance Company, and continued in that office until his death in 1878.

EBENEZER ROCKWOOD HOAR, son of Samuel and Sarah (Sherman) Hoar, was born in Concord, February 21, 1816, and graduated at Harvard in 1835, receiving a degree of Doctor of Laws in 1868. Among his classmates were George Bemis, Thomas M. Brewer, Amos Adams Lawrence, Charles W. Storey and Francis M. Weld. He was admitted to the bar in 1840, and though always living in Concord, he has from the beginning of his career occupied an office in Boston, practicing, however, in Middlesex as well as Suffolk County. In 1849 he was appointed a judge of the Court of Common Pleas, remaining on the bench until his resignation in 1853. In 1859 he was appointed judge of the Supreme Judicial Court, finding as associates at his accession to the bench, Leonard Shaw, chief justice; and Charles Augustus Dewey, Theron Metcalf, George Tyler Bigelow and Pliny Merrick. He remained on the bench until 1869. During his incumbency, Chief Justice Shaw resigned in 1860 and was succeeded by George Tyler Bigelow, who resigned in 1868, and was succeeded by Reuben Atwater Chapman, who had been appointed to the bench in 1860. Charles Augustus Dewey died in 1866 and was succeeded by Dwight Foster; Theron Metcalf resigned in 1865 and was succeeded by James Denison Colt, who resigned in 1866 and was succeeded by John Wells, and was reappointed in 1868. In 1869 Mr. Hoar was appointed by President Grant Attorney-General of the United States, and remained in office until July, 1870. In 1871 he was appointed joint high commissioner to treat with the British commissioners. He was elected from the Middlesex District to Congress in 1872, and served but one term. During his service he was largely instrumental in procuring the publication of the Revised Statutes of the United States, a work of great labor and of immense use to this country. Since that time he has closely followed his profession, only mingling in politics and attending conventions at the call of the Republican party, to whose cause he has been and is devoted. His learning in the law, his incorruptible spirit, his fidelity to clients and his ability

E. R. Hear

to present a case either to court or jury with force, have won for him a rich reputation and a large practice; while his pungency of speech and simple clearness of statement have always made him an attractive speaker in the political arena. His remark that he had no objection to the Mugwumps going out of the Republican party, but that they need not slam the door after them, illustrates the sayings which characterize his conversation and speech. He has always been a faithful son of Harvard, and while a member of the Board of Overseers was the president of the Board. He is or has been the president of the National Unitarian Conference, and has always been an active member of the denomination which that conference represents.

CHARLES DEVENS was born in Charlestown April 4, 1820, and graduated at Harvard in 1828, in the class with George Bailey Loring, James Russell Lowell and William W. Story. He read law at the Harvard Law School, and in the office of George T. Davis, of Greenfield, where, after his admission to the bar, he continued in practice until 1849, representing Franklin County in the Senate in 1848. From 1849 to 1853 he was United States marshal for Massachusetts, and in 1854 returned to the law, settling in Worcester, in partnership with George F. Hoar, now United States Senator. In April, 1861, he commanded a rifle battalion and was stationed, during three months' service, at Fort McHenry, in Baltimore Harbor. At the end of the three months' campaign he was made colonel of the Fifteenth Regiment Massachusetts Volunteers on the 24th of July, 1861, enlisted for three years. He was at the battle of Ball's Bluff, and after the death of Colonel Baker, in command, and exhibited on that occasion rare bravery and good judgment. He was made brigadier-general of volunteers April 15, 1862, and was engaged in the battles of Williamsburg, Fair Oaks—where he was wounded—South Mountain and Antietam. At the battle of Chancellorsville he commanded a division of General Howard's corps (the Eleventh), and was severely wounded. In the Virginia campaign of 1864-65 he was attached to the Eighteenth Corps, recognized as the Third Division of the Twenty-fourth Corps. In December, 1864, he was in temporary command of the Twenty-fourth Corps, entered Richmond April 3d, and April 15, 1865, was made brevet major-general. He remained in the service commanding the district of Charleston until June, 1866, when, at his own request, he was mustered out. In 1862 he was the candidate of what was called the People's party for Governor of Massachusetts, in opposition to John A. Andrew, but was defeated. In 1867 he was appointed judge of the Supreme Court, and remained on the bench until his appointment to the bench of the Supreme Judicial Court in 1873. When he took his seat on the Superior Court bench his associates were Seth Ames, chief justice, and Julius Rockwell, Otis Phillips Lord, Marcus Morton, Jr., Ezra Wilkinson, Henry Vose, John

Phelps Putnam, Lincoln Flagg Brigham and Chester Isham Reed. During his incumbency, Seth Ames resigned as chief justice on his appointment to the bench of the Supreme Judicial Court in 1869, and was succeeded by Lincoln Flagg Brigham; Marcus Morton, Jr., was appointed to the bench of the Supreme Judicial Court in 1869, and was succeeded by Henry Austin Scudder, who resigned in 1872, and was succeeded by William Allen and Chester Isham Reed, who resigned 1871, and was succeeded by John William Bacon.

Judge Devens, as above stated, was appointed judge of the Supreme Judicial Court in 1873, and continued on the bench until 1877, when he was appointed by President Hayes United States Attorney-General. On his retirement from the Cabinet, in 1881, he was re-appointed to the bench of the Supreme Judicial Court, to fill, with Walbridge Abner Field and William Allen, the vacancies occasioned by the death of James Denison Colt and the resignations of Seth Ames and Augustus Lord Soule, and is still on the bench. Though never enjoying an extensive practice at the bar, Judge Devens has had a large judicial experience, and has been eminently successful in the administration of his judicial duties. He has established a wide reputation as an orator, and has been repeatedly selected to deliver centennial and other occasional addresses. Not the least of his efforts on the platform was an oration delivered at the celebration of the anniversary of the battle of Bunker Hill, on the 17th of June, 1875. He has been president of the Bunker Hill Association, and has received the degree of Doctor of Laws from his *alma mater*. The connection of Judge Devens, then United States marshal, with the extradition of Thomas Sims, a fugitive slave, is so well stated by "Taverner," of the *Boston Post*, in the issue of that paper of April 5th of this year (1890), that the writer takes the liberty of making the statement a part of this record:

"It is noticeable that the act which first brought Judge Devens into prominence here in Boston, and was the means of exciting a certain odium against him, was the performance of an official duty which, though extremely painful to his feelings, he did not feel at liberty to neglect, and his subsequent conduct showed the noble spirit with which as a man he endeavored to counteract the effects of the policy which he enforced as an officer of the law. As United States marshal for the district of Massachusetts, from 1849 to 1853, he executed the process of the court in remanding Thomas Sims as a fugitive slave. But after the extradition he endeavored to procure the freedom of Sims, offering to pay whatever sum was necessary for the purpose, though the effort was unsuccessful. Some time afterward he wrote to Mrs. Lydia Maria Child, whom he heard was trying to raise money to purchase the freedom of Sims, requesting the return of the sums she had collected for this purpose, and asking her to allow him the privilege of paying the whole amount. Though Mrs. Child assented to this proposal, it was prevented from being carried out by the Civil War, which blocked the negotiations. But the progress of the national armies at last brought freedom to Thomas Sims, and he was aided by Judge Devens in establishing himself in civil life, and was, in course of time, appointed by him, while Attorney-General of the United States, to an appropriate place in the Department of Justice."

SETH AMES, the sixth of seven children of Fisher

Ames, was born at Dedham, April 19, 1805, and died at Brookline, August 15, 1881. He was descended in the sixth generation from Richard Ames, of Bruton, Somersetshire, England, two of whose sons came to New England in 1640. His mother was Frances, daughter of Colonel John Worthington, of Springfield. He attended the schools of Dedham and Phillips Academy, and graduated at Harvard in 1825. His college room-mate was Augustus H. Fiske, late of the Boston bar, and both married daughters of Gamaliel Bradford, a descendant from William Bradford, of the "Mayflower." He read law in the Dane Law School and in the office of George Bliss, of Springfield; and on January, 1828, entered the office of Lemuel Shaw, of Boston. He was admitted to the bar at Dedham in September, 1828, and opened an office in Lowell. In 1830 his wife, Margaret (Bradford) Ames, died, leaving four children. He was a short time the partner of Thomas Hopkinson, and represented Lowell in the General Court in 1832. He was an alderman in 1836, 1837 and 1840; Senator from Middlesex County in 1841, and city solicitor from 1842 to 1849. In 1849 he was appointed clerk of the courts for Middlesex County, and married, for his second wife, Abigail Fisher, daughter of Rev. Samuel Dana, of Marblehead. In the same year he removed to Cambridge. In 1859 he was appointed judge of the Superior Court; chief justice of that court in 1867; and judge of the Supreme Judicial court, January 19, 1869. He resigned January 15, 1881. In 1869 he removed to Brookline. After his death, George Martin, Attorney-General, submitted in behalf of a meeting of the members of the Suffolk bar, the following resolutions to the full court:

"*Resolved*, That the death of Seth Ames, lately one of the Justices of the Supreme Judicial Court, and for thirty-two years honorably connected with the administration of Justice in this Commonwealth, is an event of which the bar desire to take notice by expressing their sense of the great value of his public services and their admiration for his just and unblemished character, and for those attractive personal qualities which endeared him to all who had the privilege of his friendship.

"*Resolved*, That in the successive judicial stations which he held as Justice and Chief Justice of the Superior Court and Associate Justice of the Supreme Judicial Court, he commanded the respect and esteem of the bar and the community. He administered the criminal laws with firmness, tempered by discretion and humanity, without unnecessary harshness and without vindictiveness. In his intercourse with the bar, and when presiding at trials he was a model of fairness and courtesy; never forgetting, and therefore never finding it necessary to assert arrogantly or offensively his personal dignity. His opinions were characterized by adequate learning and by a simplicity and purity of English style which he seemed to have inherited from his distinguished father."

Chief Justice Gray responded, and the resolutions were ordered to be placed on the files of the court.

WILLIAM SEWALL GARDNER was born in Hallowell, Maine, October 1, 1827, and graduated at Bowdoin College and studied law in Lowell. He was admitted to the Middlesex bar in 1852, and entered into partnership with Theodore H. Sweetser of that city. In 1861 he removed his office to Boston, where he continued practice until 1875, when he was ap-

pointed one of the justices of the Superior Court for the Commonwealth, which office he held until October 1, 1885, when he was appointed a justice of the Supreme Judicial Court to fill the vacancy occasioned by the death of Judge Waldo Colburn. On the 7th of September, 1887, he resigned his seat on account of ill health, and died at his residence in Newton, April 4, 1888. On the 27th of November, 1888, resolutions passed at a meeting of the Suffolk bar were presented to the full court by Andrew J. Waterman, the Attorney-General, and on that occasion addresses were made by the Attorney-General, Edward Avery and Charles Levi Woodbury, which were responded to by Chief Justice Marcus Morton. The resolutions were as follows:

"The members of the Suffolk bar desire to place on record their sense of the loss which the Commonwealth has sustained in the death of William Sewall Gardner, a former Justice of this court.

"His was a nature that endeared him to those who knew him well, and secured for him the respect and esteem of the community, and the regard and confidence of those who were brought in contact with him at the bar or on the bench.

"His experience at the bar, for many years closely associated with one of the ablest lawyers of his day, who studied the law as a science and tested it by the severest rules of logic, and his long service on the bench of the Superior Court, laid a substantial foundation for the successful discharge of the accurate and discriminating investigations demanded of the members of this court.

"While the kindness of his nature might have tempted him at times to take counsel of his sympathies, his keen appreciation of the right constrained him always to exercise the severe neutrality of an impartial judge."

TIMOTHY FARRAR was the son of Deacon Samuel Farrar, and was born June 28, 1747, in that part of Concord which, by the incorporation of Lincoln in 1754, was included within the limits of the new town. He graduated at Harvard in 1767, in the class with Increase Sumner. He read law in New Ipswich, New Hampshire, and settled permanently in that town. In 1782 he was a member of the Constitutional Convention of New Hampshire. He was a judge of the Common Pleas Court of that State under a temporary Constitution in January, 1776; was a Councilor in 1780, '82, '83; judge of the Superior Court from 1790 to 1803; judge of the Common Pleas Court in 1803-4, and afterwards chief justice of the Circuit Court of Common Pleas. He was a Presidential elector in 1792, '96, 1800, 1808, and a trustee of Dartmouth College. In 1847 he received a degree of Doctor of Laws from his *alma mater*, and died at Hollis, New Hampshire, Feb. 21, 1849.

NATHANIEL WRIGHT, the oldest son of Thomas and Eunice (Osgood) Wright, was born in Sterling, February 13, 1785, four years after the incorporation of that town. He fitted for college with Rev. Reuben Holcomb, of Sterling, and graduated at Harvard, in 1808, in the class with Walter Channing, Richard H. Dana and Charles Cotesworth Pinckney, and read law with Asabel Stearns, then practicing in that part of Chelmsford which is now Lowell, and there lived until his death, which occurred November 5, 1858. He was admitted to the bar in 1814, and first opened

an office in Dracut. He was the first representative from Lowell to the General Court, in 1826, and chairman of the first Board of Selectmen, and in 1842 was chosen, on a citizens' ticket, the fourth mayor of the city, succeeding Dr. Elisha Huntington in that office. In 1843 he was re-chosen by the Whig party. He was chosen representative four years, and in 1834 was a member of the State Senate. He was president of the Lowell Bank from its organization, June 2, 1828, until his resignation, October 2, 1858. He married, March 5, 1820, Laura Hoar; and two sons graduated at Harvard—Nathaniel, in 1838, and Thomas, in 1842. Thomas entered the profession of law, settling in Lawrence, and represented, one or more years, Essex County in the Senate. He died in Lawrence in 1868. Nathaniel, a lawyer in Lowell, died September 18, 1847.

ASAHEL STEARNS was born in Lunenburg, June 17, 1774, and graduated at Harvard in 1797, in the class with Horace Binney, William Jenks, William M. Richardson, John Collins Warren and Daniel Appleton White. He settled in Chelmsford in 1800, where he practiced until 1817, acting for a time as county attorney, and during the two last years of his residence there he represented his district in Congress. In 1817 he was appointed professor in the Dane Law School, at Cambridge, holding that position until his death, February 5, 1839. In 1824 he published a volume of "Real Actions," and in 1825 received from Harvard the degree of Doctor of Laws.

SAMUEL DANA was the son of Rev. Samuel Dana, of Groton, and was born in that town June 26, 1767. He was the first postmaster of Groton, having been appointed in 1800, and held the office until July, 1804. He kept the post-office in his law-office in a building which has been removed from its original site, and in 1887 was standing near the railroad station. He was succeeded as postmaster by William Merchant Richardson, afterwards chief justice of the Superior Court of New Hampshire. Mr. Richardson graduated at Harvard in 1797, and became Mr. Dana's student and partner. Mr. Richardson was followed in the post-office by Abraham Moore, January 31, 1812, who was succeeded in 1815, on his resignation, by Caleb Butler and Henry Woods and George S. Boutwell, and again by Caleb Butler, who held the office until December 21, 1846.

He was a representative to the General Court from Groton in 1802-03 and 1825-27, and senator, 1805-13 and 1817, and president of the Senate in 1807, 1811, 1812. He was a member of Congress in 1814-15, and of the State Constitutional Convention in 1820. On the establishment of the Circuit Court of Common Pleas, Mr. Dana was made chief justice for the middle circuit, comprising Suffolk, Essex and Middlesex, and held that office until the court was abolished, February 14, 1821. In 1808 he removed to Charlestown, but returned to Groton 1815. He was a popular speaker and a man of pronounced abilities. He

married Rebecca Barrett, and died in Charlestown November 20, 1835, leaving several children, of whom the wives of Kelly Paige, of Boston, and John Seven, of Kingston, and his son, James Dana, of Charlestown, now living, are remembered by the writer.

TIMOTHY BIGELOW, the son of Timothy and Anna (Andrews) Bigelow, was born at Worcester April 30, 1767. He graduated at Harvard in 1786, in the class with John Lowell and Isaac Parker. He fitted for college with Benjamin Lincoln and Samuel Dexter, and studied law with Levi Lincoln, the father of Governor Lincoln. He was admitted to the bar in 1789, and settled in Groton, where he married, September 3, 1791, Lucy, daughter of Dr. Oliver Prescott. His office was much sought by students reading law, and among these were John Harris, afterwards judge of the Superior Court of New Hampshire; Thomas Rice, of Winslow, Me., member of Congress; John Locke, of Ashby, member of Congress; Joseph Locke, for thirteen years judge of the Police Court in Lowell; John Leighton Tuttle; Professor Asahel Stearns; John Varnum, of Haverhill, member of Congress; Loammi Baldwin, who abandoned the profession and became a distinguished engineer; John Parke Little, of Gorham, Me.; Tyler Bigelow, of Watertown, the father of Chief Justice Bigelow; Luther Lawrence, of Groton and Lowell; Augustus Peabody, of Boston, and Abraham Moore, of Groton and Boston. In 1806 Mr. Bigelow removed to Medford, and there died, May 18, 1821. He was a representative to the General Court from Groton and Medford fourteen years, senator from 1797 to 1801, councilor from 1802 to 1804, and again in 1821, and speaker of the House in the sessions of 1805-6, 1808-9, 1809-10, 1812-13, 1813-14, 1814-15, 1815-16, 1816-17, 1817-18, 1818-19, 1819-20. In 1796 Mr. Bigelow delivered the oration before the Phi Beta Kappa Society of Harvard. Katharine, wife of Abbott Lawrence, of Boston, Rev. Andrew Bigelow and John Prescott Bigelow, Secretary of the Commonwealth from 1836 to 1843, and mayor of Boston from 1849 to 1851, were his children.

LUTHER LAWRENCE was born in Groton September 28, 1778. He was a son of Samuel Lawrence, of that town, and, with his brothers, Abbott, Amos, William and Samuel, made up a family of rare ability and distinction. The only one of the family receiving a college education, he graduated at Harvard in 1801, in the class with Tyler Bigelow, Timothy Fuller and Stephen Minot. He studied law with Timothy Bigelow, and married his sister Lucy, June 2, 1805. He was a member of the Legislature from Groton, and in 1822 speaker of the House of Representatives. He early secured a large practice, and among his students were Henry Adams Bullard, Royal Bullard, Jonathan Porter, George Frederick Farley, Augustus Thorndyke, Edward St. Lee Livermore, Jr., Norman Seaver and William Amory. He removed to Lowell in 1831, five years after its incorporation, and in 1838 and 1839 was chosen its mayor. On the 16th of

April, 1839, sixteen days after entering on his second official term, while showing one of the factories to some visiting friends, he fell seventeen feet into a wheel-pit and was instantly killed. He was buried in Groton, his place of birth.

EBENEZER CHAMPNEY, a descendant of Richard Champney, who came from Lancashire, England, and settled early in Cambridge, was born in Cambridge in April, 1744, and graduated at Harvard in 1762, in the class with Francis Dana, Andrew Eliot, Elbridge Gerry, Jeremy Belknap and George Partridge. In a class of forty-seven his name is placed in the catalogue next to the last, and as until 1773 the names were placed in the order of family rank, it is presumed that the immediate origin of Mr. Champney was comparatively obscure. He first studied for the ministry and then for the practice of law. In 1764 he was admitted to the bar at Portsmouth, and settled in New Ipswich, New Hampshire. In 1775 he was appointed Judge of Probate for Hillsboro' County, and in 1783 removed to Groton. In 1789 he returned to New Ipswich, and died September 10, 1810. He married, October 9, 1764, Abigail, daughter of Rev. Caleb Trowbridge; in November, 1778, Abigail, daughter of Samuel Parker, of New Ipswich, and in March, 1796, Susan Wyman. His son, Benjamin Champney, born August 20, 1765, studied law in his office and practiced in Groton from 1786 to 1792, when he removed to New Ipswich.

ABRAHAM MOORE was born in Bolton January 5, 1785, and graduated at Harvard in 1806, in the class with Jacob Bigelow, Jonathan Cogswell, Joseph Green Cogswell, Alexander Hill Everett, Daniel Oliver and William Pitt Preble. He studied law with Timothy Bigelow in Groton, and opened an office in that town. In 1812 he was appointed postmaster of Groton and held office until his resignation in 1815, when, in consequence of financial troubles, he removed to Boston, where he continued in the practice of law until his death, January 3, 1854. His wife, whose maiden-name was Mary Mills, had been twice married, to a Mr. Barnard and Mr. Woodham, and had been an actress on the stage. After the financial troubles of Mr. Moore she returned to the stage and appeared in Boston in 1816 as *Lady Teazle*. Mary Frances Moore and Susan Varnum Moore, two of his children by this marriage, married John Cochran Park, a distinguished member of the Suffolk bar, and Grenville Mears, a well-known and esteemed merchant of Boston. He married for a second wife, in 1819, Eliza, daughter of Isaac Durell, and had at least one son, whom the writer remembers as a member of the Boston bar. During the last few years of his life he occupied an office on the easterly side of Court Square, the site of which is now covered by the billiard-room of Young's Hotel.

RICHARD SULLIVAN was the grandson of John Sullivan, who came from Ireland in 1723 and died July, 1795, at the age of 104. James Sullivan, born

in Berwick, Maine, April 22, 1744, and deceased in Boston, December 10, 1808, and General John Sullivan were the sons of the American ancestor. Richard, the subject of this sketch, was the son of James, and was born in Groton, July 17, 1779. His mother was Mehetabel Odiorne. He graduated at Harvard in 1798, in the class with William Ellery Channing, Stephen Longfellow, Joseph Story and Sidney Willard. His father began practice in Georgetown, Maine, from which place he removed to Biddeford. In February, 1778, he changed his residence to Groton, and in 1782 to Boston. Richard, the son, was fitted for college at the Boston Latin School and after leaving college studied law with his father and was admitted to the Suffolk bar in 1801. He was a State Senator from 1815 to 1817, inclusive, member of the Constitutional Convention of 1810, councilor in 1820-21, and one of the overseers at Harvard College. He married, May 22, 1804, Sarah, daughter of Thomas Russell, of Boston, and died in Cambridge, December 11, 1861.

WILLIAM PRESCOTT, though never a member of the Middlesex bar, was a native of Middlesex County. He was a descendant of John Prescott, of Lincolnshire, England, who early came to New England and settled in Lancaster, Massachusetts. Judge Benjamin Prescott, son of John, was the father of Colonel William Prescott, of Bunker Hill memory, who was the father of the subject of this sketch, who was born in Pepperell, August 19, 1762, and died in Boston, December 8, 1844. He graduated at Harvard in 1783, in the class with Harrison Gray Otis, his brother and Artemas Ward. He studied law with Nathan Dane, of Beverly, and practiced in that town and in Salem. He removed to Boston in 1808 and in 1818 was appointed a justice of the Common Pleas Court for Suffolk County. William Hickling Prescott, the historian, and Edward Gordon Prescott, Episcopal clergyman in New Jersey, were his sons. He received a degree of Doctor of Laws from Harvard in 1815 and from Dartmouth in 1826.

JAMES PRESCOTT, JR., was the son of Col. James Prescott, of Groton, and was born in that town April 19, 1766. He graduated at Harvard in 1788 and studied law in Westford, where he practiced ten years. He returned to Groton and was appointed judge of Probate, to succeed his uncle, Oliver Prescott, and was afterwards chief justice of the Court of Common Pleas. He married Hannah, daughter of Ebenezer Champney, and died October 14, 1829.

JONATHAN SEWALL was, for a time during his professional career, a resident of Middlesex County. He was born in Boston, August 21, 1728, and graduated at Harvard in the class of 1748 with only twenty-three associates. He was son of Jonathan Sewall and great-nephew of Stephen Sewall, chief justice of the Superior Court of Judicature. After leaving college he taught school in Salem until 1756, when he prepared himself for the law and settled in

Charlestown. He advanced rapidly in his profession, and in 1767 was a barrister and had been appointed Attorney-General for Massachusetts. In 1775 he removed to St. John, New Brunswick, where he was judge of the Vice-Admiralty Court until his death, which occurred at that place September 26, 1796.

HOMER BARTLETT was born in Granby, in Hampshire County, July 19, 1795. He fitted for college at Westfield Academy and graduated at Williams in 1818. He read law with Daniel Noble and Charles A. Dewey, of Williamstown, and was admitted to the Berkshire bar in 1821. After a residence of three years in Williamstown, after his admission, he removed to Ware in 1824, where he continued until 1832 in the practice of his profession, in which year he was appointed agent of the Hampshire Manufacturing Company. In 1839 he was made manager of the Massachusetts Cotton-Mill, of Lowell, incorporated in that year, and removed to that city, entering on the duties of his new position on the 18th of October in that year. In January, 1849, he was appointed treasurer of the company, which position he held until his resignation, January 22, 1872. He was a representative from Ware in 1832, and from Lowell in 1849, Presidential elector in 1844, and a member of the Executive Council in 1854. Mr. Bartlett married, February 6, 1823, Mary, daughter of William Starkweather, of Williamstown, who died in Lowell, October 3, 1850. He removed to Boston while he was treasurer of the Massachusetts Mills, and married, June 4, 1861, Mrs. Louisa (Fowler) Hubbell, of Albany, who died May 27, 1873. He survived his second wife only a year and died March 29, 1874, and was buried at Mount Auburn.

Mr. Bartlett was descended from John Bartlett and wife, Agnes (Bengan) Bartlett, of Cherington, Warwickshire, England, who died, one in 1613 and the other in 1615. Robert Bartlett, son of John, married, in 1603, Anne, daughter of Richard Livingston, and had nine children, of whom Robert, baptized March 8, 1606, came to New England in September, 1632, and settled in Cambridge. He afterwards removed to Hartford, and in 1655 to Northampton, where he lived until March 14, 1675-76, at which date he was killed by the Indians. Robert Bartlett had four children, of whom Samuel, born at Hartford in 1639, married, in 1672, Mary Bridgeman, and, in 1675, Sarah Baldwin, and had by the second wife twelve children. One of these children, Ebenezer, born in Northampton, September 27, 1685, married, December 1, 1715, Martha Lyman, and had five children, of whom Ebenezer, born in Northampton, August 28, 1721, died in Granby in 1788. The last Ebenezer had seven children, of whom another Ebenezer, born in South Hadley in 1745, died in Granby, February 2, 1798. He married Betsey Barton, of Ludlow, and had ten children, of whom Asahel, born in Granby in 1758, married three wives—Hannah Burchard, Sally Bonner and Almira Mellen. By the first wife he had

six children and by the second five, and the first wife was the mother of the subject of this sketch.

JOSEPH LOCKE was born in Fitzwilliam, New Hampshire, in 1772, and graduated at Dartmouth in 1797; he studied law with Timothy Bigelow in Groton, and was admitted to the Middlesex bar in 1800. In 1801 he began the practice of his profession in Billerica, and there remained until 1833, when he removed to Lowell. While living in Billerica he presided eight years over the Court of Sessions, was Presidential elector in 1816, member of the Constitutional Convention of 1820, eight years a representative to the General Court, and in 1821-22 a member of the Executive Council. During his residence in Lowell he represented that city one year in the General Court, and in 1834 was made judge of the Lowell Police Court, which position he held thirteen years resigning, in 1847, at the age of seventy-five. His death occurred November 10, 1853. Judge Locke was a man of unusual purity of character, and in whatever community he lived he always inspired reverence and love.

EDWARD ST. LOE LIVERMORE was born in Portsmouth, New Hampshire, April 5, 1762. He was the son of Samuel Livermore, chief justice of the Superior Court in that State, and his wife Jane, daughter of Rev. Arthur Browne. He was descended from John Livermore, who came to New England about the year 1634 and settled in Watertown, whence he removed in 1665 to Wethersfield, Connecticut, and later to New Haven. In 1670 the ancestor returned to Watertown and there died in 1685. Samuel Livermore, a great-grandson of John, born in 1732, graduated at Nassau Hall, New Jersey, and read law at Beverly, Massachusetts, with Edmund Trowbridge and settled in Portsmouth, and became Attorney-General of the Province. His son Edward was educated at Londonderry and Holderness, New Hampshire, and read law with Theophilus Parsons at Newburyport. He began the practice of law at Concord, New Hampshire, and married Mehetabel, daughter of Robert Harris. He afterwards removed to Portsmouth, and was appointed by Washington district attorney, which office he held until 1798, and became chief justice of the Superior Court of New Hampshire. In 1799 he married Sarah Crease, daughter of William Stackpole, of Boston. In 1802 he removed to Newburyport, and while a resident there was a representative to the General Court, and a member of Congress from Essex North District. In 1811 he removed to Boston, and on the 11th of July, 1813, delivered the usual annual oration in that city. At the close of the War of 1812 he removed to Zanesville, Ohio, but soon returned to Boston, and in 1816 took up his final residence in Tewksbury. He purchased there the Gedney estate of about 200 acres, which he called Belvidere, and there died September 15, 1832, his body being deposited in the Granary burial-ground in Boston.

ELISHA GLIDDEN was born in Unity, New Hamp-

shire in 1789, and graduated at Dartmouth in 1815. He read law in Dover, New Hampshire, and with Samuel Hubbard in Boston, and was admitted to the bar in 1818 or 1819. In 1820 he went to Townsend to take charge of the legal business of Colonel Walter Hastings, where he remained until 1823, during which time Colonel Hastings died. Mr. Glidden afterwards married Mrs. Hastings, and after a short residence in Boston removed to Lowell, where the writer believes he was associated at different times with Luther Lawrence and with Thomas Hopkinson, who had been one of his students. He was a director in the Railroad Bank, and president of the Lowell Institution for Savings, and died April 2, 1835.

LOAMMI BALDWIN was a descendant of Henry Baldwin, one of the first settlers of Woburn. His father, Col. Loammi Baldwin, was an officer in the Revolution, and sheriff of Middlesex County. The subject of this sketch was born in Woburn, May 16, 1780, and graduated at Harvard in 1800, in the class with Lemuel Shaw. He was admitted to the Middlesex bar in 1803, but abandoned his profession and became a distinguished engineer. The dry-dock at the Charlestown navy-yard was built by him. He died at Charlestown, June 30, 1838.

WILLIAM EMERSON FAULKNER was the son of Francis Faulkner, and was born in Acton, October 23, 1776. He graduated at Harvard in 1797, and read law with his brother-in-law, Jabez Upham, of Brookfield, with whom he was afterwards associated until his death, which occurred October 1, 1804.

JOSIAH ADAMS, the son of Rev. Moses Adams, was born in Acton, November 3, 1781, and graduated at Harvard in 1801. He read law with Thomas Heald, and after his admission to the bar in June, 1807, settled in Framingham. He died in 1854.

AARON KEYES was born in Westford in 1791, and read law in Bridgewater. He was admitted to the bar in 1822 and settled at Townsend Centre, where he was postmaster from 1826 to 1835. He married, in 1824, Martha, daughter of Moses Warren, and died in 1842.

SAMUEL JACKSON PRESCOTT, son of Dr. Oliver Prescott, of Groton, was born in that town March 15, 1773, and graduated at Harvard in 1795, in the class with Nathaniel Bradstreet and Benjamin Gorham. He read law with William Prescott, but left the profession and embarked in business with Aaron P. Cleveland. Having suffered serious loss in consequence of the embargo, he finally retired from business and was for many years a popular notary public in Boston. He died in Brookline, February 7, 1857.

JONATHAN PORTER was born in Medford November 13, 1791, and graduated at Harvard in 1814, in the class with Benjamin Apthorp Gould, Francis William Pitt Greenwood, Alvan Lamson, Pliny Merriek, William Hickling Prescott and James Walker. He studied with Luther Lawrence in Groton, and died in Medford, June 11, 1859.

JOSHUA PRESCOTT was born in Westford November

15, 1780. He read law with James Prescott in Groton and died at Reading, January 1, 1859.

THOMAS RICE was born at Pownalborough (now Wiscasset), Maine, March 30, 1798, and read law with Timothy Bigelow at Groton. He died at Winslow, Maine, August 24, 1854.

SAMUEL EMERSON SMITH was born in Hollis, New Hampshire, March 12, 1788. He studied at the Groton Academy and graduated at Harvard in 1808. He read law with Samuel Dana at Groton and died at Wiscasset, Maine, March 3, 1860.

AUGUSTUS THORNDIKE was born in Beverly, July 8, 1797, and graduated at Harvard in 1816, in the class with Samuel Dana Bell, George Frederick Farley, Oliver William Bourn Peabody and Joseph Willard, and gave the college twenty thousand dollars. He read law at Groton with Luther Lawrence and died at Boston, July 8, 1858. He married Henrietta Stewart, of Annapolis, Maryland, and had four children, of whom two sons, James Stewart and Charles, graduated at Harvard in 1848 and 1854.

ETHAN SHEPLEY was born in Groton November 2, 1789, and received his education at the academy in that town. He studied law in South Berwick, Maine, and in 1814 began practice at Saco, from which place he removed to Portland. From 1821 to 1833 he was United States district attorney of Maine, from 1833 to 1836 United States Senator, from 1836 to 1848 associate justice on the bench of the Supreme Court of Maine, and from 1848 to 1855 chief justice. He received a degree of Doctor of Laws, from Colby University in 1842 and one from Dartmouth in 1845, and died in Portland, January 15, 1877.

WILLARD HALL was born in Westford, December 24, 1780, and was the son of Willis and Melhetabel (Poole) Hall, of that town, and grandson of Rev. Willard Hall, the first minister of Westford. He graduated at Harvard in 1799 and read law with Samuel Dana at Groton, and was admitted to the bar of Hillsboro' County, New Hampshire, in 1803. Immediately after his admission he went to the State of Delaware and settled in Georgetown, from whence he very soon after removed to Dover, in the same State. In 1812 he was Secretary of State, holding the office three years; from 1816 to 1818 he was a member of Congress, in 1821 again Secretary of State and in 1822 a member of the Delaware Senate. On the 6th of May, 1823, he was commissioned United States judge for the Delaware district, holding the office forty-eight years, and resigning in 1871. He was actively interested in the cause of education, and created and perfected the present educational system of his adopted State. He was forty-eight years president of the Delaware Bible Society, many years president of the Wilmington Savings Funds Society, president of the Delaware Historical Society and an elder of the Presbyterian Church from 1829 to his death, which occurred May 10, 1875.

JOHN ABBOT, the oldest son of John Abbot, of West-

ford, was born in that town January 27, 1777. He graduated at Harvard in 1798, and for a time was preceptor of the Westford Academy. He read law in his native town and there began practice. He was a trustee and treasurer of the academy, State Senator and member of the Constitutional Convention in 1820. He was active and prominent in the Masonic order and officiated as Grand Master at the laying of the corner-stone of Bunker Hill monument June 17, 1825. He died April 30, 1854.

JOHN WRIGHT was born in Westford November 4, 1797. He fitted for college at Phillips Academy and graduated at Harvard in 1823 in the class with William Amory, Francis Hilliard, Daniel Putnam King, William Parsons Lunt and George Ripley. He studied law in Groton and after a short season of practice became interested in manufactures and the agent of the Suffolk Mills of Lowell. He died in Lowell in 1869.

JOHN MERRICK was born in Concord February 7, 1761, and graduated at Harvard in 1784 in the class with Prentiss Mellen, Benjamin Pickman and Samuel Webber. He read and practiced law in Concord and died August 15, 1797.

WILLIAM JONES, son of Samuel Jones, of Concord, was born in that town September 15, 1772, and graduated at Harvard in 1793, in the class with Charles Jackson, John Pierce and Samuel Thatcher. He read law with Jonathan Fay, of Concord, and after practicing a short time in that town removed to Norridgewock, Maine, about 1801. He was appointed clerk of the Court of Common Pleas for Somerset County June 29, 1809, and on the 23d of April, 1812, clerk of all the County Courts. June 22, 1809, he was made judge of Probate. Aside from his civil offices he was brigadier-general in the Maine Militia. On the 4th of July, 1795, only two years after leaving college, he was selected to deliver the oration in his native town. He died at Norridgewock January 10, 1813.

SAMUEL PHILLIPS PRESCOTT FAY, son of Jonathan Fay, of Concord, was born in that town January 10, 1778, and graduated at Harvard in 1803, in the class with John Farrar, James Savage and Samuel Willard. He was admitted to the Middlesex bar in 1803 and first settled at Cambridgeport. He was a councillor in 1818-19, member of the Constitutional Convention of 1820, and an overseer of Harvard College from 1825 to 1852. On the 12th of May, 1821, he was appointed judge of Probate and afterwards lived in old Cambridge until his death, May 18, 1856.

RUFUS HOSMER, son of Joseph Hosmer, of Concord, was born in that town March 18, 1778, and graduated at Harvard in 1800. He was admitted to the bar of Essex County in 1803 and removed to Stow.

STEPHEN MINOTT, son of Jonas Minott, of Concord, was born in that town September 28, 1776, and graduated at Harvard in 1801. After admission to

the bar he settled in Haverhill, where he became a judge of the Circuit Court of Common Pleas. After the abolition of that court he was appointed in 1824 county attorney for Essex, and resigned in 1830.

JONAS WHEELER was the son of Jotham Wheeler, of Concord, and was born in that town February 9, 1789. He graduated at Harvard in 1810, in the class with James Gore King and Theodore Lyman. He read law with Erastus Root, of Camden, Maine, and settled in that town. He was both Representative and Senator in the Maine Legislature and died May 1, 1826.

EDWARD BROOKS was the oldest son of Peter C. Brooks, of Boston, and was born in that city in 1793. He graduated at Harvard in 1812 and read law in the office of his uncle, Benjamin Gorham. He was a representative in the General Court from Boston in 1831, 1837 and 1842, and rendered important aid to Samuel G. Howe in establishing the Perkins Institution for the Blind. He became finally a resident of Medford and died in that town in 1878.

GORHAM BROOKS, a younger brother of the above, was born in Medford, February 18, 1795. He fitted for college at Phillips Academy and graduated at Harvard in 1814. He read law with Joseph Lyman, of Northampton, but soon abandoned his profession and entered upon mercantile pursuits. In 1833 he was a member of the firm of W. C. Mayhew & Co., of Baltimore, and afterwards of the firm of Brooks & Harrison, in the same city. In 1840 he returned to Massachusetts and made Medford his residence. He was a member of the Legislature from Medford in 1847 and died September 10, 1855. His wife was a daughter of R. D. Shepherd, of Shepherdstown, Virginia.

EBENEZER BOWMAN was born in Wilmington, July 31, 1757, and graduated at Harvard in 1782. He practiced law at Wilkesbarre and died in 1829.

ISAAC FLETCHER was born in Dunstable, November 22, 1784, and graduated at Dartmouth in 1808. He read law with Prescott & Dunbar at Keene, New Hampshire, and in 1811 removed to Lyndon, Vermont. He was eight years attorney for Caledonia County, a member of the Legislature in 1837 and 1841, and a member at one time of the Governor's staff. He married, in 1813, Abigail Stone, and died October 9, 1842.

AMOS KENDALL was the son of Zebedee and Molly (Dakin) Kendall, of Dunstable, and was born in that town August 16, 1787. Until he was sixteen years of age he worked on his father's farm and then fitted for college at the academy at New Ipswich and at the academy at Groton. He graduated first scholar at Dartmouth in 1811, and while in college taught school a portion of the time in his native town. He read law in Groton with William M. Richardson, of Groton, and was admitted to the Middlesex bar. In 1811 he removed to Kentucky, where he was for a time a tutor in the family of Henry Clay. At

Frankfort, Kentucky, he edited the *Argus*, and in 1829 was appointed fourth auditor of the United States Treasury, by Andrew Jackson. From 1835 to 1840 he was Postmaster-General and afterwards devoted himself to his profession. He was the founder and the first president of the Deaf and Dumb Asylum at Washington, and was for some years one of the trustees of Columbia College, in that city. He married, October 1, 1818, Mary B. Woolfolk, by whom he had four children, and in 1826 he married Mary Kyle, by whom he had ten more, and who died in Washington in June, 1864. In 1849 he received a degree of Doctor of Laws from Dartmouth College. During his residence in Washington he gave \$115,000 to the Cavalry Baptist Church, \$20,000 to the Deaf and Dumb Asylum, \$25,000 to found two mission schools, and \$6000 to establish a scholarship in Columbia College. In 1862 he removed to Kendall Green, New Jersey, and in 1866 visited Europe and the Holy Land. He died in Washington, November 12, 1869. Mr. Kendall was descended from Francis Kendall, who came to New England from England about 1640 and settled in Woburn. Francis Kendall married Mary Tidd in 1644, and had John, born 1646; Thomas, 1649; Mary, 1651; Elizabeth, 1653; Hannah, 1655; Rebecca, 1657; Samuel, 1659; Jacob, 1661; and Abigail, 1666. Jacob Kendall, one of these children, was the great-grandfather of Zebedee, the father of the subject of this sketch.

WILLIAM MERCHANT RICHARDSON was born in Pelham, N. H., Jan. 4, 1774, and graduated at Harvard in 1797. He practiced law a few years in Groton, and was a member of Congress from 1811 to 1814. Removing to Portsmouth, he became distinguished at the bar, and was chief justice of the Supreme Court of New Hampshire from 1816 to 1838. He was the author of the "New Hampshire Justice and Town Officer," and performed a great amount of work on the New Hampshire reports. He died at Chester, N. H., March 23, 1838.

WILLIAM AUSTIN was born in Charlestown March 2, 1778, and graduated at Harvard in 1798. He practiced law in the courts of both Suffolk and Middlesex, but was a member of the Middlesex bar. In 1801 he delivered an oration at Charlestown, on the 17th of June, and in 1807 published a volume entitled "An Essay on the Human Character of Jesus Christ." In 1805 he was wounded in a duel with James H. Elliott, the result of a newspaper controversy. He died in Charlestown June 27, 1841.

WILLIAM BRATTLE was the son of Rev. William Brattle, of Cambridge, and was born in that town in 1702. He graduated at Harvard in 1722, in the class with William Ellery and Richard Saltonstall. He combined in his practice the occupation of a lawyer, preacher, physician, soldier and legislator. He was captain of an artillery company in 1733 and a major-general in the militia, and at various times a member of the General Court and of the Council. Being a

Loyalist he removed to Halifax, Nova Scotia, in 1776, and there died in October of that year.

RICHARD DANA was the grandson of Richard Dana, who came early to New England and settled in Cambridge in 1640. He was born in Cambridge July 7, 1699, and graduated at Harvard in 1718. He was eminent in his profession, and practiced in Marblehead, Charlestown and Boston. He married a sister of Edmund Trowbridge, and was the father of Francis Dana, already mentioned. He died in Cambridge May 17, 1772.

RICHARD H. DANA was the son of Francis Dana, of Cambridge, and was born in that town November 15, 1787. He graduated at Harvard in 1808, and read law with his father, and was admitted to the Suffolk bar in 1811, and, not long after, to the Baltimore bar. In 1812 he settled in practice in Cambridge, and at one time was a member of the General Court from that town. He is believed by the writer to have had no other experience in public life. His taste for purely literary occupation was early developed, and as an essayist and poet he had wide distinction. In 1814 he delivered a Fourth of July oration, in 1818 and 1819 he was associated with Edward Tyrrel Channing in the editorial management of the *North American Review*, and in 1839 and 1840 delivered a series of lectures on Shakespeare in Boston, New York and Philadelphia. As a poet, however, his name is better known. In 1825 he published in the *New York Review* his first poems—"The Dying Raven" and the "Husband and Wife's Grave," and in 1827 he published "The Buccaneer, and Other Poems." In 1833 a volume of his poetical works was issued, and in 1850 two volumes of his poems and prose writings were issued, which included all his literary efforts except his lectures on Shakespeare. He received a degree of Doctor of Laws from Williams College and died in 1867.

STEVEN SCALES, believed to have been born in Boston, graduated at Harvard in 1763, in the class with Josiah Quincy, Nathan Cushing, John Jeffries, Samson Salter Blowers, Timothy Pickering and Caleb Gannett. He removed, in 1772, from Boston to Chelmsford, and died November 5th, in the same year.

JONATHAN WILLIAM AUSTIN, the son of Benjamin Austin, of Boston, was born in that town April 18, 1751, and graduated at Harvard in 1769, in the class with James Winthrop, Peter Thacher and Theophilus Parsons. He read law with John Adams, and was admitted to the Suffolk bar July 27, 1772. In 1773 he removed to Chelmsford and began his professional life. He was a member of the Middlesex Convention in 1774, and passed through the several grades of captain, major and colonel in the War of the Revolution. He died in 1778, while in the army, on one of the Southern campaigns.

JOHN WYTHE, whose time and place of birth are unknown to the writer, graduated at Harvard in 1760, in the class with John Lowell and William

Baylies. He settled as a lawyer in Chelmsford in 1778, and subsequently removed to Lexington and Cambridge, at which latter place he died in 1811.

SAMUEL DEXTER, son of Samuel Dexter, of Boston, was born in that town May 14, 1761, and graduated at Harvard in 1781, in the class with John Davis and Dudley Atkins Tyng. He read law in Worcester and went to Chelmsford in 1786, subsequently removing to Charlestown and finally to Boston, where he became one of the most eminent lawyers of his day. He was a member of both the House and Senate in Congress, serving in the latter capacity in 1799 and 1800, and was appointed, by President John Adams, Secretary of War in 1800, and Secretary of the Treasury in 1801. His chief distinction, however, he won at the bar. He lived in days before oratory was a lost art in the courts, and his arguments were masterpieces of logic clothed in language delighting the ear and winning the heart and judgment of all who heard him. His peroration in his speech, in 1806, in defense of Thomas Oliver Selfridge, indicted for the murder of Charles Austin, the writer heard repeated many years since by Judge Nahum Mitchell, of East Bridgewater, who was in the court-room at the time of its delivery. Selfridge was a graduate of Harvard in 1797, and the father of Rear Admiral Selfridge, of the United States navy. He was a practicing lawyer and a prominent Federalist. Austin was the son of Benjamin Austin, an active and earnest Democrat, who, it was claimed by his son, had been abused in the newspapers by Selfridge. For this abuse Austin threatened to punish Selfridge, and the two meeting in State Street, Boston, Selfridge, expecting an attack, fired the fatal shot. Both Selfridge and Austin occupied high social positions, the latter being the son of a distinguished merchant and the uncle of the late James Trecothick Austin, the Attorney-General of Massachusetts from 1832 to 1843; and intense excitement, both political and social, attended the trial. The writer remembers a capital trial about 1841, in which James T. Austin, the Attorney-General, was opposed by Franklin Dexter for the defense, the son of Samuel Dexter, who successfully defended Selfridge, the slayer of Mr. Austin's uncle, and it was not difficult to detect, in the course of the trial, a trace of the ancient family feud which the events of 1806 had excited. The closing words of Mr. Dexter's speech were as follows:

"I respect the dictates of the Christian religion; I shudder at the thought of shedding human blood; but if ever I may be driven to that narrow pass where forbearance ends and disgrace begins, may this right arm fall palsied from its socket if I fail to defend mine honor."

Mr. Dexter died at Athens, in the State of New York, May 4, 1816.

ELISHA FULLER was the son of Rev. Timothy Fuller, of Princeton, and was born in 1795 and graduated at Harvard in 1815, in the class with George

Eustis, Convers Francis, Thaddeus William Harris, John Amory Lowell, John Gorham Palfrey, Theophilus Parsons and Jared Sparks. He was admitted to the bar in 1823 and settled in Concord, whence in June, 1831, he removed to Lowell. He finally removed in 1844 to Worcester and died in 1855.

TIMOTHY FULLER, a brother of the above, was born in Chilmark, Massachusetts, July 11, 1778. He graduated at Harvard in 1801, and read law in Worcester in the office of Levi Lincoln. He was State Senator from 1813 to 1816, member of Congress from 1817 to 1825, Speaker of the Massachusetts House of Representatives in 1825 and member of the Executive Council in 1828. He was the father of Sarah Margaret Fuller (Countess d'Ossoli), Arthur Buckminster and Richard Frederick Fuller, all of whom were born in Cambridge during the residence of their father in that town. After many years' residence in Cambridge he removed to Groton and there died October 1, 1835.

CALER BUTLER was born in Pelham, New Hampshire, September 13, 1776, and graduated at Dartmouth in 1800. He read law in Groton with Luther Lawrence and settled in that town, where he was the principal of the Groton Academy eleven years, and postmaster thirteen years. He devoted much of his time to literary pursuits and published a history of Groton in 1848. He died at Groton October 7, 1854.

WILLIAM L. CHAPLIN was the son of Rev. Daniel and Susanna (Prescott) Chaplin, and was born October 27, 1796. He died at Cortland, New York, April 28, 1871.

CHRISTOPHER GORE was born in Boston September 21, 1758, and was the son of John Gore, of that town. He graduated at Harvard in 1776 and studied law with John Lowell. In 1789 he was appointed United States district attorney, and in 1796 was appointed, with William Pinckney, commissioner under Jay's treaty to settle American claims against England. He was a member of both branches of the State Legislature, Governor of Massachusetts in 1809 and United States Senator from 1813 to 1816. He died at his residence in Waltham March 1, 1827.

ROGER SHERMAN, one of the signers of the Declaration of Independence was a native of Middlesex County, and was born in Newton April 19, 1721. Until twenty-two years of age he followed the trade of shoemaker, and in 1743 went to North Milford, Connecticut, where he engaged in trade with an older brother, and in 1745 was appointed county surveyor of lands. He subsequently read law and was admitted to the bar in 1754, at the age of thirty-three. He was at one time a member of the Assembly and in 1759 was appointed a judge of the Court of Common Pleas. In 1761 he removed to New Haven and was appointed there in 1765 judge of the Common Pleas, an assistant in 1766 and later a judge of the Superior Court. In 1774 he was appointed member of Congress, became United States Senator and from 1784 until his death was mayor of New Haven. In 1776

he was one of the committee of Congress appointed to draft the Declaration of Independence, and in 1783 assisted in codifying the laws of Connecticut. He died at New Haven July 23, 1793.

ROGER MINOT SHERMAN, nephew of the above, was born in Woburn May 22, 1773, and graduated at Yale in 1792. He was admitted to the bar in 1796, and made Fairfield, Conn., his permanent residence. He was a member of the Assembly in 1798, of the Senate from 1814 to 1818, a member of the Hartford Convention in 1814, and judge of the Superior Court and the Supreme Court of Errors from 1840 to 1842. He died at Fairfield December 30, 1844.

ASHER WARE was born in Sherburne February 10, 1782, and graduated at Harvard in 1804, receiving a degree of Doctor of Laws from Bowdoin in 1837. After leaving college he was tutor at Harvard from 1807 to 1811, and Professor of Greek from 1811 to 1815. After admission to the bar he practiced one year, 1816, in Boston, and in 1817 removed to Portland. Upon the organization of the State of Maine, in 1820, he was made Secretary of State, and from 1822 to 1866 was judge of the United States District Court.

SIMON GREENLEAF, though not a member of the Middlesex bar, was so long a resident in the county as Professor in the Dane Law School at Cambridge that he ought not to be omitted in these sketches. Mr. Greenleaf was descended from Edmund Greenleaf, of Brixham, Devonshire, England, who came to New England very early and settled in Newbury in 1635, whence he removed about 1650 to Boston, and there died in 1671. The family is supposed to have been of French origin, and its name a translation of the French *Feuillevert*. Jonathan Greenleaf, of the fourth generation, lived in Newbury, accumulating property by ship-building and taking an active part in public affairs as Representative, Senator and Councilor. His son Moses was a ship-builder and removed to New Gloucester, Maine, where he died in 1812. Moses Greenleaf married, in 1776, Lydia, daughter of Rev. Jonathan Parsons, of Newburyport, and Simon Greenleaf, the subject of this sketch, was his fourth child, and was born in Newburyport December 5, 1783. After the removal of his father to New Gloucester, about 1790, Simon, left in the care of his grandfather, attended the Latin School of Newburyport, under the instruction of Michael Walsh, and at the age of eighteen joined his father and began the study of law in the office of Ezekiel Whitman, afterwards chief justice of the Supreme Court of Maine. In 1805 he was admitted to the bar of Cumberland County and began to practice in the town of Standish, Maine, whence he removed to Gray, and in 1818 removed to Portland. When the district of Maine became a State in 1820, and a Supreme Court was established, he was appointed by the Governor reporter of decisions, and held office twelve years. During this period he published nine volumes of re-

ports. In 1832 he resigned his position, and in 1833 succeeded John Hooker Ashmun as Royall Professor in the Dane Law School, which situation he held until 1846, when, on the death of Judge Joseph Story, he was transferred to the Dane Professorship. In 1848 failing health induced his resignation, but until his death he held the position of Professor Emeritus.

Besides his volumes of reports Mr. Greenleaf published in 1821 "a full collection of Cases Overruled, Denied, Doubted or Limited in their application, taken from American and English Reports;" in 1842 a "Treatise on the Law of Evidence," and at various times an "Examination of the Testimony of the Four Evangelists by the Rules of Evidence administered in Courts of Justice;" an edition of "Cruise's Digest of the Law of Real Property;" a "Discourse at his Inauguration as Royall Professor," and a "Discourse Commemorative of the Life and Character of the Hon. Joseph Story, LL.D." He received the degree of Doctor of Laws from Harvard in 1834, from Amherst in 1845, from Alabama College in 1852, and the degree of Master of Arts from Bowdoin in 1817. He died at Cambridge October 6, 1853. He married, in 1806, Hannah, daughter of Ezra Kingman, of East Bridgewater, Massachusetts, and had fifteen children, of whom only one survived him.

ABNER BARTLETT was a descendant of Robert Bartlett, who came to Plymouth in the "Ann" in 1623 and married, in 1628, Mary, daughter of Richard Warren, who came in the "Mayflower." He was the son of Abner and Anna (Hovey) Bartlett, of Plymouth, and was born in that town in 1776. His sister Anna married, in 1796, Ellis Bartlett, the grandfather of William Lehman Ashmead Bartlett, who married Baroness Burdett-Coutts. He graduated at Harvard in 1799 and married Sarah Burgess and settled in Medford. One of his daughters was the first wife of Rev. Dr. George W. Briggs, now of Cambridge. He died in Medford, September 3, 1850.

SAMUEL BLODGET was born in Woburn, April 1, 1724, and at the age of twenty-one was engaged in the expedition against Louisbourg, in 1745. He was before the Revolution judge of the Court of Common Pleas for Hillsborough County. In 1791 he became interested in the manufacture of duck, and in 1793 began the construction of the canal round Amoskeag Falls, which bears his name. He died at Haverhill, September 1, 1807.

JOHN HOAR went from Scituate about 1660 and settled in Concord, where he died April 2, 1704.

DANIEL BLISS, son of Rev. Daniel Bliss, was born in Concord, March 18, 1710, and graduated at Harvard in 1760. He read law with Abel Willard, of Lancaster, and was admitted to the Worcester bar in 1765. He began practice in Rutland, removed to Concord in 1772, but retired to Fredericton, New Brunswick, at the time of the Revolution, where he became chief justice of the Provincial Court of Common Pleas, and died in 1806.

THOMAS HEALD was born in New Ipswich, New Hampshire, March 31, 1768, and graduated at Dartmouth in 1797. He read law with Jonathan Fay and was admitted to the bar in 1800. He settled in Concord in 1813 and died at Blakeley, Alabama, in 1821, while a judge in that State.

JOHN LEIGHTON TUTTLE was born in Littleton and graduated at Harvard in 1796. He practiced law in Concord, where he was postmaster, county treasurer and Senator, and died at Watertown, New York, July 23, 1813.

JOHN KEYES was the son of Joseph Keyes, of Westford, and was born in that town in the year 1787. He was the youngest son of a large family of twelve children, and until entering college lived with his father, working on his farm during the summer and attending the district school in the winter. His father reared his family during the disastrous days which followed the Revolution on a farm of about forty acres of poor soil and without a market, where his ancestors during four generations had before him struggled for a livelihood. Young Keyes, with a mind stronger than his body, whose constitution, naturally delicate, had been further unfitted, by a severe accident in his fifteenth year, for the labors of a farmer's life, gradually drifted into the paths of knowledge which led to a better education than that which most of his school and playmates were able to receive. With health somewhat restored he entered Westford Academy, boarding at home and walking daily three miles to school. He entered Dartmouth College in 1805, and by careful economy and with the earnings of school-teaching in the winter he made the scanty supplies from home suffice for his college career, and graduated in 1809. Levi Woodbury, of New Hampshire, was the youngest in years and first in rank in his class, and it is said that the seventeen hours of study in the twenty-four which the robust constitution of Woodbury permitted him without injury to endure, alone enabled him to compete successfully with his less fortunate classmate and friend.

After leaving college he returned to Westford and entered as a student the law-office of John Abbott, then an eminent practitioner at the Middlesex bar, supporting himself partly by services rendered to his instructor and partly by teaching school. In the winter of 1811-12 he taught the school in District No. 7, in Concord, boarding with Samuel Buttrick, and March 12, 1812, entered his name in the law-office of John Leighton Tuttle, of that town. At the September term of the Circuit Court of Common Pleas in the last-mentioned year, before Judge Samuel Dana, he was admitted to the Middlesex bar, and at once took the office of Mr. Tuttle, who had been appointed lieutenant-colonel of the Ninth Regiment for frontier service, and who died at Watertown, New York, July 23, 1813. Colonel Tuttle had been postmaster of Concord, and Mr. Keyes was appointed his successor, holding the office from 1812 to

1837, when he was removed by President Van Buren. Colonel Tuttle had also been county treasurer, and Benjamin Prescott, who was chosen to succeed him, having failed to give bonds, Mr. Keyes was appointed by the Court of Sessions in his place. He was subsequently rechosen annually until 1837, a period of twenty-four years. From the salaries of these offices he laid the foundation of a fortune which at his death was the largest ever inventoried in Concord.

Mr. Keyes was early led into politics and warmly supported the Democratic party in opposition to that of the Federalists. The alluring attractions of political work, together with the duties of the offices, he held, drew him somewhat away from the more sober paths of his profession; but he acquired nevertheless a respectable and lucrative practice at a bar which included Artemas Ward, Samuel Dana, Timothy Bigelow, Asabel Stearns and Samuel Hoar among his seniors, and Hosmer, Fuller, Lawrence and Adams among his contemporaries. Though he was engaged in many important causes, he was, however, better known as a politician than as a practicing lawyer. In 1820 he was a delegate to the convention for the revision of the State Constitution from Concord, and in 1821 and 1822 he was a member of the Massachusetts House of Representatives. From 1823 to 1829 he was a member of the Senate, in which body he was of sufficient consideration to attract the shafts of his political opponents, one of which was so libelous as to cause the editor who published it to be prosecuted and convicted. At the close of his first senatorial term he was nominated by the National Republican party for Congress, but was defeated by Edward Everett, after a close contest. In 1832 and 1833 he was again a member of the Massachusetts House of Representatives, and during the illness of the Speaker, Julius Rockwell, was chosen Speaker *pro tem*. From 1823 to 1833 his party was predominant in Middlesex County, and his counsels prevailed with his party, being, as he undoubtedly was, the most popular and influential man within its limits.

Mr. Keyes was prominent in the Masonic Order, at one time holding the second office in the State, and in the Anti-Masonic excitement of 1834 he was an object of special attack, and in consequence lost his office of county treasurer. In 1837, when removed from the post-office, he ended his public service.

In town affairs he was active, but declined office, except that of moderator of town-meetings, to which he was frequently chosen. He was a good presiding officer and was selected to act as President of the Day at the bi-centennial celebration of the settlement of Concord. He was one of the projectors of the Mill Dam Company, the Insurance Company, the Bank and Savings Institution in that town, and either president or director in these corporations. In the Lyceum, the schools, and the parish he was earnest and useful, and all of them have felt the impress of his hand and life.

In 1816 Mr. Keyes married Ann S. Shepard, daughter of Dr. T. Shepard, of Hopkinton, whose widow had removed to Concord and lived there, the wife of William Hildreth, sheriff of Middlesex County, from 1810 to 1815. He had five children, of whom two were girls and died young, and three were sons, of whom one, John S. Keyes, is mentioned in this narrative. Mr. Keyes died at Concord, August 29, 1844, at the age of fifty-seven.

ABRAHAM FULLER, son of Joseph and Sarah (Jackson) Fuller, was born March 23, 1720. He kept school in Newton four years; was town clerk and treasurer of that town twenty-seven years from 1766; representative to the General Court eighteen years; delegate to the Provincial Court, Senator, councillor and judge of the Court of Common Pleas. He died April 20, 1794.

WALTER HASTINGS was born in Chelmsford in 1778 and graduated at Harvard in 1799. He read law with Judge Prescott at Groton, and opened an office in Townsend, where he practiced until the War of 1812, during which he was a colonel of a regiment. At the close of the war he returned to Townsend, and in 1814 married Roxanna, daughter of Moses Warren, and died June 6, 1821.

NATHANIEL GORHAM was born in Charlestown May 27, 1738. He was many years one of the selectmen of the town, and its representative from 1771 to 1775. He was a delegate to Provincial Congress, a member of the Board of War, a delegate to the State Constitutional Convention in 1779, a delegate to Congress in 1782-83 and in 1785-87, and its president in 1786. He was also, for several years, a judge of the Court of Common Pleas. He died at Canandaigua, New York, October 22, 1826.

BENJAMIN GORHAM, son of the above, was born in Charlestown February 13, 1775, and graduated at Harvard in 1795. He studied law with Theophilus Parsons, and became an eminent lawyer at the Middlesex and Suffolk bars. He was a member of the General Court, and in 1820, '21, '22, '23, '27, '28, '29, '30, '31, '33, '35 was a member of Congress. He died in Boston September 27, 1856.

DANIEL BLISS RIPLEY, son of Rev. Ezra Ripley, of Concord, was born in that town in 1788, and graduated at Harvard in 1805. He died at St. Stephen's, Alabama, April 30, 1825.

JOSEPH STORY was neither a native of Middlesex County nor a practitioner at its bar, but he had his residence so long within its limits, and in the minds of persons living, who remember him, he was so identified with Cambridge and the Law School, of which he was many years the head, that a chapter on the Middlesex Bench and Bar would be incomplete without a reference to his professional career and the law publications which he left as memorials of his legal knowledge and indefatigable industry. He was born in Marblehead, September 18, 1779, and was the son of Dr. Elisha Story, a native of Boston, and a surgeon

in the Revolution. He graduated at Harvard in 1798, and received degrees of Doctor of Laws from Brown in 1815, Harvard in 1821 and Dartmouth in 1824. The writer can do no better than follow the text of a sketch of Judge Story published in another work, which contains all the facts necessary to relate, and which might as well be literally copied, as to be presented in a merely remodeled form:

Among his classmates were William Ellery Channing, John Varnum and Sidney Willard. His education before entering college was received in Marblehead under the direction of Rev. Dr. William Harris, afterwards president of Columbia College. He began his law studies in the office of Chief Justice Samuel Sewall, in Marblehead, and continued them, after the appointment of Mr. Sewall to the bench, in the office of Samuel Putnam, of Salem. He was admitted to the Essex bar in July, 1801. He was a Democrat in politics, and as such stood almost alone among the lawyers of the county. He was a member of the Massachusetts House of Representatives in 1805, '16 and '17, a member of Congress in 1808, again a member of the Legislature from 1809 to 1812, and was chosen Speaker of the House of Representatives in January, 1811.

In 1806 he advocated in the Legislature an increase of the salaries of the judges of the Supreme Judicial Court, in opposition to the prejudices of his party against high judicial salaries, and more especially against Theophilus Parsons, whom it was proposed to put upon the bench, but who could not afford to relinquish a practice of \$10,000 for a position having attached to it the paltry salary of \$1200. Mr. Parsons was especially obnoxious to the Democrats, but Mr. Story, with that sturdy independence which always characterized him, advocated and carried a bill to increase the salary of the chief justice to \$2500, and of the associate justices to \$2400, and Mr. Parsons was appointed and accepted the appointment. In 1809 he advocated and was largely the means of securing a further increase of the salaries of the chief justice and the associates to \$3500 and \$3000 respectively.

On the 18th of November, 1811, he was appointed by Madison associate justice of the Supreme Court of United States, to fill the vacancy caused by the death of William Cushing, of Massachusetts, which occurred on the 13th of September, 1810. The appointment had been previously offered to John Quincy Adams, who declined it. Mr. Story was then only thirty-two years of age, and his appointment reflects credit on the sagacity of Mr. Madison who discovered in so young a man the signs of promise which his career afterwards fully verified. In 1820, at the time of the separation of Maine from Massachusetts, he was a delegate from Salem to the Constitutional Convention. In 1828, Nathan Dane, who, in founding the Law School at Cambridge, had reserved to himself the appointments to its professorships, appointed Judge

Story, Dane Professor of Law, and John Hooker Ashmun, Royall Professor of Law, and in the next year, 1829, he removed from Salem to Cambridge, where he continued to serve until his death, on the 10th of September, 1845.

Aside from his learning in the law and that wonderful fluency in the use of language, both spoken and written, which made his learning available, nothing distinguished him more than his industry. With the labors of a judge constantly pressing upon him and the cares of his professorship, the press was kept busy in supplying the law libraries of the land with his commentaries and treatises and miscellaneous productions. His first publication seems to have been a poem entitled the "Power of Solitude," published in Salem in 1801. In 1805 appeared "Selections of Pleadings in Civil Actions with Annotations." In 1828 he edited the public and general statutes passed by Congress from 1789 to 1827, and in 1836 and 1845 supplements to these dates. In 1832 appeared "Commentaries on the Law of Bailments with Illustrations from the Civil and Foreign Law;" in 1833 "Commentaries on the Constitution;" in 1834 "Commentaries on the Conflict of Laws, Foreign and Domestic, in Regard to Contracts, Rights and Remedies, and Especially in Regard to Marriages, Divorces, Wills, Successions and Judgments." In 1835 and 1836 appeared "Commentaries on Equity Jurisprudence as Administered in England and America;" in 1838 "Commentaries on Equity Pleadings and the Incidents Thereto according to the Practice of the Courts of Equity in England and America;" in 1839 "Commentaries on the Law of Agency as a Branch of Commercial and Maritime Jurisprudence, with Occasional Illustrations from the Civil and Foreign Law;" in 1841 "Commentaries on the Law of Partnership as a Branch of Commercial and Maritime Jurisprudence, with occasional illustrations from the Civil and Foreign Laws;" in 1843 "Commentaries on the Law of Bills of Exchange, Foreign and Inland, as Administered in England and America, with occasional illustrations from the Commercial Law of Nations of Continental Europe;" in 1845 "Commentaries on the Law of Promissory Notes." His decisions in the first circuit from 1812 to 1815 are in "Gallison's Reports;" from 1816 to 1830 in "Mason's Reports;" from 1830 to 1839 in "Sumner's Reports," and from 1839 to 1845 in "Story's Reports." Among his numerous other publications were an "Eulogy on Washington," at Salem, in 1800; an "Eulogy on Captain James Lawrence and Lieutenant Ludlow," in 1813; "Sketch of Samuel Dexter," in 1816; "Charges to Grand Juries in Boston and Providence" in 1819; "Charge to the Grand Jury at Portland," in 1820; "Address before the Suffolk Bar," in 1821; "Discourse before the Phi Beta Society," in 1826; "Discourse before the Essex Historical Society" in 1828; "Address at his own inauguration as Professor," in 1829; "Address at the dedication of Mount Auburn,"

in 1831; "Address at the funeral services of Professor John Hooker Ashmun," in 1833; "Eulogy on John Marshal," in 1835; "Lectures on the Science of Law," in 1838; "Address before the Harvard Alumni," in 1842, and a "Charge to the Grand Jury of Rhode Island on Treason," in 1845. In addition to this long list of his works might be mentioned a large number of essays and articles in magazines and reviews, and three unprinted manuscript volumes finished just before his death, entitled "Digest of Law Supplementary to Comyns," which are deposited in the Harvard College Library.

NATHAN CROSBY was born in Sandwich, N. H., February 12, 1798. He was descended from Simon and Ann Crosby, who settled in Cambridge in 1635. The descent was through Simon, of Billerica, Josiah, Josiah, Josiah and Asa, a physician, who married Betsey, daughter of Colonel Nathan Hoyt, and died in Hanover, N. H., April 12, 1836, at the age of seventy years. Nathan was one of seventeen children by two mothers, six dying young, five sons receiving degrees from Dartmouth and two daughters marrying professional men. Three of the brothers of Nathan were professors at Dartmouth. He graduated at Dartmouth in 1820, and married Rebecca, daughter of Stephen Moody, a lawyer of Gilmanton, N. H. He studied law with Mr. Moody and with Asa Freeman, of Dover. His wife died January 3, 1867, and he then married, May 19, 1870, Mrs. Matilda (Pickens) Fearing, daughter of James and Charity (Mackie) Pickens, of Boston, and widow of Dr. Joseph W. Fearing, of Providence. In 1826 he removed from New Hampshire to Amesbury, thence to Newburyport, and, in 1843, to Lowell, where he succeeded Joseph Locke as judge of the Police Court.

JOHN P. ROBINSON was born in Dover, N. H., in 1799, and, after attending Phillips Academy, entered Harvard in 1819, and graduated in 1823. He read law in the office of Daniel Webster, and in 1827 began practice in Lowell. He was a member of the House of Representatives in 1829, '30, '31, '33, '42, and a Senator in 1835. He was a scholar as well as a lawyer, and devoted no small portion of his time to classical study. He married a daughter of Ezra Worthen, and died October 20, 1864. He was a man of somewhat eccentric traits, and inveterate in his personal dislikes and quarrels. On one occasion, meeting a brother member of the bar, he said, while rubbing his hands with apparent satisfaction: "There will be hot work in hell to-night." "How is that, Mr. Robinson?" asked his friend. "Farley died this morning," he replied.

WILLIAM W. FULLER, son of Rev. Timothy Fuller, and brother of Elisha and Timothy, already mentioned, graduated at Harvard in 1813, and practiced law in Lowell eight years, but removed to Illinois, where he died in 1849.

NATHAN BROOKS, son of Joshua Brooks, of Lincoln, was born in that town October 18, 1785, and

graduated at Harvard in 1809. He settled in Concord in 1813, from which town he was Representative to the General Court in 1823, '24, '25. In 1827 he was appointed Master in Chancery, in 1829 he was a member of the Executive Council, and in 1831 Senator. He married, in 1820, Caroline Downes, and had Caroline, who married Ebenezer Rockwood Hoar. He married, second, Mary Merrick, and had George Merrick. He died in 1863.

SAMUEL FARRAR, son of Deacon Samuel Farrar, and brother of Timothy Farrar, already mentioned, was born in Lincoln, December 13, 1773, and graduated at Harvard in 1797. He was tutor at Harvard one year, after which he read law and settled in Andover, where he was at one time president of a bank and treasurer of the Theological Seminary, and died in 1861.

JOSEPH FARRAR, son of Humphrey Farrar, of Lincoln, was born in that town February 14, 1775, and graduated at Dartmouth in 1794. The writer is unable to state where he practiced law.

JAMES RUSSELL, son of Daniel Russell, of Charlestown, and brother of Chambers Russell, already mentioned, was born in Charlestown, August 5, 1715. He was a Representative from Charlestown thirteen years, from 1746, and May 16, 1771, was appointed a judge of the Court of Common Pleas. In 1775 he removed to Dunstable, and thence to Lincoln, where he lived more than fifteen years. He married Katharine, daughter of Thomas Graves, who died in Lincoln, September 17, 1778. His children were Thomas, who married Elizabeth, daughter of George Watson, of Plymouth; Charles, a graduate of Harvard in 1757, who became a physician; Chambers, who died in South Carolina; Katharine, who married a Mr. Henly, of Charlestown; Rebecca, who married Judge Tyng and Judge Sewall; Margaret, who married John Codman, and Sarah and Mary, unmarried. Mr. Russell died in Charlestown.

NATHANIEL PIERCE HOAR, son of Samuel Hoar, of Lincoln, was born in that town September 2, 1784, and graduated at Harvard in 1810. He read law with his brother, Samuel Hoar, of Concord, and settled in Portsmouth, N. H., in 1813. He returned to Lincoln, and there died May 24, 1820.

THOMAS FISKE, son of Elijah Fiske, of Lincoln, was born in that town about 1799 and graduated at Harvard in 1819. He settled in Charleston, South Carolina, in 1826 and died in 1830.

AMOS SPAULDING, son of Zebulon Spaulding, of Carlisle, graduated at Dartmouth in 1805 and settled, as a lawyer, in Andover. As a citizen of that town he was at one time a Representative and Senator in the General Court.

JOEL ADAMS, son of Timothy Adams, of Carlisle, graduated at Harvard in 1805 and was admitted to the Middlesex bar in September, 1808. He settled in Chelmsford and died in 1861.

ASA GREEN, son of Zacheus Green, of Carlisle,

graduated at Williams College in 1807 and settled as a lawyer in Brattleborough, Vermont, where he was at one time postmaster.

JOSEPH ADAMS, son of Rev. Moses Adams, of Acton, and brother of Josiah Adams, already mentioned, was born in Acton, September 25, 1783, and graduated at Harvard in 1803. He settled as a lawyer in West Cambridge and died in that town June 10, 1814.

ABIEL HEYWOOD, son of Jonathan Heywood, of Concord, was born in Concord, December 9, 1759, and graduated at Harvard in 1781. He studied medicine with Dr. Spring, of Watertown, and settled in his native town. In 1796 he was chosen town clerk and selectman; in 1802 he was appointed special judge of the Court of Common Pleas and was an associate justice of the Court of Sessions from 1802 to the time of the organization of the County Commissioners' Court. He died in Concord in 1839.

JONATHAN FAY was the son of Captain Jonathan Fay, of Westboro', and graduated at Harvard in 1778. He settled in the law at Concord, where he married Lucy Prescott, and died June 1, 1811, at the age of fifty-nine years.

PETER CLARK, son of Benjamin Clark, was born in Concord and graduated at Harvard in 1777. He settled in the law in Southboro' and died in July, 1792, aged thirty-six years.

SILAS LEE, son of Joseph Lee, of Concord, was born in that town July 3, 1760, and graduated at Harvard in 1784. He settled as a lawyer in what is now Wiscasset, Maine, and in 1800 and 1801 represented the district of Lincoln and Kennebec in the Sixth Congress. In January, 1802, he was appointed district attorney for the district of Maine, and in 1807 judge of probate for the county of Lincoln. He held the offices of district attorney and judge until his death, March 1, 1814.

JAMES MITCHELL VARNUM was born in Dracut in 1749 and graduated at Rhode Island College. After his admission to the bar he settled at East Greenwich, Rhode Island, and acquired an extensive practice. In 1774 he commanded the Kentish Guards and in January, 1775, was appointed colonel of the First Rhode Island Regiment. He was made brigadier-general February 21, 1777, and in the next winter he was at Valley Forge. He was at the battle of Monmouth in June, 1778, and in July engaged in General Sullivan's expedition to Rhode Island. In 1780-82 and 1786-87 he was a member of the old Congress, and in 1788, having been appointed judge of the Supreme Court in the Northwest Territory, he removed to Marietta, where he died, January 10, 1789.

SAMUEL HOAR, of Concord, was descended from Charles Hoar, sheriff of Gloucester, England, who died in that city in 1634. His widow, Joanna, came to New England about 1640 with five children, the sixth and oldest child, Thomas, remaining in England. Of these five children, Joanna married Colonel

Edmund Quincy; Margery married a Matthews in England, and in this country, when a widow, Rev. Henry Flint, of Braintree; Daniel went to England in 1653; Leonard was president of Harvard College from September 10, 1672, until his death, March 15, 1674-75; and John settled in Scituate and removed to Concord about 1660. The mother died in Braintree, December 23, 1661. John, who settled in Concord, by a wife Alice, who died June 5, 1697, had Elizabeth, who married Jonathan Prescott; Mary, who married Benjamin Graves, and Daniel, who married, in 1677, Mary Stratton. Daniel had John, Leonard, Daniel, Joseph, Jonathan, Mary, Samuel, Isaac, David and Elizabeth. Of these Daniel, the third son, married, in 1705, Sarah Jones, and had four sons—John, Daniel, Jonathan and Timothy—and several daughters. Of these, John married Elizabeth Coolidge, of Watertown, and was the father of Samuel and Leonard, of Lincoln. Of these two sons, Samuel married Susanna Pierce and was the father of the subject of this sketch. He lived in Lincoln and was a lieutenant in the Revolution, a magistrate, Representative, Senator and a member of the Constitutional Convention of 1820.

The subject of this sketch was born in Lincoln, May 18, 1778, and fitted for college with Rev. Charles Stearns, of that town, graduating at Harvard in 1802. After leaving college he was two years a tutor in the family of Colonel Taylor, of Mount Airy, in Virginia, and at the close of his law studies with Artemas Ward, in Charlestown, was admitted to the bar in September, 1805, and settled in Concord. In 1806 he declined the office of the professorship of Mathematics at Harvard, having already in his first year of professional life acquired a very considerable practice. He rose rapidly to the front rank of lawyers at the Middlesex bar, and in almost all important cases in the courts of that county he was counsel on one side or the other. It has been said of him that "so eminently practical and useful and so much to the point did he always aim to make himself, that one would not speak of Mr. Hoar as especially learned or sagacious or eloquent, save when the precise condition of his cause needed the exercise of sagacity, of persuasive speech or the support of learning. He threw away no exertion by misplaced efforts, but what his cause demanded he was usually able to furnish, and few men could judge as well as he by what means his object would be best accomplished. No man was more safe than he as an adviser; none more fully prepared to meet the varying exigencies of the forum; no one, whatever his gifts of speech, more favorably impressed or convincingly addressed a jury. His style as a speaker was calm, dignified, simple, direct and unimpassioned, but he spoke as one who was first convinced, before he attempted to convince his tribunal. While he never went below the proper dignity of time, place and occasion, at the same time he would never fail to receive from all the juries and

bystanders at a Middlesex *nisi prius* term the general award that he was the most sincere and sensible man that ever argued cases at that bar. Nor was this all. To the measure also of a greatness even to the surprise of his friends could he raise his efforts as an advocate when the occasion called for a full exhibition of his clear, strong, logical faculty, or excited those genuine emotions from which spring the fountains of eloquence." It may be stated as an illustration of the simple confidence reposed by the people of Middlesex County in his opinion and word, that on one occasion, when a jury failing to agree was called into court by the judge, the foreman said that there was no misunderstanding of the law on the evidence, but that they were embarrassed by the fact that while the evidence clearly proved the prisoner guilty, Mr. Hoar had said in his speech for the defense that he believed him innocent.

Mr. Hoar devoted himself almost exclusively to the labor of his profession until 1835, when he took his seat as a member of the Twenty-fourth Congress. He had, however, previous to that time represented Concord in the convention for the revision of the Constitution in 1820, and was a member of the State Senate in 1826, '32 and '33. In Congress he succeeded Edward Everett as a Representative from the Middlesex District. Soon after his single term in Congress he withdrew from the practice of law, and devoted himself to literary and philanthropic pursuits. He was a member of the Harrisburg Convention, which nominated General Harrison for the Presidency in 1839, and until ten years later than that time he was an unwavering supporter of the Whig party.

Not long after this time events occurred with which Mr. Hoar was personally connected, which served as one of the causes of that upheaval of public sentiment at the North against the institution of slavery which was destined to extinguish that institution forever. On the 19th of December, 1835, the Legislature of South Carolina passed an act providing that any free negro or person of color coming voluntarily into the State should be warned to depart, and failing so to depart, on returning after such warning, should be publicly sold as a slave. Under this act colored stewards, or cooks, or sailors of vessels entering South Carolina ports were to be seized and placed in jail, and there confined until the departure of the vessel in which they had come, and if they failed to depart with their vessels, or if they returned, they were to be sold as slaves. After several remonstrances made by Massachusetts against the treatment of her citizens under this Act, the Legislature, in March, 1841, passed resolves authorizing the Governor to employ an agent in the port of Charleston, "for the purpose of collecting and transmitting accurate information respecting the number and names of citizens of Massachusetts who have heretofore been, or may be during the period of his engagement, imprisoned without the allegation of any crime. The said agent shall also be

enabled to bring and prosecute, with the aid of counsel, one or more suits in behalf of any citizen that may be so imprisoned, at the expense of Massachusetts, for the purpose of having the legality of such imprisonment tried and determined upon in the Supreme Court of the United States." On the 16th of March, 1844, another resolve was passed, under which Governor George N. Briggs employed Mr. Hoar on the 11th of October in that year. It is unnecessary to here recount the various incidents which preceded the enforced return of Mr. Hoar to Massachusetts. He reached Charleston on the 28th of November, and on the 5th of December the Legislature of South Carolina adopted the following resolutions:

"Resolved, That the right to exclude from their territories seditious persons or others whose presence may be dangerous to their peace, is essential to every independent state.

"Resolved, That free negroes and persons of color are not citizens of the United States within the meaning of the Constitution, which confers upon the citizens of one state the privileges and immunities of citizens in the several states.

"Resolved, That the emissary sent by the State of Massachusetts to the State of South Carolina, with the avowed purpose of interfering with her institutions and disturbing her peace, is to be regarded in the character he has assumed, and to be treated accordingly.

"Resolved, That his Excellency the Governor be requested to expel from our territory the said agent after due notice to depart; and that the Legislature will sustain the executive authority in any measures it may adopt for the purpose aforesaid."

An agent of the Governor to carry these resolutions into effect reached Charleston from Columbia, the capital, on the afternoon of Tuesday, the 6th of December; but Mr. Hoar, on the representation of the mayor and sheriff and leading citizens, that he could not remain with safety, had that morning embarked on his return. In the attempted performance of the duties of his mission he acted with coolness, composure, courage and good judgment. He did not fly from the danger, but yielded reluctantly to the necessities of the occasion, and Governor Briggs stated, in a special message to the Legislature, "that his conduct under the circumstances seems to have been marked by that prudence, firmness and wisdom which has distinguished his character through his life." In seeming recognition of his services and approval of his course, the Legislature, in the following January, by whom at that time the Executive Council were appointed, chose him one of that body.

In 1848 Mr. Hoar, believing the nomination of General Taylor an abandonment by the Whig party of its opposition to the extension of slavery, joined in the formation of the Free Soil party and presided at a convention at Worcester, June 28, 1848, to which all opposed to nominations of General Taylor and General Cass by the Whig and Democratic parties were invited. A national convention was afterwards held at Buffalo, and Martin Van Buren and Charles Francis Adams were nominated for President and Vice-President. This ticket was supported by Mr. Hoar.

In 1850 Mr. Hoar was chosen Representative to the Legislature, and by his efforts the removal of the

courts from Concord was postponed for a season, and largely through his influence and speech, Harvard College was preserved from State control.

In 1854 and 1855 Mr. Hoar aided conspicuously in the formation of the Republican party, and the events initiating and attending the birth of that party were the last in which he publicly engaged. He died November 2, 1856.

Mr. Hoar married Sarah, daughter of Roger Sherman, of Connecticut, October 13, 1812, who died October 30, 1866. Their children were: Elizabeth, born July 14, 1814, and died April 7, 1878; Ebenezer Rockwood, born February 21, 1816; Sarah Sherman, born November 9, 1817; Samuel Johnson, born February 4, 1820, and died January 18, 1821; Edward Sherman, born December 22, 1823; and George Frisbie, born August 29, 1826.

ARTEMAS WARD was the son of General Artemas Ward, of Shrewsbury, Massachusetts, who was the commander-in-chief of the Massachusetts forces at the beginning of the Revolutionary War, and afterwards first major-general under General Washington. General Ward held other important offices, both before and after the Revolution, and was known as a man of high principle and inflexible integrity. On the maternal side, Artemas Ward traced his ancestry to Dr. Increase Mather. He was born at Shrewsbury January 9, 1762. He graduated at Harvard College in 1783.

After finishing his law studies he began the practice of his profession in Weston, Massachusetts, where he became known and respected, both as a lawyer and a citizen. He was active in town affairs, being representative in the General Court in 1796, 1797, 1798, 1799 and 1800, and holding other town offices. He was captain of a company of light infantry raised in Middlesex County, from September 7, 1789, to March 31, 1793, when his resignation of his command was accepted.

In 1800 when his brother-in-law, Samuel Dexter, the eminent lawyer, who held high offices under the National Government, left Charlestown, to attend to his duties in Washington, Artemas Ward removed to Charlestown to take the place of Mr. Dexter. He was a member of the Executive Council in 1803, 1804, 1805, 1808 and 1809.

In 1810 he became a citizen of Boston, where he resided until his death.

In 1811 he was one of the representatives from Boston in the General Court. He represented the Boston district in the Thirteenth and the Fourteenth Congress (from March, 1813, to March, 1817), declining a re-election at the end of his second term. He was a member of the State Senate, from Suffolk County, in 1818 and 1819, and of the convention to revise the Constitution of Massachusetts in 1820.

In 1819 he became judge of the Boston Court of Common Pleas, and upon the abolition of this tribunal and the establishment of the Court of Common

Asa Ward

Pleas for the Commonwealth, in 1821, he was appointed chief justice of the last-named court. This position he retained until 1839, when he resigned.

At the height of his practice he was invited to accept a seat on the bench of the Supreme Judicial Court, but declined for domestic reasons.

He was a member of the Board of Overseers of Harvard College from 1810 to 1844, and received the degree of LL.D. from the college in 1842.

He married Catharine Maria Dexter, January 14, 1788. Miss Dexter was the daughter of Hon. Samuel Dexter, then a resident of Weston, and sister of Samuel Dexter, the distinguished lawyer. There were seven children of this marriage, of whom the last survivor died in 1881.

During the last few years of his life he was in feeble health, and seldom left his house. He died October 7, 1847.

Such are the facts which have been found as to the life of Artemas Ward, gathered mostly from the records of his time. They tell us little of the real man, as he appeared to those among whom he lived, and who took part with him in the action of his day—though from the number of responsible offices to which he was called, it may be inferred that he showed himself faithful in the performance of duty, and had the respect and esteem of the community.

The present writer cannot hope to supply the deficiencies in this narrative, so as to give a true representation of Artemas Ward as he was. There seem to be no sources from which the necessary information can be procured. He left no writing of his own which may be referred to for the purpose, nor has much been written of him by others. His generation has passed away, and none who can properly be called his contemporaries are left to tell of him. His children, who remembered him with warm love and a feeling which was almost reverence, are gone. His descendants now living knew him only as one who had already entered upon the period of old age. But something may be added to make the account less imperfect.

He was a man of solid and substantial qualities, with no taste for ostentation or display. As a lawyer he devoted himself to his profession; as a judge, to the duties of his position; in the various elective offices which he filled, he did the work that was to be done. In Congress he spoke sometimes, but not often.

He was not a politician in the usual sense of the word. Yet he held decided political opinions, sympathizing with the old Federal party till its dissolution and afterwards with the Whig party. He had much anti-slavery feeling, being interested in the cause in its earlier days, before it had grown popular and its advocates had become a political power.

It has been said of him: "If we should select any one trait as particularly distinguishing him, by the universal consent of those who best and those who least knew him, it would be his inflexible regard to justice. . . .

"Of his keen and resolute sense of justice others may speak besides his professional companions. It was seen in other relations than those which he sustained towards the legal interests of the Commonwealth. It was manifested in his political course. Conscientiously attached to one of the two great parties which then divided the nation, he gave a firm support to the measures which he thought right, and as strenuously resisted those which he deemed wrong. In his more private connections he showed the same unswerving purpose of rectitude, the same disapprobation of whatever was false or mean, the same reverence for the right."¹

The estimation in which he was held by those knowing him and practicing in his court, will appear from the proceedings at a meeting of the Suffolk Bar, held Oct. 8, 1847, the day after his decease.

Hon. Richard Fletcher, in offering resolutions at the meeting, spoke thus:

"The decease of the late Chief Justice Ward is an event which must be deeply felt by the members of this bar, and I presume there can be but one feeling and one sentiment as to the propriety of our offering some public testimonial of our respect for his memory. He had reached an advanced age, and his long life had been usefully and honorably spent. As a man, in all the relations of domestic and social life, he sustained a most exemplary and elevated character. As a member of our national Legislature, his duties were faithfully and ably performed. As a lawyer he acquired and maintained a high rank. But it is in his judicial character that he is most known and more particularly remembered by the present members of the bar.

"He came to the bench as Chief Justice of the Court of Common Pleas, under its present organization in 1821. It will, I presume, be universally admitted that he was eminently qualified for the duties of that office. He had a matured and established character. He had ample store of legal learning and habits of business admirably adapted to the great amount of details in the business of his court. He had great patience and equanimity of temper—qualities of great value in any station of life, but essential to a judge. His conduct on the bench was marked by uniform courtesy and kindness—crowning qualities of any judge of any court, without which any judge of any court must lose most of his dignity and much of his usefulness."

Among the resolutions adopted at the meeting were the following:

"*Resolved*, That this bar would honor his memory, as well for his great worth as a man, as for the distinguished ability, learning, integrity, patience and fidelity with which, for a long course of years, he discharged the important duties of his judicial station.

¹ Sermon by Rev. E. S. Gannett, preached Oct. 17, 1847.

"Resolved, That the members of this bar hold in grateful remembrance the courtesy and kindness which on the bench he uniformly extended to them in the performance of their professional labors."

EPHRAIM WOOD was descended from William Wood, who settled in Concord in 1638. William Wood died May 14, 1671, at the age of eighty-nine years, leaving a son, Michael, and a daughter, Ruth, the wife of Thomas Wheeler. Michael died May 13, 1674, having had Abraham, Isaac, Thomson, Jacob, John and Abigail, who married Stephen Hosmer. Of these, Jacob married Mary Wheeler in 1697, and died October 6, 1723, having had Jacob, Mary, Ephraim, Dorcas, Hannah and Millicent. Of these, Ephraim married Mary Buss, and was the father of Ephraim, the subject of this sketch. The last Ephraim was born in Concord, August 1, 1733, and died in Concord, April 8, 1814. He learned the trade of shoemaker, but rapidly advanced both in social and political life. He was chosen town clerk in 1771, selectman, assessor and overseer of the poor, and served in these offices many years. He was one of the judges of the Court of Common Pleas under the Constitution, and in various ways rendered important services to the community.

JAMES TEMPLE, son of Benjamin Temple, was born in Concord, September 20, 1766, and graduated at Dartmouth in 1794. He taught the grammar school in Concord in 1795 and 1796, and read law with Jonathan Fay, of that town. He settled in the law at Cambridge, and died March 10, 1802.

WILLIAM CROSBY was born in Billerica, June 3, 1770, and graduated at Harvard in 1794. He read law with Samuel Dana, of Groton, and settled in Belfast, Maine, where he died March 31, 1852.

EPHRAIM BUTTRICK, son of Samuel Buttrick, of Concord, was born in that town about 1799 and graduated at Harvard in 1819. He was admitted to the Middlesex bar in 1823 and settled in East Cambridge.

JOHN MILTON CHENEY, son of Hezekiah Cheney, of Concord, was born about 1801 and graduated at Harvard in 1821. He settled as a lawyer in Concord, and was appointed cashier of the Concord Bank in April, 1832. He died in 1869.

HORATIO COOK MERRIAM, born in Concord, graduated at Harvard in 1829, and settled in the law at Lowell.

DANIEL NEEDHAM was born in Salem, Massachusetts, May 21, 1822. The branch of the Needham family to which he belongs has for several generations consistently adhered to the doctrine and usages of the Society of Friends.

Edmond Needham, the first American ancestor on his father's side, arrived in this country between the years 1635 and 1649. The date of his birth, the name of his birthplace in England and the date of his death are not known. His force of character and godliness of life were well known to his contemporaries, and impressed themselves upon his will, which

is dated "fourth month, 1677." The opening paragraph reads as follows:

"The will and last testament of Edmond Needham, of Lyn, in New England being, blessed be God, in his perfect knowledge, memory, and understanding, tho' otherwise ill in body mak ye writin by min on hand, and according to min on mind, to my children and grandchildren as follows:"

He left two sons, of which Ezekiel was the elder; Edmond Needham (2d) was born in 1679 or 1680, and was married March 15, 1702. His family record, like those of the majority of the Friends, exhibits the principal lines of descent, but is extremely deficient in minor particulars, and fails to indicate the time of his birth. Daniel Needham, born December 5, 1703, was the father of Daniel Needham, who was born in 1754. He was a merchant by occupation and engaged in trade with Philadelphia. The names of his wife and the date of his death are alike unknown. His son James, born January 1, 1789, in Salem, was a tobacco manufacturer, and largely interested in trade in South America. His moral convictions and humane sympathies were fully enlisted in the great anti-slavery agitation. The temperance reform also found in him a wise and strong exponent. He married Lydia, daughter of Benjamin Breed, of Lynn, who was born January 26, 1795, and who became the mother of his five children. He died in 1845.

Daniel, the subject of this sketch, the son of James and Lydia Needham, was educated in the celebrated Friend's School, at Providence, Rhode Island. In 1845 he began the study of law in the office of Judge David Roberts, at Salem, and was admitted to the bar of Middlesex County in 1847. Prior to his qualifications for legal practice, Mr. Needham had been deeply interested in the Peterborough and Shirley Railroad, and, although quite young, had been made one of the board of directors. While officiating in this capacity his moral principles were subjected to the severest strain; but they resolutely bore the test, and thus demonstrated the real excellence of the man. It had seemed a matter of necessity that the Board of Directors should endorse the paper of the corporation to the amount of \$42,000. When the obligations matured, other directors put their property out of their hands. Mr. Needham took a wholly different course. As it was, there was a probability of accumulating the funds thus forfeited, but in case of practical repudiation there was no possibility of expunging the stain from his reputation. He therefore gave up his property to the value of \$35,000, obtained an extension of time for the payment of the remainder of the debt and continued to prosecute his business. He secured from the New Hampshire Legislature authority to issue construction bonds. These he sold in the market on such favorable terms that his ultimate loss was less than \$2000. The clear gain was an untarnished name, which the highest authority affirms to be of more value

Henry M. Chapman

than "great riches." Thus in his twenty-sixth year the community held the key to the future of his career, which, from his known rectitude and decision, could not be other than honorable and beneficent. Fully prepared as he was for the pursuits of a legal practitioner, Mr. Needham prosecuted them to a limited extent.

Interesting himself in agriculture, he successfully conducted the management of several farms—one at Hartford, Vermont; one at Dover, Delaware; one at Prairie du Sac, Wisconsin, and others in Massachusetts. This continued for several years. In 1857, in association with others, he erected a woolen-mill at Montello, Wisconsin. He also bought a grain-mill situated on the same stream, on his own account. In 1865 he purchased the interests of his partners in the woolen-mill and became its sole proprietor. The business of both mills was then carried on by him until 1872. Both enterprises had been financially profitable. In 1866 Mr. Needham was one of three gentlemen who successfully introduced the "hand fire extinguisher" into the United States. He was the first president of the company organized for its manufacture. A French invention originally, it was improved in several important respects, and commanded a lucrative sale.

He was appointed national bank examiner for Massachusetts in 1871, an office which he held from 1871 to 1886. One hundred and eighty-five national banks were in his charge, and all of these, with two exceptions, were located in Massachusetts. During his term of office more official defalcations were brought to light than in the united terms of all other national bank examiners. The first of these was at the Leehmere National Bank, in 1873. Then followed in quick succession notably those connected with the Merchants' National Bank, of Lowell, the Hingham National Bank, of Hingham, the First National Bank, of New Bedford, and the Pacific National Bank, of Boston; more than a year before the collapse of the last-named institution he called attention to the reckless manner in which its business was done; but warning and advice were both unheeded. The crash followed, and the bank itself came officially into Mr. Needham's hands on the 18th of November, 1881. Carefully husbanding its resources and adjusting its numerous complications, he partially reconstructed its organization, and by direction of the Government returned it to the hands of the directors; but owing to many of its assets proving worthless, it again passed into the hands of a receiver.

In political life Mr. Needham's experience has been wide and various. In 1851 he was appointed to an official position on Governor Boutwell's staff, with the rank and title of colonel. In 1853 he succeeded Caleb Cushing as chairman of the Democratic State Committee and discharged his duties with great executive ability until 1854. In 1854 he was the

Democratic candidate for Congress in the Seventh Massachusetts District, but was defeated by his Know-Nothing competitor. In 1855 Col. Needham purchased a large farm in Vermont and changed his residence from Massachusetts to that State. In 1857 he was elected to the Vermont legislature from the town of Hartford. In 1858 he was re-elected to the same position. Serving on the Committee on Education, he saw the necessity of a Reform School and earnestly advocated its foundation. Success was delayed, but was ultimately attained, and largely through his efforts. In 1859 and 1860 he represented Windsor County in the Vermont State Senate, and was a member of the Senate at the special session of 1861.

From 1857 to 1863 he rendered valuable service to Vermont as the secretary of the State Agricultural Society. In the last of these years he represented Vermont at the World's Exposition of Industry and Art in the city of Hamburg. There he secured for his State the first prizes for excellence of exhibited Merino sheep. European competitors were at first inclined to be indignant at his success, but finally acknowledged that it was merited. In America his services received due meed of applause and are still held in pleasant memory.

Requested by the United States Government to prepare a report of the Exposition, he responded to the demand, and the result of his mission to Germany is given to the country in the Patent Office Report of 1863.

Colonel Needham returned to the United States in 1864, and re-established himself in his former home in Massachusetts. Elected to the lower house of the Legislature from Groton in 1867, he served on several important committees of that body. In 1868 and 1869 he was returned to the Massachusetts State Senate. As chairman of the committee charged with the duty of investigating the affairs of the Hartford and Erie Railroad, whose managers wished to obtain aid from the State, he made a thorough examination of its organization, business and prospects; was chairman of the committee appointed to inquire into the advisability of permitting the Boston and Albany Railroad Company to issue stock to stockholders. On the question of granting authority to towns to subscribe for stock in aid of certain railroads, he voted with the minority. Subsequently, events vindicated the wisdom of his action.

Colonel Needham was elected secretary of the New England Agricultural Society, at its organization in 1865, and has since sustained that position. Singularly efficient in the exercise of his functions, his real zeal and abilities have been among the principal factors of its success. This society has held agricultural fairs in all the New England States, and that with full share of public patronage and with exceptional pecuniary success. At times responsible for the expenses incurred, he has skillfully conducted affairs so as to escape financial loss.

As one of the most enlightened and practical citizens of the grand old Commonwealth of Massachusetts, he is necessarily interested in popular education. For twenty years he has been chairman of the Groton School Committee. He was also treasurer of the town in the years 1853 and 1854.

From his earliest manhood Colonel Needham has been an eloquent speaker and a popular lecturer. When lyceums were most in vogue, his services were in frequent request and his income from effective response quite considerable. He is a trustee of the Massachusetts State College, and is president of the Board of Trustees of the Lawrence Academy; he has been several years president of the Middlesex North Conference, and is connected with many financial and eleemosynary boards as associate director or trustee.

He has delivered numerous addresses on different subjects to various organizations, and enjoys the reputation of a pleasing and instructive speaker. Among his most widely circulated addresses, are one on the "Evolution of Labor," one on "Strikes, their Cause and Remedy," and one on "Germany," before the Vermont Agricultural Society. He also delivered two orations during the three days' session of "New England at the Centennial Exhibition of 1876, at Philadelphia;" one of these was on the "Position of New England at the Centennial;" the other upon the "Growth and Development of Art in America"—both of which were printed in pamphlet form and had a wide distribution.

The life of Colonel Needham is a model of useful industry. Two States have served themselves, while honoring him, by elections to both branches of their Legislatures. Such a distinction is rare, and is fruitful of suggestion. Whether farmer, manufacturer, legislator, lecturer or bank examiner, he has been fully equal to all his relations and opportunities. Not less honest and upright in all his dealings than fearless in the execution of duty, and versatile in point of talent, he is ever "the right man in the right place."

Colonel Needham has visited Europe three times—twice on business and once for recreation. He has traveled extensively in his own country, having been in California and throughout the Republic of Mexico.

Colonel Needham was married on the 15th of July, 1842, to Caroline A., daughter of Benjamin Hall, of Boston. Mr. Hall was the first importer of ready-made clothing from Europe, and while engaged in that business was involved in serious disagreement with the government officials. Daniel Webster acted as his counsel at the trial, and brought Mr. Hall victoriously through it.

Two sons and two daughters constituted the fruit of Colonel Needham's first marriage; only one of them is now living. Mrs. Needham died on the 30th of June, 1878. On the 6th of October, 1880, he was married to Ellen M. Brigham, of Groton, by whom he has two children—Marion Brigham and Alice Emily.

Colonel Needham's son, William Chauncy Hall Needham, died at Columbus, Ohio, on the 11th day of January, 1882—while a member of the Ohio Senate—aged thirty-six years. He was a graduate of the Norwich University; studied medicine in the Medical Department of Harvard University, where he took the degree of M.D.; was subsequently city physician of Gallipolis, Ohio, and was elected one of Ohio's thirty-one Senators at the election of 1881. He was a man universally respected and beloved, leaving at his death a widow and two children—one son and one daughter.

Colonel Needham's mother, at the age of ninety-five, is still living in the enjoyment of health and all her faculties.

BENJAMIN KINSMAN PHELPS was born in Haverhill Sept. 16, 1832, and was the son of Rev. Dudley and Ann (Kinsman) Phelps. He removed with his father to Groton in 1837, and, fitting for college at the Groton Academy, graduated at Yale in 1853. He read law with Benjamin M. Farley, of Hollis, N H., and removed to New York. From 1866 to 1870 he was assistant district attorney of the Southern District of New York, and in 1872 and 1875 was chosen district attorney for the city and county of New York.

EUGENE FULLER, born in Cambridge May 14, 1815, graduated at Harvard in 1834, read law with George F. Farley, of Groton, and was drowned at sea June 21, 1859.

JOHN LOCKE was descended from William Locke, who died in Woburn in 1720. He was born in Hopkinton Feb. 14, 1764, and graduated at Harvard in 1792. He read law with Timothy Bigelow in Groton, and settled in Ashby. At one time he was a member of Congress, a member of the Constitutional Convention of 1820, and died in Boston March 29, 1855.

GEORGE MOREY was born in Walpole June 12, 1789, and graduated at Harvard in 1811. He read law with Luther Lawrence at Groton, and in the later years of his life was well known in Boston as an active and prominent member of the Whig party. He was at various times a member of both branches of the General Court, and a member of the Executive Council. He never, however, sought office for himself, but, proud of his State and city, he was always anxious to see them well governed, and unselfishly exerted all his influence in the selection of the best men for places of trust.

GEORGE SEWALL BOUTWELL was born in Brookline, Mass., Jan. 28, 1818, and worked, when a boy, on a farm. He was engaged in mercantile pursuits many years. He kept a country store in Groton, and, on the death of Henry Woods, Jan. 12, 1841, he was appointed by President Van Buren postmaster of that town, holding the office until April 15, 1841, when he was displaced by the new Whig administration, and Caleb Butler was appointed. Somewhat later he abandoned business for the study of law, and from 1842 to 1850 he was a member of the Legisla-

ture from Groton. In 1851-52 he was Governor of Massachusetts, and in the first year of his service received the degree of Doctor of Laws from Harvard. In 1853 he was a member of the Constitutional Convention. Previous, however, to his election as governor he served as bank commissioner by appointment of the State executive. Between the years 1853 and 1862 he served five years as secretary of the Board of Education, and a term of six years as an overseer of Harvard College. He was the first commissioner of internal revenues, serving from July, 1862, to March, 1863, and from 1863 to 1869 was a member of Congress. From March, 1869, to March, 1873, he was Secretary of the Treasury, having, before his accession to that office, been one of the managers of the impeachment trial of President Johnson, in 1868. On the resignation of Henry Wilson as United States Senator to take the office of Vice-President of the United States, to which he was chosen in 1872, Mr. Boutwell was chosen to fill his place, and served from 1873 to 1877. Since 1877 Mr. Boutwell has devoted himself to his professional business. His home is still at Groton, but he has a law-office in Boston and one in Washington, and in the latter place is largely occupied with important business, both in committees of Congress and before the Supreme Court.

HENRY H. FULLER, the son of Rev. Timothy Fuller, of Princeton, and brother of Elisha, William W. and Timothy Fuller, already mentioned, was born in Princeton in 1790, and graduated at Harvard in 1811. He read law in Litchfield, Vermont, with Chief Justice Reeve and Judge Gould, and also in Boston. He was admitted to the Suffolk bar in 1815, where he practiced many years. He died in Concord, September 15, 1853.

JOHN FARWELL graduated at Harvard in 1808, and read law with Asahel Stearns. He settled in Tyngsboro' and there died November 19, 1852.

ANSON BURLINGAME was born in New Berlin, Chenango County, New York, November 14, 1822. He was educated at the Branch University, Michigan, and read law at the Harvard Law School. He lived in Cambridge for a time, and married a daughter of Hon. Isaac Livermore, of that town. He was a Senator in 1852; a member of the Constitutional Convention in 1853; a member of the Executive Council in 1853; and member of Congress from 1856 to 1861. He was appointed Minister to Austria by President Lincoln in 1861, and was Minister to China from 1861 to 1867, and from 1867 to his death in St. Petersburg, February 23, 1870, he was in the confidential employment of the Chinese Government.

NATHANIEL PRENTISS BANKS was born of poor parents in Waltham, January 30, 1816. When a boy he worked in a factory, and in political sketches of his life he has been called the "bobbin boy." He was one of those boys whom all of us have seen, to whom books seemed to be a natural food and the only food which assimilated and nourished the system.

With the appetite for learning born in him, he could no more fail to rise than boys of another class, with inborn proclivities which they were unable to resist and overcome, were sure to fall. There is as much difference between various forms of human nature as between the stone and the feather. Both obey the laws of nature, and common charity should lead us to reflect that oftentimes he who falls makes a greater effort to resist the law of gravitation than he who rises in yielding to his uplifting law. He attended the common schools of his native town, and while a young man edited a newspaper there, and afterwards in Lowell. After studying law he entered into politics and has been almost continuously in public life. Under the administration of President Polk he held a position in the Boston custom-house, and in 1849 was a member of the House of Representatives, holding his seat in 1850, 1851 and 1852, and during the last two years the Speaker of that body. For the duties of Speaker he possessed peculiar qualifications. He had a commanding presence, a good voice with a clear and sharp enunciation, a promptitude of decision, a clear brain—which made him an almost ideal presiding officer. The writer has seen in the chair of the House every Speaker since 1838, including Robert C. Winthrop, George Ashmun, Thomas Kinnicut, Daniel P. King, Samuel H. Walley, Ebenezer Bradbury, Francis B. Crowninshield, Esign H. Kellogg, Nathaniel P. Banks, George Bliss, Otis P. Lord, Daniel C. Eddy, Charles A. Phelps, Julius Rockwell, John A. Goodwin, Alexander H. Bullock, James M. Stone, Harvey Jewell, John E. Sanford, John D. Long, Levi C. Wade, Charles J. Noyes, George A. Marden, John Q. A. Brackett and William E. Barrett, and he remembers none whose administration on the whole was so brilliant as that of Mr. Banks. The terse, crisp and well-pronounced method of putting questions to the House, the thorough knowledge of parliamentary law exhibited in the progress of debate, the dramatic manner with which the whole business of Speaker was conducted, made an impression on the writer's mind which has never been effaced. He believed, with every good parliamentarian, that in a large majority of questions of order a prompt ruling would be universally acceptable without a question of its absolute technical correctness. He never hesitated in deciding a point of order on the spot, for he was well aware that a ruling postponed until the following day would give others as well as himself an opportunity to examine the question and would be less likely to be accepted as correct, than a ruling made at the moment in the heat and smoke of debate.

In 1858 Mr. Banks was a member of the convention for the revision of the Constitution, and was chosen its president. He was a member of the Thirty-third, Thirty-fourth and Thirty-fifth Congresses, from 1853 to 1858 inclusive, and in 1855 and 1856 was the Speaker of the House. The contest which resulted in his election was more protracted than any before or since,

and the discretion, coolness and judgment which characterized him during its continuance, gave him a national reputation which his subsequent career in the chair only served to enhance. In the autumn of 1857 he was chosen by the Republican party Governor of Massachusetts, and on the 1st of January, 1858, resigned his seat in Congress to assume office. As Governor he fully met the expectations of the community in the performance of his official duties, while an address which as Governor he was called upon to deliver at the dedication of Agassiz Museum, gave him a renown as a scholar, for which the literary world had not been prepared.

After leaving the Gubernatorial chair he was made president of the Illinois Central Railroad, and occupied that position when the War of the Rebellion broke out. He at once offered his services to the President and received a commission as major-general of volunteers, dated May 16, 1861. He was soon after appointed to command the Annapolis Military District, and subsequently that of the Shenandoah. No man had at this time a clearer conception of the character of the war in which the nation had engaged, and of its probable duration. In May, 1861, about the time of his appointment to the Annapolis District, the writer, then on a tour of survey among Massachusetts men in the field by order of Governor Andrew, met General Banks at Fort McHenry, near Baltimore, where General Devens, then a major, was stationed in command of a Worcester battalion. General Banks rode from the fort to Baltimore with him, and expressed his belief that the call for troops, which then had been made, was wholly inadequate for a struggle which he confidently expected would last at least four years. On the 24th of May, 1862, he was attacked in the Shenandoah by Stonewall Jackson and compelled to retreat. In the battle of Cedar Mountain, August 9, 1862, he commanded a corps under General Pope, and in December of that year succeeded General Butler as commander of the Department of Louisiana. He took Opelousas in April, 1863; Alexandria in May; and Port Hudson on the 8th of July. In March, 1864, he commanded an expedition to the Red River, the results of which were not fortunate. In May, 1864, he was relieved from command. Like other civilian generals in the war, it is probable that he failed to receive from officers of a military education that cordial co-operation and support which are essential to success in operations in the field. He came out of the war with a reputation for honesty, fidelity, patriotism and courage, and for ability as a soldier fully up to the standard which it might have been expected that a man without military experience would reach.

In 1865 General Banks was chosen member of Congress again to the Thirty-ninth Congress, for the unexpired term of D. W. Gavit, and was re-elected to the Fortieth, Forty-first, Forty-second, Forty-fourth and Forty-fifth Congresses, and, March 11, 1879, was

appointed United States marshal, serving until April 23, 1888. In the autumn of 1888 he was chosen again to Congress—to the Fifty-first Congress—and is now serving in that capacity.

JOSEPH WILLARD, son of Rev. Joseph Willard, president of Harvard College from 1781 to his death, in 1804, was born in Cambridge March 14, 1798, and graduated at Harvard in 1816. He settled in the law in Cambridge, but removed to Boston in 1829. From 1839 until 1855 he was clerk of the Common Pleas Court for Suffolk, and in that year he was appointed clerk of the Superior Court for the county of Suffolk. When that court was abolished, in 1859, he was chosen clerk of the Superior Court of the Commonwealth for the county of Suffolk, and so continued until his death, May 12, 1865. From 1829 to 1864 he was the corresponding secretary of the Massachusetts Historical Society, and in 1826 published a history of the town of Lancaster, and in 1858 the life of Simon Willard. His son, Morgan Sidney Willard, was killed at Fredericksburg, December 13, 1862.

GEORGE F. FARLEY.—It is always a difficult, if not impossible, task to portray the qualities and characteristics of an eminent man in a memoir or in history so that he will be seen, known and judged by posterity as by his contemporaries. In this regard the painter has the decided advantage over the biographer and the historian, for the painter, when poring over the face of a man, divinely, through all hindrance, finds the man behind it, and so paints him that his face, the shape and color of a life and soul, lives for his children, ever at its best and fullest.

In attempting to write a just, accurate and full biographical sketch of the late George Frederick Farley, the writer is convinced of the impossibility of performing this task with any measure of satisfaction to himself or of justice to its distinguished subject.

He was the son of Benjamin and Lucy (Fletcher) Farley, and was born in Dunstable, in the Commonwealth of Massachusetts, April 5, 1793, and graduated at Harvard College in 1816. He read law in the office of his brother, Hon. B. M. Farley, of Hollis, in the State of New Hampshire, and Hon. Luther Lawrence, of Groton, in said Commonwealth. He was admitted to the bar and commenced the practice of his profession at New Ipswich in 1821. In the year 1831 he was a member of the New Hampshire General Court from New Ipswich, and in the same year removed to Groton, in the Commonwealth of Massachusetts, where he practiced his profession until his death, November 8, 1855.

He inherited a strong constitution, and always enjoyed vigorous health. He possessed a gigantic intellect, but it was associated with the finest emotions and the most genial feelings. He was "rich in saving common sense and in his simplicity absolute."

He had no disposition to enter into political life nor any ambition for its laurels.

He gave his sole and undivided attention to the

practice of his profession, which he dearly loved, and which was the fit arena for the exercise and display of his marvelous powers. He met without fear the greatest lawyers of his day in New Hampshire and in Massachusetts—Webster, Mason, Dexter and others—and always held his own. This fact is a conclusive test and proof of his extraordinary ability as a lawyer and advocate.

In a conversation with Mr. Webster in the last year of his life, he used the following language in speaking of Mr. Farley: "I know him well—we have measured lances together. He is a very great lawyer." In his brief practice in New Hampshire he attained very high distinction, and was retained in its most important causes, and encountered its most eminent lawyers.

Upon his removal to Massachusetts he quickly discovered, by his retainer in causes of magnitude in Middlesex, Worcester, Essex and Suffolk Counties, that his fame as a lawyer and advocate had preceded him.

Among these cases was one when the late eminent lawyer, Samuel Mann, was his junior counsel—the famous "Convent case," as it was called—where a large number of men were indicted for the alleged burning of the convent. It was one of the most celebrated cases in the history of trials in Massachusetts.

Mr. Farley defended all of the defendants, and with such consummate skill and ability that all of his clients were acquitted.

In this case the Lady Superior took the stand as a witness for the Government, attired in a thick veil, which completely concealed her face. Mr. Farley requested her to raise her veil. The Lady Superior refused. Mr. Farley addressed the Court, demanding that the witness should lift her veil, because, he claimed, that his clients had the constitutional right to look upon the witnesses against them face to face. The Court so ordered, and the veil was raised, much to the indignation and discomfiture of the Lady Superior, who found that the law of the convent was not the law of the courts.

Among the notable criminal cases in which Mr. Farley was engaged, was a capital case, tried at Keene, New Hampshire, after he had established his residence in Groton. His client was indicted for the murder of his wife by poison. Prof. Webster, who analyzed the contents of the stomach of the wife, testified as a witness for the government.

Mr. Farley in his keen, adroit and searching cross-examination of Prof. Webster, elicited the most important fact for the defence, that he employed poisons as tests in his analysis, and put him into a furious rage by the suggestion of the probability that the poisons contained in his tests satisfactorily explained and accounted for the presence of poisons, which he testified he had found in the stomach. The cross-examination of Prof. Webster in this trial was merciless, astute and triumphant, as the great lawyer ex-

posed, with his imperturbable coolness and self-possession and perfect confidence in his position, the intrinsic weakness of his testimony as well as his ungovernable temper, and will be long remembered as one of the masterpieces of cross-examination in the courts of that State. The verdict of the jury in this case was for the prisoner, and wholly due to the transcendent skill and ability with which Mr. Farley conducted the defence.

Hon. John Appleton, ex-chief justice of the Supreme Court of the State of Maine, who was the first law student in the office of Mr. Farley in New Ipswich and who always enjoyed his friendship during his life, says of Mr. Farley: "He was an intellectual giant. He was one of the foremost men at the bar of New England. It was in the logic of his argument that he was strong. Grant his premises, and the conclusion followed necessarily and irresistibly. He made precedents rather than followed them. His logical powers were superior to those of any man I ever met. As a student in his office I was on quite intimate terms with him. I think if I have acquired any reputation, it is due in no slight degree to the advice and instruction I received from him."

The Hon. Amasa Norcross, of Fitchburg, Massachusetts, says of Mr. Farley: "In the early years of my practice it was my privilege to be engaged in several cases where Mr. Farley was senior counsel. I then had an opportunity to observe the remarkable intellectual powers he possessed. I thought then and now believe that he was not then nor has he been excelled by any member of our profession in the State in that he was able to present a cause to a jury upon its facts in a manner wholly unimpassioned—I may say in a conversational way; but with a precision of statement and with such an admirable selection of words as to carry to every mind the exact meaning he intended and to lead to the inevitable conclusion he was to reach. The simple, unadorned speech, yet most adorned with a forceful utterance and the severest logic, uttering no useless word, all supported the theory—the best possible for his client that could be constructed from the facts. His grasping of facts in support of his theory, with his ingenious arrangement of them, was simply marvelous. No case was tried by him without a theory and an application of evidence in a way that was best calculated to sustain it. As a man he secured the full confidence of whatever tribunal he addressed. The Worcester County jurors were wont to say of him that he was the fairest man in argument they ever heard. The simple, direct and graceful speech employed by him controlled their minds, as it tended certainly to the support of that view of the case he had determined in his mind as being best for his client. The statement of certain general principles involved in the case and a general statement of his theory, if accepted by the jury, determined the result, for the masterly argument that followed held the jury to the end. His treatment of

the evidence in a given case was oft-times philosophical, and his felicitous use of language secured the fullest attention of the tribunal he was addressing and the breathless attention of all within sound of his voice. His style of argument was said to be not unlike that of the distinguished lawyer, Jeremiah Mason, who was practicing in the courts of New Hampshire when Mr. Farley entered the profession. Several important causes pending in the courts of that State were tried by Mr. Farley in the later years of his profession. He was then regarded, as I happen to know, by the best lawyers of that State as a man possessing a remarkable intellect, and the peer of Mr. Mason, who also removed to Massachusetts from that State."

Hon. Peleg W. Chandler, of Boston, in speaking of Mr. Farley, used this language: "Farley was a very great lawyer. I never knew his superior as a logician; nor his equal, except in Jeremiah Mason."

Hon. Josiah G. Abbott, of Boston, writes of Mr. Farley: "I knew Mr. Farley from the time I was a student-at-law, and he was in the full maturity of his power as long as he lived. The last ten or twelve years of his life I knew him very intimately.

"He was among the ablest and strongest men I ever knew. He was not merely a lawyer and nothing else. Not only was he a good classical scholar, especially keeping bright his knowledge of Latin writers, but he was a most discriminating admirer of the best, English literature. This, I suppose, was not generally known, for I think he always was somewhat inclined to put on an appearance of brusqueness and carelessness in reference to matters usually reckoned as accomplishments.

"He had studied the law thoroughly and made himself master of all its great principles and rules."

"But through his whole life he passed no considerable time in looking up cases and authorities.

"He looked upon the law as establishing great principles and rules, to regulate and govern the conduct of life, and whenever legal questions were submitted to him he settled them by a thorough and careful consideration of the principles upon which they depended, as he believed, and then looked for the authorities to confirm his judgment. Early in my acquaintance with him, he told me that a lawyer who depended mainly on the study and citation of cases was never 'worth his salt.' The true course, he continued, for one who wishes to make himself a real lawyer, was to firmly and thoroughly ground himself on the great principles upon which the law was founded, and which pervaded and governed it in its application to human affairs, and to make them absolutely his own. His arguments and conduct of cases were always governed by such considerations. He discussed principles, making comparatively but slight use of cases, thus making authorities instead of being governed by them.

"To bring him up to the full measure of his powers,

it required a cause of importance or one having some features which thoroughly interested him.

"I do not think in ordinary cases he by any means did justice to himself. They were not large enough to interest him. But when he was thoroughly interested and aroused, either by the case itself or by the strength of the opposing counsel, no man could excel and but few—very few—equal him. I never knew any man who was a more perfect master of logic than Mr. Farley. At his best, it was difficult to find any weakness in his chain of reasoning. Grant his premises, and his conclusions were impregnable. But logic was by no means all that gave him at times his wonderful power. Logic alone was never very successful with juries of masses of men. There must be something to give warmth and heat to logic to make it living, not dead—to so adapt it and so mould and warm those to whom it is addressed, that it shall control their thoughts and reason. When aroused no man had a greater power of impressing himself upon those he addressed, making them take his thoughts and his reasoning as their own. Upon whatever that power depends, whether it is sympathetic or magnetic, to use a cant phrase, or comes from sheer power of will and force of mind, as I rather think it does, Mr. Farley certainly possessed it to a most remarkable degree. But I do not think he ordinarily manifested it to any great extent. I think I have heard four or five arguments by him, which I never did and never expect to hear excelled, hardly equaled.

"In the ordinary run of cases there were men by no means his equals in power, who would appear as well as he. I always thought and I think now that Mr. Farley never realized the extent of his powers. Whatever the occasion required, he was always equal to and answered the demand. But I do not believe that supreme time ever came to him which called for the full measure of the great powers with which he was gifted.

"As I have said, he enjoyed the classics and the best English literature.

"Besides, he was interested in all new discoveries and new phases of thought. He kept well abreast with all advances made in his time, and no man could discuss questions outside of his profession better than he, when he met one capable of maintaining his part in the discussion. With a somewhat brusque and rough manner he had great warmth of feeling, and when he was a friend, was one always to be relied upon.

"Upon the whole, Mr. Farley impressed me as being one of the strongest and most remarkable men I have ever met with. But his case shows how very little there is in the life of the greatest lawyer that survives him long. Mr. Farley conducted trials and made arguments that showed he possessed more logic, more reasoning power, more mind, than is shown in many of the books that live for centuries or than was ever shown by many of the statesmen whose names have gone into history; yet notwithstanding this, his repu-

tation is now not much more than a tradition, only personally known to and cherished by a few, who linger upon the stage. It is only another instance, added to the long list, that the life of the lawyer, however great may be his powers, is written on nothing more enduring than sand or water."

Although Mr. Farley tried causes all over the Commonwealth and in New Hampshire, it was with the courts of Old Middlesex, where he won so many forensic victories, that his fame as a jurist must be most intimately associated as long as the gradually but surely failing memory of tradition shall hold it as its own.

There he was easily and always the leader of its bar, which was distinguished by many strong and eminent lawyers. In one notable cause tried there against the Vermont & Massachusetts Railroad, in which the late Judge B. R. Curtis was retained and acted as counsel for the company and Mr. Farley for the plaintiff, he most conspicuously exhibited his ready sagacity and tact. Some very handsome plans had been introduced as evidence in the case by Judge Curtis. Mr. Farley, in his argument to the jury, discarded these beautiful pictures and borrowing from one of the jury a piece of chalk, which every Middlesex farmer carried in his pocket, he proceeded to chalk out a diagram of the place of the accident upon the floor in full view of the jury, and so ingeniously employed it in his argument that, to use the expression of the late Rev. Thomas Whittemore, the president of the railway company: "Mr. Farley chalked us out of the case." Mr. Whittemore was so much impressed with the powers of Mr. Farley as manifested in that case, that he at once gave him a general retainer as counsel for his road.

Mr. Farley always had a peculiar habit of stating his cases to persons whom he met while the trial was going on, and whom he knew as possessing sound common sense, evidently with a view of seeing how the case struck them and of eliciting from them some thought or suggestion which he might use when he came to address the twelve men of sound "common sense" who were hearing and to pass upon the case.

It was his custom, when consulted by clients in his office, to hear their statements patiently, and, after carefully questioning them as to all the facts, to give them his opinion without consulting the reports or the books. After his client had left he would say to the students in the office, who had been attentive listeners to the interview: "Perhaps you had better look into the reports and see if the Supreme Court and I agree."

It was his distinguishing habit to so exhaustively examine and consider his opponent's case that when he came to state their side of the case he surprised them by disclosing much stronger points than they had discovered, but only to their embarrassment and defeat by his convincing and triumphant replies

thereto. Judge Appleton, in his letter concerning Mr. Farley, from which quotations have been made, further says, in speaking of his home, where he was always a welcome guest:

"His wife was one of the saints that occasionally appear to bless her family and friends. Few men ever had a happier home than it was his fortune to enjoy. In his family he was genial and hospitable—delightful in conversation, a good talker—which in those days was estimated a high compliment. An amusing and true anecdote is told of Mr. Farley as a conversationist. Owing to some failure of the train from Boston to connect with the train at Groton Junction, as it was then called, but now Ayer, for Groton Centre, where Mr. Farley resided, he concluded, as it was a pleasant day, to walk from the Junction to his home, a distance of about four miles. He had for his companion in the walk the late Rev. Mr. Richards, formerly pastor of the Central Church, a highly cultivated and able man, whose acquaintance he made by chance at the Junction. Mr. Farley, in speaking of the walk and of Mr. Richards afterwards to the Rev. Mr. Bulkley, of Groton, Mr. Farley's own minister, and whose pulpit Mr. Richards came to fill on exchange with Mr. Bulkley said: 'That Mr. Richards is a most delightful man. I met him accidentally at the Junction and made his acquaintance and we walked up to Groton.' Mr. Bulkley enjoyed this praise of his friend Richards very much, as he recalled what Mr. Richards said of Mr. Farley. He had told Mr. Bulkley, 'that he met Mr. Farley and had a highly enjoyable walk with him from the Junction. That he was astonished and charmed with Mr. Farley's wonderful conversational powers, for he talked all the way from the Junction to the Centre, while he was a delighted listener.' This is but another illustration of the well-known fact that a good talker likes a good listener."

Mr. Farley's great and sure reliance was upon himself. He was conscious of his strength, but, as is usual with truly great intellects, made a modest display of it.

In the consideration of questions of law he made his own paths in the practice of his profession and did not seek or walk in the ways furnished by other minds in the published reports. He possessed an original creative legal mind. Firmly planted in the principles of the common law, he applied those principles to the various cases as they arose.

In his gigantic mental laboratory all his results were worked out.

Mr. Farley, at his decease, left as surviving members of his family—his son, George Frederick Farley, for many years a merchant of Boston, but now deceased, and his daughter, Sarah E. Farley, and Mary E. Keely, wife of Edward A. Keely, a member of the Suffolk bar.

In closing this necessarily very inadequate sketch of Mr. Farley, it is but simple justice to his memory to

say, upon the testimony furnished therein by the able contemporary jurists who knew him so well, in weighing his character, attainments, fame and success as a jurist and advocate, that he had but few equals at the bar of New England.

GEORGE FRISBIE HOAR, the youngest child of Samuel and Sarah Sherman Hoar, was born in Concord August 29, 1826. He studied at the Concord Academy and graduated at Harvard in 1846. After studying law at the Dane Law School in Cambridge he settled in Worcester, where he was chosen representative to the State Legislature in 1852, a member of the Senate in 1857 and city solicitor in 1860. He was chosen a member of the Forty-first, Forty-second, Forty-third and Forty-fourth Congresses, which covered the period from 1869 to 1875, and declined a nomination for the Forty-fifth Congress. He has been in the Senate of the United States since 1877, and his third term, which he is now serving, will expire March 4, 1895. During his service in the lower house of Congress he was one of the managers on the part of the House of Representatives of the Belknap impeachment trial in 1876, and in the same year one of the Electoral Commission. He was an overseer of Harvard College from 1874 to 1880, presided over the Massachusetts State Republican Conventions of 1871, 1877, 1882 and 1885; was a delegate to the Republican National Conventions of 1876 at Cincinnati and of 1880, 1884 and 1888 at Chicago, presiding over the convention of 1880; was regent of the Smithsonian Institute in 1880; has been president and is now vice-president of the American Antiquarian Society, trustee of the Peabody Museum of Archaeology, trustee of Leicester Academy; is a member of the Massachusetts Historical Society, of the American Historical Society and the Historic Genealogical Society and has received the degree of Doctor of Laws from William and Mary, Amherst, Yale and Harvard Colleges, and is a member of other organizations too numerous to mention.

EDMUND TROWBRIDGE DANA was the son of Richard H. Dana, the lawyer and poet, and brother of Richard H. Dana, Jr., the author of "Two Years Before the Mast." He was born in Cambridge, August 29, 1818, and graduated at Vermont University in 1839. He read law in the Dane Law School at Cambridge and practiced a few years with his brother, when he went to Heidelberg to pursue his studies. He translated and edited works on international and public law and political economy after his return home and also resumed practice with his brother. He died at Cambridge May 18, 1869. The writer knew him well, and believes that no man in the Commonwealth held out a brighter promise of prominence in the literature of law when his career was abruptly ended by death. He was a man of infinite humor, and his quaint illustrations of passing events are now in the writer's mind as he recalls his friend to memory.

JOHN WILLIAM PITT ABBOTT, son of John Ab-

bott, already mentioned, was born in Hampton, Connecticut, April 27, 1806, and graduated at Harvard in 1827. He read law at Westford with his father and at the Dane Law School, was admitted to the bar in June, 1830, and settled at Westford, where he succeeded his father as treasurer of the Westford Academy, and practiced in his profession until his death in 1872. He was a representative to the General Court in 1862, a senator in 1866 and for many years selectman and town clerk of Westford.

JOHN BIGELOW was born in Malden November 25, 1817, and graduated at Union College in 1835. After his admission to the bar he practiced in New York City about ten years, mingling literary with professional work. In 1840 he was the literary editor of *The Plebeian*, and about that time an able contributor to the *Democratic Review*. In 1848 he was made an inspector of Sing Sing Prison, and in 1850 became a partner of William Cullen Bryant, of the New York *Evening Post*. In 1856 he published a life of John C. Fremont, in 1861 was appointed consul at Paris, and from 1864 to 1866 resided in that city as Minister of the United States, succeeding William L. Dayton. He is now living in New York.

JOSEPH GREEN COLE, son of Abraham Cole, of Lincoln, was born about 1801 and graduated at Harvard in 1822, and read law with Governor Lincoln, of Maine, in which State he settled in his profession and died in 1851.

ALBERT HOBART NELSON, son of Dr. John Nelson, of Carlisle, was born in that town March 12, 1812, and graduated at Harvard in 1832, afterwards reading law in the Cambridge Law School. He was appointed chief justice of the Superior Court for the County of Suffolk on the establishment of that court in 1855, and remained on the bench until his resignation in the year of his death. He died in 1858.

ALPHEUS B. ALGER, son of Edwin A. and Amanda (Buswell) Alger, was born in Lowell, October 8, 1854. He attended the public schools of his native town and graduated at Harvard in 1875. He read law in the office of Hon. Josiah G. Abbott, and was admitted to the bar in 1877, since which time he has been connected with the law firm of Brown & Alger, of which his father is a member. In Cambridge, where he resides, he has been chairman and secretary of the Democratic City Committee, and in 1884 he was a member of the Board of Aldermen. In 1886 and 1887 he was a member of the State Senate, and for several years preceding the present year he was the secretary of the Democratic State Central Committee.

JOHN HENRY HARDY, son of John and Hannah (Farley) Hardy, was born in Hollis, New Hampshire, February 2, 1847. He received his early education from the public schools of Hollis and the academies of Mt. Vernon and New Ipswich, and graduated at Dartmouth in 1870. After reading law at the Dane Law School and in the office of Hon. Robert M.

J. J. Buckner

6

Morse, Jr., he was admitted to the Suffolk bar in 1872, and began practice in a partnership with Geo. W. Morse, which continued two years. He then associated himself with Samuel J. Elder and Thomas W. Proctor, with whom he continued until he was appointed, in 1885, associate justice of the Boston Municipal Court. At the age of fifteen Judge Hardy was a member of the Fifteenth Regiment of Massachusetts Volunteers at the siege of Fort Hudson, and, though young in years, exhibited a resolution and will worthy of veterans in the service. In 1883 he represented the town of Arlington in the House of Representatives. He married, in Littleton, August 30, 1871, Anna J. Conant, a descendant of Roger Conant, and daughter of Levi Conant.

GEORGE ANSON BRUCE, son of Nathaniel and Lucy (Butterfield) Bruce, was born in Mt. Vernon, New Hampshire, November 19, 1839. He was fitted for college at the Appleton Academy, in Mt. Vernon, and graduated at Dartmouth in 1861. In 1862 he was commissioned First Lieutenant of the Thirteenth New Hampshire Regiment, and served as aide, judge advocate, inspector and assistant adjutant-general until he was mustered out, July 3, 1865. During his service he received three brevet promotions. He studied Law in Lowell, and was admitted to the Middlesex bar in that city, in October, 1866. During that year he was a member of the New Hampshire Legislature from his native town. He began practice in Boston in 1867, where he lived until 1874, when he removed to Somerville, of which city he was mayor in 1877, 1880 and 1881. He was a member of the Massachusetts Senate in 1882, 1883 and 1884, and, in 1884, its president. He married in Groton, in 1870, Clara M., daughter of Joseph F. and Sarah (Longley) Hall.

NATHANIEL HOLMES, son of Samuel and Mary (Aunan) Holmes, was born in Peterboro', New Hampshire, July 2, 1814. He received his early education at the public schools of Peterboro', and at the Chester and New Ipswich and Phillips Academies, and graduated at Harvard in 1837. While in college he taught school in Milford, New Hampshire, in Billerica and Leominster, and in Welds Academy, at Jamaica Plains, near Boston. After graduating he was for a time a private tutor in the family of Hon. John N. Steele, near Vienna, Maryland, and there began the study of law. His law studies were completed at the Dane Law School and in the office of Henry H. Fuller, and he was admitted to the Suffolk bar in September, 1839. He settled in St. Louis, entering into partnership with Thomas B. Hudson, with whom he remained until 1846, when he became associated with his brother, Samuel A. Holmes, with whom he continued until 1853. In 1846 he was circuit attorney for the county of St. Louis, and at later dates a director of the St. Louis Law Association, counselor of the St. Louis Public School Board and of the North Missouri Railroad Company. In 1865 he was made a judge of

the Missouri Supreme Court, and resigned in 1868 to accept the appointment of Royall Professor of Law at the Dane Law School in Cambridge. In 1872 he resigned his professorship and returned to St. Louis, but in 1883 retired from active practice and took up his residence again in Cambridge.

JOHN QUINCY ADAMS BRACKETT was born in Bradford, New Hampshire, June 8, 1842, and is the son of Ambrose S. and Nancy (Brown) Brackett, of that town. He received his early education in the public schools of his native town and at Colby Academy, in New London, in the above-mentioned State, and graduated at Harvard in 1865, in the class with Charles Warren Clifford, Benjamin Mills Pierce and William Rotch. He received the degree of Bachelor of Laws from Harvard in 1868, and in the same year was admitted to the Suffolk bar, at which he has continued to practice until the present time. In the earlier days of his practice he was associated in business with Levi C. Wade two or three years, but since 1880 has pursued his profession in company with Walter H. Roberts, under the name of Brackett & Roberts.

Almost continuously since his admission to the bar Mr. Brackett has been associated actively with politics, and few names have been more widely known than his on the political platforms of the State. He has surrendered himself to the fortunes of the Republican party, and little else than its dissolution would be likely to weaken his party loyalty. He was a member of the Common Council of Boston in 1873, '74, '75 and '76, and during the last year of his service was president of that body. He was a member of the Massachusetts House of Representatives from Boston in 1877, '78, '79, '80 and '81, and distinguished his legislative career by his advocacy and championship of the establishment of co-operative banks, in the welfare of which he has maintained a deep interest. In 1889 he had become a resident in Arlington and again became a member of the House of Representatives, holding his seat three years, during the last two of which he was Speaker. In 1887, '88 and '89 he was Lieutenant-Governor, during a considerable portion of the last year acting as Governor in consequence of the continued illness of Governor Oliver Ames. In September, 1888, also, during an earlier illness of the Governor, he was called into service as his substitute, and in that capacity represented the State at the celebration in Columbus of the anniversary of the settlement of Ohio, in a manner reflecting honor on the Commonwealth. At the celebration at Plymouth on the 1st of August, 1889, he again represented the Governor, and his speech on that occasion stamped him as a master of the art which in his official capacity he has been so often required to test. In September, 1889, after a somewhat earnest contest, he was placed in nomination for Governor by the Republican party and chosen in November following to serve for the year 1890.

Few young men in Massachusetts have had a more successful career in the political arena. During the twenty-two years which have elapsed since his admission to the bar, sixteen, with the present year, have been spent in public office, and his continued advancement seems only to depend on the maintenance of power by the party he has served so long.

Governor Brackett married, June 20, 1878, Angie M., daughter of Abel G. and Eliza A. Peck, of Arlington, and makes that town his home.

MONTRESSOR TYLER ALLEN, son of George W. and Mary L. Allen, was born in Woburn, May 20, 1844. He read law at the Boston University Law School, and was admitted to the bar in 1879. He married, in 1865, Julia Frances Peasley, and while practicing his profession in Boston makes Woburn his residence.

JOSEPH O. BURDETT was born in Wakefield, October 30, 1848. He graduated at Tuft's College in 1867, and read law in the office of John Wilkes Hammond, in Cambridge, and was admitted to the Middlesex bar in April, 1873. In 1874 he removed to Hingham, where he married Ella, daughter of John K. Corthell. He has represented his adopted town in the Legislature, and during the last three years has been chairman of the Republican State Central Committee. He has a law-office in Boston, but still resides in Hingham.

WILLIAM AMOS BANCROFT was born in Groton, April 26, 1855, and was the son of Charles and Lydia Eneine (Spaulding) Bancroft, of that town. He fitted for college at Phillips Academy, and graduated at Harvard in 1878. He read law at the Dane Law School and in the office of Wm B. Stevens, and was admitted to the bar in 1881. In 1885 he was appointed superintendent of the Cambridge Street Railroad, and in 1888 was appointed by the West End Street Railway Company its road-master, from which he has retired to resume his profession. Having given his attention soon after leaving college to military matters, he was made a captain in 1879 of Company B, of the Fifth Massachusetts Regiment, which he had joined as a private during his freshman year in college, and in 1882 was chosen colonel of that Regiment, a position which he still holds. He has been a member of the Common Council of Cambridge, the place of his residence, and has represented that city three years in the Legislature. He married, January 18, 1879, Mary, daughter of Joseph Shaw, of Boston.

JOHN JAMES GILCHRIST was born in Medford Feb. 16, 1809. His father, James Gilchrist, a ship-master, removed while he was quite young to Charlestown, N. H., and carried on the occupation of farming. John, the son, fitted for college with Rev. Dr. Crosby, and graduated at Harvard in 1828, in the class with Dr. Henry Ingersoll Bowditch, George Stillman Hillard and Robert Charles Winthrop. He read law in Charlestown, N. H., with William Briggs,

and at the Dane Law School. After admission to the bar he became associated in business with Governor Hubbard, whose daughter, Sarah, he married in 1836. In 1840 he was appointed an associate justice of the Supreme Court, and in 1848, on the resignation of Judge Parker, was made chief justice. On the establishment of the Court of Claims at Washington he was placed at its head by President Pierce, and died at Washington April 29, 1858. He published a digest of New Hampshire reports in 1846, and it has been said of him that "in depth and extent of legal lore many of his judicial contemporaries may have equaled him, but only a few have excelled him."

JAMES G. SWAN, the third son of Samuel and Margaret (Tufts) Swan, of Medford, was born in that town January 11, 1818. He went to California in its early golden days, and thence to Washington Territory, where, in 1871, he was made probate judge. He was afterwards appointed inspector of customs in the district of Puget Sound, and stationed at Neah Bay three years, and, later, at Fort Townsend. Subsequently he was appointed United States Commissioner of the Third Judicial District of Washington Territory, and in 1875 went to Alaska as United States commissioner, to procure articles of Indian manufacture for the Centennial Exposition. In 1857 he published a book entitled "The Northwest Coast; or, Three Years in Washington Territory," and in 1880 gave to the town of Medford a collection of Indian curios for the public library of the town.

THOMAS S. HARLOW was born in Castine, Me., Nov. 15, 1812. In 1824 his family removed to Bangor, and in 1831 he came to Boston. He taught the grammar school in Medford, and graduated at Bowdoin in 1836. He read law with Governor Edward Kent, in Bangor, and for a short time edited a newspaper in Dover, Me. He was admitted to the bar in 1839, and spent three years in Paducah, Ky. In 1842 he returned to Massachusetts, and opened an office in Boston. In November, 1843, he married Lucy J. Hall, of Medford, and took up his residence in that town. He has always, during his residence there, been interested in town affairs, and won the respect and confidence of his fellow-citizens. He has been a member of the School Committee and of the Board of Trustees of the Public Library, and is at the present time a special justice of the First Eastern Middlesex District Court, having within its jurisdiction the towns of North Reading, Reading, Stoneham, Wakefield, Melrose, Malden, Everett and Medford, and holding its sessions at Malden and Wakefield.

ALFRED BREWSTER ELY, the son of Rev. Dr. Alfred Ely, of Monson, was born in that town Jan. 13, 1817. He fitted for college at the Monson Academy, and graduated at Amherst in 1836. After leaving college he taught the high school in Brattleboro', Vt., and the Donaldson Academy, at Fayetteville, N. C., and read law with Chapman & Ashmun, in Springfield, Mass., where he was admitted

A. A. H. H. H.

to the bar. In 1848 he removed to Boston, where he established himself in the law, making Newton, a part of the time, his place of residence from which town he was representative to the General Court in 1872. He early became an active "Native American," and introduced into Massachusetts in 1846 the "Order of United Americans," of which for a time he was the president. At one time he edited, and perhaps owned, the *Boston Daily Times* and the *Boston Ledger*, and held the offices of State director in the Western Railroad, and commissioner of Back Bay Lands. In 1861 he was quartermaster of the Thirteenth Connecticut Regiment, and aid-de-camp of Brigadier-General Benham. In 1862 he was assistant adjutant-general of the Northern Division of the Department of the South, and was at Hilton Head and Fort Pulaski, and in the battles of Edisto and Stono, and afterwards on the staff of General Morgan. He resigned in 1863. He married, first, Lucy, daughter of Charles J. Cooley, of Norwich, and second, Harriet Elizabeth, daughter of Freeman Allen, of Boston, and died at Newton July 30, 1872.

DAVID H. MASON was born in Sullivan, New Hampshire, March 17, 1818, and graduated at Dartmouth in 1841. He lived in Newton twenty-five years and there died May 29, 1873. He delivered the oration at the centennial anniversary of his native town, July 14, 1864; in 1860 he was a member of the Massachusetts Board of Education, and December 22, 1870, was appointed United States district attorney.

JOEL GILES was born in Townsend in 1804, and graduated at Harvard in 1829, after which he was for a time a tutor in the college. He was descended from Edward Giles, who came from Salisbury, in England, and settled in Salem. He settled in Boston, and in 1848 delivered the Fourth of July oration in that city. He was a member of both branches of the General Court, member of the Constitutional Convention of 1853, and died in Boston.

JOHN GILES, brother of the above, born in Townsend in 1806, graduated at Harvard in 1831, read law with Parsons & Stearns, in Boston, and died in June, 1838.

LUTHER STEARNS CUSHING, son of Edmund Cushing, of Lunenburg, and grandson of Colonel Charles Cushing, of Hingham, was born in Lunenburg, June 22, 1803, and graduated from the Harvard Law School in 1826. After conducting for a time the *Jurist and Law Magazine*, he was appointed clerk of the Massachusetts House of Representatives in 1832, and served until 1844. In the latter year he was chosen a representative from Boston, and in the same year appointed judge of the Court of Common Pleas, remaining on the bench until 1848. In 1845 he published a "Manual of Parliamentary Practice." In 1854, as reporter of the Supreme Judicial Court, to which position he was appointed after leaving the bench, he published twelve volumes of Reports. He also pub-

lished "Elements of the Law and Practice of Legislative Assemblies," "Introduction to the Study of Roman Law," and "Rules of Proceeding and Debates in Deliberative Assemblies." He died in Boston, June 22, 1856.

THOMAS HOPKINSON was born in New Sharon, Maine, August 25, 1804, and graduated at Harvard in 1830, in the class with Charles Sumner and George Washington Warren. He read law with Lawrence & Glidden in Lowell, and was admitted to the bar in 1833. He was a representative from Lowell in 1838 and 1847, Senator in 1845, and in 1848 was appointed judge of the Court of Common Pleas, resigning the next year to assume the position of president of the Boston and Worcester Railroad Company. He was city solicitor of Lowell in 1840, a member of the Constitutional Convention from Cambridge, in 1853, and died in that place on November 17, 1856.

FREDERICK AUGUSTUS WORCESTER was born in Hollis, New Hampshire, in 1807, and was the son of Jesse Worcester, of that town, and graduated at Harvard in 1831. He had four brothers who were college graduates,—Joseph Emerson, the lexicographer, who graduated at Yale in 1811, and died in 1865; Rev. Taylor Gilman, who graduated at Harvard in 1823, and died in 1869; Rev. Henry A., who graduated at Yale in 1828, and Hon. Samuel Thomas, who graduated at Harvard in 1830. He had two other brothers—Jesse, who entered Harvard in 1809 and died the same year, and David, who entered Harvard in 1828 and left college in his junior year. Frederick Augustus studied at Pinkerton Academy, in Derry, New Hampshire, and at Phillips Academy before entering college. He read law with Benjamin M. Farley, at Hollis, and at the Harvard Law School; and finished his studies with George F. Farley in Groton. In 1835 he went to Townsend, thence to Bangor, but returned. He married Jane M. Kellogg, of Amherst.

JOHN A. KNOWLES was born in Pembroke, New Hampshire, April 25, 1800, and died at his home on South Street, Lowell, Mass., July 25, 1884, at the age of eighty-four years. He was the son of Simon and Deborah Knowles who were natives of Hopkinton, New Hampshire, and was the youngest of a family of thirteen children. Like almost all other boys reared in the farming towns of New Hampshire in the beginning of the present century, he very early learned to rely for support upon his own exertions. At the age of fifteen years he left home and engaged in the trade of wagon-making in Hopkinton, New Hampshire. A part of his time, however, was devoted to attending school. He seems to have very early entertained the fixed resolve to attain by the cultivation of his intellect a higher position in life than that of an ordinary workman. Accordingly from the age of nineteen years to that of twenty-four years he devoted himself alternately to a course of study and to teaching in district schools. Subsequently, however, on ac-

count of his feeble health and his limited pecuniary ability, he relinquished the cherished hope of obtaining a college education, and devoted himself for two years to teaching school in Keene, New Hampshire, and Taunton, Massachusetts.

Mr. Knowles came to Lowell in the autumn of 1827, when twenty-seven years of age, and opened an evening school, in which penmanship (in which he was an expert) was the leading branch. This school, however, he soon relinquished, and commenced the study of law in the office of Elisha Glidden, who for nine years was an attorney-at-law in Lowell, and was at one time the partner of Luther Lawrence, second mayor of the city.

After nearly five years spent in the office and family of Mr. Glidden, and in attending, at Dedham, the lectures of Judge Theron Metcalf, he was admitted to the bar in 1832, at the age of thirty-two years, and immediately opened a law-office in the city of Lowell. He continued the practice of law in that city until increasing deafness demanded his retirement. As a lawyer he was distinguished, not for brilliant oratory or persuasive eloquence before a jury, but for the soundness of his counsel, the conscientious fidelity of his service, and the purity and uprightness of his character. These qualities secured to him for many years a large office practice, and gained for him not only a good estate, but also an enviable name as a man of exalted moral character.

Few citizens of Lowell have been called to a larger number of positions of trust and honor. For several years he was clerk of the Police Court under Judge Locke. In 1833 and 1834 he was city solicitor. In 1835, 1844 and 1845 he was a representative of Lowell in the General Court of Massachusetts. In 1847 he held the office of State Senator. For several years he was a member of the Board of School Committee. From 1847 for nearly thirty years he was president of the Appleton Bank, resigning the office at length on account of impaired eye-sight. From 1848 he served for several years as treasurer of the Lowell & Lawrence Railroad.

In every position of responsibility Mr. Knowles displayed a character of transparent honesty and strict integrity. He was a man to be trusted. Though of a genial and complacent nature, yet, when occasion called and justice demanded, he knew how to "put his foot down firm." When he was president of the Citizens' Bank, an institution which, after a brief existence, went down in the financial depression of 1837 and the following years, he gained an enviable name by his firmness in resisting steadfastly every attempt of speculators to induce him to resort to doubtful methods of management.

Mr. Knowles was fond of literary pursuits. His pen was not idle. By his sketches of the early days and the early men of Lowell, read before the Old Residents' Historical Association, he did much to interest its members. There was in his mind a poetic

vein, and he often repeated the flowing lines of Pope and other old poets which his memory had retained for fifty years. The writing of poems was to him a pleasant recreation. He was for many years a beloved officer of the Unitarian Church, of which he was one of the founders.

DANIEL SAMUEL RICHARDSON was born in Tyngsborough, Mass., December 1, 1816, and died at his residence on Nesmith Street, Lowell, March 21, 1890, at the age of seventy-three years. He was descended from a long line of New England ancestors, all of whom occupied such honorable positions in life that it is interesting to trace his genealogical descent from the early settlement of Massachusetts.

1. Ezekiel Richardson, his earliest American ancestor, belonged to that large colony of Puritan Englishman who, about 1630, under Governor John Winthrop, settled in Salem, Boston, Charlestown and the neighboring towns. He was a conspicuous man, having been on the first Board of Selectmen of Charlestown and representative of that town in the General Court. He subsequently served on the Board of Selectmen of the town of Woburn.

2. His son, Captain Josiah Richardson, was prominent among the first settlers of Chelmsford, having been for fourteen years a selectman of the town. It is an interesting fact regarding him that he was once the owner of that part of the territory of Lowell on which now stand most of the large manufactories of that city, having, in 1688, received it by deed from two Indians, John Nebersha and Samuel Nebersha, "for ye love we bear for ye aforesaid Josiah."

3. His son, Lieutenant Josiah Richardson, was the clerk and a selectman of the town of Chelmsford.

4. Captain William Richardson, son of the latter, represented the town of Pelham (then a part of Massachusetts) in the General Court. He died in 1776, at the age of nearly seventy-five years.

5. His son, Captain Daniel Richardson, resided also in Pelham. He was for three years a soldier in the Revolutionary Army, and was present at the battle of Monmouth. He died in 1833, at the age of eighty-four years.

6. His son, Daniel Richardson, the father of the subject of this sketch, was a successful attorney-at-law in Tyngsborough, Mass., and served the town in the General Court of Massachusetts, both as Representative and Senator. Of his three sons, who were his only children, Daniel S. was the oldest, William A. is chief justice of the Court of Claims at Washington, having formerly held the high office of Secretary of the United States Treasury, and George F. is one of the ablest lawyers of the bar of Middlesex County. The three brothers all graduated from Harvard College and the Law School, all pursued the study of law, all practiced their profession in Lowell, and all in succession were elected to the presidency of the Common Council of that city. It is an interesting fact that for twenty-one years one at

Daniel S. Richardson

least of the brothers was a member of the university.

Daniel S. Richardson fitted for college at the academy at Derry, N. H., and graduated at Harvard in 1836, before he had reached the age of twenty years. In college he ranked among the first scholars of his class, being a member of the Phi Beta Kappa Society and receiving the Bowdoin prize. He subsequently graduated from the Law School.

At the age of twenty-three years he commenced the practice of law in Lowell, occupying an office in a location on Central Street, in which he remained for more than fifty years.

He loved his profession, and to it he devoted his highest powers. His cases were prepared with scrupulous fidelity, and all that patient research and unremitting toil could do he freely gave to his clients. He was a lawyer and not an orator. Others might excel him in a popular harangue, but before a jury such was the force of his logic, the perspicuity of his language, the evident sincerity of his conviction, and above all the admirable thoroughness of his preparation, that few advocates were his peers. In the first case which Mr. Richardson argued before the full bench of the Supreme Court the celebrated Chief Justice Shaw so far departed from his habitual reticence as to say: "This case has been very well argued."

Mr. Richardson acquired a very extensive practice in civil cases. It is said that in the Massachusetts Reports there are more than three hundred cases which he took to the Supreme Court. His office was a school for young lawyers. Very few men have had around them so many students of the law. In him they found a patient and sympathizing instructor and friend whom they learned to love, and whose generous kindness they still recall with affection and tenderness. The honor and esteem in which his compeers at the bar hold him were well expressed at the recent memorial meeting of the Middlesex bar by General Butler, who had intimately known him for fifty years, in the following words: "He was one of the few men I ever knew who apparently had no enemies. The practice of the bench shows no more fragrant name than that of Daniel S. Richardson."

Although the practice of the law was Mr. Richardson's chosen vocation, yet his fellow-citizens recognized his merits by placing him in many positions of trust and honor. In 1842, 1843 and 1847 he was a member of the General Court and was in the State Senate in 1862. In 1845 and 1846 he served in the Common Council, and was, in both years, president of that body. He was in 1848 on the Board of Aldermen. He was for a very long time a director, and for sixteen years the president of the Prescott National Bank. For fifteen years or more he was trustee of the State Lunatic Asylum at Danvers. He was president of the Lowell Manufacturing Company and director in the Lowell Bleachery and the Traders'

and Mechanics' Insurance Company. He was president of the Vermont and Massachusetts Railroad from 1863 to the time of his death. He was also formerly president of the Lowell & Nashua Railroad. For three years he was chairman of the commissioners of Middlesex County. And even yet we have by no means completed the full list of offices and trusts which occupied his busy and useful life.

Mr. Richardson was, during all his life, a diligent student. He kept himself informed in the politics, science and literature of the day. In 1841 he was, for several months, the editor of the *Lowell Courier*, but his law business forbade him to continue his work as a journalist. As editor his motto, as he declared in his valedictory, was expressed in the following couplet:

"Do boldly what you do, and let your page
Smile when it smiles, and when it rages, rage."

He adds, however, that he had leaned towards the smiling page. In religious sentiment he was a Unitarian and it has been said of him that his creed was the Sermon on the Mount. In politics he was, in his early years, a Whig. After the Whig party became extinct he was through life a firm and consistent Republican.

GILES HENRY WHITNEY, son of Abel and Abigail H. (Townsend) Whitney, of Lancaster, was born in Boston January 18, 1818. His father kept, in Boston, a private school for boys. The son Giles attended the Latin School from the age of eight to that of thirteen, and finished his preparation for college with Frederick P. Leverett. He graduated at Harvard in 1837, and after reading law with George F. Farley, of Groton, with Washburn and Hartshorn, of Worcester, and at the Harvard Law School, was admitted to the bar in September, 1842. He practiced in Westminster until April, 1846, when he removed to Templeton, and in June, 1857, to Winchendon. He was in the Senate in 1851, and in the House of Representatives in 1864, 1866 and 1881. He married, in November, 1850, Lydia A., daughter of Capt. Joseph Davis, of Templeton.

HENRY VOSE was the son of Elijah and Rebecca Gorham (Bartlett) Vose, of Charlestown, and was born in that town May 21, 1817. Early afflicted with asthma, he was sent to Concord, where he lived several years in the family of a farmer. He fitted for college at the Concord Academy and graduated at Harvard in 1837. During a part or the whole of his college life he was an inmate of the family of Rev. Henry Ware, Jr. After leaving college he was, for a time, a family instructor in Western New York and read law, first in the office of George T. Davis, of Greenfield, and afterwards in that of Chapman & Ashmun, of Springfield, when he was admitted to the bar. He was a member of the Massachusetts House of Representatives in 1858, and on the organization of the Superior Court in 1859 he was appointed one of its judges. He removed to Boston soon after his appoint-

ment and made that place his residence until his death, January 17, 1869. He married, October 19, 1842, Martha Barrett Ripley, of Greenfield.

FREDERIC T. GREENHALGE was born in Clithero, England, July 19, 1842, and was brought to this country by his father in his youth. He received his early education in the common schools of Lowell, and though he entered Harvard in 1859 he did not pursue the whole college course. He studied law and was admitted to the bar at Lowell in 1865. He was a member of the Common Council of that city in 1868-69, and received a degree of Master of Arts from Harvard in 1870. He was also a member of the Lowell School Committee from 1871 to 1873, mayor of the city in 1880 and 1881, delegate to the National Republican Convention in 1884, a representative in 1885, city solicitor in 1888 and was chosen member of the Fifty-first Congress as a Republican, in 1888. He is a man of fine scholarship as well as high legal attainments and of polished and winning eloquence. With life and health his further advancement is sure.

CHARLES THEODORE RUSSELL, now living in Cambridge, is descended from William Russell, who came to Boston in 1640, and settled in Cambridge in 1645. Mr. Russell is the son of Charles and Persis (Hastings) Russell, of Princeton, and was born in that town November 20, 1815. His father was a merchant in Princeton, clerk of the town and postmaster, representative eight years, four years a member of the Senate and four years a member of the Governor's Council. Mr. Russell fitted for college at the Princeton Academy, under the care of Rev. Warren Goddard, and graduated at Harvard in 1837, delivering the Latin salutatory at his commencement and the valedictory on the reception of the degree of Master of Arts in 1840. He read law in the office of Henry H. Fuller and at the Harvard Law School, and was admitted to the bar in 1839. The writer, a student at Harvard at the time Mr. Russell was in the Law School, remembers the ease and skill in debate shown by him in the Harvard Union, to whose discussions the law students were admitted. After admission to the bar he was associated with Mr. Fuller two years, and in 1845 entered into partnership with his younger brother, Thomas Hastings Russell, who graduated at Harvard in 1843, and had then become a member of the bar. Until 1855 he made Boston his residence and then removed to Cambridge, where he has since lived. He was a representative from Boston in 1844, 1845 and 1850, and a Senator from Suffolk in 1851 and 1852, and from Middlesex in 1877 and 1878. He was mayor of Cambridge in 1861-62, has been professor in the Law School of Boston University, fourteen years one of the Board of Visitors of the Theological School at Andover and secretary of the board, a corporate member of the Commissioners for Foreign Missions, member of the Oriental Society, president of the Young Men's Christian Association, and delivered an address at its inauguration. He has written a short history

of his native town and delivered a centennial oration there in 1859 and also delivered the oration in Boston on the 4th of July, 1852. The law-firm of which he is the senior member includes, besides his brother, above-mentioned, his sons, Charles Theodore, Jr. and William E. and Arthur H., a son of his brother. Mr. Russell married, June 1, 1840, Sarah Elizabeth, daughter of Joseph Ballister, of Boston.

RICHARD H. DANA, JR., son of Richard H. Dana, a sketch of whom has been given, and grandson of Francis Dana, also included in this chapter, was born in Cambridge, August 1, 1815. His mother was Ruth Charlotte Smith, of Providence. He entered Harvard in 1831, but owing to a severe affection of the eyes, he was obliged to abandon study for a time, and as a sailor before the mast, sailed from Boston, August 6, 1834, for the northwest coast. He reached Boston on his return September 20, 1836, and joined the class of 1837, with which he graduated. He attended the Harvard Law School, and was admitted to the Suffolk bar in 1840. He published in that year "Two Years Before the Mast," and at later times "The Seaman's Friend," "Dictionary of Sea Terms," "Customs and Usages of the Merchant Service," "Sketches of Allston and Channing" and "To Cuba and Back, a Vacation Voyage." He entered at once on a successful practice, not a small portion of which, in the earliest years of his career, was in the defense of seamen from unjust and hard usage. He was a member of the Constitutional Convention of 1853, and one of the founders of the Free Soil party, and its successor the Republican party. In the trials had in Boston of persons charged with the unlawful rescue of a fugitive slave from the hands of United States officers, in the court-house in that city, he labored diligently and eloquently, alone in some cases, and in others associated with Hon. John P. Hale, of New Hampshire, and secured their acquittal. He was appointed United States district attorney by President Lincoln in 1861, and held the office until 1865. In 1866 he received the degree of Doctor of Laws from his *Alma Mater*. He married, August 25, 1841, Sarah Watson, of Hartford. In 1881 he went to Italy and died at Rome, January 6, 1882.

BENJAMIN ROBBINS CURTIS was born in Watertown, November 4, 1809, and graduated at Harvard in 1829, receiving a degree of Doctor of Laws from his *Alma Mater* in 1852. He was admitted to the bar in 1832, and began practice at Northfield, Massachusetts. In 1834 he removed to Boston, where he soon reached the front rank in his profession, meeting as his competitors in the courts Charles G. Levering, Rufus Choate, Sidney Bartlett and at times Daniel Webster. In September, 1851, he was appointed an associate justice on the bench of the Supreme Court of the United States, and resigned in 1857. In 1868 he was one of the counsel of President Andrew Johnson before the Court of Impeachment, and before that time he was two years in the Legislature. He published in

1857 "Reports of the United States Circuit Court" in two volumes, and later twenty-two volumes of "Decisions of the United States Supreme Court" and a "Digest" of the same.

GEORGE TUCKNOR CURTIS, brother of the above, was born in Watertown, November 28, 1812, and graduated at Harvard in 1812. He was admitted to the Suffolk bar in August, 1836, and was a representative in the General Court from Boston from 1840 to 1844. He has been a voluminous law writer, of sound though conservative mind, and a respected authority on all constitutional questions. Among his published law works are "Rights and Duties of Merchant Seamen," "Digest of the Decisions of the Courts of Common Law and Admiralty," "Cases in the American and English Courts of Admiralty," "American Conveyances," "Treatise on the Law of Patents," "Equity Precedents," a tract entitled "The Rights of Conscience and Property," a treatise on the "Law of Copyright," "Commentaries on the Jurisprudence, Practice and Peculiar Jurisdiction of the Courts of the United States," and a "History of the Origin, Formation and Adoption of the Constitution of the United States." Besides these he has published a "Life of Daniel Webster." He is now a resident of New York, engaged in literary pursuits, and in practice in the United States Supreme Court.

WILLIAM W. STORY, son of Judge Joseph Story, was born in Salem February 12, 1819, and graduated at Harvard in 1838. He read law in the Harvard Law School, from which he graduated in 1840. His father removed from Salem to Cambridge when he was ten years of age, and during his college and professional life he was a resident of that town. He soon abandoned the law for the more congenial pursuit of sculpture, in which he has won an enviable distinction. Among his best known works are the statue of Edward Everett in the Boston Public Garden, and that of Chief Justice Marshall at the west front of the Capitol in Washington. He is now in Italy, where most of his artist life has been passed.

GUSTAVUS ADOLPHUS SOMERBY, son of Samuel and Hannah (George) Somerby, of Newbury, was born in that town November 2, 1821. He was descended from Anthony Somerby, one of the clerks of courts in Essex County in the seventeenth century. He attended school at Wayland, and read law with Edward Mellen, being admitted to the bar in 1844. He practiced in Wayland until 1852, when he removed to Waltham and joined with Josiah Rutter in a law partnership, which continued until 1858, when he removed to Boston. During his career he occupied offices in Gray's Building on Court Street, in the old State-House and Sears Building. He died at South Framingham July 24, 1879, leaving a son, Samuel Ellsworth Somerby, who graduated at Harvard the year of his father's death. Mr. Somerby was a man of large frame and with mental powers in harmony with his physical. He practiced largely at the

Middlesex bar, where he early accustomed himself to the legal blows which its members were in the habit of giving and receiving. He was especially distinguished and successful before a jury, and some of his greatest triumphs, in criminal cases particularly, were due to the boldness, almost heroic at times, with which he presented his case. The acquittal of Leavitt Alley, on trial in Boston in 1873 for murder, will ever stand as a monument to his courage and shrewdness. The line of his defense was a hint, so shrewdly given that it rather originated the suggestion in the minds of the jurymen themselves than passed his own lips, that the son of Mr. Alley was the real criminal. The prisoner's witnesses and the cross-examination of the witnesses for the Government were so handled as to necessarily convey, through unseen and unexpected channels, this hint to the jury, and the refusal to put the boy on the stand, though it was well known that he was conversant with many of the incidents of the affair, served to carry this hint home with a force that was sure to have an effect. The trial lasted ten or twelve days, and the strain upon nerve and brain was so severe that Mr. Somerby never fully recovered from the prostration which it induced.

GEORGE WASHINGTON WARREN was born in Charlestown October 1, 1813, and was the son of Isaac and Abigail (Fiske) Warren, of that town. He was descended from John Warren, who appeared in New England in 1630. He graduated at Harvard in 1830. He married, in 1835, Lucy Rogers, daughter of Dr. Jonathan Newell, of Stow, and had a son, Lucius Henry Warren, born in 1838, who graduated from Princeton in 1860, and from the Harvard Law School in 1862. His first wife died September 4, 1840, and he married, second, Georgianna, daughter of Jonathan and Susan Pratt Thompson, of Charlestown, by whom he had two sons and three daughters. Mr. Warren settled in the practice of law in his native town, and in 1838 was a representative to the General Court, and senator in 1853-54. After the incorporation of Charlestown as a city, by an act passed February 22, 1847, and accepted March 10, 1847, Mr. Warren was chosen its first mayor, and continued in office three years. From 1837 to 1847 he was secretary of the Bunker Hill Monument Association, and from 1847 to 1875 its president. He also wrote a history of the association. In 1861 he was appointed judge of the Municipal Court of the Charlestown District, and remained on the bench until his death, which occurred at Boston May 13, 1883.

CHARLES COWLEY was born in Eastington, England, January 9, 1832. He came to New England with his father, who settled as a manufacturer in Lowell. With a common-school education, he read law in the office of Josiah G. Abbott, and was admitted to the Middlesex bar in 1856. He was in both the army and navy during the war. Mr. Cowley has, aside from his profession, devoted himself creditably to literary pursuits, and in politics has sought to pro-

mote the welfare of the laboring man. Lowell has always been his residence since he came to America.

JEREMIAH CROWLEY was born in Lowell, January 12, 1832, and is the son of Dennis Crowley, of that city. He was a member of the Sixth Massachusetts Regiment during its three months' campaign in 1861. He read law in the office of John F. McEvoy, of Lowell, and was admitted to the Middlesex bar in 1869. He has been a councilman and alderman of Lowell and a member of the State Senate. He is in the enjoyment of a lucrative practice in his native city.

BENJAMIN DEAN was born in Clithero, England, August 14, 1824, and was the son of Benjamin and Alice Dean. His father came to New England and settled in Lowell, where the subject of this sketch received his early education. After one year in Dartmouth College, Benjamin, the son, entered, as a student, the law-office of Thomas Hopkinson, of Lowell, and was admitted to the bar in 1845. He practiced law in Lowell about seven years and then removed to Boston, where he has since resided. He has been a member of the State Senate three years, a member of the Boston Common Council four years and represented the Third District in the Forty-fifth Congress. For a number of years he has been a member of the Boston Park Commission. He married, in 1848, Mary A., daughter of J. B. French, of Lowell.

PHILIP J. DOHERTY was born in Charlestown, January 27, 1856, and at the age of twenty graduated at the Boston University Law School. He was admitted to the bar in 1877 and has since practiced his profession in Boston. He has been a member of the House of Representatives and a member of the Board of Aldermen of Boston. He married, August 16, 1878, Catherine A. Butler, of Charlestown.

GEORGE STEVENS, son of Daniel and Tabitha (Sawyer) Stevens, of Stoddard, New Hampshire, was born in that town October 23, 1824. He was descended from John Stevens, of Chelmsford, 1662, through John, Henry, Daniel and Daniel. He graduated at Dartmouth in 1849, and read law with Ira A. Eastman, of Gilmanton, N. H., and with Moses N. Morris, of Pittsfield, Mass. After teaching school two or three years he was admitted to the bar in 1854, and settled in Lowell, where he established a lucrative practice and was city solicitor in 1867-68. He married, September 19, 1859, Elizabeth Rachel, daughter of James Kimball, of Littleton, by whom he had three children, one of whom, George Hunter Stevens, was his partner at the time of his death, which occurred at Lowell, June 6, 1881.

JOHN SULLIVAN LADD, son of John and Profenda (Robinson) Ladd, of Lee, New Hampshire, was born in that town July 3, 1810. He graduated at Dartmouth in 1835, and read law with John P. Robinson. After teaching two years he settled in Cambridge in 1839, and married, in June, 1841, Ann, daughter of David Babson. September 5, 1847, he married Mary

Ann, daughter of Samuel Butler, of Bedford. He represented Cambridge in the General Court, was a member of the Constitutional Convention in 1853, a member of the Common Council and in 1851 its president. He was trial justice some years, and in 1854 was made judge of the Police Court in Cambridge, which position he held twenty-eight years. He died at Cambridge, September 5, 1886.

CHARLES R. TRAIN, son of Rev. Charles Train, of Framingham, was born in that town Oct. 18, 1817. His father had two wives—Elizabeth Harrington and Hepsibah Harrington, the latter of whom was the mother of the subject of this sketch. He was descended from John Train, of Watertown, an early settler. He attended the public schools of Framingham and the Framingham Academy, and graduated at Brown in 1837. He read law in Cambridge and was admitted to the bar in 1841. He settled in Framingham, representing that town in the General Court in 1847, and in the Constitutional Convention in 1853. He was district attorney from 1848 to 1855, a member of the Council in 1857-58, member of Congress from 1859 to 1863, again a member of the General Court in 1871 from Boston, and Attorney-General of Massachusetts from 1872 to 1879. He removed to Boston about 1866, and died at North Conway, New Hampshire, July 29, 1885.

GEORGE HENRY GORDON was born in Charlestown, July 19, 1825, and graduated at West Point in 1846. He entered the mounted rifles and served under General Scott in the Mexican War. He was severely wounded at Cerro Gordo and breveted first lieutenant for gallantry in the field. In 1853 he was made full first lieutenant, and resigned in 1854, entering the Cambridge Law School and being admitted to the Suffolk bar. In 1861 he raised the Second Regiment of Massachusetts Volunteers, and as its colonel was made military governor of Harper's Ferry. In 1862 he commanded a brigade under General Banks and was made brigadier-general of volunteers June 9, 1862. He was at the second battle of Bull Run and at Antietam. He was also engaged in operations about Charleston Harbor in 1863-64, and against Mobile in August, 1864. He was breveted major-general of volunteers April 9, 1865, for meritorious services. After the war he was at one time United States collector of internal revenue, and practiced law in Boston until his death, about 1885 or '86.

THOMAS A. BEARD was born in Littleton, New Hampshire, and practiced law in Lowell from 1842 to 1856. He was appointed assistant treasurer by President Pierce and died November 6, 1862.

GEORGE FRANCIS RICHARDSON was born on Dec. 6, 1829, at Tyngsborough, Mass. He is the son of Daniel and Hannah (Adams) Richardson, his father having been an attorney-at-law and a prominent citizen of Tyngsborough. The ancestors of both his parents were honorably identified with the early history of New England. A more extended notice

Chas. K. Fram

Wm. F. Richardson

of the ancestry and family of Mr. Richardson is to be found in the sketch of the life of his older brother, Daniel S. Richardson, on another page of this work.

Having pursued his preparatory course of study in Phillips Academy, Exeter, Mr. Richardson entered Harvard College in 1846, at the age of sixteen years. Upon his graduation from college he entered the Dane Law School in Cambridge, from which, at the age of twenty-three years, he graduated with honor, having received the first prize for an essay.

After being admitted to the bar and practicing law in Boston for two years, in 1858 he entered as partner the law-office of his brother, Daniel S., being in that position the successor of his brother, William A. who had been appointed judge of Probate and Insolvency for Middlesex County. The firm of Daniel S. and Geo. F. Richardson has now continued thirty-two years, holding at the bar of Middlesex County a very high reputation for legal learning and professional honors.

Though devoted to the practice of his profession, Mr. Richardson never forgets that he is a citizen of Lowell. He is always alive to all that pertains to the welfare and honor of the city. Especially when the War of the Rebellion made its first demand upon the self-sacrifice and patriotism of the people, he stood forth as the trusted and accepted leader, and inspired his fellow-citizens with courage and hope. By his efforts a company was promptly raised and equipped in Lowell, which had the honor of being the first company of three-years' men formed in the State of Massachusetts. It was organized on the evening of the 19th of April, 1861, the day on which the Sixth Regiment marched through Baltimore. In his honor it received the name of the Richardson Light Infantry.

Mr. Richardson has been placed in very many positions of trust and honor. In 1862 and 1863 he was a member of the Common Council, and occupied the same position, as president of that body, which his brothers, Daniel S. and William A., had filled before him. In 1864 he was in the Board of Aldermen. In 1867 and 1868 he was mayor of the city, having received his second election almost without a dissenting vote. As mayor of the city he filled the position with great popular acceptance. His professional practice had well equipped him for the performance of the ordinary duties of the office, and his intellectual culture and graceful address brought honor to the city on all public occasions. In 1868 he was a member of the Republican Convention at Chicago which nominated Gen. Grant for his first election. In 1871 and 1872 he was a member of the Massachusetts Senate. At the close of his service as Senator, Mr. Richardson was brought to the decision of a very important question in respect to his future career. On one hand was the alluring prospect of political advancement, for he had already made a

flattering record, and he possessed all the qualities of a successful political leader. On the other hand was his chosen profession. He could not hold both; he must choose one and reject the other. He deliberately chose his profession, and now for eighteen years he has conscientiously and very successfully devoted himself to its arduous duties. Meantime he has filled such positions in social and civil life as came to him as a good citizen, having been city solicitor, member of the School Board, trustee of the City Library, president of Middlesex Mechanic Association, director of the Traders' and Mechanics' Insurance Company, a director of the Prescott National Bank, of the Stony Brook Railroad and of the Vermont & Massachusetts Railroad, and president of the Lowell Manufacturing Company. He has also been president of the Unitarian Club and of the Ministry-at-Large. As trustee of the Boston Water-Power, he has borne the important responsibility of the sale of land to the amount of about three million dollars.

Mr. Richardson is fond of literary pursuits. He loves his library, which is especially rich in the old English classics. Few literary men possess so large and so unique a collection of the various editions of the plays of Shakespeare. He is a connoisseur in Shakespearean literature, and his articles given to the press in defence of the claims of William Shakespeare as the veritable author of the plays so long attributed to him, exhibit a thorough mastery of his subject and a wide range of literary attainments.

ISAAC O. BARNES was in the practice of law in Lowell from 1832 to 1835 inclusive. His name appears in the first directory published in 1832 with an office on Central Street. It is possible that he may have been in Lowell before the directory was issued. In 1833 he was associated with Francis E. Bond, having an office in Railroad Bank Building and boarding at the Mansion House. In 1834 his office was in the same building and in 1835 he appears in the directory as associated with Tappan Wentworth in the same building. He probably removed to Boston in 1836, where he was at one time United States marshal. He died at the Bromfield House on Bromfield Street in that city, if the writer remembers correctly, where he made his home for many years.

EDWARD F. SHERMAN was born in Acton February 10, 1821, and went when a child to Lowell, where he remained until 1839. He graduated at Dartmouth in 1843 and before entering on the study of law was for a time principal of the academy at Canaan, New Hampshire, and of the academy at Pittsfield, Massachusetts. In 1846 he returned to Lowell, where he read law with Tappan Wentworth, whose partner he was for eight years. In 1855 he was chosen secretary of the Traders' and Mechanics' Insurance Company, and held this office sixteen years. He was a director in the Prescott National Bank, trustee of the

Mechanics' Savings Bank, representative in 1861 and 1866, a member of the School Committee, in 1870 a member of the City Government, and in 1871 mayor. He died February 10, 1872.

WENDELL PHILLIPS, son of John Phillips, the first mayor of Boston, was born in Boston, November 29, 1811, and graduated at Harvard in 1831. He attended the Harvard Law School and read law in the offices of Luther Lawrence and Thomas Hopkinson at Lowell. He was admitted to the Middlesex bar in 1834, but never practiced in Middlesex County.

CHESTER W. EATON was born in Wakefield January 13, 1839. He graduated from the Scientific Department of Dartmouth College in 1859, and after reading law at the Dane Law School was admitted to the bar in 1864. After some years' practice in Wakefield and Boston he has devoted himself largely to literary and business pursuits and has held various important and responsible offices in his native town. He married, in 1868, Emma G., daughter of Rev. Giles Leach, of Rye, New Hampshire.

GEORGE MILLER HOBBS was born in Waltham April 11, 1827, and is the son of William and Maria (Miller) Hobbs, of that town. He graduated at Harvard in 1850, and at the Dane Law School in 1857. He was admitted to the bar in Boston in 1858, and entered practice with Hon. Edward Avery, with whom he has ever since been associated. He has been a member of the House of Representatives and of the Roxbury and Boston School Boards. He married, October 26, 1859, Annie M., daughter of Dr. Samuel Morrell, of Boston.

CHARLES SUMNER LILLEY was born in Lowell December 13, 1851, and was the son of Charles and Cynthia (Huntley) Lilley, of that city. He read law in the office of Arthur P. Bonney, of Lowell, and was admitted to the bar in 1877. He has been a member of the Lowell Board of Aldermen, of the State Senate and the Executive Council.

CHARLES JOHN MCINTIRE was born in Cambridge March 26, 1842. He read law at the Dane Law School and was admitted to the Suffolk bar in 1865. During the pursuit of his law studies he served as a private in the Forty-fourth Massachusetts Regiment. He has been a member of the Cambridge Common Council, of the Board of Aldermen of that city and a member of the House of Representatives. For three years he was assistant district attorney for Middlesex County, and is now city solicitor of Cambridge. He married, in 1865, Marie Terese, daughter of George B. Linegan, of Charlestown.

JOHN H. MORRISON was born in Westford December 23, 1856, and is the son of John and Bridget Morrison, of that town. After a term at Harvard shortened by sickness, he read law in the office of William H. Anderson, of Lowell, and at the Dane Law School, from which institution he graduated in 1878. He was admitted to the bar in 1879 and has since practiced in Lowell. He has been a member of the Lowell

School Board, of the House of Representatives and the State Senate. He married, in 1884, Margaret L., daughter of James Owen, of Lowell.

BENJAMIN FRANKLIN BUTLER is the grandson of Zephaniah Butler, of Woodbury, Connecticut, who served in the Continental Army in the War of the Revolution. The father of Benjamin was John Butler, of Deerfield, New Hampshire, a captain of dragoons during the War of 1812, a follower in war and an admirer in peace of Andrew Jackson, for whom the eldest of his two sons was named. After the war John Butler engaged in trade with the West Indies and died in March, 1819, of yellow fever at one of the West India islands, leaving his widow, with two young children and only a scanty share of worldly goods, to make her way and theirs in the world. The younger child, Benjamin Franklin, the subject of this sketch, was born at Deerfield on the 5th of November, 1818, only four months before his father's death. He was a delicate child, and, like many a delicate child before and since, possessed a precocious mind, which sought with avidity wherever it could be found that mental food on which it was destined to develop and mature. He attended the common schools of his native town, and the few books which came in his way he eagerly devoured. It was as true with him as with others that a few books thoroughly read gave an impulse to thought and nourished the intellectual powers more surely than that desultory reading which the bountiful library often leads to, and which ends in a scattering mind without definiteness of action or a power of concentration. A single book, no matter what its title or contents may be, read carefully and reread sentence by sentence will in every word suggest a thought which, in ever-widening circles, finally covers and includes the whole field which the mind of man is able to survey. As concentrated food nourishes the system more than a bountiful but unassimilating supply, so the few plain, simple books to which young Butler had access met exactly the wants of mental digestion, exercising and nourishing it without distracting and disordering it.

In 1828, Mrs Butler removed to Lowell, where, by taking a few boarders and carefully saving her gains she became able to give to her children a better education than she had ever dared to expect. Benjamin was sent to Phillips Academy at Exeter, and in 1834, at the age of sixteen, was sent to Waterville College in Maine. At that college there was a manual department in which the students worked three hours in each day, thus earning a moderate amount of wages to help pay the cost of their education. Here young Butler earned something, but still left college in 1838 somewhat in debt for his college expenses. During his college life those keen powers of argument and speech, which have since characterized him, manifested themselves, and his fellow-students recall many an arena in which he came off victorious.

After leaving college, oppressed by debt and with

Benjamin Butler

health impaired, he went with an uncle on a fishing voyage to the coast of Labrador, and, as he says himself, "hove a line, ate the flesh and drank the oil of cod, came back after a four months' cruise in perfect health, and had not another sick day in twenty years." The discussions in which he often took part at Waterville, were either the result of a naturally controversial taste, or were the means of developing one, and in seeking a course of life to follow, he almost as a matter of course selected the profession of law. He entered the office of Wm. Smith, of Lowell, the father of Henry F. Smith, whose name was afterwards changed to Durant and who became distinguished at the Suffolk bar.

In 1841 he was admitted to the Middlesex bar. On his examination for admission by Judge Charles Henry Warren, then holding a session of the Court of Common Pleas, questions were put to him whose answers impressed the judge with his acquirements in the principles of law. It happened that on the day of the examination a case was on trial before the judge in which the question of admitting certain evidence had somewhat puzzled him. The case was Robert Reed against Jenness Batchelder, which was carried finally to the Supreme Court on exceptions, and is reported in the first of Metcalf, page 529. It was an action of assumpsit on a promissory note given by the defendant, when a minor, to Reed & Dudley, July 26, 1835, and payable to them as bearer. The defence of course was infancy. But in July, 1839, while the note was in the hands of the promisees, and after the defendant had come of age, he verbally renewed his promise to pay, to Henry Reed, one of the firm of Reed & Dudley, and the note was subsequently endorsed to Robert Reed, the plaintiff. The plaintiff's offer to put the renewal of the promise in evidence was objected to by the defendant's counsel, and on the day of the examination above referred to, Judge Warren had sustained the objection. Mr. Butler had been present during the trial, and the general question was asked him by the judge, what effect such a renewal of promise would have, and what he thought of his ruling. The student replied that he thought the ruling wrong and the note good. "Why," asked the judge. "Because," said the student, "the note was not void but only voidable, and when the verbal promise was made the note became at once negotiable." The next day the judge reversed his ruling, exception was taken and the case carried up. Judge Warren afterwards complimented Mr. Butler on his ready and just application of the principles of law to the case in question, and acknowledged the influence it had on his mind. Judge Shaw, in the opinion of the Supreme Court, overruled the exception, and decided that though the renewal of promise was made verbally to Henry Reed, one of the firm of Reed & Dudley, it at once became negotiable, and in the hands of Robert Reed, to whom it was passed, was good.

Mr. Butler settled in Lowell, and rose rapidly in his profession, as he could scarcely fail to do with his learning in the law, his infinite resource, his boldness and persistency in every case in which he was engaged, and his readiness, with or without fee, to relieve the suffering and oppressed. His practice soon extended beyond the limits of his own county, and in the courts of Suffolk he became a familiar object of interest. It is unnecessary to say that the son of a friend and admirer of Andrew Jackson, he was from childhood a Democrat, fully imbued with those principles, not always kept in view, for the support of which the Democratic party was created, and which will keep it alive through all mutations as long as our nation exists. He believed that a too great centralization of power in the hands of the general government was a danger to be avoided, and that the rights of States, not to recede from the Union, but to maintain and retain certain functions, were absolutely essential to our nation's permanent existence and welfare. A nation with all the strength and density of power at its central point, could be as weak as an army with depleted wings, which the slightest disorder would break and destroy.

As a Democrat, Mr. Butler early engaged in political activity, and almost from the date of his admission to the bar his voice has been heard in political conventions and on the stump. His earliest essay in the political line was at Lowell, in which he successfully advocated the ten-hour rule, in the factories of that town. He was a member of the House of Representatives of Massachusetts in 1853, and in the same year a delegate to the convention for the revision of the State Constitution. While a member of the House, George Bliss, of Springfield, was the Speaker, and the Whig party was in the ascendant. Otis P. Lord, of Salem, was the Whig leader of the House, and, by his great abilities and unconquerable will, held the Speaker under his control, and always obedient to his wish. The altercations between Mr. Butler and the Speaker were numerous, and Mr. Bliss was only extricated from the perplexities into which he was repeatedly led by the ingenious devices of his Democratic opponent on the floor, by the helping hand of Mr. Lord. Practically, while Mr. Bliss was the chosen occupant of the chair, Mr. Lord was Speaker, and Mr. Bliss was only his mouth-piece. On one occasion, when the Speaker, at the behest of Mr. Lord, had added another to the long list of rulings which Mr. Butler's points of order had received, he said, "Mr. Speaker, I cannot complain of these rulings. They doubtless seem to the Speaker to be just. I perceive an anxiety on your part to be just to the minority and to me, by whom at this moment they are represented, for, like Saul on the road to Damascus, your constant anxiety seems to be, 'Lord, Lord, what wilt thou have me to do?'"

Mr. Butler was in the State Senate in 1859-60, and in the former year performed an important part in the

revision of the statutes. In that year the writer was with him in the Senate, and had abundant opportunities to observe and measure the various qualities of his head and heart. Though opposed to him in politics, he was not sufficiently blind to fail to discover those traits of character which have attracted to him the circle of friends which, like satellites, he has always carried with him in his social and political orbit. He disclosed two sides—a sharp bitterness of antagonism, and the warmest of hearts; a harshness of deportment at one time, and at another a polish of manner and conversation not easily excelled; now inspiring those about him with fear, and again as gentle as a child, as affectionate as a brother, as loving as the dearest friend. His character seemed to consist of extremes; like the extremes of the magnet one attracted, the other repelled, and no one looked on him with entire indifference. So, in his treatment of men, as he could be implacable in his antagonism he could never forget a friend or be faithless to his interests. Indeed, it has seemed to the writer as if his regard for friendship and its obligations were the inspiring cause of that seeming bitterness, which he has exhibited towards those who have attacked and denounced him.

The Superior Court, established by the Legislature of 1859, was mainly the work of his hands. The old Common Pleas Court had, with the material of which it was mainly composed, evidently outlived its usefulness, and the bill creating the new court was drawn by Mr. Butler, and has stood the tests of time and criticism. The retiring court, consisting of Edward Mellen, chief justice, and Henry Walker Bishop, George Nixon Briggs, George Partridge Sanger, Henry Morris and David Aiken, associates; gave way to the new court, consisting of Charles Allen Chief Justice, and with him as associates, Julius Rockwell, Otis Phillips Lord, Marcus Morton, Jr., Seth Ames, Ezra Wilkinson, Henry Vose, Thomas Russell, John Phelps Putnam and Lincoln Flagg Brigham.

In 1860 Mr. Butler, having passed through the various preliminary grades, was brigadier-general of the militia, with headquarters at Lowell. In that year he was a delegate to the Democratic National Convention held at Charleston in April. His presence was a familiar one in Democratic National Conventions, as he had never failed to attend one since the nomination of James K. Polk in 1844. Mr. Parton says that "he went to Charleston with two strong convictions in his mind. One was that concessions to the South had gone as far as the Northern Democracy could ever be induced to go. The other was that the fair nomination of Mr. Douglas by a National Democratic Convention was impossible." General Butler was a member of the committee to construct a platform. The committee divided, making three reports—one by the majority adhering to the demand for a slave code for the Territories and protection to

the slave trade; one by the minority, referring all questions in regard to the rights of property in States or Territories to the Supreme Court, and one by General Butler, reaffirming the Democratic principles laid down at the National Democratic Convention at Cincinnati in 1856. The report of General Butler was adopted, but a nomination failed to be made, and the convention adjourned to meet at Baltimore on the 18th of June. At Baltimore the convention was again divided. The Douglas men nominated their chief for the Presidency, and Herschell Johnson, of Georgia, an avowed disunionist, for Vice-President. The other members of the convention retired and nominated for President John Cabell Breckenridge, of Kentucky, and Joseph Lane, of Oregon, for Vice-President. General Butler was one of the supporters of the latter nominations. The Douglas platform said, "We do not know whether slavery can exist in a Territory or not. There is a difference of opinion among us upon the subject. The Supreme Court must decide and its decision shall be final and binding." The Breckenridge platform said: "Slavery lawfully exists in a territory the moment a slaveholder enters it with his slaves. The United States is bound to maintain his right to hold slaves in a Territory. But when the people of a Territory frame a State Constitution they are to decide whether to enter the Union as a slave or free State. If as a slave State, they are to be admitted without question. If as a free State, the slave-owner must retire or emancipate." In addition to the two tickets of the Democratic party, there was the ticket of what was called the Bell and Everett party, with John Bell, of Tennessee, for President, and Edward Everett, of Massachusetts, for Vice-President, which constructed no platform and expressed no opinion on the question of slavery then at issue, and the ticket of the Republican party, with Abraham Lincoln for President and Hannibal Hamlin, of Maine, for Vice-President, which distinctly opposed the extension of slavery into the Territories.

General Butler returned to Massachusetts and to Lowell an unpopular man, but defended his course with ability, though without success. He was the candidate for Governor on the Breckenridge ticket and received only six thousand out of one hundred and seventy thousand votes. He had previously been the Democratic candidate for the same office, and received fifty thousand votes.

In December, 1860, Mr. Lincoln having been chosen President in November, General Butler went to Washington, and, in company with Southern Democrats, declared himself in unmistakable terms against any attempts to break up the Union. No Republican was more emphatic in his denunciation of the treasonable language which he heard. His friends at the South insisted that the North would not fight against secession. He told them that the North would fight, and that if the South went into a war there

would be an end to slavery. "Do you mean to fight yourself?" they asked. "I would," he said, "and by the grace of God I will." South Carolina seceded, and it was expected that a delegation would come to Washington to present the ordinance of secession to the President. Mr. Black, the United States Attorney-General, had given it as his opinion that the proceedings of South Carolina were legally definable as a "riot," which the forces of the United States could not be legally used in suppressing. General Butler said to the Attorney-General: "You say that the government cannot use its army and navy to coerce South Carolina in South Carolina. Very well, I do not agree with you; but let the proposition be granted. Now, secession is either a right or it is treason. If it is a right, the sooner we know it the better. If it is treason, then the presenting of the ordinance of secession is an overt act of treason. These men are coming to the White House to present the ordinance to the President. Admit them. Let them present the ordinance. Let the President say to them: 'Gentlemen, you go hence in the custody of a marshal of the United States as prisoners of state, charged with treason against your country.' Summon a jury here in Washington. Indict the commissioners. If any of your officers are backward in acting, you have the appointing power; replace them with men who feel as men should at a time like this. Try the commissioners before the Supreme Court, with all the imposing forms and stately ceremonies which marked the trial of Aaron Burr. I have some reputation at home as a criminal lawyer, and will stay here and help the District Attorney through the trial without fee or reward. If they are convicted, execute the sentence. If they are acquitted, you will have done something toward leaving a clean path for the incoming administration. Time will have been gained; but the great advantage will be that both sides will join to watch this high and dignified proceeding; the passions of men will cool; the great points at issue will become clear to all parties; the mind of the country will be active, while passion and prejudice are allayed. Meanwhile, if you cannot use your army and navy in Charleston Harbor, you can certainly employ them in keeping order here."

The war followed, and on the 15th of April, 1861, Fort Sumter had fallen, and the President's proclamation for troops was issued. A brigade of four regiments was called for from Massachusetts, to be commanded by a brigadier-general. The Third, Fourth, Sixth and Eighth Regiments were selected to go. The Third and Fourth went by water to Fort Monroe; the Sixth went by land, meeting its well-known experience in its passage through Baltimore, and on the 18th of April, with the Eighth Regiment, General Butler, the brigadier-general selected, started by rail for Washington. From this point, during his service in the war, his history forms a part of the history of his country. His arrival at Annapolis by

water from Havre de Grace, his rescue of the frigate "Constitution," his possession of Annapolis and the Naval Academy, his reconstruction of the railroad track to Annapolis Junction and his possession of Baltimore are related on too many historic pages to be repeated in this narrative.

The occupation of Baltimore by General Butler was not approved by General Scott, who sent to him, on the 14th of May, the following despatch: "Sir, your hazardous occupation of Baltimore was made without my knowledge, and, of course, without my approbation. It is a God-send that it was without conflict of arms. It is also reported that you have sent a detachment to Frederick; but this is impossible. Not a word have I received from you as to either movement. Let me hear from you." This despatch struck the general with surprise, as the various despatches received by him from Colonel Hamilton, then on the staff of the lieutenant-general, certainly warranted the movement he had successfully made. General Butler was soon after removed from the Department of Annapolis, which included Baltimore, and commissioned major-general of volunteers, in command of the Department of Virginia and North Carolina, with headquarters at Fort Monroe. In explanation of the conduct of General Scott it may be said that he had planned a combined movement against Baltimore of 12,000 troops, in four columns, marching from different posts, and was somewhat chagrined to find that General Butler had accomplished the occupation of the city with a small body of soldiers without bloodshed, and without even the semblance of resistance.

The commission of General Butler as major-general was dated May 16th, two days after his occupation of Baltimore, and thus he became, in reality, the senior major-general in the service of the United States. It is believed, however, that General McClellan and General Banks received ante-dated commissions afterwards, and thus on paper, but not in fact, became his seniors. The writer saw General Butler at Fort Monroe soon after he assumed command at that fort, and during the period of four days had an opportunity of observing his aptitude for military affairs and the growth of discipline among the three months' men stationed at the fort.

Early in August General Butler was relieved of his command in the Department of Virginia and North Carolina, and General Wool was appointed in his place. His removal, however, was caused more by a desire on the part of the War Department to place a skillful and experienced officer of the army in active service than by any dissatisfaction with the manner in which General Butler had performed his duties. One of the first acts of General Wool was to place General Butler in command of the volunteer troops outside the fort. This command included nearly all the troops in the department. Few were in the fort itself, but the constantly-arriving regiments were stationed at Hampton, Newport News and other points in the

vicinity. Most of these were fresh troops, lately enlisted and equipped, and needed the most rigid oversight and discipline to prepare them for active service. Not long after he was placed in command of an expedition to reduce the forts at Hatteras Inlet, which sailed August 22d, and proved successful. On his return from that expedition his command of the troops outside Fort Monroe ceased and he returned to Washington. From Washington he came to Massachusetts, having received from the War Department an order, issued September 16, 1861, "to raise, organize, arm, uniform and equip a volunteer force for the war, in the New England States, not exceeding six regiments of the maximum standard of such arms, and in such proportions and in such manner as he may judge expedient; and for this purpose his orders and requisitions on the quartermaster, ordnance and other staff departments of the army are to be obeyed and answered; provided the cost of such recruitment, armament and equipment does not exceed, in the aggregate, that of like troops now or hereafter raised for the service of the United States."

These troops embarked from Boston Feb. 20, 1862, under the command of General Butler, and after the reduction of Fort St. Philip and Fort Jackson, on the Mississippi River, and their surrender to Admiral Farragut, May 1st, he took possession of New Orleans, and remained in command of the Department of the Gulf until the arrival of General Banks, on the 14th of December, 1862, who, under a general order dated November 9th, assumed command. The cause of his removal was doubtless a diplomatic one, in which the French government was involved, having its origin in the treatment of French neutrals by General Butler, which our government really approved, but which, through French spectacles, it might seem to disapprove by the removal of the general at whose hands it was received. If General Butler had done nothing in the war prior to the occupation of New Orleans, and nothing after he was relieved of his command of the Department of the Gulf, his administration of affairs in that city alone would secure to him abundant and lasting fame. The limits fixed for this narration will not permit a detailed account of its brilliant incidents. It is a little singular that by his acts in that city he should have dulled the glory of Andrew Jackson, the master of his youth and age, by robbing him of one of his titles, and becoming himself the hero of New Orleans.

He was appointed to the Department of Virginia and North Carolina, and during the campaign of 1864 he participated in the military operations before Petersburg and Richmond as commander of the Army of the James. In December, 1864, he commanded an expedition against Fort Fisher, and in November, 1865, resigned his commission. From 1866 to 1871 he was a member of Congress from the Essex District, and in 1868 one of the managers of the impeachment trial of President Johnson. At the Re-

publican State Convention in 1871 he was a candidate for nomination for Governor, and defeated by William B. Washburn. In 1879 he was an independent candidate for Governor, and in 1882 he was chosen Governor by the Democratic party, and served through 1883. In 1883, on his re-nomination, he was defeated by George D. Robinson. He is still, at the age of seventy-two, enjoying and successfully managing a large practice, and as a statesman and politician may be said to have, though perhaps not the largest, yet the most enthusiastic following of which any public man in our country can boast.

CHARLES EDWARD POWERS was born in Townsend May 9, 1834, and is the son of Charles and Sarah (Brooks) Powers, of that town. He graduated at Harvard in 1856, and, after studying medicine for a time, read law at the Dane Law School, and graduated in 1858. He settled in Boston, and has since made that city his place of residence and business.

FRANCIS WINNIE QUA was born in Lisbon, N. Y., Sept. 2, 1845. He was admitted to the Middlesex bar in 1878, and settled in Lowell. He was a member of the Massachusetts House of Representatives in 1888 and 1889, and served with credit to himself and to his constituents. He married, September 6, 1879, Alice L., daughter of Michael Harden, of Ogdensburg.

ROBERT ALEXANDER SOUTHWORTH was born in Medford May 6, 1852, and is the son of Alexander and Helen Southworth, of that town. He graduated at Harvard in 1874, and, after studying law in the office of Charles Theodore and Thomas H. Russell, was admitted to the Suffolk bar in 1876. He has been assistant clerk of the Massachusetts House of Representatives, and secretary of the Republican State Central Committee. In 1888 he was a member of the State Senate. He now practices law and resides in Boston.

GEORGE CLARK TRAVIS was born in Holliston, August 19, 1847, and graduated at Harvard in 1869. He was admitted to the Middlesex bar in 1872, and, after practicing law in his native town several years, removed to South Framingham, where he lived and practiced until 1886, when he removed to Groton, his present place of residence, continuing his office in Framingham and occupying one also in Boston. He married, April 5, 1871, Harriet March, daughter of Austin G., and Mary Charlotte (March) Fitch, of Holliston.

JOHN C. DODGE was born in New Castle, Maine, in 1810, and graduated at Bowdoin College in 1834. In 1842 he opened a law-office in Boston and made a specialty of maritime law. He represented Cambridge in the House of Representatives, and was a member of the Massachusetts Senate. He was president of the Board of Overseers of Bowdoin, and received from that college, in 1875, the degree of Doctor of Laws. He married, in 1843, Lucy Sherman, of Edgecomb, Maine, and died in Cambridge, where he had resided many years, July 17, 1890.

GEORGE BEMIS was born in Watertown in 1816, and graduated at Harvard in 1835. He read law at the Harvard Law School and was admitted to the bar in 1839. He practiced law in Boston until 1858, when a severe hemorrhage of the lungs so far impaired his health as to cause him to abandon ordinary professional employment and to spend a large part of the remainder of his life abroad. He was employed in connection with Judge Phillips in the preparation of a code of criminal law for Massachusetts, which, however, was not adopted by the Legislature. He distinguished himself in the trial of Abner Rogers a convict who killed the warden of the State Prison, being associated in the defence with George T. Bigelow, afterwards chief justice of the Supreme Court. He was also associated with John H. Clifford, Attorney-General, in the prosecution of Dr. Webster for the murder of Dr. Parkman, and the preparation of that celebrated case was the work of his hands. His own earnings, with some inherited property enabled him to devote the last twenty years of his life to the study of public law, and, especially after the Rebellion on the subject of belligerent and neutral rights and duties. He rendered valuable assistance to the State Department in the discussion of the claims of the United States against Great Britain for the depredations of the Alabama and other cruisers from British ports against our commerce, and published several spirited and able pamphlets as a contribution to the controversy. He died at Nice, in Italy, January 5, 1878.

JOHN W. BACON was born in Natick in 1818 and graduated at Harvard in 1843. After leaving college he taught for a time in the Boston High School, and after reading law was admitted to the Middlesex bar in 1846. He practiced law in Natick fourteen years, and from 1859 to 1862 was a member of the State Senate. In 1866 he was appointed by Governor Bullock chief justice of the Municipal Court of Boston, and in 1871 by Governor Claflin one of the justices of the Superior Court. He died at Taunton, March 21, 1888.

WILLIAM WHITING was born in Concord, March 3, 1813, and graduated at Harvard in 1833, and after teaching private schools at Plymouth and Concord, read law at the Harvard Law School and was admitted to the bar in 1838. He opened an office in Boston, and very early, by assiduous labor and an exhaustive preparation of all cases placed in his charge, won a place in the front rank of the Massachusetts bar. He married Lydia Cushing, daughter of Thomas Russell, of Plymouth, and William G. Russell, a Harvard graduate of 1840, and brother of his wife, read law in his office and became his partner in business. In 1864 he was appointed solicitor of the War Department and served three years. In 1868 he was a Presidential elector and in 1872 was chosen Representative to Congress, but died before he took his seat. In 1862 he published a work entitled "The War Powers of the President and the Legislative

Powers of Congress in Relation to Rebellion, Treason and Slavery." He also published various pamphlets, chiefly legal arguments before the United States Courts, and a memoir of Rev. Joseph Harrington. He died at Roxbury Highlands, June 29, 1873.

JOHN COCHRAN PARK was born in Boston, June 10, 1804, and graduated at Harvard in 1824, in the class with George Lunt and Elias Hasket Derby. He was admitted to the bar about 1827 and lived to be the oldest member of the Suffolk bar. In the early days of his practice he was active in military matters and at various times commanded the Boston City Guards, the Boston Light Infantry and the Ancient and Honorable Artillery Company. He joined the last-named company in 1829, was its adjutant in 1837, its second lieutenant in 1845, its first lieutenant in 1850 and its captain in 1853. He was also the clerk of the company from 1839 to 1833. For many years he was an active and prominent member of the Whig party and one of the most fluent and popular speakers in its ranks. He passed through the Free Soil party into the Republican party, and continued his connection with that party until the Presidential campaign of 1888, when he voted for Grover Cleveland. In 1851 he was appointed by Governor Boutwell district attorney for the Suffolk District and remained in office until 1853. In 1860 he removed to Newton, where he continued to reside until his death, which occurred April 21, 1889. He married twice, his first wife being a daughter of Abraham Moore, already referred to as an attorney, first in Groton and afterwards in Boston. At his death he left a widow and one son, another son having died of wounds received in the war.

In Newton Mr. Park was appointed by Governor Long, in 1881, judge of the Newton Police Court, and remained on the bench until his death. The social atmosphere of Newton was especially congenial to him. Thrown into a circle of educated and scholarly men, he found a happy opportunity for the display of the rare literary and conversational powers which he possessed. In the church with which he was connected, in its Sunday-school and in various movements for reform, he found a welcome field for his naturally refined and philanthropic tastes. The various papers read by him in the Newton Tuesday Club, of which he was a member, show both the tendency of his mind and its strength and clearness to the last. In 1877 he read a paper on the "Morals of the Young," in 1878 one on "Prose Writers of Fiction," in 1879 "The Government and the Indians," in 1880 "The Poor and Pauperism," in 1881 "Marriage," in 1883 "Orators and Oratory," in 1881 "Political Parties" and "A Mission of Peace to the South," in 1886 "Communism, Socialism and Strikes" and "Parliament and Congress," and in 1888 "We, the People."

Judge Robert C. Pitman, a member of the club, in a fitting memorial, says of Mr. Park: "His career was as versatile as it was protracted. But few have

touched life at so many points. We were reminded by the honors paid at his funeral of his early and long-continued interest in military life. We know the traditions of his fascinating oratory when Webster and Everett and Choate and Phillips were in their prime; he served in both branches of the Legislature; at the bar he had a long and varied career upon the civil and criminal side, which was crowned at last with faithful years of judicial duties; always prompt to turn aside for any service in education, charities or reforms, and having a life-long interest in religion, its services and instructions."

JOHN SPAULDING was born in Townsend, August 8, 1817. He is descended from Edward Spaulding, who came to New England about 1630, and first settled in Braintree. Edward, the ancestor, was made a freeman in 1640, and was one of the original grantees and settlers of Chelmsford in May, 1655. By a wife, Margaret, who died in August, 1640, he had John about 1633, Edward about 1635 and Grace. By a second wife, Rachel, he had Benjamin in 1643; Joseph 1646; Dinah, 1649, and Andrew 1652. Of these children, Andrew, who was born November 19, 1652, and died May 5, 1713, married Hannah Jefes, of Billerica, April 30, 1674, and had Hannah, Andrew, Henry, John, Rachel, William, Joanna, Benoni and Mary. Of these, Andrew, who was born in Chelmsford, March 25, 1678, and died November 7, 1753, married Abigail Warren, February 5, 1701, and had Andrew, Jacob, Henry, Josiah, Ephraim, Isaac, Abigail, Joanna, James, David, Benjamin and Sarah. Of these, Isaac, who was born in Chelmsford, October 28, 1710, and died March 4, 1776, married Sarah Barrett, and removed to Townsend, where his farm is still in the family. His children were Jonathan, Lydia, Sarah, Benjamin, Abigail, Lucy and Esther. Of these, Benjamin was born in Townsend, August 14, 1743, and died May 27, 1832. He married Mary Heald December 5, 1765, and had Benjamin, Peter, Mary, David, Joel, Abel, Isaac, Sarah, Ephraim and Nancy. Of these, Benjamin, born in Townsend, April 17, 1767, died May 21, 1812. He married, first, Sibyl Wallace, March 19, 1789; second, Sibyl Sanders, August 1, 1797, and third, Mrs. Betsey Searle, May 2, 1822. His children were Sibyl, Benjamin, John, Polly, Levi, Peter, Jonas, Abigail, Susan, Samuel and Amos. Of these, John, born in Townsend, May 10, 1791, married Mrs. Eleanor Bennett, of Boston, in 1814; second, Eliza Lawrence Spaulding, of Shirley, June 3, 1830, and third, Esther Pierce, of Townsend, May 22, 1834. His children were Eliza Ann, born October 1, 1814; John, August 8, 1817; Mary Heald, April 6, 1820; Sibyl, September 12, 1822; Caroline Matilda, October 18, 1824; Abel, September 21, 1831; Ellen Maria, November 13, 1842; Theodore Lyman, April 21, 1845; Lyman Beecher, February 25, 1847; Theodore Eddy, May 3, 1849, and Ellen Rebecca, February 23, 1854.

Of these, John, the subject of this sketch, received

his early education in the public schools of his native town and at Phillips Academy. In 1842 he entered Yale College, but on account of ill health was obliged to leave his class in its senior year and thus failed to receive a degree in regular order. At a subsequent period, however, the degree of Master of Arts was conferred on him. The education which he finally secured was due chiefly to his own love of learning and his indomitable energy and perseverance. While working on his father's farm he was only able to attend school during eight or ten weeks in the winter, and the instruction thus received was supplemented by voluntary study during evenings and rainy days at other seasons of the year. At the age of seventeen he had prepared himself for teaching school, and for a short time pursued that occupation with eminent success. With strong health, great self-reliance and precocious will and energy, but with inadequate financial aid he succeeded in obtaining a liberal education. In 1850 he graduated at the Dane Law School, in Cambridge, and, after a period of study in the law-office of George Frederick Farley, of Groton, was admitted to the bar in 1851. By his own unaided efforts he entered on his professional career, and having paid his own way, he opened an office in Groton, owing no man a dollar and with a small sum securely invested in profitable railroad stock.

While in the office of Mr. Farley he was placed in charge of cases in the Magistrates' Court and thus acquired some experience in the trial of cases before he launched his own professional bark. In this way he secured a class of business which, after he began practice on his own account, naturally fell into his hands—a practice which gradually extended even beyond the borders of Middlesex County, and which, skillfully managed as it was, secured to him at a very early period a prominent and lucrative standing in his profession.

His settlement in Groton was made in response to the request of many prominent citizens, who were anxious to have a young, active lawyer in their town, and they not only provided him with an office as an inducement for him to remain with them, but their continued encouragement and aid were of essential service to him in getting a firm foothold at the bar. Mr. Spaulding remained in Groton about ten years. When the south part of that town became a prominent railroad centre he followed the popular wave and practiced in that section until 1872, when he removed to Boston. It was largely due to his efforts and influence that Groton Junction as it was called, and a part of the town of Shirley were incorporated, in 1871, as a new town under the name of Ayer.

While practicing in Middlesex County the District Courts were established, and when the First Northern Middlesex Court was established Mr. Spaulding declined the appointment of judge, but accepted the position of special justice, which he now holds. The necessary sacrifice of a large portion of his lucrative

John Spaulding

Stephen Northworth

practice would scarcely, in his opinion, be justified by the honor which such a judicial position would bestow.

Judge Spaulding now resides in Boston Highlands, and is in the enjoyment of a well-earned and lucrative legal business, which is not likely to be soon impaired by any failure of his strong mental and physical powers. He married, in 1802, Charlotte A., daughter of Alpheus Bigelow, of Weston, who died June 24, 1889, leaving no children.

Judge Spaulding has, until now, well advanced in life, devoted himself assiduously to his professional pursuits, neither seeking nor accepting office, believing that in our country few higher positions can be attained than that of a well-read, sound, successful lawyer.

ARTHUR P. BONNEY, the son of Isaac and Abigail (Stetson) Bonney, of Plympton, Massachusetts, was born in that town July 9, 1828. He attended the common schools of his native town and afterwards those in Lowell. He also attended the Dracut Academy, and in the study of the languages had the advantages of a private tutor. He first studied medicine for a time, but finally entered as a student the law-office of Seth Ames & Thomas Hopkinson, then in full practice in Lowell. After his admission to the bar in 1848 he opened an office in Lowell and practiced alone until he entered the firm of his old instructors, which assumed the name of Hopkinson, Ames & Bonney. In 1849 Mr. Hopkinson was appointed a justice of the Common Pleas Court, and the firm continued under the name of Ames & Bonney until 1859, when Mr. Ames was appointed one of the justices of the Superior Court established in that year. Since that time Mr. Bonney has continued in a gradually enlarging business until his practice, now chiefly confined to corporations, has placed him in the front rank of Lowell's most prominent and wealthy citizens. In 1855 he was city solicitor, and in 1857, 1858 and 1861 he was a member of the State Senate. In 1858 the writer was with him at the Senate board, and remembers him, though the youngest, yet one of the ablest, members. From 1864 to 1880 he was president of the First National Bank of Lowell, and from 1880 to the present time has been president of the Merchants' National Bank. He has been also a director in the Lowell and Andover Railroad Corporation. He is a Republican in politics and a Unitarian in religion, and a prominent and active member of both organizations. He married Emma A., daughter of Dr. Royal Hall, of Lowell, and has one child, a daughter.

HON. TAPPAN WENTWORTH was born in Dover, New Hampshire, February 24, 1802, and died in Lowell, Massachusetts, June 12, 1875. The Wentworth family is one of the most prominent in the history of England, and Tappan Wentworth was a lineal descendant of Thomas Wentworth, the Earl of Strafford, whom the genius of Macaulay has made forever famous.

William Wentworth was the first immigrant of his

name to America, and was one of the Rev. John Wheelwright's company at Exeter, in 1638.

After that he resided at Wells and then in Dover, in the church of which he was a ruling elder.

He was the father of four sons, from one of whom Governor John Wentworth was descended; from another, the Hon. John Wentworth, of Chicago, and from the other two, by a union in the line, the Hon. Tappan Wentworth.

Three of the Wentworths were Governors of New Hampshire. Of these, John Wentworth was commissioned Lieutenant-Governor in 1711; Benning Wentworth was appointed Governor in 1741, and held the office until 1767; John Wentworth, his nephew and successor, held the same dignity until the commencement of the Revolutionary War. In that memorable struggle for human rights he conscientiously adhered to the Royal cause.

The Wentworth Governors had granted the charter of Dartmouth College, and had endowed it by giving the lands upon which its edifices now stand, and had fostered it so long as they had the power.

William Wentworth, the first American founder of the family, was twice married; was the father of ten children, and died March 16, 1696. Benjamin Wentworth, his youngest son, born in Dover, married Sarah Allen, in 1697, by whom he had eleven children, and died in August, 1728. William Wentworth, eldest son of Benjamin, was born August 14, 1698, and was twice married. Of his twelve children, Evans was born December 25, 1750, married Dorothy, daughter of Ezekiel Wentworth, March 19, 1772, and died in August, 1826. Of his nine children, Isaac, father of Tappan, was born August 13, 1776; married Eleanor, daughter of Thomas Gowdey; was the father of eleven children, and died in 1827.

Tappan Wentworth received his elementary education at the common schools and the classical school at Dover.

During his early manhood he spent about three years at Portsmouth, employed in a grocery store, from whence he went to South Berwick, Maine, and served successively in the stores of Benjamin Mason and Alphonso Gerrish, as clerk.

But Tappan Wentworth possessed abilities, force and ambition that demanded a wider field than that within the limits of a country store. He manifested deep interest in politics. A spirited article written by him, advocating the re-election of William Burleigh member of Congress from the York District, attracted that gentleman's attention, and induced him to offer his tuition in the study of law to Tappan Wentworth. The offer was accepted, the course of legal preparation finished, and he was admitted to the bar of York County in 1826.

Seven years of successful practice in South Berwick and Great Falls followed his admission. In November, 1833, he removed to Lowell, with savings to the amount of about \$7000 in his possession.

Mr. Wentworth's first public service was rendered as a member of the committee which drafted the first city charter of Lowell in 1836. He was the Whig lawyer on the committee, and Joseph W. Mansur the Democratic. He was elected to the Common Council the same year, re-elected in 1837, '39, '40, '41, and officiated as president the last four years. In 1848-49 he represented his fellow-citizens in the Senate of Massachusetts. In 1851 he was returned as representative to the lower house of the State Legislature, and also in 1859, 1860 and 1863. In 1865-66 he was again representative in the State Senate. He was an active Whig advocate—a statesman of the Webster school throughout the best days of the Whig organization—and on the "stump" displayed the qualities of a practical and an argumentative orator.

In the fall of 1852, Tappan Wentworth was elected as a Whig to the National House of Representatives, by a vote of 4341, as against 4240 cast for Henry Wilson, Coalitionist.

The *Worcester Ayis*, at the time of his election, said: "The election of this gentleman to Congress from the Eighth District over Henry Wilson, the master-spirit of coalition, has given great satisfaction to the Whigs in all parts of the State.

"To any who know Mr. Wentworth, it is needless to say that his election is an important contribution to the talent and ability of the next Congress—as a clear-headed and forcible speaker, he will have no superior in the Massachusetts delegation, while as a working member he will be eminently useful."

While in Congress he was a member of the House Committee on Commerce, and introduced several important measures. Among them was a resolution to see what legislation is necessary to regulate or prohibit the introduction into the United States by any foreign government or individual of any foreigners, either insane, blind or otherwise disabled. On this resolution he spoke at considerable length.

The matter was referred to the Committee on Commerce, which subsequently reported a bill that passed into law, and that covers the entire subject. In 1854 he delivered a powerful and eloquent speech, in opposition to the passage of the Kansas-Nebraska Bill.

The cordial relations which had so long existed between Mr. Wentworth and President Pierce, and also between himself and Attorney General Caleb Cushing, were of great advantage to him, although he was in the Whig opposition to their Democratic administration. Through them he quickly established friendly relations with the several members of the Cabinet, and also with the Democratic Speaker, who showed his appreciation of Mr. Wentworth's abilities when he appointed the different Standing Committees. These relations with the chiefs of the existing administration, which enabled him to serve his constituents more beneficially than he otherwise could have done, were used by his opponents to create distrust of his

fidelity, and to defeat him when a candidate for reelection.

The public life of Mr. Wentworth was closely identified with the growth and prosperity of the city of Lowell, and he was already ready to assist in any public enterprise, and liberally supported all the city institutions.

He was projector and president of one of the State railways, and at the time of his death was president of the National Rubber Company, of Providence and Bristol, R. I.

His life-work, however, was his profession, and to that were given his talents, which were of a commanding character.

He always received the careful attention of both judge and jury. His legal record was brilliant and successful, and his place in the profession was in the front rank.

Judge Nathan Crosby, in his eulogy on Mr. Wentworth, said: "He was not long in selecting Dartmouth as his donee. He was a New Hampshire man, his kindred had laid the foundation of the State, and had chartered and founded the college."

His will bequeathed all his property, which he said would not take long to reach \$500,000 to Dartmouth College in the following words: "All my real estate stocks in corporations and debts due me, I give, devise and bequeath to Dartmouth College, in fee simple, and forever, to be used for the purposes of said College, in such manner as the proper officers who may have the management and control of the general funds of the College, may from time to time determine."

The bequest was charged with limited legacies and annuities, and will bear in all coming time, one-half the expenses and reap one-half the benefits and glory of this college. "In all the relations of life," wrote an early friend familiar with him as husband, father, son and brother, "he most emphatically and nobly did his duty, and his record is written on high."

"When he once gave his friendship, remarked Mr. John McNeil, his brother-in-law, "it was for life, and to the end. Even if the object proved unworthy, he let go with more reluctance and regret than most men."

A large portion of his law library was bequeathed to the city of Lowell, for the use of the bar of Lowell, practicing in the Police Court. Mrs. Wentworth afterwards furnished in good taste and fitness a library-case for the books, surmounted with the Wentworth coat-of-arms, with the superscription "Wentworth library," and also gave largely from her own library to fill its shelves.

After the death of Mr. Wentworth a largely attended meeting of the Middlesex bar passed some highly eulogistic resolutions, expressive of their appreciation of his character and abilities, and of their sense of his loss.

Tappan Wentworth was married, on the 20th of January, 1842, to Anne, daughter of Genl. Solomon

Wm. J. G. Smith

McNeil, of Hillsboro', N. H., a granddaughter of Gov. Pierce, and a niece of President Franklin Pierce. In all respects she was a help-meat for him. An only child, a son, Frederick Tappan Wentworth, was born March 7, 1843, and died April 17, 1853, of a sudden illness. His death was a sore affliction to his parents.

Mrs. Wentworth, surviving her noble husband, has gracefully and touchingly completed the great act of his life.

JOSIAH G. ABBOTT, now living in Boston, is descended from George Abbott, of Yorkshire, England, who came to New England about 1640, and settled at Andover, in 1643. The ancestor married, in 1647, Hannah, daughter of William and Annie Chandler, and died December 24, 1681. His widow married Rev. Francis Dane, the minister of Andover, and died June 11, 1711. William Abbott, son of the ancestor, born November 18, 1657, married, June 2, 1682, Elizabeth Gray, and had a son Paul, born March 25, 1697, who removed from Andover to Pomfret, Connecticut, about 1722. Paul had a son Nathan, born in Andover April 11, 1731, who married, in 1759, Jane Paul, and had a son Caleb, who married Lucy Lovejoy, and for a second wife, Deborah Baker. Caleb had a son Caleb, born February 10, 1779, who was a merchant in Chelmsford, and married Mercy, daughter of Josiah Fletcher. The children of the last Caleb were—Mercy Maria, born January 24, 1808, deceased August 21, 1825; Lucy Ann Lovejoy, born Sept. 16, 1809; Caleb Fletcher, born Sept. 8, 1811, who graduated at Harvard in 1831, and settled as a lawyer in 1835 in Toledo, Ohio; Josiah Gardner, the subject of this sketch, and Evelina Maria Antoinette, born Sept. 14, 1817.

Josiah Gardner was born in Chelmsford, November 1, 1815, and attended the Chelmsford Academy, at one time under the care of Ralph Waldo Emerson, principal. He recalls with special interest the impression which Mr. Emerson, then unknown, by his gentle seriousness and great purity, made on his youthful mind. He graduated at Harvard in 1832, in the class with Henry Whitney Bellows, Charles T. Brooks, George Ticknor Curtis, Estes Howe, Charles Mason, Albert Hobart Nelson, Samuel Osgood, George Frederick Simmons and many others who acquired position and fame. In such a class, though the youngest member, Mr. Abbott secured a creditable rank. After leaving college he read law with Nathaniel Wright and Amos Spaulding in Lowell, and at the Dane Law School in Cambridge. He was prepared for admission at the bar in September, 1835, but a serious illness delayed his admission until December of that year, when, barely twenty years of age he entered on his professional career as a partner with Mr. Spaulding, one of his instructors. After a business connection of two years with Mr. Spaulding he practiced alone until 1840, when he became connected with Samuel Appleton Brown.

On the 21st of May, 1855, the Common Pleas Court, so far as Suffolk County was concerned, was discontinued by law, and the Superior Court for the County of Suffolk was established. The judges commissioned for this court by Governor Gardner were, Albert Hobart Nelson, chief justice, and Judges Huntington, Nash and Abbott, the subject of this sketch, associates. On the resignation of Chief Justice Nelson, who died in 1858, Charles Allen was appointed by Governor Banks as his successor. Judge Abbott resigned in June, 1858. In 1859 both the Common Pleas Court and the Superior Court for the County of Suffolk were abolished, and the Superior Court for the Commonwealth was established. It was due to the manner in which he and his associates administered the Superior Court that the Court of Common Pleas was abolished and courts on the same basis as the Superior Court established for all the State. Judge Abbott, on his return to practice, still lived in Lowell, but had his office in Boston, and engaged, however, in a law business which extended into many of the counties of the State. In 1860 he declined a seat on the bench of the Supreme Judicial Court, and in 1861 removed to Boston, where he has since that time lived.

In 1837, at the age of twenty-two he was a member of the House of Representatives and in 1842 and 1843, member of the Senate. In the latter year he was chairman of the Judiciary Committee of the Senate, an unusual honor for one who had served so short a time, and was also editor of a tri-weekly paper in Lowell for the year 1840, the year of the hard cider campaign. He was also a member of the staff of Governor Marcus Morton. In 1853 he was a delegate from Lowell to the convention for the revision of the Constitution, and in 1875 and 1876 was a member of Congress. While in Congress he was a member of the commission to determine the election of President, and has been the Democratic candidate for Governor several times and repeatedly the Democratic candidate in the Legislature for United States Senator. He has been a delegate to the Democratic National Conventions of 1844, '64, '68, '72, '76, '80 and '84; a delegate at large, and chairman of the Massachusetts delegation at all but that of 1844. He has been at various times intimately connected with corporations and business enterprises, having been president of the Hamilton Manufacturing Company of Lowell, of the Atlantic Cotton-Mill of Lawrence, of the Hill Manufacturing Company and the Union Water-Power Company of Lewiston, Maine, and of the Boston and Lowell Railroad Company. He has also been a director of the North American Insurance Company of Boston, and vice-president of several savings institutions. Throughout his career, however, he has always made politics and financial and other occupations subservient to his professional vocation, and never permitted them to distract his mind from his legitimate professional studies and pursuits.

His business in the courts has brought him in contact with the ablest men of the Massachusetts bar, including Choate, Curtis, Bartlett and Whiting, of the Suffolk bar, and Farley, Butler and Sweetser, of the Middlesex bar, and in the contests with these giants in the law in which he has engaged he has shown himself their peer. With General Butler in his earlier years he was often associated as his senior, and in later times he has often been pitted against him in the legal arena. With Mr. Choate he was obliged to exert all his powers, and make use of all his learning. With Mr. Butler it was necessary to be armed at all points and be constantly on the alert against surprises while Mr. Farley at times displayed a wonderful keenness of logic which needed all his legal and forensic strength to meet and if possible overcome. No man at the bar in our Commonwealth has been more industrious in his profession or performed more unremitting labor. It is safe to say that during fifteen years of his career he was engaged in the trial of causes before the courts or referees or auditors or committees of the Legislature three hundred days out of the three hundred and sixty-five in the year. The writer has had the opportunity of observing his skill in the management of important causes, and has discovered in him a faculty, not common among lawyers of tersely and concisely selecting and treating the strong points in his case before a jury, making them the means of a counter-attack against the strong points of his opponent, and, like a skillful general, piercing the centre of his antagonist's line of battle while the movements against his wings were left unopposed.

Judge Abbott married, July 18, 1838, Caroline, daughter of Edward St. Loe Livermore, chief justice of the Supreme Court of New Hampshire, and has had two daughter and seven sons. His two daughters were Caroline, who married George Perry, son of the late Dr. Marshal S. Perry, of Boston, and Sarah, who married William P. Fay. Of his sons, Edward Gardner was born September 29, 1840, and graduated at Harvard in 1860. At the breaking out of the war of 1861 he raised the first company of three years' volunteers for the Second Regiment of Massachusetts, and as brevet major was killed at the battle of Cedar Mountain. Henry Livermore, born January 21, 1842, also graduated at Harvard in 1860, at the age of eighteen years, and while major of the Twentieth Regiment of Massachusetts and brevet brigadier-general was killed in the Wilderness. Fletcher Morton, born February 18, 1843, was commissioned captain in the Second Regiment of Massachusetts and served on the staff of General William Dwight. Though in many battles, in which he exhibited conspicuous gallantry, he served three years in the war without a scratch. He afterwards studied medicine, but is not in practice. Samuel Appleton Browne was born March 6, 1846, and graduated at Harvard in 1866. He enlisted at the age of sixteen in the New England Guards

Regiment, but was not called into service, and entered college. He is now engaged in the profession of law. Franklin Pierce, the fifth son, attended the Dane Law School at Cambridge, and is now practicing law. Grafton St. Loe graduated at Harvard in 1877 and is also in the law. Holker Welch Abbott, the seventh son, is an artist. Judge Abbott received the degree of Doctor of Laws from Williams College in 1862. He is now living in Boston, and at the age of seventy-four assiduously engaged in the labors of his profession, with mind and body unimpaired and with the promise of years of labor for his own honor and credit and for the community in which he is held in universal respect.

THEODORE HARRISON SWEETSER was born in Wardsboro', Vermont, in 1821, but attended the common schools of Lowell and Phillips Academy in his youth and entered Amherst College. He left college before graduation and taught school in Lowell and afterwards entered as a student the law-office of Tappan Wentworth, in that city. After his admission to the bar he was associated for a time with Mr. Wentworth in business and afterwards at different times with Benjamin Poole and William Sewall Gardner. He was in the Common Council of Lowell in 1851, city solicitor in 1853, '54, '59, '60 and '61, in the Legislature from Lowell in 1870, and the Democratic candidate for Governor and member of Congress. In 1879 he removed to Boston and there died May 8, 1882. His mother was a sister of Solomon Strong, one of the judges appointed to the bench of the Common Pleas Court when it was established, in 1821. Mr. Sweetser was recognized by the members of the bar as one of the ablest in their ranks, and his ability and reputation drew to him a large and lucrative business. He married a Miss Derby, who died before him, and their only daughter, the wife of Willis Farrington, lives in Lowell.

GEORGE MERRICK BROOKS, the son of Nathan and Mary (Merrick) Brooks, of Concord, was born in that town in 1824, and graduated at Harvard in 1844. He read law with Hopkinson & Ames, of Lowell, and at the Dane Law School in Cambridge, and was admitted to the bar in Lowell in 1847. He settled in his native town and married, in 1851, Abba Prescott, who died leaving no children. In 1865 he married Mary A. Dillingham, of Lowell, who is the mother of two children, both daughters, the older of whom is nineteen. Mr. Brooks has been selectman five years, was in the Massachusetts House of Representatives in 1858, and in the Senate in 1859. In 1869, '70, '71, '72 he was a member of Congress, having been chosen at his first election to fill the vacancy occasioned by the resignation of George S. Boutwell to take the position of Secretary of the Treasury under President Grant. Before the close of the second Congress, of which he was a member, he resigned to take the position of Judge of Probate for Middlesex County, to which he had been appointed by Governor

William A. Richardson

Washburn. He has been president of the Middlesex Institution for Savings, a director in the Concord National Bank, and a trustee of the Concord Public Library. He is still Judge of Probate and held in the highest esteem throughout the county.

JOHN SHEPARD KEYES, son of John and Ann S. (Shepard) Keyes, of Concord, was born in that town Sept. 19, 1821, and attended, in his youth, the common schools of his native town, and Concord Academy, and fitted for college under the care of private instructors. He graduated at Harvard in 1841, and read law with his father and Edward Mellen, of Wayland, and in the Dane Law School, at Cambridge, and was admitted to the bar in March, 1844. He opened an office in Concord, and until 1853 was engaged in practice. In 1849 he was a member of the Massachusetts Senate, and in 1853 was appointed sheriff of Middlesex County, and served under his appointment until his office was made elective, when in 1856 he was chosen by the county, and served until 1860. In 1860 he attended, as a delegate, the Republican National Convention at Chicago, and in April, 1861, was appointed by President Lincoln United States marshal for Massachusetts, and served until August, 1866, when he resigned. He then retired to his farm in Concord, was water commissioner and road commissioner, and in 1874 was appointed by Governor Talbot, acting Governor, standing justice of the Central Middlesex District Court, and still holds that office. He delivered the oration at Concord on the Fourth of July in the centennial year 1876, and was president of the day on the celebration of the 250th anniversary of the settlement of the town, in 1885.

An interesting incident in the life of Mr. Keyes is one connected with his membership of the Senate, in 1849. In that year the Senate consisted of forty Whigs, and the House of Representatives had 260 members. Forty years after, in 1889, only two of the Senators were living, and only four of the House could be heard of as yet in active life. In that year these six, including Charles Devens and John S. Keyes, of the Senate, and George S. Boutwell, Nathaniel P. Banks, William Claflin and Henry L. Dawes, dined together, and the record of the men is sufficiently remarkable to be stated in this narrative. Three of the six had been Governors of Massachusetts, four Representatives in Congress, three United States marshals for Massachusetts, two members of the President's Cabinet, two United States Senators, two major-generals in the army, one president of the Massachusetts Senate, one Lieutenant Governor of Massachusetts, one Speaker of both the Massachusetts and United States House of Representatives, two judges. In 1849 three were Whigs and three Democrats, and in 1889 all Republicans.

Mr. Keyes married, Sept. 19, 1844, Martha Lawrence Prescott, of Concord, and has had six children, two of whom died in infancy. Two daughters are living,

one of whom is married, and a son, Prescott Keyes, who graduated at Harvard in 1879, read law with Charles R. Train and at the Dane Law School, in Cambridge, and is now in practice in Suffolk and Middlesex.

EDWARD MELLEN was born in Westboro', in Worcester County, early in the century and graduated at Brown University. After admission to the bar he settled in Wayland, in Middlesex County, where he soon acquired a large practice. He was a hard student and became so well versed in the reports that on almost every point of law which had been decided in the Supreme Judicial Court of Massachusetts he could readily quote the case in which it was involved. He was leading counsel in many important cases, and it is said that at the December Middlesex term of the Court of Common Pleas in 1843 he tried twenty contested cases and secured verdicts in nineteen. In 1847 he, with Charles Edward Forbes, was appointed to the Common Pleas bench to fill vacancies occasioned by the resignation of Emory Washburn and Harrison Gray Otis Colby. In 1854 he was made chief justice on the death of his predecessor, Daniel Wells, and retained that position until the court was abolished, in 1859. During his career as judge he was most assiduous in the performance of his duties, shirking no work, always taking voluminous notes and making exhaustive charges to the jury. After he left the bench he settled in Worcester, where he continued in successful practice until his death, which occurred at Wayland in 1875.

WILLIAM ADAMS RICHARDSON, son of Daniel and Mary (Adams) Richardson, was born in Tyngsborough, November 2, 1821. His father, a native of Pelham, New Hampshire, was a brother of William M. Richardson, who, for twenty years, was the chief justice of that State and married Mary, daughter of William Adams, of Chelmsford, for whom the subject of this sketch was named. William Adams Richardson prepared for college at the Groton (now Lawrence) Academy, at Groton, of which institution he has been for nearly thirty years one of the trustees. He graduated at Harvard in 1843 and at the Dane Law School in 1846. He also read law for a time in the office at Lowell of his brother, Daniel S. Richardson, whose sketch has already been given, and was admitted to the bar in Boston July 8, 1846. On the next day after his admission he went into business with his brother, under the firm-name of D. S. & W. A. Richardson. This partnership continued until 1858, when he was appointed judge of Probate and Insolvency for Middlesex County. He then left, his brother removing his office to Boston, and not long after changing his residence to Cambridge.

In 1849 he was chosen to fill a vacancy in the Common Council of Lowell and being again a member of the Council in 1853 and 1851 was, during both of these years, president of that body. In November, 1846, he was appointed judge advocate of the second

division of Massachusetts Volunteer Militia with the rank of a major, and held that office several years. In 1850, the last year of the service of Governor Briggs, he was a member of the staff with the rank of lieutenant-colonel. In March, 1855, he was appointed one of the commissioners to revise the Statutes of Massachusetts, who reported the revision which finally became the General Statutes of 1860. On the 27th of December, 1859, he was appointed with George Partridge Sanger, by a resolution of the Legislature of Massachusetts, a commissioner to edit and superintend the publication of the General Statutes and prepare an index to the same.

On the 7th of April, 1856, he was appointed judge of Probate for Middlesex County, holding office until July, 1858, when that office was abolished, and, as has been stated, he was appointed judge of Probate and Insolvency. In 1863 he was chosen by the Legislature of Massachusetts one of the overseers of Harvard College for the term of six years, and the law under which the overseers are chosen by the alumni was based on a plan devised by him. In 1869 he was chosen for another term of six years by the alumni, but before the expiration of his term he removed from the State.

On the 27th of March, 1867, he was appointed with Judge Sanger, already mentioned, as his associate in editing and publishing the General Statutes, an editor of the annual supplement to the "General Statutes," which was continued until the "General Statutes" were superseded by the "Public Statutes" in 1882.

On the 20th of March, 1869, he was appointed assistant secretary of the treasury, and held that office until March, 1873, when, on the retirement of George S. Boutwell, the secretary, he was appointed his successor. On the 23d of April, 1869, he was appointed one of the justices of the Superior Court of Massachusetts, but declined the appointment to continue in the office of assistant secretary of the treasury.

After the great fire in Boston had burned and destroyed the stereotype plates of the "General Statutes" and "Supplement," he was associated in 1872, with Judge Sanger under a resolution of the Legislature in preparing and editing a second edition of both. On the 17th of March, 1873, he was appointed, as has been stated, Secretary of the Treasury, and held that office until he was appointed in June, 1874, one of the judges of the Court of Claims at Washington, being promoted January 20, 1885, from the position of associate judge to that of chief justice, which he still holds. His associates on the bench are Charles C. Nott, Glenni W. Schofield, Lawrence Weldon and John Davis.

On the 7th of June, 1880, he was appointed by Congress to edit and publish a supplement to the Revised Statutes of the United States, with notes and references, which was issued in 1881, and contains the

legislation from 1874 to that year. Since 1880 Mr. Richardson has been one of the professors of law in Georgetown University, and has received a degree of Doctor of Laws from Columbia University in 1873, Georgetown in 1881, Howard in 1882 and Dartmouth in 1886.

In April, 1890, Congress passed an act continuing the publication of the supplement to the Revised Statutes of the United States down to March, 1891, to be prepared and edited by Mr. Richardson.

At various times during the residence of Mr. Richardson in Lowell he was a director in the Appleton State and National Bank, president of the Wamesit State and National Bank, one of the corporators, trustees and finance committee of the Lowell Five Cent Savings Bank, and one of the directors of the Merrimack Manufacturing Company. He was also vice-president and president of the Middlesex Mechanics' Association.

Mr. Richardson married, October 29, 1849, Anna M. Marston, of Machiasport, Me., who died in Paris, France, March 26, 1876, leaving one child, Isabel Richardson, now the wife of Alexander F. Magruder, surgeon in the navy, now living in Washington.

The record of Mr. Richardson shows him to have been an active, industrious man, not only learned in the law, but possessing business habits and general traits of character which have deserved and won the confidence of the world.

SAMUEL APPLETON BROWNE, was born in Ipswich November 4, 1810, and read law with Nathan D. Appleton at Alfred, Me. He practiced law in Lowell after his admission to the bar in 1840, and was associated with Josiah G. Abbott until Mr. Abbott was appointed to the bench of the Superior Court for the County of Suffolk in 1855. He was a member of the Massachusetts Senate two years, and died January 27, 1867.

WILLIAM EUSTIS RUSSELL is the son of Charles Theodore and Sarah Elizabeth (Ballister) Russell, of Cambridge, whose sketch has already been given, and was born in that city. He graduated at Harvard in 1877, and, having studied law with his father, was admitted to the Suffolk bar, and is in business with his father, Charles Theodore Russell; his uncle, Thomas Hastings Russell; his brother, Charles Theodore, Jr.; and his cousin, Arthur H., the son of Thomas Hastings, and has his office in Boston. Though so young a man, he has been the mayor of his native city from 1885 to 1889, and in 1888 and 1889 was the candidate for Governor of Massachusetts of the Democratic party. The two campaigns in which he was engaged were, on the whole, the most remarkable gubernatorial campaigns ever made in Massachusetts. His speeches, which were numerous and able, gave him a national reputation, which promises a career of brilliancy and advancement.

WILLIAM ELLISON PARMENTER is the son of William Parmenter, of East Cambridge, who is re-

J. J. Hammond

Chas. E. Powers.

membered as a distinguished Democratic politician. He graduated at Harvard in 1836, and, after reading law, was admitted to the Suffolk bar. He always had his office in Boston until his appointment to the bench of the Municipal Court in that city, of which he is the chief justice. His residence is in Arlington.

JOHN WILKES HAMMOND¹ was born in that part of Rochester, in Plymouth County, Massachusetts which is now Mattapoisett, December 16, 1837, being the first-born of two children of John Wilkes Hammond and Maria L. (Southworth) Hammond. His ancestors had been residents of Plymouth County for more than two centuries. His father was a house carpenter,—an intelligent and respectable man,—who, dying when the subject of this sketch was five years old, left a widow and two children without property. The name of their son, who had been christened James Horace Hammond, was changed by act of the Legislature, after the death of his father, to John Wilkes Hammond.

His mother, an intelligent woman, and of great energy and perseverance, provided for her children by teaching school, keeping boarders, and such other means as her ingenuity suggested, giving them the benefit of good mental and moral training. John was apt to learn, but was not physically strong, and for his health, in the summer of 1855 he went upon a cod-fishing cruise, of several months, to the Grand Bank of Newfoundland, in a schooner from Plymouth.

Supplementing what he had learned in the public schools of Mattapoisett by an attendance of some months in the Barstow Academy of that village, he entered Tufts College in the autumn of 1857. Here, by school-keeping and other means, he worked his way through college, graduating at the head of his class in July, 1861.

Finding himself, at this time, about five hundred dollars in debt, he taught in the high schools of Stoughton and Tisbury, until September, 1862, when he enlisted as a private in Company I, Third Massachusetts nine-months' Infantry, and served with this regiment until it was mustered out in June, 1863.

During his service in the army he narrowly escaped being taken prisoner at the attack of the rebels on Plymouth, N. C.

After his return from the war he commenced the study of medicine, but finding it not to his taste, abandoned it, and taught for a time in the high schools of South Reading (now Wakefield) and Melrose,—studying law, the latter part of the time, in the office of Sweetser & Gardner, in Boston.

With this preparation, and an attendance of one term at the Harvard Law School, he was admitted to the bar, at the Superior Court, Cambridge, in February, 1866.

In March he commenced practice in Cambridge, where he has ever since resided.

On August 15th of the same year he married Clara Ellen, only child of Benjamin F. and Clara (Foster) Tweed. Of the issue of this union there are three children,—Frank Tweed, Clara Maria, and John Wilkes.

Mr. Hammond began practice with a high ideal of the legal profession, regarding it as a means of preventing rather than promoting litigation. Acting on this conviction, he uniformly advised clients to settle difficulties, if possible, without recourse to trial.

Though an entire stranger in Cambridge, and destitute of the aid of influential friends, he soon gained the confidence of the community, as was shown by his election to several municipal offices—as member of the School Committee and of the Common Council. In 1872 and 1873 he represented Cambridge in the General Court.

In the mean time his legal practice had rapidly increased, and in 1873 he was elected city solicitor,—an office which he held continuously, by annual election, until March 10, 1886. At this time, having been appointed by Governor Robinson associate justice of the Superior Court, he left a large and increasing legal practice, resigned the office of city solicitor and entered at once upon his duties as judge.

Members of the bar, who practiced in the courts with him, uniformly speak of him as having attained a high standing both as a counselor and an advocate.

As an advocate he showed excellent judgment in the presentation of the evidence before the jury, and was persistent in behalf of his client. His arguments were never long, but strictly confined to the points at issue, and were delivered with a straightforward earnestness that was very effective with juries. He was equally strong before the bench.

The experience which Mr. Hammond had in the courts, and especially that as city solicitor, were an admirable training for his duties as judge. The opinions which he had been called upon to give to the several departments of the city government, and which, in case of litigation, it became his duty to maintain in court, were largely of a judicial character. As a judge he fully maintained the reputation he had acquired as a lawyer.

CHARLES EDWARD POWERS,² son of Charles and Sarah Brooks Powers, was born in Townsend, May 9, 1834, [See biographical sketch of Charles Powers.] In his boyhood he attended the public schools, and had the advantages and full benefit of a thorough education, having graduated from the institution of New Hampton, N. H., and was afterwards private pupil of Prof. Knight, of New London, N. H., in the higher mathematics, for which he had great fondness. He entered Harvard University, at Cambridge, in 1853; graduated and took the degree of A. B. in 1856, after having passed a rigid examination, and was awarded

¹ Contributed.

² Contributed.

the grade of "*magna cum laude*." After taking the degree it was his intention to study medicine and surgery, with the view of becoming a surgeon, and for that purpose he entered the medical school in Boston. He had, however, but commenced his new studies, when he learned of the very sudden death of his esteemed father, which event obliged him to leave the school and devote himself to his father's business, which he very successfully carried on for a time, and after settling up the estate he concluded to study law, and entered the Law School of Harvard University for that purpose, from which he graduated, and took the degree of LL.B. in 1858. In 1859 he formed a co-partnership with Hon. Linus Child and Linus Mason Child, under the firm-name of Child & Powers, "attorneys and counselors-at-law," and opened law offices in the city of Boston, where they have since remained, Mr. Child, Sr., having died some years ago.

Soon after commencing the active practice of the law the street railways of Boston were beginning to be built and put in operation. Mr. Powers was one of the few only, in those early days, who believed in their success, and he at once embarked in the enterprise, became a large owner, and was made a director and president in several of them. For many years, he and his firm were the acting counsel for many of them, and remain so to this day.

Soon after becoming a resident of Boston Mr. Powers became a very active Free Mason. He was made the Master of a lodge; for several years was the Eminent Commander of Boston Commandery of Knights Templar; and for several years was the Grand Master of the Select and Royal Masons of Massachusetts.

Mr. Powers has never been an aspirant for political office. Some years since, and immediately after the great fire in Boston, he was prevailed upon to accept the nomination for the City Council of Boston, and thereupon both political parties put him in nomination, and for two years he was unanimously elected. After serving the two years in the City Council, he was nominated and elected on the "Water Board" of the city, where he served until the water-works were put into the hands of commissioners. It may be said of Mr. Powers that he is regarded as an energetic, sagacious man, quick to apprehend, fertile in resource, and one who does thoroughly that to which he turns his attention.

Mr. Powers was married in 1858 to Miss H. E. Fessenden, daughter of Hon. Walter Fessenden, of Townsend, and has two daughters—Marion (Mrs. Lamar S. Lowry) and Florence Agnes (Mrs. Henry McLellan Harding). They have both received an European education, having been abroad six or seven years for that purpose; and while thus abroad, Mr. Powers visited them every year, and made extensive travels with them. In religion Mr. Powers is a Unitarian, having become a member of the College

Chapel Church in 1856. He has always enjoyed the best of health, never having had a sick day in his life. To a large degree he inherited his father's noble physique and constitution, and we trust that he may continue to enjoy good health for very many years to come.

SAMUEL KING HAMILTON¹ comes from Maine, the good old State that has been nursing mother to so many sons of genius, who have by worthy deeds in other fields, reflected honor on the gracious parent who bore them.

Mr. Hamilton was the youngest son of Benjamin R. and Sarah (Carl) Hamilton, and was born July 27, 1837, at Carl's Corner, in Waterborough, York County, Maine. He was descended from a sturdy, strong-headed Scottish ancestry, which first took root in American soil at Berwick, Me., about 1666. The boyhood and youth of Mr. Hamilton were spent on the home farm, where he became used to the rugged, healthful life of the New England husbandman, and early learned "what trees make shingle," while a naturally strong mind developed with all the rapidity of which surrounding circumstances would permit. A district school furnished the rudiments of knowledge, but a hungry and restless mind soon compassed its curriculum, and reached out with still eager longing for something larger and better than it had known.

The parents recognized in the last of their six stalwart sons, as in others before him, the presence of a spirit too aspiring for its native acres, and wisely provided him an opportunity to pursue his studies at Limerick Academy, and later in the Saco High School, where, with enthusiastic diligence under accomplished instructors, the youth of Waterboro' made rapid strides in the educational course, and in February, 1856, had the courage to apply for the the position of teacher of a village school, and first wielded the emblem of magisterial authority in the Ford District of his native town, with conspicuous success.

Leaving the High School in Saco in 1856, with hopes of future usefulness crystallizing into earnest purpose to deserve success, and still following the beckoning hand of fair Science, young Hamilton entered, in September, 1856, the Chandler Scientific Department of Dartmouth College, and graduated with honor in the class of 1859. He had mostly paid his own way through by teaching school in winters and by other employment, and now with resolute courage and glowing hopes he pressed forward for the final equipment for his chosen profession of the law. Before graduating from college he had already entered as a student the busy office of Hon. Ira T. Drew, at Alfred, Maine, where, remaining several years, varied by teaching school at Wakefield, Massachusetts, and as principal of Alfred Academy, and assisting in a large general practice in York County, he so demonstrated

¹ By Chester W. Eaton.

E. J. Hamilton

Wm. H. Anderson

his capacity and ability in the legal profession, that in 1862, having been admitted to the York County bar, he was received by Mr. Drew as a partner under the firm-name of Drew & Hamilton. There was no kicking of heels for clients in that office, but the business of the partnership rapidly expanded, and the firm had a high reputation all over the country. In 1867 the partnership was dissolved, and Mr. Hamilton opened an office in Biddeford, where he established his residence and met with ample success. He was an alderman of the city two years, and in 1871 was chosen, as a Democrat, to represent Biddeford in the Maine Legislature, where he made his mark as a busy, influential member. In December, 1872, Mr. Hamilton moved to Wakefield, Massachusetts, entering into partnership with Chester W. Eaton, a college classmate, with law-offices at Boston and Wakefield. This partnership was dissolved in 1878, Mr. Hamilton continuing his office in Boston, where his soundness as an adviser and his ability as an advocate were becoming more and more recognized in the business world. He retained his residence in Wakefield, where he was highly valued as a citizen and a lawyer. Mr. Hamilton has been greatly interested in the prosperous development, and especially the educational concerns, of his adopted town. He has served nine years on the Board of School Committee, six years of which time he was chairman of the Board, as chairman of selectmen two years, and many years as chairman of trustees of Beebe Town Library, and has assisted in the promotion of various important enterprises in the town. In 1883, when the people of Wakefield were about erecting a handsome and commodious brick school-house they voted unanimously in open town-meeting that the same should be called the "Hamilton School Building," in recognition of Mr. Hamilton's valuable and public-spirited services in behalf of the Wakefield schools. Mr. Hamilton has been treasurer of the Pine Tree State Club, of Boston, since its organization, and was delegate to the National Democratic Convention in 1889, from the Fifth Congressional District of Massachusetts.

Though the business office of Mr. Hamilton has been located in Boston, his practice has extended largely over Middlesex County, and his form and voice are well known to court and jury in Boston, Cambridge, Lowell, Malden and Wakefield. His office practice is also large, and he has obtained a special distinction for legal knowledge and acumen in respect to the organization and management of corporations. Mr. Hamilton has been in demand as a platform speaker in many hot political campaigns, and by his abounding good nature and ready wit is popular even among his opponents. He still resides in Wakefield, and is one of the foremost in all local movements for public improvements.

Mr. Hamilton was married in Newfield, Maine, February 13, 1867, to Annie E., daughter of Joseph B. and Harriet N. Davis. They have no children.

WILLIAM H. ANDERSON'S¹ earliest American ancestor was James Anderson, one of the sixteen original proprietors of the town of Londonderry, N. H., a class of sturdy, uncompromising Presbyterians, who, seeking greater religious freedom, emigrated from Ireland to New England in the year 1719.

Their ancestors, many years before, had fled from the persecutions which the Presbyterian Church suffered in Scotland, and, crossing the narrow channel, had settled in the fertile fields of the North of Ireland.

James Anderson settled in that part of Londonderry now called Derry, and his oldest son received his father's "second division," or "amendment land," which comprised a large tract lying on Beaver Brook, in the southern part of the town. A portion of this tract has been handed down from father to son for five generations, to the subject of this sketch. Such instances are now quite rare even in New England, and it is not strange that, combining so many natural attractions and historic associations, Mr. Anderson has delighted to improve it and make it a place of his frequent resort.

On this farm Mr. Anderson was born Jan. 12, 1836. His father, Francis D. Anderson, was a well-known resident of the town, and was frequently placed by his fellow-townsmen in offices of trust and honor. His mother, Jane Davidson, of the adjoining town of Windham, N. H., although a life-long invalid, is well remembered for her superior qualities of mind and heart and her Christian fortitude and patience under great suffering.

Mr. Anderson, after passing his boyhood on his father's farm, pursued his preparatory course of liberal study at Kimball Union Academy, Meriden, N. H., and at Phillips Academy, Andover, Mass. He entered Yale College in 1855, at the age of nineteen years, and graduated in 1859. After graduation he went to Mississippi, and was a tutor in a private family in Natchez, in that State, and in New Orleans until the autumn of 1860, when ill health compelled him to return North.

He commenced the study of law in the office of Morse (Isaac S.) and Stevens (George) in Lowell, and continued in their office till his admission to the bar in December, 1862. The firm of Morse & Stevens being then dissolved, he became a partner with Mr. George Stevens on the 1st of January, 1863. This business relation continued until April, 1875, a period of nearly thirteen years, and only ceased because of the election of Mr. Stevens as district attorney for Middlesex County.

Messrs. Stevens and Anderson were the first tenants of the building known as Barristers' Hall, at the corner of Central and Merrimack Streets, after its change from religious to secular uses, and Mr. Anderson has now (1890) occupied the same office for more than twenty-five years.

¹ Contributed.

In 1868 and 1869 Mr. Anderson was a member of the Common Council of Lowell, and in the latter year he was president of that body. For several years he was a member of the School Committee. In 1871 and 1872 he was a member of the Massachusetts House of Representatives.

Since the latter date he has held no public office, but has devoted himself closely to the practice of his profession, having found by experience that the law is indeed a jealous mistress and that she cannot be too assiduously wooed.

Mr. Anderson possesses qualities which admirably adapt him to the practice of his profession. Cool and deliberate in judgment, thoughtful and dignified in manner, patient and thorough in investigation, he readily impresses upon his clients the conviction that their interests are safe in his hands. He enjoys an extensive practice and holds a high position at the bar of Middlesex County.

The elegant residence of Mr. Anderson, on the heights of Belvidere, overlooking the Merrimack, is not surpassed in attractiveness and beauty by that of any citizen of Lowell. The broad and well-shorn lawn in front, the wood-crowned heights of Centralville across the stream, the charming views both up and down the river combine to form a scene of no ordinary loveliness.

On Oct. 1, 1868, Mr. Anderson married Mary A., daughter of Joseph Hine, of Springfield, Mass. His only child, Francis W., was born Dec. 20, 1877.

MARCELLUS COGGAN.¹—The subject of this sketch belongs distinctly to the class of self-made men. He was born in Bristol, Lincoln County, Maine, the second of four children of Leonard C. and Betsey M. Coggan. He obtained his early education in the district school of his native town, and later followed the sea in the coasting trade between Maine and the southern ports and the West Indies. Not satisfied to follow a seafaring life, when a young man he entered Lincoln Academy, New Castle, Me., and there prepared for Bowdoin College, which he entered in 1868, and through which he made his way by hard work, teaching in public schools and academies during the winters, and graduating with honor in 1872, at the age of twenty-five.

Immediately afterwards he was engaged as principal of Nichols Academy, in Dudley, Worcester County, Mass., and remained there until 1879. Nichols Academy is an old institution of learning, well-known in Worcester County, and at times in its history had enjoyed great prosperity, but when Mr. Coggan took charge it was undergoing a period of depression. With the management of the new principal it took on new life and energy, and entered upon a new period of prosperity, which it has since maintained. While in Dudley Mr. Coggan took an active part in town affairs, and was a member of the School Committee for four years.

During all this time, and ever since leaving college, Mr. Coggan had the legal profession in view, and read law steadily while engaged in teaching. In 1879 he gave up his position as principal, and removed his residence to Malden, entering at the same time the law-office of Child & Powers, in Boston. In 1881 he was admitted to the Suffolk bar, and his success in practice was immediate and steady. In 1886 he formed a partnership with William Schofield, at that time instructor in the Law of Torts at the Harvard Law School, and the firm have since done business under the name of Coggan & Schofield in Malden and Boston, and have risen steadily in business and in the estimation of the public.

Upon taking up his residence in Malden Mr. Coggan at once became active in public affairs, joining various local organizations. In 1880 he was elected a member of the School Committee, and was an active and efficient member of the board for three years. During that time questions of great importance to the educational interests of the city were agitated, and Mr. Coggan impressed himself upon the citizens as a man of decided opinions, and of the courage to maintain them. In 1884, by the persuasion of friends, he ran as an independent candidate for the office of mayor, against the regular nominee of the city convention, and was defeated; but his friends were so encouraged by the results of his canvass that he was induced to run again as an independent candidate in 1885, and was elected over the regular nominee, Hon. Joseph F. Wiggin.

Mr. Coggan assumed the office of mayor of Malden in January, 1886, and was the fourth in succession in that office since the incorporation of the city—a signal tribute to his character and ability, since he had been a resident of the city only since 1879. His administration as mayor was successful, and in 1886 he was re-elected, without opposition, by an almost unanimous vote, for the ensuing year. Perhaps the strongest feature of Mr. Coggan's administration was his enforcement of the prohibitory law. The city, in 1885, had voted "No License," and during the first year of Mr. Coggan's mayoralty this vote of the people was thoroughly enforced, in a manner which attracted wide attention, and with results which were very gratifying to the friends of temperance. In the second year of his office Mr. Coggan continued in all departments the vigorous policy which had marked his first year. He refused a nomination for a third term, and retired from office at the end of 1887. Since that time he has taken no active part in politics, but has devoted himself exclusively to his profession. In his political principles Mr. Coggan has been a consistent and life-long Republican.

In 1872 Mr. Coggan married Luella B. Robbins, daughter of C. C. Robbins and Lucinda Robbins, of Bristol, Me., and three children have been born to them of that marriage.

MR. ALFRED HEMENWAY, one of the leading law-

¹ Contributed.

Marcellus Cogan

yers of the Massachusetts bar, was born in Hopkinton, Mass., August 17, 1839. He fitted for college in his native town and graduated at Yale University in the class of 1861. He studied law at the Harvard University Law School, and was admitted to the bar in Suffolk County July 13, 1863. He has since then resided and practiced in Boston, and has steadily risen in his profession, alike in the extent of his practice and in reputation as a lawyer. He has delivered law lectures at the Lasell Seminary, is one of the examiners for admission to the Suffolk bar, and has been president of the Yale Alumni Association in Boston. But he has mainly confined his attention to the immediate duties of his profession, in which he is a close student, and in which he is recognized as one of the most successful members. His familiarity with the reports and the readiness with which he cites the cases bearing on any mooted point have especially won him reputation. Very few lawyers are better grounded in the principles of the law or so familiar with its authorities. He is much in court, tries cases with ability, is now largely engaged as senior counsel, and before a jury or the court has a ready speech, an agreeable manner, and an earnest, convincing and logical power of statement and argument. He is a member of the law-firm of Allen, Long & Hemenway, his partners being Stillman B. Allen, Esq. and ex-Governor John D. Long. Mr. Hemenway was tendered an appointment upon the bench of the Superior Court by Governor Ames, but he declined the honor.

It cannot be expected that in this narrative sketches would be given of all the prominent members of the Middlesex bar. Already the space assigned to this chapter has been exceeded, and the writer must exclude from his list the names of many lawyers who deserve a place in this record. There are General James Dana, of Charlestown, recently deceased, the son of Samuel Dana, already referred to; Marshal Preston, of Billerica; Constantine C. Estey, of Framingham; Theodore C. Hurd, clerk of the courts; B. B. Johnson, of Waltham, who has been mayor of that city, and is active and prominent in the prohibitory cause; Henry F. Durant, son of William Smith, who changed his name, and who, after a short practice in Lowell, became a successful member of the Suffolk bar; Richard G. Colby, city solicitor of Lowell in 1842; Isaac S. Morse, city solicitor of Lowell from 1850 to 1852, and afterwards district attorney; Alpheus A. Brown, city solicitor of Lowell in 1858 and 1862 and 1863; William B. Stevens, of Stoneham, district attorney for the Northern District; J. H. Tyler, register of Probate and Insolvency; Arthur W. Austin; Thomas Wright, of Lawrence, son of Nathaniel Wright, of Lowell; J. Q. A. Griffin, the brilliant lawyer and legislator, cut off in the full promise of an eminent career; Sherman Hoar, of Waltham, and Josiah Rutter, of Waltham—but all these must only be referred to by name, while many more, worthy of mention, must be omitted altogether.

The chapter will close with a list, as complete as the writer has been able to make it, of the lawyers now practicing in the county.

The following were, in 1889, engaged in practice in the towns set against their names:

- Acton—F. C. Nash, A. A. Wyman.
 Arlington—John H. Handy, Wm. Parmenter, W. H. H. Tuttle.
 Ashby—S. J. Bradlee.
 Ashland—George T. Higley.
 Ayer—Warren H. Atwood, C. A. Batchelder, George J. Barnes, James Gerish, Levi Wallace, C. T. Worcester.
 Bedford—George R. Blinn, Elihu G. Loomis, George Skilton.
 Belmont—Frederick Dodge.
 Cambridge—Augustine J. Daly.
 Cambridgeport—George C. Bent, John Cahill, H. C. Holt, Edwin H. Jose, J. E. Kelley, G. A. A. Pevey, Charles G. Pope, I. F. Sawyer, Henry H. Winslow.
 East Cambridge—Felix Conlon, Freeman Hunt, Edward B. Malley, Charles J. McIntire, Lorenzo Marrett.
 Concord—G. M. Brooks, George Heywood, Eben Rockwood Hoar, Samuel Hoar, John S. Keyes, Prescott Keys, George A. King, Charles Thompson, C. H. Walcott.
 Everett—Dudley P. Bailey, C. C. Nichols, George A. Saltmarsh, G. E. Smith.
 Framingham (South)—Walter Adams, John W. Allard, Constantine C. Estey, Charles S. Forbes, Ira B. Forbes, W. A. Kingsbury, Sidney A. Phillips.
 Holliston—W. A. Kingsbury.
 Hudson—James T. Joslin, Ralph E. Joslin.
 Lexington—Robert P. Clapp, George H. Reed, J. Russell Reed, Augustus E. Scott.
 Littleton—George A. Sanderson.
 Lowell—Julian Abbott, James C. Abbott, W. H. Anderson, Wm. P. Barry, George W. Batchelder, C. R. Blaisdell, A. P. Blaisdell, Harvey A. Brown, C. E. Burnham, George A. Ryan, James H. Carmichael, G. W. Clement, Ch. H. Conant, Wm. F. Courtney, Charles Cowley, Jeremiah Crowley, John Davis, Dan Donahue, Thos. F. Enright, Philip J. Farley, Peter A. Fay, Fred A. Fisher, John F. Frye, F. T. Gullet, Jos. H. Gullet, Ch. S. Hadley, S. P. Hadley, John J. Harvey, J. T. Haskell, P. J. Hoar, J. J. Hogan, John L. Hunt, Louis H. Kleski, J. C. Kimball, Jona. Ladd, Alfred G. Lamson, G. F. Lawton, F. Lawton, Ch. S. Lilley, Fred P. Marble, John Marren, J. S. Marshall, Martin L. Hamblet, John T. Matterson, John W. McEvoy, Ed. D. McVey, Albert M. Moore, Jno. H. Morrison, Isaac S. Moore, Wm. F. Courtney, James Stuart Murphy, Bernard D. O'Connell, Myron Penn, J. J. Pickman, George W. Poole, Irving S. Porter, Nathan D. Pratt, Ed. B. Quinn, Francis W. Quay, John W. Reed, Dan M. Richardson, George F. Richardson, George R. Richardson, J. F. Savage, C. W. Savage, A. P. Sawyer, Luther L. Shepard, George H. Stevens, Solon W. Stevens, L. T. Trull, A. C. Varnum, George M. Ward, Herbert R. White, S. B. Wymann.
 Malden—Charles E. Abbott, George D. Ayers, Harry H. Barrett, Harvey L. Boutwell, C. M. Bruce, Otten H. Carpenter, Marcelus Coggan, W. B. de Las Casas, F. L. Eaton, Charles R. Elder, George H. Fall, J. L. Farham, P. J. McGuire, Edwin G. McInnes, J. H. Millett, J. W. Pettingall, M. E. Stevens, Arthur H. Wellman.
 Marlboro'—Samuel N. Aldrich, W. N. Davenport, Herman S. Fay, Gabe I. McDonald, Edward F. Johnson, J. W. McDonald, J. C. J. Otterson.
 Maynard—Thomas Hallis, J. W. Reed.
 Medford—Thomas S. Harlow, Benjamin F. Hayes, F. H. Kidder, W. P. Martin, C. F. Page, B. E. Perry, C. G. Plunkett, D. A. Gleason (West), George J. Tutts (West).
 Melrose—E. C. Morgan, W. H. Roberts.
 Natick—P. H. Cooney, F. M. Folsom, James McManis, H. C. Mulligan, H. G. Sleeper, Charles Q. Turrell, G. P. Tower, L. H. Wakenfield.
 Newton—J. C. Ivy, J. C. Kennedy, George A. P. Codwine (Lower Falls).
 Reading—Solon Bancroft, Chauncey P. Judd, E. T. Swift.
 Somerville—Samy S. Bowman, Brown & Alger, John Haskell Butler, John E. Casey, Herbert A. Chapin, D. F. Crane, Joseph Cummings, Samuel C. Darling, Michael F. Farrell, Oren S. Knapp, Charles S. Lincoln, Thomas F. Maguire, A. A. Perry, Charles G. Pope, Isaac Story, Francis Tufts, L. R. Wentworth.
 Stoneham—B. F. Briggs, A. V. Lynde, A. S. Lynde, William B. Stevens.

Tewksbury—Charles R. Blaisdell.

Wakefield—Dean Dudley, Chester W. Eaton, Freeman Evans, S. K. Hamilton, Winfield C. Jordan, Wm. E. Rogers, George H. Towle, Edward A. Upton.

Waltham—Allen J. Mayberry, Thomas Curley, T. B. Eaton, D. French, John L. Harvey, Sherman Hoar, B. B. Johnson, A. J. Lathrop, Dudley Roberts, R. M. Start, Charles F. Stone, F. M. Stone, T. H. Armstrong.

Watertown—L. A. Benson, F. E. Crawford, J. J. Sullivan.

Wayland—R. T. Lombard.

Weston—Andrew Fiske, Charles H. Fiske.

Wilmington—Chester W. Clark.

Winchester—A. B. Collin, S. J. Elder, S. H. Folsom, George S. Littlefield, Eugene Tappan, A. C. Vinton, J. T. Wilson.

Woburn—Charles D. Adams, M. T. Allen, B. E. Bond, Parker L. Converse, Francis P. Curran, L. W. & E. F. Johnson, John G. Magnire, Wm. N. Titus.

CITIES AND TOWNS.

CHAPTER I.

CAMBRIDGE.

INTRODUCTION.

BY JOHN HOLMES.

WE have been urged on the score of long residence in the county, to write something for this book.

Under so vague a commission, many topics suggest themselves, and we fall back on our native town of Cambridge, where the qualification above mentioned is most available.

We have a few words to say about Revolutionary recollections connected with our town, but rely chiefly on our topographic memory to give pleasure in noting the changes wrought by time. First, however, a loyal word for our county.

It is a fair territory. It has its mounts of vision, whence one beholds spread out beneath him the plenty, prosperity and peaceful content which, viewed thus largely, belong to the domain of poetry. We have our two, (sufficiently) broad rivers, which pay their daily tribute to Ocean and receive back a briny acknowledgment of their loyalty; others are accessories only to larger streams. We have silvery lakes in which secluded Nature views herself with satisfaction. We have, here and there, pleasant suggestions, at least, of forest.

Without prejudice to sister counties, we think we have all the gradations from wild nature, to a comely civilization, in fair proximity to perfection. The history before us, tells of our progress, from the one point to the other.

Middlesex is rich in Revolutionary incident. Cambridge was a part of the route by which both detachments of the British troops went to Concord on the 19th of April, 1775. The first party of 800 was conveyed from Boston to Lechmere's Point (now East Cambridge) in boats, and passing over the marshes to what then, and also in our boyhood, was called Milk Row, in Cambridge, went by that avenue from the Charlestown, to the West Cambridge (now Arlington) road.

The reinforcement under Lord Percy, coming over Brighton Bridge, must have proceeded straight from

Harvard Square up North Avenue. About 1846 a venerable inhabitant of our town told us that on the 19th of April, being then a boy apprentice to a tailor, he saw from a building just north of our present post-office (which we remember) Lord Percy's detachment pass by.

It is well enough to fix the spot whence the young 'prentice gazed unconsciously at the beginning of a Revolution. Such places seem like telegraphic points between the past and the present for the imagination.

Somewhere about 1850 a venerable colored man appeared at our doors asking some transient hospitality. His extreme age suggested inquiry. It appeared that he was living in Lexington in 1775, and, as it seemed, belonged to a Captain Parker of that town. By his own account he lived on very easy terms in the household. Being asked if he remembered what is called the Battle of Lexington, he replied that he saw it, and knew all about it. Here, then, was an eye-witness of a memorable event. Unsophisticated as he appeared, he was the very man to give some simple incident of the day whose picturesque effect he might not himself appreciate.

When refreshed he was put on the witness stand. "Now then tell us about the battle." "Well, you see I had Cap'n Parker's horse to take care on that day. Well I come out there and the dust was a flyin' and the guns a firin' and the blood a runnin'. You see, I had taken care of Cap'n Parker's horse." This was the amount of what could be got from him about the Battle of Lexington. He was then asked if he remembered anything about Bunker's Hill. "Yes, I was there. I remember all about it." "Well, how was that?" "Well, the British Gen'l he come out and drewed his sword and the 'Merican Gen'l he come out and drewed *his* sword, an' then they all went at it and fit till the blood run knee deep." So much for our antiquarian discovery.

In our boy days many small story-and-a-half buildings (so-called) on the present North Avenue reminded one of the Revolutionary epoch. They had witnessed the passage of Lord Percy's nine hundred, and had probably added their part, to the number of his assailants.

These memories of the beginning of the war are

continued in Cambridge by the occupation of the college buildings by our troops, and by Washington's occupation of the present Longfellow house as headquarters.

We now turn to Harvard College at its foundation.

Governor Winthrop came to Salem, which was already settled, and thence to Boston, in 1630, bringing the charter of the Colony with him. To quote from a note to his journal: "7th mo., 14th day, 1638, John Harvard, Master of Arts in Emanuel College, Cambridge, deceased, and by will gave the half of his estate, amounting to about 700 pounds, for the erecting of the college." The General Court had in 1636 "agreed to give 400 pounds toward a school or college. . . ." From Winthrop we find that on the 22d of August, 1642, "Nine bachelors commenced at Cambridge; they were young men of good hope and performed their acts so as gave good proof of their proficiency in the tongues and arts."

"The general court had settled a government or superintendency over the college, viz.: all the magistrates and elders over the six nearest churches and the president, or the greatest part of them. Most of them were now present at this first commencement, and dined with the college, with the scholars' ordinary commons, which was done of purpose for the students' encouragement, etc., and it gave good content to all."

This was such an occasion as one endeavors to reproduce to his fancy by the dim light of the time. The simple procession (for we are sure there must have been one) marched silently, with no incident of pomp, save possibly the square cap; and whether even the president wore that, is a question beyond us to answer. The squirrel crossed its track, and when arrived wild woodland sounds intruded on the Latin disputations. Doubtless a group of cows from the "Great Pasture" gathered not very far from the present new gateway, and watched, ruminating, the unaccustomed gathering. For all the little world around Cambridge that could quit work, came to that commencement and admired the new college, magnificent to eyes now so accustomed to homely surroundings. The college yard, now so called, must, we think, have been in a very rough state in 1642. The trees or their stumps must have occupied a considerable portion of it. The ground where University Hall now stands must have been a bog or a swamp.

While our college was being thus peacefully inaugurated, civil war was beginning in England, where the Puritan soon proved the affinity between religious, and civil, liberty. But for political precaution we should probably have had our Cromwell and Ireton and Desborough Streets in Boston.

We should like to know how and how far our first commencement was made a holiday. Probably the services of the day were a sufficient excitement to the sober, industrious settlers. Possibly a little

"strong waters" circulated in a serious manner; that article had so many salutary aspects that coincided with a festive inclination. It was good to keep out the cold in winter. It coalesced beneficially with the heat in summer. It was good in a general way as an antidote to climatic influences and a hopeful sort of application in almost all exigencies. Although our fathers had not learned to judge it with the severity of our times, they were cautious in its use. They had disused the practice of drinking toasts because of its tendency to excess. Whatever the mode of enjoyment after the services were over, it was quiet and decorous, and all broke up in good season for their return by daylight over such paths as might then be. Our cows were driven home from the Great Pasture at sundown, and all the village was probably asleep by nine.

Our fathers confined themselves so much to Scripture knowledge and discussion that one would hardly have expected them to open the gates of classical learning to their children. One would suppose that the ungodly miscellany of the heathen mythology would have been as obnoxious to them as the cross in the colors. Perhaps they curtailed that portion of literature. But Latin was the *Lingua Franca* of theology; Greek was the language of the New Testament and Hebrew of the Old. Their first object was to raise up a body of learned ministers who should defend and preserve their theological opinions to the latest generation. To do this a knowledge of the language was deemed necessary.

We who view the college and country now well appreciate the interest of that first commencement. The university of to-day, with its 1200 students and its 150 or so of instructors casts a kindly look back on its *alter ego* of 1642. The tide of youth has now flowed through it for two and a half centuries, running free and strong and ever increasing in volume.

It is a pleasant feature of the college that grim Time within its precincts assumes his nearest to a cheerful and beneficent aspect. He dispenses very much with his scythe, and is content to show his hour-glass to the young men to remind them of the disintegrating tendency of the hour and the minute.

One turns from the tumultuous succession of objects and sounds in the outside world to rest his eyes on the calm of the college precincts, where the commerce is all in ideas and all the working day is "High Change."

The "scholars," as they used to be styled, have always made an amiable society among themselves, the personal relations of the individual being mostly confined to his class, in which every good fellow, whatever his circumstances, was cordially regarded by all.

The college and the town grew up from infancy together, and have always maintained pleasant relations with each other.

This book is designed to give a minute view of

each town, as well as a history of the collective county. We think a topographic sketch of our town as it was seventy years since would be interesting, to the elder inhabitants at least, who do not enjoy so large a retrospective privilege as ourselves. Cambridge, with its numerous in-dwellers from all parts of the country, who contract associations with the town, is somewhat cosmopolitan, and has many more than its citizens to be interested in its history. The Cambridge of our childhood seventy years since must have very much resembled itself of seventy years earlier. It had been, like other inland places, a farming town until its growth in the neighborhood of the college precluded that occupation there. We of that neighborhood spoke of going to Harvard Square as going "down in town;" those more remote, as going "down to the village." In the now Harvard Square stood "Willard's Hotel," the same building in which now (May, 1890) the passenger-room of the railroad is. "Willard's" was the resort of the moderns—i. e., the less "advanced" people—men whose memories were of General Bonaparte, of the Embargo and the last war. Porter's tavern was the presumable resort of the ancients, whose remembrance might reach back to Bunker Hill, or possibly to the massacre at Fort William Henry.

This building was of two stories, gambrel roofed and of hospitable aspect, with a more modern hall for dancing attached, the great place for public gayeties in our boyhood. This building is still standing, devoted to new purposes. On the left of Willard's, and on the corner of Dunster Street, was our principal grocer; on the right another grocer's shop, with the post-office in the rear; then a passage way, and then our only effective dry-goods shop, at the corner of Brighton Street. All these buildings are still standing. At the easterly corner of Dunster Street, facing on Main, was a house of some antiquity, where our first regular apothecary's shop made its appearance. Thence to Holyoke Street was vacancy. On the easterly corner of Holyoke, facing on Harvard Street, stood our book-store, with a printing-office on the second floor, and wooden stairs on the outside on Holyoke Street—a thin, long, three-story building; next, east of that, a very old red house, with a traditional flavor about it of Bradish, a famous pirate of our colonial times. We have some notion that Captain Kidd was mentioned as a fellow-lodger. If evidence is asked for, we can add that there have been rumors of an iron pot of coin discovered in the cellar. This all will allow to be corroborative. But tradition alone, being *vox populi*, is sufficient for our purpose. This incident imparts a fine aroma of maritime adventure to Harvard Street.

Next to the red house was a small bake-house, and at the westerly corner of Linden Street a three-story wooden house. Passing Linden Street, the whole square next, we think, may have been occupied by the quite stately Borland house, which stands far

back from Harvard Street. Passing Plympton Street, there was a piece of land running from a point one or two hundred feet down Plympton Street, round to and a little distance down Bow Street. It contained pear and mulberry trees only.

Opposite this land, on the present Harvard Street (which in our boyhood was called from thence the Middle Road), stood the old parsonage, and next this, easterly, the modern Dana house, built in our boyhood. There was no building in sight beyond this on Harvard Street, and on Main Street from Bow Street there was no dwelling visible but the Judge Dana house between the present Dana and Ellery Streets. Beyond this there was one house on the left; none on the right before reaching the present Inman Street.

The open ground extending from Church Street to Waterhouse Street was called, except the part occupied by roads, the Common. Agriculture lingered in the neighborhood of the college. Jarvis Field was still occupied as farm land. We have seen Indian corn growing where the Scientific School, and Gymnasium now stand.

There were no street lamps save, for a few years, four, on the walk in front of the college buildings. People walked at night by faith—that is, such confidence as they might have in their knowledge of the ups and downs that lay in their invisible path. There were no names of streets; people in giving a direction, approximated as well as they could: "Down by the 'meetinus,'" "Down by the Hayscales," "Down by the Mash" (marsh), "Up by Miss Jarvis's."

The present Kirkland Street was built up about 1821. There was then standing there, a little below Oxford Street, a dilapidated, untenable "Foxcroft" house. The present Cambridge Street, then "Craigie's Road," had one house, visible from the Delta, on it. The road presented then quite a forest vista to those looking down it. At the end of the Delta was what was called the Swamp. This extended some little distance till it met the woods on the left side of the road.

On Brattle Street, from Ash Street, there was but one house, the Vassal house, on the southerly side, as far as Elmwood Avenue, and considerably beyond; on the northerly side there were six or seven. Mount Auburn Street from the present police station, to Elmwood Avenue was a solitude.

We had a true old Puritan "meeting-house," which did credit to our artificers of 1756. We recollect those who were men in our childhood with much respect as excellent workmen and citizens. Since the introduction of machinery the skill required, of the carpenter at least, is very much diminished. Within our "meetinus," as it was usually called, all was creditable to the workmen employed and to the liberal zeal of the parish. The pulpit was quite elaborate and in good taste. The pews had their panels and mouldings (if that is the right term). The spire was perhaps a

little wanting in bulk, but as an emblem of man dwindling as he approaches the celestial regions it was good. The pews were left to the proprietor to paint, or not, as he pleased. The "Boys' Gallery" which perhaps was somewhat akin to a penal colony, was unpainted.

The Massachusetts colonists early established a trade with the West Indies, exchanging their fish and lumber for sugar and molasses. Their abundant wood enabled them to turn the latter article into rum. This became a very cheap commodity; if we remember rightly a quart of *new* rum could be bought for six cents in our young days. We all know the evils that rum brought with it and the gradual awakening of the country to appreciation of them.

In our town, rum (considering that as the representative liquor) gave rise to a set of philosophers, who preferred desultory labor, with frequent intervals for reflection and contemplation. They were generally good-natured and pleasantly disposed, and perhaps somewhat relieved the picture of steady industry in town and college. They had a strong social bent, considering society as the most obvious and easy means of enlarging the mind.

One incident will show their genial and hospitable turn. A young man, a neighbor of ours, on a summer evening met another young man at one of their gatherings, who professed himself a stranger in town. After a long and hilarious session our neighbor asked him if he would not come and lodge with him that night. He accepted the offer gratefully and they set out. When they came into the Common our neighbor stopped, took his coat and hat off and threw them down. "Hello! what are you up to?" said his friend. "Why this is where I sleep," said our neighbor. The very broad philanthropy of the act strikes one. This man was a stranger; it was enough, he shared his bed with him.

Our friend undoubtedly frequented a three-cent place of entertainment. At Willard's a "drink" was six cents, at the stores three; at Willard's, too, "soda water" was sold, then something phenomenal, which as boys we only heard of.

We might tell of the wages paid in our boyhood, as, for instance, ten or twelve dollars a month (with board) to first-rate young men from the country, for care of barn and wood-house, with occasional farm work. A dollar a week to young women of the same quality, of our Spanish silver currency of four-pences (or four-pences) 6½ cents, nine-pences 12½, pence 20 and dollars, besides our own bank-notes and cents, and it may be some silver. We might speak of the hereditary household economies, of the salt-fish, sternly utilitarian, the brown bread, the Indian pudding (which we respect, but do not love) and other articles suggesting the necessary frugality of earlier times. For prices, we think we recollect Java coffee at fourteen cents the pound, beef and mutton at twelve and a half (*i. e.* nine-pence); but let us remind the householder

that money was but a third as plenty as to-day, or less. Meanwhile the fare in the four-horse stage-coach that went twice a day to Boston was twenty-five cents.

We ought to mention the dame school, where very little children, sat on wooden blocks and larger ones on benches, where virtue was rewarded by a tinsel bow pinned (temporarily) on shoulder; and her froward sister naughtiness, with head down, a tear in the eye and a finger in the mouth, was obliged to stand a certain time with a black one attached in the same way. It was here that we read in Miss Hannah Adams' History of the Duc d'Anville's unfortunate naval expedition, and how the admiral of the fleet "fell on his sword," and saw as we read, from time to time, the mast of the college sloop looking over the opposite house; thus associating the Duke and the College Sloop in our memory.

We have said nothing of our navigation. It consisted entirely of the above-mentioned college sloop.

She was a good, honest, innocent craft, and lies pleasantly at anchor in our memory.

We have said nothing of our nearest neighbor, Cambridgeport, whom we ought to mention as having furnished a very good private school for our and her own boys, which has left many friendly memories.

CHAPTER II.

CAMBRIDGE—(Continued).

THE INDIANS OF CAMBRIDGE AND VICINITY.

BY REV. GEORGE M. EODGE.

AN account of the Indians of Cambridge must necessarily involve a partial history of the Massachusetts tribe, since the Indians of all this region were known generally under that name; and because the arbitrary limits of patents, grants and plantations were all unknown to them, and they had no idea of town, county or colony lines. Moreover, the Indians seldom had any permanent dwelling-place, and were accustomed to move at different seasons and in different years into various parts of the country. We begin then with a brief account of the Massachusetts tribe or division of the New England Indians. For the present purpose we need not go back further than 1604-5, when Sieur Samuel de Champlain, with his captain, Sieur de Monts, sailed along the coast from the St. Croix River as far as Eastham harbor, upon Cape Cod. It was Champlain who named Mont Désert, because, unlike most of the islands and headlands along the coast, it was "destitute of trees." He located "Norumbegue" as our Penobscot River, and upon this the Indians who swarmed along the shores told him lived their great "King," Bessabez (the English called this "King" Bashaba). The Indians hereabouts he called the "Etechemins," (and the name

included the Indians of the Kennebec at the same time). These Indians conducted him to the falls of "Norumbegue," and there "Bessabez" came to visit him, the place of their meeting being doubtless the site of the present city of Bangor. The interest of this voyage to us now is the record of the numerous crowds of Indians all along the shores. Champlain describes the natives of the Maine coasts as "swarthy, dressed in beaver-skins, etc.," of large stature and, in general, intelligent and friendly, until after Weymouth's sojourn in their vicinity and his capture of some of their people, after which they were suspicious and timid. It was in June, 1605, that they passed beyond the Kennebec and along the lower part of Maine to Massachusetts. Champlain calls the inhabitants the *Almouchiquois*. Everywhere the shores seemed full of natives hunting, fishing and paddling out in canoes to trade with the strangers. From his descriptions and maps the course of his voyage may be traced quite accurately, although the names he gave have mostly passed away. His ship anchored inside "Richmond Island," as it was afterwards called, and the Indians came down upon the shore on the mainland and built a huge bonfire and danced and shouted to attract their attention. Champlain gives a very minute account of this locality, from Black Point to beyond the river which he wrote *Choüacoet*, as he understood the Indian name, but which the English called *Saco*. They mingled freely with the natives and traded with them. The Indians are described as prosperous and well-favored, with many plantations upon which they were engaged in cultivating the soil. He says they had not before noticed any tilling or cultivating by the Indians. Their method, as he marked and described it here, applies, doubtless, to that of the Massachusetts Indians.

In place of ploughs the Indians used a sort of wooden spade. They dropped three or four kernels of corn in a place, and then piled about a quantity of loose earth mixed with the shells of the "*Signoc*," or what we call the "Horsefoot-crab," of which there were immense numbers along the shores. These hills were about three feet apart. In the "hill" with the corn they also dropped a few beans. They planted squashes and pumpkins also among the "hills," and this method has been but little changed since their day. They planted in May and gathered in September. Coasting southward along the lands which he describes, his vessel at last enters Boston harbor, and is anchored, probably, nearly opposite Charlestown Navy Yard, and near the East Boston shore. From this anchorage they observed many fires all along the surrounding shores, and many of the Indians coming down to the shores to see them. Some of their crew were sent on shore with presents and with the Penobscot Indian, *Panounias*, and his wife; but these Indians could not understand the natives, who were of the same tongue as those at *Saco*. They did not therefore find out the name of their chief.

All around the shores there was "a great deal of land cleared up and planted with Indian corn." He says: "The country is very pleasant and agreeable, and there is no lack of fine trees. The Indians here had the 'dug-out' wooden boats instead of the birch-bark canoes; they had not seen any of these before, and he says, they were constructed by the slow process of burning out the trunk of a tree from one side with hot stones. They used stone hatchets and axes to cut down the trees; and their weapons were pikes, clubs, bows and arrows. Continuing southward, crowds of Indians came to the shores at all points, showing that at the time the country was populous and, as it seemed, the natives were prosperous and at peace. It was midsummer, 1605, when Champlain visited Massachusetts. He did not at this time explore the rivers of the Bay, but mentions the *Charles*, which he named the "*Du Guast*," in honor of *Pierre du Guast*, commander of the expedition, whose title was "*Sieur de Monts*." The English named it for their King. Champlain supposed this river flowed from the West, from the country of the *Iroquois*. Such, in brief, was the general condition of the Indians along the coast in 1605. We pass now to a more particular account of their condition, as the English settlers found them in 1620, and onward. It will be remembered that Champlain called all the Indians, from the Kennebec to the South, as far as he went, by the general name, "*Almouchiquois*."

The earliest definite accounts we have of the Indians, who lived upon the peninsula between the *Mystic* and *Charles Rivers* are somewhat meagre and unsatisfactory. They belonged to, and seem to have been the central portion of the formerly large and powerful tribe of the Massachusetts. Some of their old men told our earliest settlers that the dominion of their great *Sachem* had once extended as far as the *Wampanoags* and *Narragansetts* on the south, to the *Connecticut River* on the west, and to the *Pennacooks* on the north. Nothing, however, as to the limits, is certain. There is a tradition, apparently supported by evidences which will appear further on, that upon the peninsula between the *Mystic* and *Charles* was situated the rendezvous of this formerly great tribe. It was here that they used to gather from the south, bringing their products of the land and water; from the north, with the barter of beaver and other furs, and from the interior, where the people were called, by those living on the coast, *Nipmucks*, or "fresh-water" Indians. All the Bay, from *Nahant* to *Cohasset*, seems to have been a sort of capital, with many considerable sub-tribes and *sagamores*, subject to this great *Sachem* of the Massachusetts, whose chief seat is said, by one tradition, to have been within the limits of *Dorchester*, upon a hill near the place now called *Squantum*.

But the strength and glory of this great tribe had departed long before the English came in contact with them, and even before that terrible plague of

1615-17, which swept away by far the greater part of the coast Indians, from the Kennebec to Rhode Island. Of that devastating scourge we have many corroborating accounts, among which one of the most vivid is given by Mr. Thomas Morton, of "Merry Mount" fame, in that curious book of his, entitled "New English Canaan." It will be seen that, like all accounts of that period, it is mixed with strange and crude superstitions. He relates the destruction of the crew of a French ship, by the Wampanoags, and tells that one of the Frenchmen, who was spared, rebuked them for their wickedness, and told them that God would punish and destroy them; whereupon the Indians answered that "they were so many that God could not kill them." "In a short time after," says Morton,—

"The hand of God fell heavily upon them with such a mortal stroke that they died on heaps, as they lay in their houses, and the living that were able to shift for themselves, would runne away and let them dy, and let their carcases ly above the ground without burial. For in a place where many inhabited there hath been but one left alive, to tell what became of the rest; the living being (as it seems) not able to bury the dead. They were left for crows, kites, and vermin to pray upon. And the bones and skulls upon the severall places of their habitations made such a spectacle after my coming into these parts, that as I travailed in that Forrest nere the Massachusetts, it seemed to me a new-found Golgotha."

There is, also, in Captain John Smith's account of New England (written in England in 1630), a passage giving a similar story of the great plague, and adding the particulars that the pestilence carried off "all the Massachusetts, some five or six hundred in number, leaving only thirty living, of whom their enemies killed all but two." Captain Smith says he cannot vouch for the truth of this, but that "it is most certaine that there was an exceeding great plague amongst them, for where I have scene two or three hundred, within three years after remained scarce thirty." His first visit was in 1614, his second in 1617. We learn, also, from the writings of Sir Ferdinando Gorges (whose agent, Richard Vines, with a comrade, spent the winter of 1615-16, probably, at Winter Harbor, and lodged in the wigwams with the natives who died by scores of the plague, while these two were unaffected by it), that previous to this plague the Indian tribes along the coast had been greatly decimated by some powerful tribes who had fallen upon them, plundering and destroying, from Casco Bay to Plymouth and the country beyond. These fierce invaders came along the coast from the east, and were known to the Massachusetts as Tarratines, and were said to have as their great Sachem that mystical personage whom the Eastern Indians called the "Bashaba," whose chief seat was upon the Penobscot River, whom Champlain called Bessabez, as above noted; and the Indians who met the first explorers of the coast of Maine declared that this "Bashaba" was the great king of the whole country, as far as they knew. There are some evidences that the Mohawks had been appealed to by the tribes of Massachusetts, and had helped them to beat

back the Tarratines, but, in their turn, had fallen upon their allies and injured them more even than the enemies had done. After that came the great plague, and again, after that had passed, it is probable that the Tarratines or Mohawks, or both, invaded the remnants of the tribes, who, perhaps, for safety, allied themselves with the Wampanoags, as, at the coming of the Pilgrims in 1620, their Sachem, Massasoit, seems to have been the acknowledged head of the tribes as far north as the Merrimack.

The territory embracing the parts to the north and west of Boston was, during the years preceding the coming of the Pilgrims, owned by the Sachem Nanepashemet, to whom also the local tribes were in subjection, while the inland tribes, the Nipmucks—probably their kindred—were in friendly alliance. While each chief of a tribe seems to have been independent in the control and discipline of his own people, there was always an authority referred to by most of the Sachems.

Massasoit seems to have owned no such authority himself, nor did any of his people refer to any higher than his. The same is true of Philip, his son, after the death of his father and brother. Miantonomah and his son Canonchet, Sachems of the Narragansetts, acknowledged no higher rulers. Passaconaway, of the Pennacooks, seems to have been of like rank; and the indications are that Nanepashemet, in his day, had held a like position before pestilence and war had wasted his people.

It is said that, before the war with the Tarratines, Nanepashemet had lived at Lynn, and after that retired to the peninsula formed by the Mystic and Charles Rivers, and there fortified a hill against the approach of his enemies. The Pilgrim, Bradford, in his journal, says that the Eastern Indians came at harvest time to plunder the Massachusetts of their corn. Mr. Hubbard, of Ipswich, writing fifty years later, said that the Tarratines made war upon these Western Indians "upon the account of some treachery of the latter."

The first authentic reference we have to the Massachusetts, as a tribe, is found in the early annals of the Pilgrims, in a work published in England in 1622 by G. Mourt, and popularly known since as "Mourt's Relation." G. Mourt was probably George Morton, one of the Plymouth Company, and an associate of Bradford and Winslow, who doubtless furnished the items of his "Relation" from their journals.

Part IV. of his work gives an account of a journey of a party of the Pilgrims from Plymouth to the home of the Massachusetts, "and what happened there." The account begins:

"It seemed good to the Company in generall that, though the Massachusetts had often threatened us (as we were informed), yet, we should go amongst them, partly to see the country, partly to make peace with them and partly to procure their trucke. For these ends the Governour chose ten men, fit for the purpose, and sent Tisquantum and two other salvages to bring us to speech with the people and interpret for us. We set out about midnight; the tyde then serving for us; we supposing it

to be neerer then it is, thought to be there next morning betimes; but it proved well neere twentie leagues from New Plimouth.

"Wee came to the bottome of the Bay, but being late wee anchored and lay in the Shallop, not having seene any of the people, &c."

The account tells that on the next day they went on shore and sent Tisquantum (Squanto) to find the Indians, who were at a distance up in the country. The place where they landed, and where they found a quantity of lobsters which had been caught by the natives, was near a "cliffe," and was probably the rocky point in Quincy Bay known as "the Chapel," at Squantum Head.

They found the Sachem of the tribe here dwelling to be Obbatinewat, who owned allegiance to Massasoit, and treated them kindly. He told them he did not dare to remain in any stated place, for fear of the Tarratines, and he said, too, that the Squaw-Sachem, dwelling across the Bay beyond the river (the Charles), was his enemy. He referred to the Squaw-Sachem as the "Queene of the Massachusetts," or gave the Pilgrims that idea. Obbatinewat next day consented to accompany them to visit this "Queen."

They crossed the Bay, with its "at lest fiftie islands," and at night came to the place where the Squaw-Sachem lived; but the Indians, going on shore, found no one, and so they returned and all remained on board the shallop all night. On the next day they went ashore, leaving two men to care for the shallop (this was on October 1, 1621), and "marched in Armes" three miles up into the country, where they found corn-fields where some corn had just been gathered, and a house, probably a common wigwam, had been pulled down. Going on a mile or more, they came to a hill, on the top of which was a house, altogether different from any other Indian houses which they had noticed. This was built upon a scaffold raised upon poles some six feet from the ground. This house would seem to have been a sort of observatory. Beyond this hill, "in a bottome," they found a fort, covering a circle, some forty to fifty feet in diameter, and enclosed with poles thirty or forty "foote" long, as "thick as they could be set one by another." A trench was dug on each side of this palisade, "breast high." At one point there was an entrance to this fortress across a bridge. In the midst of this fortification there was the frame of a house, and here Nanepashemet, their former king, was buried. The location of this fort is supposed to have been to the southeast of Mystic Pond, in West Medford; and near the supposed site, in 1862, a skeleton was exhumed, which was thought by some to be that of the old Indian "King," as there was found with it a pipe with a copper mouthpiece. About a mile farther on, upon the top of a hill, the Pilgrims found another such fort, and they were told that here Nanepashemet had been killed, and no one had lived here since his death. It is probable that he was killed in the raid of the Tarratines in 1619, when the pestilence had left him defenceless, and too old and weak to escape by flight.

The English remained upon this hill and sent their Indian guides forward to find the people and reassure them, so that they might have a talk and trade with them. They found the Indian women not far away, and having pacified them, they brought the English to them, within a mile of the fort on the hill. These women had fled before them, but carrying a large amount of corn, some of which they now prepared for the entertainment of the English. It was long before any of their men could be induced to appear; and at last only one, and he shaking with fear. The English traded with them what they could, using them kindly and dealing fairly, promising to return again before long with more means of trade and asking the Indians to save all their furs for them, which they promised. Nearly all the women followed them down to their boats for the sake of trading, selling the fur clothes which they wore, and replacing them with boughs of trees lashed about them. And so they parted with them amicably; though their Indian guides urged them to plunder the women and take their furs without paying for them.

They missed their chief purpose, which was to gain an interview with the Squaw-Sachem, or Queen of the Massachusetts. The Indian women reported her a long distance away, so that they could not go to her. The journey here described seems to have been through the present limits of Charlestown, Somerville and Medford, to the southeast side of Mystic Pond, the party probably following along the high land by the old trail, well known, of course, to their guides.

The picture shows how weak and helpless the once powerful tribe of the Massachusetts had become. It is probable that the main body of the tribe was with the "Queen," but in all there could have been only a few hundred who were inhabiting the country between the two rivers, and as far back as Concord, where the eminent historian of that town, Mr. Shattuck, thinks the "Queen" had her residence at this time. The contrast here shown with the condition of the Indians in 1605 declares the terrible havoc of the plague and their wars. Little more is known of this tribe after this, until the settlements were begun in Massachusetts Bay. In April, 1629, in their directions to those who came over to settle the plantation in the bay, the authorities of the "New England Company," say:

"If any of the Salvages pretend right of inheritance to all or any part of the lands granted in our patent, we pray you endeavor to purchase their title that we may avoide the least scruple of intrusion."

According to this direction, the settlers sought to obtain the lands of the Indians by fair purchase, though the prices paid would seem to us now incredibly small, some trinket or article of clothing, or arms and ammunition being paid for a tract of land. But we must remember that the people had a whole continent of free land before them; and on their part, the Indians had no idea of land values or titles, and only a few of their wisest began to think of the re-

sult of this constant giving up of their land. Their attachment to any particular locality was tribal rather than personal; and when the English sought to obtain a title by purchase, it was found that the ownership of the land was in a vague sort of way vested in the Sachem or sagamore of the tribe. The first settlers in Boston and vicinity were careful to secure titles to their lands from the highest authority of the Massachusetts tribe. At the time of their coming that authority was the Squaw-Sachem, widow of Nanepashemet, who, some time after his death, married the chief Pow-wow, or "Medicine-Man" of the tribe, whose name was Webcowits or Wibbacowits. This marriage, however, did not transfer any of her hereditary rights or titles to him; and he seems not to have been recognized as a ruler, or anything more than a Pow-wow, as before the alliance. It was probably by the precaution of the English that he was joined in the deeds given by the Squaw-Sachem. Just when the earliest of these deeds were given is uncertain, but not certainly until after 1629-30. It is probable that at the beginning of the settlements upon the peninsula between the Mystic and Charles Rivers, and the surrounding territory, the settlers, as soon as might be, obtained deeds from the Squaw-Sachem. In order that there might be no question about the titles gained from the Indians, the General Court, March 13, 1638-39, empowered Major Edward Gibbons to agree with the Indians for the land within the bounds of Watertown, Cambridge and Boston. Subsequent deeds and records show that the conveyance was made by the Squaw-Sachem to Watertown and Cambridge, although no deed or copy of deed has been preserved, so far as is known. The first deed, relating to any of these lands given by the Squaw-Sachem, was dated April 18, 1639.

Deed of Squaw-Sachem and Wife unto the inhabitants of Charlestowne.

"Wee, Webcowet & Squaw Sachem, do sell unto the inhabitants of Charlestowne, all the land within the lines granted them by The Court excepting the farnes & the ground on the West of the two Great Ponds called Misticke Ponds from the South side of Mr. Nowell's lot, nere the upper end of the ponds, unto the little runnet that cometh from Capt. Cooke's mill, which the Squaw reserveth for their own use for her life, for the Indians to plant and hunt upon; and the weare above the ponds they also reserve for the Indians to fish at while the Squaw (Sachem liveth), and after the death of Squaw Sachem shce doth leave al her lands from Mr. Mayhews house to nere Salem to the present Governor John Winthrop, Sent, Mr. Increase Nowell, Mr. John Wilson & Mr. Edward Gibbons, to dispose of, and all Indians to depart, and for satisfaction from Charlestowne, Wee acknowledge to have received in full satisfaction, twenty and one coates, nine teen fathoms of Wampum & three bushel of Corne. In witness whereof, wee have herunto set our hands the day & yeare above named.

"The Marke of SQUAW SACHEM,
the Marke of WEB-COWET."

In the Middlesex Court Files, in the case of "Charlestowne vs. Glaison," relative to the possession of some of these lands, dated April 1, 1662, there are several very interesting papers, among them the original of the above deed, and a deposition of Edward Johnson concerning this conveyance of Squaw-Sachem. It is here given on account of its casual references to the Indian Queen, etc.:

"Edward Johnson, aged 60 years, witnesseth:

"That abt one or two and twenty years agoe the deponent being at the wigwam of Squa Sachem, there was p'sent Mr. Increase Nowell, Major Edward Gibbons, Leitt, Sprague and Edward Converss, and some others of Charlestowne, at wch time, according to the interpretation of her and her husband's meaning by the above named Major Edward Gibbons, they did grant and sell unto Charlestowne, all their land within the limitts of Charlestowne except that on the West side of the ponds called Misticke, where their Wigwam then stood, wch they reserved for term of her life, & after her decease they did then declare it should come and remaine to Jno Winthrop Esq^r, Mr. Increase Nowell, Mr. Jno Wilson & the above named Major Edward Gibbons, & the persons and contract this deponent, at his returne Home, did enter into his day-booke from remembrance y^t of this is y^e whole truth rembered, so sayth

"Sworne in Court 4 (2) 1660

EDWARD JOHNSON.

as attest THOMAS DANFORTH, Recordr.

"Vera Copia

THOMAS DANFORTH, R."

It was evidently considered the safest course for the inhabitants to secure the reversion of all the Indian lands reserved, in order that after the Squaw-Sachem's death they might not be troubled with any heirs or other claimants, and might also be rid of the Indians. And for these and other reasons Major Edward Gibbons (who was well acquainted with the Indians and their language, and possessed apparently special influence over the Squaw-Sachem, as well as power in the colony) again became active in the matter, and this time the Squaw-Sachem executes a deed of gift to Jotham Gibbons, the young son of Major Gibbons, conveying the reversion of all her lands hitherto reserved. The following is the deed:

"Be it knowne unto all men by these presents that wee, Webcowites and the Squa Sachem of Misticke, wife of the said Webcowites, calling to mnde and well considering the many kindnesses and benefitts we have received from the hands of Captaine Edward Gibbons, of Boston, in New England, in parte of requittall whereof and for our tender love and good respect that wee doe bear to Jotham Gibbons Sonne and heire apparent of the said Captaine Gibbons, doe hereby, of our own motion and accord, give and grant unto the said Jotham Gibbons the reversion of all that parcell of land which lyes against the ponde at Misticke aforesaid, together with the said ponde, all which wee reserved from Charlestowne and Cambridge, late called Newtowne, and all hereditaments and appurtenances thereunto belonging after the death of me, the said Squa Sachem. To have and to hold the said Reversion of the said parcell of lands and ponde and all and singular the premises with the appurtenances unto the said Jotham Gibbons, his heires and assignes forever. In witness whereof wee have hereunto sett our hands and seales the thirteenth day of the Eleventh moneth in the year so declared by Christians One thousand six hundred thirty and nyne, and in the fiftenth yeare of the Raigne of King Charles of England, and willing that these be recorded before our much honored friends, the Governor of the Massachusetts Bay in New England and the rest of the Magistrates there for perpetuall remembrance of this thing.

"Signed, sealed and delivered

in the presence of

"ROBERT LE CAR,	The Squa Sachem's	marke,
EDMOND QUINSEA,		
ROBERT GILFAM,	Webcowites'	marke."

This original document is preserved in the court files of Middlesex County. An imperfect copy also is in the Massachusetts Archives, volume 30, page 1.

The transactions with the Squaw-Sachem went on up to near 1660. The English seem to have treated her with marked consideration, and to have faithfully performed their promises to her in their payments of corn, "coates," etc. Many items appear in Cambridge Records relating to these transactions.

It would appear that after the death of Nanepashemet, the Squaw-Sachem exercised little control over any of the Massachusetts Indians south of the Charles River. These seem to have become subject to Massasoit. There were several noted Sachems among them, like Chickatawbet, who claimed to be rightful owner of the lands about Boston, and from whom the Boston settlers bought them; Kutshamakin, who lived upon the Neponset River, and sold what is now Milton to the English; Wampatuck, son of Chickatawbet, etc. To the north, Masconomo, Sagamore of Agawam (Ipswich). These repudiated the authority of the Squaw-Sachem, and, indeed, all authority was merged into English rule, when the Sachems, in 1643, formally submitted to the General Court and put themselves under the protection of the English.

It is said that Nanepashemet left five children, and four of their names are given in the "History of the Lynn," by Mr. Lewis, viz.: 1. Montowampate, Sachem of Saugus, called by the English "Sagamore James."

2. A daughter, called by the English "Abigail."

3. Wonohaquaham, Sachem of Winnesimet, known to the settlers as "Sagamore John."

4. Winnepurkitt, or "George Rumneymarsh," but after he succeeded his brother "James" as Sachem of Saugus, called "Sagamore George." It was Winnepurkitt who, according to the story in Morton's "New Canaan," married the daughter of Passaconaway, the great Sachem of the Pennacooks. Upon Morton's story is founded the legend of Whittier's poem, "The Bridal of Pennacook."

Squaw-Sachem died sometime before 1662, as in April of that year suit was begun by the town of Charlestown to recover the lands granted to Jotham Gibbons in reversion, from F. Gleison, who was then in possession, Maj. Gibbons and his son having died several years before. The small-pox scourge of 1633, almost utterly destroyed the people of Nanepashemet's sons at Rumneymarsh, Saugus, Nahant and Marblehead.

The glowing accounts of the first explorers of the coast of North America were greatly disappointing to those who came into the country to settle in 1620 and soon after. We have seen that the pestilence and war had been especially destructive to the great Massachusetts tribe. The death of their chief Sachem had broken the tribe into factions, which neither the Squaw-Sachem nor any one of the lesser Sachems of the tribe seems to have had the disposition or power to re-unite. But the pestilence and war and poverty and constant fear had broken their spirits, and they had no feeling of hostility or resistance when the English came, but rather found them a protection from their hereditary enemies. The Massachusetts Indians had nothing but their lands which the English wanted, and these, by command of the government, they easily obtained in a legal way. The Indians were glad to be allowed to remain in the vicinity of their old homes and near the English, and to be tolera-

ted even through half-contemptuous pity and ill-concealed distrust.

The people of the town of Cambridge seem to have maintained unbroken terms of friendship with the Indians, and to have tacitly allowed them many privileges which elsewhere had been refused. They made them useful also in many ways, employing them, both men and women, upon their farms, though they did not generally consider them reliable, capable or industrious. There is no doubt that their hereditary tendency to vagrancy still clung to them. The people of the Squaw-Sachem, as we have seen, after the settlement of Charlestown and Cambridge, etc., gathered to the lands reserved for them at the Mystic Ponds. There was another company of Indians on the south side of Charles River at Nonantum, within the bounds of what was then Cambridge (now Newton.) These Indians were under the Sachemship of Kutshamakin, who claimed to be "Sachem of Massachusetts." Waban was the chief man of this Nonantum colony, though not a Sachem. His wife was Tasunsquam daughter of Tahattawan, Sachem of Concord, which relation doubtless gave him some authority; but he was a man of intelligence and ability, and it was largely due to these qualities in him that, under the earnest Christian zeal of John Eliot, of Roxbury and the equally earnest and wise direction of Major Daniel Gookin, of Cambridge, this small village at Nonantum reached the highest point of Christian civilization ever attained by any American Indians. The history of this little colony on Nonantum is, however, synonymous nearly with the history of the Christian Indians, which is not properly a matter for this chapter, but as that movement had its actual formal beginning here in the wigwam of Waban at Nonantum, it may be proper to note a few points. We may see at a glance, what I think has never been particularly referred to in a published account, that the forlorn condition of the Massachusetts Indians, their helplessness, abject poverty and broken spirit, put them in a condition to receive any word of life from the English, which might in any way give them courage or restore a way of hope. And then again, opposition to the efforts of Mr. Eliot to convert the Indians, was based upon the same reason of their Sachems and rulers, which they gave for not formally submitting to English laws: either process destroyed the authority of the hereditary ruler of the tribe. The Massachusetts Indians in the vicinity of Boston and Cambridge, had come almost imperceptibly under the control and direction of the colonial laws. The result was that hardly more than the name of authority was left to the Sachems, and little objection was made to the christianizing endeavors of Mr. Eliot and Major Gookin.

Rev. Mr. Eliot, who came over in 1631, and was settled over the church in Roxbury, early appreciated the opportunity and realized its importance. He began soon to fit himself for the work, by gaining a

thorough knowledge of the Indian language; and also prepared the public, especially of England, for assisting the work, by publishing tracts in London, giving account of the great field for missionary enterprise, in which the French Catholics had been so successful. In both his personal preparation and in the public mind he was successful. His tracts published in London stirred up the whole kingdom with a missionary fervor, and from the churches and from benevolent people contributions poured into the fund of the "Society for Propagating the Gospel in New England," until about £12,000 had been collected and invested in real estate in England, the income of which was to be expended in missionary work among the Indians of New England, to pay the wages of school-teachers and missionaries. But the General Court of Massachusetts were not behind in zeal, and in 1646 (before the society in London had been organized) passed an act for the same end as above.

Upon the 28th of October, 1646, Mr. Eliot, in company with Major Gookin and two others, went to Nonantum, and there, in the large wigwam of Waban, for the first time preached (in their own language) to an Indian congregation, mainly called together by the endeavors of Waban, the chief man, though not Sachem, of Nonantum. Mr. Eliot continued preaching through a part of the winter and the following spring. Many of the prominent ministers and laymen often attended these meetings, and sympathized and assisted as actively as possible in his work. Among the foremost of these were Rev. Thomas Shepard, Major Gookin and Mr. Dunster, of Cambridge. It was early realized that these Indians must be reduced to ways of civilized life as well as taught Christian doctrine. It was soon seen that they must be taught something of the industrial arts. A large tract at Nonantum was set apart for the occupancy of the Indians, and it was sought to gather all within the neighboring towns to this place. Those who came were encouraged to cultivate farms and build better houses. They were furnished with farming and carpenter's tools, etc. They surrounded their town with ditches and stone walls, planted orchards and laid out regular roads and streets, enclosing their fields with fences. The young men were taught trades; many learned farming by working upon the farms of the English.

At Nonantum (where all Indian history for Cambridge and other towns near by centres at this period) the first civil laws for regulating an Indian community were established. The success of the colony at Nonantum had encouraged Mr. Eliot to widen his efforts, and itinerant teachers were fitted among the natives and sent to the various tribes to open the way for Mr. Eliot; and six communities of "Christian Indians" had been established by the efforts of Mr. Eliot and Major Daniel Gookin, who had been made superintendent of the general work in New England. These communities were located in 1674 in what are now the towns of Canton, Grafton,

Marlborough, Tewksbury, Littleton and Hopkinton. Some five or six others, called the "New Praying Towns," were started. But we must follow the fortunes of the Nonantum village.

In 1650, at the earnest wish of the friends of the Christian Indians, led by Mr. Eliot, a township of six thousand acres, on the Charles River, at Natick, was granted for the use of said Christian Indians for a town. This Indian town was regularly laid out in 1651, and thither that year Waban and the Nonantum Indians removed, and thereafter became identified with that flourishing community.

In Bacon's "History of Natick" this town is described as consisting of "three long streets, two on the north side and one on the south side of the river, with a bridge eighty feet long, and eight feet high, and stone foundations, with the whole being built by the Indians themselves. To each house on these streets was attached a piece of land. The houses were in the Indian style." But one of the houses was built in English style, large and commodious. This was used on week-days as a school-house, and as a church on Sundays.

Waban was chosen ruler of the town and proved a wise, prudent and useful leader. He was active in gathering the Indian church at Natick. He died in fullness of years, having survived the terrible disappointments and shared the persecutions imposed upon the Christian Indians by the bitter prejudices of the people at large during the war with Philip and his allies, 1675-77. When, to satisfy the popular rage, their village was broken up, and all were seized and carried down the harbor and imprisoned upon Deer Island through the winter and spring, Waban, then seventy-five years old, went with them and shared all their privations, and lived to return again with them to their village, though, as Major Gookin relates, he was near dying at their return to Cambridge, where they were received and kindly treated by many who had formerly known them. Waban himself and some others of those who were very sick were received into Major Gookin's own house and cared for by himself and wife and friends till they recovered. There was no place where the Indians had more friends, or more powerful friends, than in Cambridge. Captain Thomas Prentice was the first of the military leaders to conduct the friendly Indians as soldiers into the war, and commended them earnestly for what they accomplished. The leading men of the Colony, the Governor and Council and the magistrates, and nearly all the military leaders believed in the Christian Indians, and urged their employment in the war; but the bitter jealousy and prejudice of the people prevailed for the time, and the Indians, so willing and proud to serve, and so much more capable of carrying on the peculiar tactics of Indian warfare than the slow and cumbersome ranks of the colonial militia, were thus shut out, persecuted, insulted, and many driven into hostility by the popular frenzy against all

Indians. When the General Court finally decided, by the advice of all the highest military leaders, that an Indian company should be raised and put into the field, and carried out the order, with Capt. Samuel Hunting as the captain, our arms first began to prevail and the hostile Indians to lose heart. An attempt, also at Cambridge, was made to impart a liberal education to some choice Indian youths; Mr. Eliot proposed and the London Society were pleased to try the experiment. Many youths were started upon the course, but few survived the training to enter the colleges. Most of them died from confinement or changed habit of diet, or got disheartened by their unequal competition with Englishmen. There were two very promising youths from Martha's Vineyard, named Joel and Caleb. Joel, the most hopeful of these, when within a few months of taking his degree, went home for a brief visit, and on the return passage the vessel was wrecked off Nantucket Island and Joel was drowned. Upon the Triennial Catalogue of Harvard College, in the year 1665, appears the name of the only one of these Indians ever graduated—"Caleb Cheeshahteaumuck, Indus." Caleb, not long after he took his degree, died at Charlestown of consumption. The history of the Indians of Cambridge closes really with the end of the Nonantum Colony and its merging in Natick. The latter continued as an Indian town from 1651-1762. Thomas Waban, son of the first Waban, was fairly well educated and was town clerk for many years. Thomas Waban, Jr., was his son, and both joined in a deed to Samuel Umpatowin in 1719. The church was formed in 1660, and was broken up in 1716. In 1749 the Indian population of the town was 166. In 1797 it was twenty, and in 1826 none were left.

Besides Rev. Mr. Eliot and Major Gookin, the principal men engaged in this effort to Christianize the Indians lived in Cambridge, so that the town may well deserve its distinction as the seat of America's first and greatest University. The General Court appointed one of the English Magistrates to join with the chief ruler of the Indians in keeping a higher court among them; and this court had the power of the usual County Court. The first magistrate appointed was Daniel Gookin, in 1656; and for about three years of his absence, soon after, Major Humphrey Atherton was appointed; but he dying at the end of that time, Major Gookin was again appointed, and served until the abrogation of the Colonial Charter, in 1686. The record of a court held by him among the Indians at Wabquissit in 1674, illustrates his course of proceeding.

Mr. Eliot preached a sermon, and "then I began a court among the Indians. And first, I approved their teacher, Sampson, and their constable, Black James, giving each of them a charge to be diligent and faithful in their places. Also I exhorted the people to yield obedience to the gospel of Christ, and to those set in order there. Then published a warrant, or

order, that I had prepared, empowering the constable to suppress drunkenness, Sabbath-breaking, especially pow-wowing and idolatry; and, after warning given, to apprehend all delinquents, and bring them before authority to answer for their misdemeanor; the smaller faults to bring before Wattasacompanum, ruler of the Nipmuck country; for idolatry and pow-wowing, to bring them before me."

It may be of interest to add, that the Society for the Propagation of the Gospel among the Indians has held its organization to the present, having been active, more or less, in dispensing the funds among the remnants of the New England tribes; and nearly always, I think, the directors have been chiefly residents of Cambridge, and worthy successors of Eliot and Gookin.

CHAPTER III.

CAMBRIDGE—(Continued).

ECCLÉSIASTICAL HISTORY.

BY REV. ALEXANDER MCKENZIE, D.D.

THE founding of Cambridge was a part of the great religious and political movement of the sixteenth and seventeenth centuries. It was a Puritan movement, having its rise in England, but accomplishing its chief work in this western continent. Our own eminent historian has written: "Civilized New England is the child of English Puritanism. The spirit of Puritanism was no creation of the sixteenth century. It is as old as the truth and manliness of England." Another of our historical writers has given it as his judgment that if it had not been for Puritanism political liberty would probably have disappeared from the world; and that the time of Cromwell's triumph was the critical moment of history.

It is not necessary to trace the course of events which the name Puritan suggests. The connection of our own history with it can be briefly told. The authority of the Church of Rome had been renounced, but there came in its place the authority of the Church of England. Ecclesiastical government was vested in the King and the nobility. They ruled, and the people were expected to submit. The statutes were many and explicit, and there were enough martyrdoms to prove their force. "The truth and manliness of England" could not render an unbroken assent and an unflinching obedience. Many refused to be content with the transfer of authority and the advantage which had come with it. They wanted a larger reformation. From the nature of their demand they were called Puritans. Their demands were broad and were steadily enlarged. Liberty, reform, purity, religion mark the progress of their thought and the increase of their purpose. For the most part, they proposed to remain in the national church, there to

work for its improvement. To what they deemed wrong they would not consent, but they would not separate themselves from the church which they loved and in which they had all the rights to which any were entitled. Against them was turned the force of State and Church. The Court of High Commission was set up for their harm and the cruelty of the English Inquisition directed against as good and loyal men as England ever knew. Clergymen were deposed, imprisoned, killed. Against Englishmen such methods have never prevailed. Violence failed of its end when it encountered such men. When James came to the throne the Puritans hoped for better things. They appealed to him for a truer Sabbath, a shorter liturgy, better music in the churches, and for ministers who should combine ability, fidelity and integrity. The King granted them an interview at Hampton Court and replied to them in terms which left no hope. "If this be all your party have to say, I will make them conform, or I will harry them out of this land, or else worse." That was in 1604. In 1605 Thomas Shepard was born.

There was nothing good to be looked for in England. Was there any hope beyond its shores? Some thought so and crossed to the Low Countries. Some concealed themselves and waited. Some had already left the National Church. As early as 1567, perhaps, there was "the Privye Church in London." About 1580 there was a permanent Congregational Church of Englishmen. The new churches had their own teachers and conducted their own affairs. The Congregational Church at Scrooby, in Nottinghamshire, with Clyfton, Robinson, Brewster, and Bradford, removed to Amsterdam and Leyden, and finally crossed the wide sea and found a sanctuary and a home, and made an illustrious record of faith and devotion.

Yet, in 1620, only a few of the Puritans were Pilgrims. But their principles were gaining power. The contests with James during his troubled reign increased the force of the people as against the authority of the King. His methods were not suited to win approbation. "I hear our new King hath hanged one man before he was tried. 'Tis strangely done." Four years before James disappeared the Court of High Commission renewed its severity and made it more certain that liberty must consent to exile. Buckingham sought to beguile men whom he could not suppress, and hindered their action by the hopes he aroused. By degrees they came to see that all this meant nothing; more and more, there was talk of making a New England. John White, rector of Trinity Church in Dorchester, on the Channel, proposed to the ship owners to found a settlement on these shores, that the sailors who came here might have a home when they were not at sea, so that their spiritual interests might be cared for when they were far from the churches. Not very much came of the project, which perhaps meant more than was avowed. Soon men of means were planning a colony here.

They obtained the charter under which Massachusetts lived for fifty-five years, and other ships sailed "into the West as the sun went down." Naumkeag was settled and became Salem. The charter said nothing of religious liberty. It is probable that the colonists thought they could secure this by sailing three thousand miles, and that the government thought it could be prevented, however far away. Four weeks from the arrival at Naumkeag the colonists formed themselves into a church, assenting to a covenant and ordaining a minister. It does not appear that they at first intended to leave the Church of England. But they had come "to practise the positive part of church reformation, and propagate the Gospel in America," and this was the form which their wisdom approved and their position demanded. If they had not formally anticipated this, they were, at least, prepared for it. Here was another Congregational Church upon our coast.

The Puritan spirit continued to assert itself in England. In 1629, Aug. 26th, John Winthrop and eleven others entered into an agreement at Cambridge, "beneath the shadows, and, perhaps, within the very walls of that venerable University, to which New England was destined to owe so many of her brightest luminaries and noblest benefactors"—"Upon due consideration of the state of the Plantation now in hand for New England, . . . it is fully and faithfully agreed amongst us, and every one of us doth hereby freely and sincerely promise and bind himself, on the word of a Christian, and in the presence of God, who is the searcher of all hearts, that we will so really endeavor the prosecution of this work, as, by God's assistance, we will be ready in our persons, with such of our several families as are to go with us, and such provisions as we are able conveniently to furnish ourselves withal, to embark for the said Plantation by the first of March next, at such port or ports of this land as shall be agreed upon by the Company, to the end to pass the seas (and in God's protection), to inhabit and continue in New England." There were certain provisions which prudence dictated, but which proved no impediment, and in 1630 they came in the "Arbella" to Salem, bringing their charter, and with it the government of the colony. Before the close of that year seventeen vessels had crossed from the Old World to the New, and a thousand persons had come in them. The new colonists found much distress at Salem, from sickness and scarcity of food. After less than a week for rest and inquiry, Winthrop set out with a party to find a place of settlement which would be open to them and more promising. Mishawum, or Charlestown, was fixed upon as the capital town, and on the 30th of July, 1630, a church was organized with a covenant, and on the 27th of August the Reverend John Wilson was chosen teaching-elder and solemnly set apart for his sacred office. Mr. Wilson had been for several years a minister in the Church of England, but had been suspended and si-

lenced for non-conformity, and was ready to identify himself with those who were seeking a larger liberty. There was difficulty in securing a good supply of water at Charlestown, and many of the church moved across the river. Among these were the Governor, the minister, and other leading men. In this way the Church became the First Church in Boston, of which "some have been heard to say, they believed it to be the most glorious church in the world."

It is well to ask who these men were who were thus making a permanent political and ecclesiastical establishment on this continental Western Reserve. There can be no better witness than our own historian, Palfrey. He quotes the words of "the prejudiced Chalmers": "The principal planters of Massachusetts were English country gentlemen of no inconsiderable fortunes; of enlarged understandings, improved by liberal education; of extensive ambition, concealed under the appearance of religious humility." For himself he writes in a more genial temper: "The Puritanism of the first forty years of the seventeenth century was not tainted with degrading or ungraceful associations of any sort. The rank, the wealth, the chivalry, the genius, the learning, the accomplishments, the social refinements and elegance of the time were largely represented in its ranks." "The leading emigrants to Massachusetts were of the brotherhood of men who, by force of social consideration as well as of intelligence and resolute patriotism, moulded the public opinion and action of England in the first half of the seventeenth century." "In politics the Puritan was the liberal of his day." "They will live in history," said another eminent citizen, "as they have lived, the very embodiment, of a noble devotion to the principles which induced them to establish a colony, to be 'so religiously, peaceably and civilly governed' as thereby to incite the very heathen to embrace the principles of Christianity."

Such were the men who began the ecclesiastical history of the Massachusetts Colony to which Newtown belonged. The circumstances under which they came here have been already alluded to, yet it is just to let one of their own number speak. John Winthrop had been chosen Governor before he left England. He was then forty-two years old, a scholar, a statesman, of good rank and generous property. "Commanding universal respect and confidence from an early age, he had moved in the circles where the highest matters of English policy were discussed by men who had been associates of Whitgift, Bacon, Essex and Cecil." He has left a statement of "Reasons to be considered for justifieinge the undertakers of the intended Plantation in New England, and for encouraginge such whose hartes God shall move to ioyne them in it." These reasons need not be given here in full; yet they should be read, that we may know what purposes and thoughts moved those into whose labors we have entered. A few points may be cited here.

"1. It will be a service to the Church of great conse-

quence to carry the gospel into those parts of the world.

"2. All other churches of Europe are brought to desolation, and our sinnes, for which the Lord be- ginneth already to frowne upon us and to cutte us short, doe threaten evil times to be coming upon us, and whoe knowes but that God hath provided this place to be a refuge for many whom he means to save out of the generall callamity? . . .

"3. This land growes weary of her inhabitants. . . .

"4. The whole earth is the Lord's garden, and he hath given it to the sonnes of men; . . . why then should we stand striving here for places of habitation, etc.? . . . and in the mean time suffer a whole continent as fruitful and convenient for the use of man to lie waste without any improvement?

"6. The Fountains of Learning and Religion are soe corrupted as (besides the unsupportable charge of their education) most children are perverted, corrupted and utterly overthrowne by the multitude of evill examples, etc., etc.

"9. It appears to be a worke of God for the good of his Church, in that he hath disposed the hartes of soe many of his wise and faithful servants, both ministers and others, not only to approve of the enterprise, but to interest themselves in it, some in their persons and estates, others by their serious advise and helpe otherwise, and all by their prayers for the wealfare of it."

Having considered this general statement of the motives and sentiments of the leading minds which were first here, we are prepared to take up our local history. But we must return to England to find the beginning of our church life. The early history of Cambridge, much more than the later, centres in a few men, whose personal character and teaching gave form to the thought and action of the churches. This was especially true at the beginning and warrant, indeed requires, a presentation of the men who were the leaders. Cambridge was peculiar in having had a double beginning, under the guidance of men of special eminence.

The first man to be named was Thomas Hooker, who was born in Leicestershire, England, in 1586. He was a graduate and fellow of Emmanuel College, Cambridge. Of his youthful promise Cotton Mather makes this record: "He was born of parents that were neither unable nor unwilling to bestow upon him a liberal education; whereunto the early, lively sparkles of wit observed in him did very much encourage them. His natural temper was cheerful and courteous; but it was accompanied with such a sensible grandeur of mind as caused his friends, without the help of astrology, to prognosticate that he was born to be considerable." He began to preach while he was connected with the university. He pursued his ministry at Chelmsford and had great success in it. An incident which has been preserved

illustrates his fervor. He preached from time to time in his own county, and one of the chief burgesses of the town of Leicester, who was for some reason greatly opposed to him, set a company of fiddlers to play in the church-yard to counteract and break up the preaching. But the preacher's voice was strong and clear, and was easily heard above the noise of the hostile strings. The burgess found himself listening to the preacher and went to the church-door that he might hear better, and was won by the earnest minister and made a friend of the faith which he had striven to oppose. Results of this kind were of small account to those who were ruling the church in their own interests. Mr. Hooker was a firm adherent to the doctrines of the Church of England, but to some of its ceremonies he could not conform. He was too conspicuous to be tolerated in his dissent, when obscure men were sent to the prison and beyond. In 1630 Mr. Hooker was silenced for non-conformity by a spiritual court in session at Chelmsford. It is a testimony to the man that forty-seven ministers of the Church of England sent to the Bishop of London a petition in his behalf, in which they bore witness "that they knew Mr. Hooker to be orthodox in his doctrine, honest in his life and conversation, peaceable in his disposition, and in no wise turbulent or factious." It was of no avail. The decree had been signed and sealed. But he continued to labor for the religious welfare of the community in private ways. Even this he could not pursue. He had been ordered to appear before the Court of High Commission, and put under a bond of fifty pounds. His friends advised him to forfeit the bond and avoid the perilous trial. They paid the bond and he crossed over to Holland, where for three years he carried on his ministry. For a part of the time he was associated at Rotterdam with the Rev. William Ames, who was abroad for the same reasons which had exiled Hooker. Mr. Ames is reported to have said that "he had never met a man who was equal to Mr. Hooker as a preacher or a learned disputant." But he was not willing to remain in a strange and foreign land. At that time the Puritan emigration was going forward, and among those who had gone out seeking after a country of their own were many who knew Mr. Hooker and appreciated his greatness. Some had been under his ministry. There was a strong desire that he should go with them across the sea and be their teacher in the New World. He regarded this as a divine call. It was enforced by the impossibility of remaining in England. He had returned, but the officers of the law were at once in pursuit of him. He decided to accede to the request which had been made. He kept out of the public view as much as he could until July, 1633, when he sailed from the Downs. Even then he was constrained to hide himself until the ship was well out at sea. After a voyage of six weeks the ship reached Boston Harbor. There were two

other passengers who were to be honorably prominent here—John Cotton, who at once was chosen teacher of the First Church in Boston; and Samuel Stone, who was to be Mr. Hooker's associate through all his ministry in New England. The voyage must have been interesting. The men enjoyed their liberty and improved it. There was a sermon every day, and usually three. To Mr. Cotton a child was born, who, after his baptism in Boston, was named Seaborn. The name has a quaint look in the Latin Quinquennial of Harvard College, with the class of 1651,—Marigena Cotton. It is the second name in the list, which indicates the rank of the father. It is said that there was no playfulness among the Puritans, but it is at least in tradition that the people, said regarding the ministers who came in the "Griffin," that three great necessities would now be supplied, for they had Cotton for their clothing, Hooker for their fishing, and Stone for their building.

The ministers were warmly welcomed, and with good reason. They were an accession of strength. The colonists at that time were "men of eminent capacity and sterling character, fit to be concerned in the founding of a State." Dr. Palfrey has finely said: "In all its generations of wealth and refinement, Boston has never seen an assembly more illustrious, for generous qualities or for manly culture, than when the magistrates of the young colony welcomed Cotton and his fellow-voyagers at Winthrop's table."

Samuel Stone was born at Hertford, in England, and was educated at Emmanuel College. He was for a time a minister at Towcester, in Northamptonshire, where his ability and industry were conspicuous. But he could not yield a full conformity to the ceremonies of the Established Church, and it seemed to be good to him, as to so many others, to seek a more open country. His connection with Mr. Hooker was a fortunate one for them both. Those who had invited Mr. Hooker to be their minister preceded him. They began to make their settlement at Mount Wollaston, in what is now the town of Quincy, where Captain Wellaston had come, with some thirty or forty persons, a few years before. But in Governor Winthrop's journal, under the date of August 14, 1632, we have this entry: "The Braintree company, which had begun to sit down at Mount Wollaston by order of court, removed to Newtown. These were Mr. Hooker's company." It is supposed that they were called the Braintree Company because they came from Braintree, a town about forty miles from London. What Newtown was at that time will be learned from another part of this history. But the coming of these settlers was a notable addition to its numbers and character. The settlement had begun in 1631. There was a project for a town which should be the seat of government for the colony. In the judgment of the Governor and assistants and others "it was a fit place for a beautiful town." The project was not carried out, but the new

town was a place of importance and had the promise of growth. The town was carefully laid out and made a good appearance. A visitor early described it as "one of the neatest and best compacted towns in New England, having many fair structures, with many handsome contrived streets. The inhabitants most of them are very rich and well stored with cattle of all sorts." There were very few persons here, but there were men of force and enterprise among them, and they were destined to permanence and renown. How many came from the Braintree Company cannot be told. But there was a notable growth, so that in 1632 there were nearly a hundred families in the town. But there was no church here and no minister, and there is no record of public religious services. But Prince's Annals for 1632 tell that in "this year is built the first house for public worship at Newtown (after called Cambridge), with a bell upon it." The records of the town do not mention this house, but there is an agreement in December, 1632, "that every person under subscribed shall meet every first Monday in every month, within the meeting-house, in the afternoon, within half an hour after the ringing of the bell." The meeting-house was on the west side of Water, (now Dunster) Street, near its intersection with Spring, now Mt. Auburn Street. The site is marked by a stone in the foundation of the modern building now upon the ground. It must have been small and plain. There is no description of it, but the church erected about the same time in Boston had mud-walls and a thatched roof. An order had been passed that in Newtown no man should "build his chimney of wood, nor cover his roof with thatch." It is probable that the house here was of logs. Many years after its erection a vote was passed in town-meeting that the church should be repaired "with a four square roofe, and covered with shingles." It was a startling change to those who were accustomed to the cathedrals and stately churches of England, to come into these dark and narrow walls. It was a part of the price they paid for the liberty they sought, and they were not the men to complain of the terms. They were equal to the demands of their place and their work.

Upon their arrival "Mr. Hooker and Mr. Stone went presently to Newtown, where they were to be entertained." We can imagine the gladness of the coming. On the 11th of October, 1633, Winthrop makes the brief record. "A fast at Newtown, where Mr. Hooker was chosen pastor and Mr. Stone teacher in such a manner as before at Boston." The church was the eighth gathered in the Massachusetts Bay colony, but the precise date of its organization has not been preserved.

Only a few months later than this the people of the town were planning for a removal. At the General Court, in May, 1634, "Those of Newtown complained of straitness for want of land, especially meadow, and desired leave of the Court to look out either for enlargement or removal, which was granted." At the

session in September, 1634, this question of the removal of Newtown occupied nearly all the time. In the previous July, "Six of Newtown went in the 'Blessing' (being bound to the Dutch plantation) to discover Connecticut River, intending to remove their town thither." The report was favorable, and the town asked permission to move. "It was alleged by Mr. Hooker as a fundamental error, that towns were set so near each to other." Much objection was made, and enlargement was offered by Boston and Watertown, and the removal was not effected. It was but a temporary arrangement. In May, 1636, Governor Winthrop has to enter in his journal, "Mr. Hooker, pastor of the Church at Newtown, and the rest of his congregation, went to Connecticut; his wife was carried in a horse-litter, and they drove 160 cattle, and fed of their milk by the way." Trumbull's account of the journey is worth copying. "About the beginning of June, Mr. Hooker, Mr. Stone, and about a hundred men, women and children, took their departure from Cambridge, and traveled more than a hundred miles, through hideous and trackless wilderness, to Hartford. They had no guide but their compass, made their way over mountains, through swamps, thickets, and rivers, which were not passable but with great difficulty. They had no cover but the heavens, nor any lodgings but those which simple nature afforded them. They drove with them a hundred and sixty head of cattle, and by the way subsisted upon the milk of their cows. Mrs. Hooker was borne through the wilderness upon a litter. The people generally carried their packs, arms and some utensils. They were nearly a fortnight on their journey. This adventure was the more remarkable, as many of this company were persons of figure, who had lived in England in honor, affluence and delicacy, and entire strangers to fatigue and danger." Thus did Newtown found Hartford.

Although Mr. Hooker was here but a short time, still his work, and through him the influence of the Church, were extended. His influence in ecclesiastical affairs reached beyond the limits of his own township. There was need of wise leadership. The principles of church life were clear, but the methods were not so plain. The conditions were new and there was no definite agreement upon modes of administration, "until Mr. Cotton and Mr. Hooker came over, which was in the year 1633, who did clear up the order and method of Church government, according as they apprehended was most consonant to the Word of God." Their maturity and experience were of the highest value to the new churches and communities. Hooker worked with the other ministers for the common good of the colony. He was one of the preachers at the Thursday Lectures. He was a counselor and friend of men in public station. He was appointed by the General Court "to dispute" with Roger Williams in his controversy with the authorities. When Endicott cut the cross from the English

flag, Mr. Hooker yielded to public and private importunity and wrote his opinion "Touching the Crosse in the Banners." He wrote calmly and plainly: "Not that I am a friend to the crosse as an idoll, or to any idollatry in it; or that any carnal fear takes me asyde and makes me unwilling to give way to the evidence of the truth, because of the sad consequences that may be suspected to flowe from it. I blesse the Lord, my conscience accuseth me of no such thing; but that as yet I am not able to see the sinfullness of this banner in a civil use." It is plain that the influence of this minister was much wider than his parish bounds, and that the influence was for order and peace, and for the establishment of the stable principles of life. His influence did not end with his removal to Connecticut. But at this point of his removal the ecclesiastical history of Cambridge begins again. We may, for the present, take leave of Hooker with the elegiac lines written by Cotton in his honor:—

"To see three things was holy Austin's wish,—
Rome in her flower, Christ Jesus in the flesh,
And Paul in the pulpit; lately men might see
Two first, and more, in Hooker's ministry.

"Zion in beauty is a fairer sight
Than Rome in flower, with all her glory dight;
Yet Zion's beauty did most clearly shine
In Hooker's rule and doctrine, both divine."

The history which we are tracing begins again with the Puritan movement in England. Again it is one man with whom, at first, we have to do.

Mention has already been incidentally made of Towcester. It is a small town in Northamptonshire. The old brick houses are, for the most part, on one street, which has a very red appearance as the visitor looks upon it. He is struck with the unusual number of inns—The Talbot, Albion, Plough, Dolphin, Wheat Sheaf, Nelson's Arms—and is unable to account for their presence, or to find for them any visible means of support. They are easily accounted for by the fact that the town was once on the stage road between Chester and London. Then, doubtless, there was a stir of travel and business. This is of the past. Quiet prevails in the houses and in the bearing of the people. There is a fine stone church, a part of which dates from the end of the twelfth or the beginning of the thirteenth century. The massive tower goes back to Edward IV. Around the church are the graves of many generations, and near by is the pleasant vicarage, where the Rev. James Mountain resides. Across the lane is a cabinet-maker's establishment, which, in the old time, was a home for monks. In the wall around the yard are niches which once must have held sacred images. Here the good men had their daily walk and meditation. At a later day the house was used for the parish schools. Something of modern life is seen in the town in a fine building devoted to municipal purposes. A Congregational and a Baptist Church, and perhaps others, mark the presence of dissent, though they are much less impressive than the house of the

establishment. There are two or three hamlets outside the main town, and nearly three thousand people now inhabit the pleasant quietness.

With this English town Cambridge has a natural and interesting connection. For it was in Towcester the man was born whose name was to be historic among us. The old church-book in Towcester has one brief record before which a Cambridge man pauses in reverence. In the long list of baptisms reaching through centuries, he reads: "Thomas sonne to William Shepard, 9 November." He was borne on the fifth of November, 1605, 'called the Powder Treason Day,' at that very houre of the day when the Parliament should have been blown up, . . . which occasioned my father to give me the name *Thomas*, because he sayed I would hardly *believe* that ever any such wickedness should be attempted by men against so religious and good Parliament." William Shepard was a prosperous grocer, "a wise, prudent man, the peacemaker of the place." As there was in Towcester no preaching which satisfied him, he removed to Banbury that he and his household might be "under a stirring ministry." The mother died when Thomas was four years old. His childhood had little brightness or promise in it. He was sent, when very young, to his grandparents at Fossecut, "a most blind town and corner," where he was "put to keep geese, and other such country work," while his own interests were neglected. Then he was sent to his uncle at Apthorp, "a little blind town," where he learned "to sing and sport, as children did in those parts, and to dance at their Whitson-Ales." When he returned home he was harshly used by his stepmother, and his father sent him to a free school in Towcester, kept by a Welshman, who was very cruel to him, so that he was discouraged in his lessons, and often wished he was a keeper of hogs and beasts instead of a school-boy. He was ten years old when his father died, and his brother took the place of both father and mother to him. He had been in a hard school; but he had received strong religious impressions and had taken an earnest hold upon life. At fourteen, though "very raw and young," he was admitted a pensioner at Emmanuel College. Here he faced new perils. He became proud of his attainments, neglected his religious duties, and strayed into bad company and evil ways. Shame and remorse came to him, and the searching preaching of the master of the college persuaded him to make for himself a serious and manly life. "I saw the Lord gave me a hart to receive Xt., with a naked hand even a naked Xt., and so hee gave me peace." He left college with a high reputation for scholarship and with the customary honors of the university, and with new purposes and desires.

Before we go further we ought more distinctly to note the influence of Emmanuel College upon our ecclesiastical life. It was the college of Thomas Hooker, Samuel Stone, Thomas Shepard, John Har-

vard. At Cambridge the Puritan influence was especially strong, and at Emmanuel the strongest. It was the heart of the greatest movement of modern times. Emmanuel was founded in 1584. Walter Mildmay, chancellor and counselor of Elizabeth, purchased the ground, on which a university of the Black Friars, the Preaching Friars, had stood, and on this rose the college which he founded and endowed. He was a leader among the Puritans, and he sought in his way to advance and extend their principles. The story goes that the Queen met him soon after the college was opened, and greeted him with, "So, Sir Walter, I hear you have erected a Puritan foundation." "No, madam, far be it from me to countenance anything contrary to your established laws; but I have set an acorn, which, when it becomes an oak, God alone knows what will be the fruit thereof." Fifty years later, when Harvard was a student, Fuller wrote: "Sure I am at this day it hath overshadowed all the university." Even then its shadow, rather its brightness, had fallen on a land three thousand miles away. It was a stubborn, wilful college. The traditions required that churches and chapels should be built on a line running east and west. Mildmay set his chapel on a line running north and south. The breaking from tradition was the assertion of liberty. On the lofty pediment are the arms of the college—a lion rampant, holding a chaplet, which drew out this tribute in Greek:

"Thy emblems fair, and lion bold,
Well pleased Emmanuel's House, I see;
If such a rank thy lions hold,
What mighty things thy men must be!"

This was the place, this was the life, into which the boy Thomas Shepard entered, whose air he breathed, whose teachings he received, whose masters he revered, whose scholars he knew, from which he came forth a man. He took his Bachelor's degree in 1623 and became Master of Arts in 1627. His life was beginning; what should he do next? He had been used to Puritan training from his youth up; but, not without scruple, he received deacon's orders in the Established Church. He was given an appointment as a lecturer. This was a Puritan office, designed to furnish preachers where there was no proper ministry. The appointment was for three years. It was a needy place to which he was sent, but his labors were successful, and there he won to himself his steadfast friend, Roger Harlakenden, whose mortal part was afterwards laid in our old burying-ground where Shepard was to join him.

It is almost telling Hooker's story over again to relate that the young minister was not allowed to do his work in peace. He was charged with being "a non-conformable man, when for the most of that time I was not resolved either way." He finished his three years and remained a few months longer, at the request and charge of the people, when he was summoned before Laud, the Bishop of London—"our

great enemy," Winthrop calls him. The Bishop was more angry than was becoming to his sacred office, and his sentence was more explicit than pastoral: "I charge you that you neither preach, read, marry, bury, or exercise any ministerial functions in any part of my diocese; for if you do, and I hear of it, I'll be upon your track and follow you wherever you go, in any part of this kingdom, and so everlastingly disenable you." Laud was building better than he knew. The story need not be followed out in its details. The young man spent a few months with the Harlakendens, becoming more fixed in his Puritan ideas. "Then the Bishop fired me out of this place." He accepted an invitation to Yorkshire, where he was chaplain to the family of Sir Richard Darley. There he was kindly treated, very kindly, inasmuch as the knight's kinswoman, Margaret Tauteville became Margaret Shepard. But the old hostility found him out and he came to Northumberland. He removed again and was silenced again. Then he "preached up and down the country, and at last privately in Mr. Fenwick's house." While he was thus being loosed from Church and country, divers friends in New England asked him to come over to them, and many in Old England desired him to go and promised to accompany him. He resolved to accede to their request. His "little booke," with his own account of his life, remains as an invaluable memorial of the man. In this he gives the reasons for his consent to leave the country. "I saw no call to any other place in Old England." "I saw the Lord departed from England when Mr. Hooker and Mr. Cotton were gone, and I saw the hearts of most of the godly set and bent that way, and I did think I should feel my miseries if I stayed behind." "My dear wife did much long to see me settled there in peace and so put me on to it." "Tho' my ends were mixt and I looked much to my own quiet, yet the Lord let me see the glory of those liberties in N. England, and made me purpose, if ever I come over, to live among God's people as one come out from the dead, to his praise." "I did hope my going over might make them to follow me." "My liberty in private was daily threatened."

He sailed with his wife and child late in the year 1634. They encountered a violent storm and were nearly lost. They reached the land, where his child soon died and was privately buried. He began to question if he had gone too far in separating from the "Assemblies in England." He spent the winter in Norfolk, busy with his pen now that his lips were closed. In the spring he went up to London, where with difficulty he evaded the officers of the law, and in August, 1635, he sailed the second time, with his wife and another son, his brother, Harlakenden, and other precious friends. It was in the ship "Defence," "very rotten and unfit for such a voyage." Through many storms and many fears they were brought in safety; and on the 3d of October, 1635, they

reached Boston, where they were welcomed by many friends. On the second day after their arrival Shepard and his family came to Newtown, where he found Hooker and Stone, whom he had known in England. Hooker had been his teacher and counselor. Stone had succeeded to his lectureship, and had taken it to Towcester, where he had done much for his townspeople. It must have been helpful to Shepard to find these men ready to receive him and introduce him to his new work. The new-comers enjoyed for a few months the society of the veterans of 1632 and 1633, who were about to seek the wilds of Connecticut. Very serious and interesting their intercourse must have been. The arrival was well timed, for Shepard could take up the work of Hooker, the new settlers could purchase the houses which were to be deserted, and the new church could stand in the place of the old. The account of the transfer is given in the "little booke:" "Myself and those that came with me found many houses empty and many persons willing to sell, and here our company bought off their houses to dwell in until we should see another place fit to remove into, but having been here some time diverse of our brethren did desire to sit stille and not to remove farther, partly because of the fellowship of the churches, partly because they thought their lives were short and removals to near plantations full of troubles, partly because they found sufficient for themselves and their company. Herenpon there was a purpose to enter into church fellowship, which we did the yeare after, about the end of the winter."

The minister's house was in what is now the college yard, on the site now occupied by Boylston Hall. There Hooker lived and Shepard after him. The place of the meeting-house has been already mentioned. A few of the old families remained when their neighbors had gone, and became a part of the new community; for the affairs of the town passed into new hands and there was a new church. On the 1st day of February, 1636, the church was organized. The record of that day must be copied from the journal of Governor Winthrop, who was undoubtedly more than an eye witness:

"Mr. Shepard, a godly minister, came lately out of England, and divers other good christians, intending to raise a church body, came and acquainted the magistrates therewith, who gave their approbation. They also sent to all the neighboring churches for their elders to give their assistance at a certain day at Newtown, when they should constitute their body. Accordingly at this day there met a great assembly, where the proceeding was as followeth:

"Mr. Shepard and two others, who were after to be chosen to office, sat together in the elder's seat; then the elder of them began with prayer; after this Mr. Shepard prayed with deep confession of sin, etc., and exercised out of Eph. v., that he might make it to himself a holy, etc., and also opened the cause of their meeting; then the elder desired to know of

the churches assembled what number were needful to make a church, and how they ought to proceed in this action. Whereupon some of the ancient ministers conferring shortly together gave answer: That the scripture did not set down any certain rule for the number; three (they thought) were too few, because by Matt. xviii. an appeal was allowed from three, but that seven might be a fit number; and for their proceeding they advised that such as would join should make confession of their faith and declare what work of grace the Lord had wrought in them, which accordingly they did. Mr. Shepard first, then four others, then the elder and one who was to be deacon (who had also prayed) and another member; then the covenant was read and they all gave a solemn assent to it. Then the elder desired of the churches that if they did appoint them to be a church, they would give them the right hand of fellowship. Whereupon Mr. Cotton (after a short speech with some others near him), in the name of the churches, gave his hand to the elder with a short speech of their assent, and desired the peace of the Lord's presence to be with them. Then Mr. Shepard made an exhortation to the rest of his body about the nature of their covenant, and to stand firm to it, and commended them to the Lord in a most heavenly prayer. Then the elder told the assembly that they were intended to choose Mr. Shepard for their pastor (by the name of the brother who had exercised), and desired the churches that if they had anything to except against him, they would impart it to them before the day of ordination. Then he gave the churches thanks for their assistance, and so left them to the Lord."

In this simple, reverent, democratic method the church entered upon a career which has already lasted for more than two hundred and fifty years. It was the union of men and women who were of one faith and of one character and purpose, and who were living together, and in fellowship with their neighbors, who were of a like mind. The covenant to which they agreed has not been preserved. We can readily believe that it was essentially the same as that of the First Church in Boston, which was probably written by Governor Winthrop:

"In the name of our Lord Jesus Christ, and in obedience to his holy will and divine ordinance.

"We, whose names are hereunder written, being by his most wise and good providence brought together into this part of America, in the Bay of Massachusetts; and desirous to unite ourselves into one congregation, or church under the Lord Jesus Christ, our head, in such sort as becometh all those whom he hath redeemed and sanctified to himself, do here solemnly and religiously (as in his most holy presence) promise and bind ourselves to walk in all our ways according to the rule of the gospel, and in all sincere conformity to his holy ordinances, and in mutual love and respect each to other, so near as God shall give us grace."

Concerning this covenant and its adoption on the other side of the river, the present distinguished representative of the name of the first Governor has said: "That old covenant is one under which any man might well be willing to live and to die. . . . Beyond all doubt, that day, that service, that covenant, settle the question that Congregationalism was to be the prevailing order, and for a long time the only order in early New England. Nor, let me add, have I ever doubted for a moment that Congregationalism was the best and the only mode of planting and propagating Christianity in this part of the country in those old Puritan times."

This ancient covenant, with the necessary change in the opening sentence of the covenant proper, is still in use in the First Church in Cambridge.

The fathers did not think it necessary to make a statement of doctrine which should be original and peculiarly their own. They agreed substantially with other reformed churches. They had separated from the Church of England chiefly upon matters of worship, discipline and government, and found it desirable to make a certain confession for their churches. Accordingly in 1648 they formed and published "The Cambridge Platform of Church Discipline, gathered out of the Word of God, and agreed upon by the elders and messengers of the churches assembled in Synod." The name of this platform indicates the place of its formation. The Westminster Assembly had just made its historic statement of faith, and to this the Cambridge Synod unanimously expressed its assent. In the Preface it is said, "This Synod, having perused and considered, with much gladness of heart, and thankfulness to God, the Confession of Faith published of late by the reverend assembly in England, do judge it to be very holy, orthodox and judicious in all matters of faith; and do therefore freely and fully consent thereunto, for the substance thereof. Only in those things which have respect to church government and discipline, we refer ourselves to the platform of church discipline agreed upon by this present assembly; and do therefore think it meet, that this Confession of Faith should be commended to the churches of Christ amongst us, and to the honored Court, as worthy of their due consideration and acceptance."

We have, therefore, the constitution under which the church here began its work. The documents are of the highest interest, not only for their use here, but as a part of the history of the times, and a memorial of the thought and life of earnest men who were working out a great purpose.

The date of Mr. Shepard's ordination is not known. At the organization of the church notice was given that it was proposed to make him their pastor, and his ordination must have soon followed. The Shepard company numbered some sixty persons, as nearly as can now be determined, and with them were some who had remained when the Hooper com-

pany went away. The new church included among its members men of influence, whose names were prominent in other relations. There was Roger Harkenden, of that house which protected and supported the young Shepard and his family in the days of their persecution, who came with them to this country. "He was a very godly man, and of good use both in commonwealth and in church;" and Richard Champney, ruling elder, descended from Sir Henry Champney, one of the thirty brave warriors who fought in 1066 under William the Conqueror; and Samuel Green, who came in 1632, for fifty years a printer, whose greatest work was the Indian Bible; and Matthew Day, the first known steward of the college; and Thomas Cheesholme, the second steward of the college; and Edward Winship, for many years honored by election to public office; and Nathaniel Eaton, of whom we do not boast, though he was the first head of the embryo college; and the first of the Sparhawks, the house which in different generations gave the church four deacons, and served the community in other offices of trust; and Edward Collins, the deacon, father of famous sons; and Henry Dunster, the first president of the college, "as true a friend," says Mr. Quincy, "and as faithful a servant as this college ever possessed;" and Thomas Danforth, Daniel Gookin, Herbert Pelham, Elijah Corlet. These selected names suggest a goodly list for the day of beginnings. We should add John Bridge, who owned land here in 1632, who was early made a deacon in the church, and was selectman and representative, whom Thomas Shepard named when he was giving his reasons for coming hither. "Diverse people in Old England of my dear friends desired me to goe to N. E., there to live together, and some went before and writ to me of providing a place for a company of us, one of which was John Bridge, and I saw diverse families of Xtian frends, who were resolved thither to goe with me." The statue of this stout-hearted Puritan stands on Cambridge common, in front of the church which bears the name of Shepard.

In any account of the early religious life of Cambridge special mention should be made of Margaret Shepard. She was evidently a woman of strong character, and her influence over her husband was constant and helpful. She was unwilling to stay at Buttercrambe, where he found her, and she came with him into the difficulties which were besetting him. Her faith and hope reached out to the land beyond the sea. She longed to see him established here in peace, and urged him to yield to the persuasions of his friends. His description of her and his manner of alluding to her are worth noting by those who imagine there was nothing tender in the Puritan character. "The Lord taught me much of His goodness and greatness, and when He had fitted a wife for me He then gave me her, who was a most sweet, humble woman, full of Christ, and a very discerning Xtian;

a wife who was most incomparably loving to me, and every way amiable and holy and endowed with a very sweet spirit of prayer." The ocean voyage was very hard for her, with her young child. To his son he writes that his mother "did loose her life by being carefull to preserve thine, for in the ship thou wert so feeble and froward, both in the day and night, that hereby she lost her strength and at last her life. The ship, in a storm, tumbling suddenly on the one side, my wife, having the child in her arms, was almost pitched with her head and child in her armes agaynst a post in the ship; and, being ready to fall, shee felt herself pluckt back by shee knew not what, whereby shee and the child were agayne preserved; and I cannot ascribe this to any other but the angels of God, who are ministering spirits for the heirs of life." When he has mentioned the formation of the church he adds: "A fortnight after my deare wife Margaret dyed, being first received into Church fellowship, which, as she much longed for the Lord did so sweeten it unto her, that she was hereby exceedingly cheered and comforted with the sense of God's love, which continued until her last gaspe."

The full plan of the New England fathers contemplated five church officers—the pastor and teacher, who were called elders, the ruling elder, deacon and deaconess. It does not appear that Cambridge had a deaconess, at least under that name. These officers were to be chosen and ordained by the church in which they were to serve. The pastor's special work was to "attend to exhortation, and therein to administer a word of wisdom." He was to apply the precepts of the Scriptures to the conduct of men. The teacher was to "attend to doctrine, and therein to administer a word of wisdom." The one, therefore, had what we should term the practical, and the other the doctrinal part of the present clerical office. Both were to administer the sacraments of the Church. Both, also, were "to execute the censures." The earliest church here had both pastor and teacher, Hooker and Stone, but in the church which took its place the two officers seemed to have been combined from the beginning. The ruling elder was to attend to the discipline of the church and to take the lead in all matters of business. "To feed the flock of God with a word of admonition, and, as they shall be sent for, to visit and pray over their sick brethren." The office was not of long continuance. In fifty years from the settlement of the country it had fallen into comparative disuse, although it was continued here until near the close of the century. The deacon was to be a man proved and found blameless. His was "to receive the offerings of the church and to keep the treasury of the church, and therewith to serve the table which the church is to provide for—as the Lord's table, the table of the ministers, and of such as are in necessity, to whom they are to distribute in simplicity." Some churches had one deacon, some two, some three. The number of elders varied in different churches.

The ruling elders in Cambridge, so far as there is any record, were Edmund Frost, who was made a freeman in 1636, and died in 1672; Richard Champney, a freeman in 1636, died 1669; James Clark, a freeman in 1647, ordained ruling elder in 1682, died 1699; James Stone, a freeman in 1665, ordained 1682, died 1683.

The deacons who served in the seventeenth century were Thomas Marriot, John Bridge, Nathaniel Sparhawk, Edward Collins, Gregory Stone, Thomas Cheeseholme, John Cooper, Walter Hasting, Nathaniel Sparhawk.

We have seen something of the appointments of the church in men and in principles; it may be interesting to look at some of the methods of their ecclesiastical life. "The public worship," says an early writer, "is in as fair a meeting-house as they can provide; therein, in most cases, they have been at great charges." If we could go within the simple building which first served for a sanctuary, we should find a rough room, divided by a central passage, and furnished with benches. On one side of the house the males would sit, and the females on the other. Very likely some of the men would have carnal weapons, for prudential reasons. The pulpit would be a stand or desk within a railing, and, in its plainness, in keeping with its environment. On the Lord's Day the bell would call the people, although, for some reason, we find that a drum was used at one time. In the town records for 1646 is an entry of "fifty shillings, paid unto Thomas Langhorne for his service to the town in beating the drum these two years past." It was common to have an hour-glass in the church, by which to measure the time of the services. When the people became able to arrange the meeting-house according to their idea of the fitness of things, the ruling elders had a seat below the pulpit, and the deacons a seat a little lower down, where they faced the congregation. The pulpit was then an elaborate structure, under a sounding-board. The boys had a place by themselves in one of the galleries, with a tithingman for their particular benefit. In 1666 "Thomas Fox is ordered to look to the youth in time of public worship." In 1669 there was complaint that sundry persons were spending their time unprofitably outside the meeting-house, and the constable was ordered to see "that they do attend upon the public worship of God."

In many cases the meeting-house was finished and furnished by degrees. At first benches were put in; then a man would obtain a deed of a space on the floor, some six feet square, and erect a pit, or pew, upon it. He was to keep his pew in repair and "maintain all the glass against it." When there was no such private arrangement the people had seats assigned to them according to rank or property or age. This was called "dignifying" the house. Here is an order for 1658: "That the elders, deacons and selectmen for the time being shall be a constant and settled power

for regulating the sitting of persons in the meeting-house from time to time as need shall require." We have the appointment for 1662; it runs this way: "The Committee for ordering the seating of people in the meeting-house, being met at the ordinary, appointed—

"Bro. R. Jackson's wife to sit there where Sister Kempster was wont to sit.

"Mrs. Upham with her mother.

"Ester Sparhawke in the place where Mrs. Upham is removed from. . . .

"Joanna Winship in the place where Ester Sparhawke was wont to sit. . . .

"Ens. Samuel Greene to sit at the table. . . .

"Goode Gates at the end of the Deacons' seats."

The congregation usually walked to the meeting-house or rode on horseback. For the convenience of those who rode, in 1665 "the Townsmen do order the Constables to make a convenient horse-block at the meeting-house and causeway to the door."

In the New England customs the congregation met as early as nine o'clock on Sabbath morning and about two in the afternoon. The services consisted of prayer, singing, reading and expounding the Scriptures, for it was generally considered improper to read them without exposition—"dumb reading," they called it. There was also a sermon by the pastor or teacher. As they accounted a man a minister only to his own congregation, when one was in the pulpit of another clergyman it was common for the ruling elders of the place to give him authority to speak in some such form as this: "If this present brother hath any word of exhortation for the people at this time, in the name of God let him say on." To "say on" was to "prophesy." An hour was regarded the proper length for a sermon, although upon occasions the preacher might "take another glass." The sermon was usually preached without a manuscript in the early days. The prayer was, of course, extemporaneous. Children were baptized in the meeting-house, generally on the next Sabbath after their birth. The pastor or teacher stood in the deacons' seats, as that was an "eminent place," and, with an address to the church and the parents and two prayers, administered the ordinance. "No sureties were required." The Lord's Supper was administered once in each month at the morning service. The form was very much like that which now prevails in Congregational Churches. Persons were received to membership in the church in public, but with more of examination and profession than is common now. There is now in the library of the New England Historic Genealogical Society a small manuscript volume in Mr. Shepard's writing, entitled, "The Confessions of Diverse Propounded to be Received and were Entertained as Members." There are fifty confessions, some of them very brief and some quite extended. Cases of discipline were more openly dealt with than is common now. This was in accordance with the spirit of the

times. Every Sabbath afternoon there was a contribution. One of the deacons stood up in his place and said, "Brethren of the congregation, now there is time left for contribution; wherefore as God hath prospered you, so freely offer." "On some extraordinary occasions," says an old writer, "as building and repairing of churches or meeting-houses or other necessities, the ministers press a liberal contribution, with effectual exhortation out of Scripture." Then the people passed up to the deacons' seat with their offerings. "The magistrates and chief gentlemen went first, then the elders, then all the congregation of men and most of them that are not of the church, all single persons, widows, and women in absence of their husbands." Money and papers were dropped into a box. If the offering were "any other chattel," it was set down before the deacons. The writer first quoted says, "I have seen a fairgilt cup, with a cover, offered them by one, which is still used at the Communion." It was customary for visitors in the congregation to make an offering, which was called "the strangers' money," and was often stipulated for by the clergyman as a perquisite of his office. At first the minister's salary was paid from the voluntary contribution made on the Sabbath, but this soon gave way to the system of taxation. In 1657 there is a vote in the town records, appointing the deacons or other townsmen "to make a levy of two hundred and forty pounds for the maintenance this year and full payment of the debts of our reverend pastor." In 1665 the selectmen "ordered that all persons that do contribute to the ministry of this place do, upon the first second day of May next, appear before the deacons and selectmen, to clear the payment of their dues for time past, or send in writing a receipt thereof under the hand of our pastor or deacons, and that for the future every one do annually attend the order at the same time; the place of meeting to be at the meeting-house, and the time by eight of the clock in the morning." In the list of salaries given to different ministers during the first twenty years of the Massachusetts Colony, Mr. Shepard's salary is stated at seventy pounds. This was among the largest salaries of the time. Two are given at ninety pounds, and they decrease gradually to thirty pounds.

At almost every point we can see where the fathers were swinging away from the customs of the church with which they had formerly been connected. Thus, marriage was not a sacrament, but a civil contract, entered into by the parties before a magistrate. This marrying by a magistrate was for the Pilgrims "according to the laudable example of the Low Countries in which they had lived." To perform this ceremony was nowhere found in the New Testament to be laid on the ministers as a part of their office. Winthrop mentions a great marriage to be solemnized in Boston, when the bridegroom invited his minister to preach on the occasion. "The magistrates sent to him to forbear. We were not willing to bring in the

custom of ministers performing the solemnity of marriage, which sermons at such times might induce; but if any minister were present, and would bestow a word of exhortation, etc., it was permitted."

In a similar way funerals were stripped of the ceremonies which had attended them abroad. The dead were no longer buried with imposing rites beneath the floor of the church or in consecrated ground, but were laid in some convenient enclosure without even a prayer. Lechford, writing in 1641, says: "At burials nothing is read, nor any funeral sermon made, but all the neighborhood, or a good company of them, come together by tolling of the bell, and carry the dead solemnly to his grave, and then stand by him while he is buried. The ministers are most commonly present." No burial was allowed on the Sabbath, except by leave obtained from a justice. It was long the custom at the burial of a woman for the women to walk first in the procession; the men when the funeral was that of a man. Funerals were somewhat expensive, although not in the same way as at present. This was especially the case when a person of note had died. Wine, cider, gloves were provided. In one case, at Ipswich, at the funeral of a minister, in 1768, the bearers were furnished with gold rings, one of which was given to "a candidate who was preaching for them," and the attending ministers received eighteen pairs of white leather gloves. At length an act was passed to retrench extraordinary expenses at funerals.

They kept none of the former holy days except the Lord's Day, associating the observance of the other days with superstition and oppression. But they instituted days of public fasting and thanksgiving. In addition to the Sabbath services there was a weekly lecture. They gave great heed to the training of the young in religion and good learning. Cambridge was early divided into districts, which were assigned to certain persons who were to see to the catechizing and educating of the youth. In "New England's First Fruits," published in London in 1643, we read: "And by the side of the Colledge a faire Grammar School, for the training up of young schollars, and fitting of them for Academical Learning, that still as they are judged ripe, they may be received into the Colledge; of this schoole Master Corlet is the Mr., who has very well approved himselfe for his abilities, dexterity and painfullnesse in teaching and education of the youth under him." Mr. Corlet taught for nearly fifty years and acquired a high reputation. Cotton Mather speaks of him as "that memorable old schoolmaster in Cambridge, from whose education our colledge and country have received so many of its worthy men, that he is himself worthy to have his name celebrated."

"The Corlet's pains, and Cheever's, we must own,
That thou, New England, art not Scythia grown."

In 1648 is an order that a part of the Common shall

be sold "for the gratifying of Mr. Corlet for his pains in keeping a school in the town." In 1644 the General Court granted, on the petition of Cambridge and Charlestown, one thousand acres of land to be forever appropriated to a grammar school, and also made a grant of two hundred acres to Mr. Corlet. In 1662 his scholars were so few that the town made him an allowance of ten pounds. The town afterwards voted him an annual grant of twenty pounds.

The instruction in the family and school was simple compared with that which is now given. There were no spelling-books, no English grammars—little of what is now considered essential. Children learned to read from the Bible, taking in moral and religious instruction with the letters and words. An out-of-door life gave the youth object-lessons and teaching in practical mechanics.

Printing in this part of America began here. The first printer was Stephen Day, who brought out "The Freeman's Oath," in 1639. An Almanac by William Pierce, Mariner, came in the same year, and the next year a Psalm-book. The singing in the churches was without instrumental accompaniment. This was thought to be forbidden by the words of Amos, "I will not hear the melody of thy viols." It was compared to the idolatrous performance which Nebuchadnezzar delighted in—"the sound of the cornet, flute, harp, sackbut, psaltery and dulcimer, and all kinds of music." Through the first century there were not more than ten different tunes, it is said, and few congregations could sing more than five. In the singing it was customary for the ruling elder, or deacon, or some other proper person, to read the hymn line by line and give out the tune. The amount read at each time was increased in some cases, and finally the whole hymn was read at once by the minister. The version of the Psalms in use here was probably that made by Sternhold and Hopkins, which was printed at the end of the Bible. This was not satisfactory, and a number of prominent divines were appointed to make a new version. Thomas Shepard gave the committee instruction in a stanza which makes us reconciled to the omission of his name,—

"You Roxb'ry poets, keep clear of the crime
Of missing to give us very good rhyme—
And you of Dorchester, your verses lengthen,
But with the text's own words you will them strengthen."

The book came out in 1640, and was well received. It was revised by Mr. Dunster and received the addition of "Spiritual Songs." It passed through seventy editions, and was used extensively in Great Britain, especially in Scotland. It was in use in some American churches till after the Revolution. It was entitled "The Bay Psalm Book," and afterwards "The New England Version of the Psalms." One verse from the Twenty-third Psalm will give some idea of the character of the work:—

"The Lord to mee a Shepherd is,
Want therefore shall not I

Hee in the folds of tender-grasse,
 Doth canse mee downe to lie :
 To waters calme He gently leads,
 Restores my soule doth Hee :
 He doth in paths of righteousness
 For His name's sake lead mee."

It has seemed well to glance at the customs of the fathers, that we may see something of the life which was once going on here. Many of their usages seem strange to us, but if we had been born into them they would have suited us as well as they did others. The men and their ways must be estimated with reference to their time and place and work. It should be kept in mind that the ruling spirits here were men, gentlemen, scholars. Newtown had her share of the choice wheat which came from the sifting of a nation. These men knew literature. Shakespeare died in 1616, and possibly some of these men knew him. Bacon died in 1626. Milton was born in 1608. Our fathers stood close to them. Sir Henry Vane was chosen Governor of Massachusetts in March of the same year in which the present First Church in Cambridge was organized.

"Vane, young in years but in sage counsel old,
 Than whom a better Senator ne'er held
 The helm of Rome— * * *
 * On thy firm band Religion leans
 In peace, and reckons thee her eldest son."

It was a goodly company which was here, in an open country. Liberty, intelligence, piety were revered and enjoyed. We are reclaiming some of their methods, for their principles were excellent even when their administration was at fault. There was life here. The woods and streams offered recreation to the boys when their tasks were done. The girls had quiet enjoyment in their homes. Morality was abroad. "One may live there from year to year, and not see a drunkard, hear an oath, or meet a beggar." In this practical age it should stand for much, that in their great endeavor they were successful.

But it is time that we resumed the history of events connected with the church. The early annals are not complete, but we have enough to enable us to trace the course of events from the beginning. There are no full records of the church before 1696. But there is a church book, which was opened in 1637 or 1638, in which are matters of interest, although the book was largely devoted to financial matters. Shepard's autobiography reveals some things which were personal to him, but also of interest to the church. The records of the town are closely related to the history of the church. There are biographies and histories which treat of men and events with which the church here was intimately connected. There is material for a much fuller history than can be given in these pages. The reader who desires more will find much satisfaction in the "History of Cambridge," by Rev. Lucius R. Paige, D.D. To his work any one must make constant reference who attempts to write of Cambridge. A book of "Lectures on the History of the First

Church in Cambridge" was published in 1873, and some portions of the lectures are reproduced here. The list of freemen in the Colony is of great service in determining who were members of the church, so long as only church members could be full citizens. Mr. Mitchel prepared an interesting catalogue, which he entitled "The Church of Christ at Cambridge, in N. E.; or, the Names of all the members thereof that are in Full Communion; together with their children who were either baptized in this Church, or (coming from other churches) were in their minority at their present joyning; taken and registered in the 11 month, 1658." The catalogue was continued through Mitchel's ministry. Beginning with 1696, we have a full list of members. There are two subordinate lists, which also begin in 1696,—"*Persons who owned the Covenant and were baptized;*" "*Persons who owned the Covenant in order to their children being baptized.*" Of the meaning of these titles there will be occasion to speak hereafter.

As a part of the ecclesiastical history of Cambridge, should be reckoned the founding of Harvard College. In 1636, the same year in which the present First Church in Cambridge was organized, in the autumn of the year, the General Court made an appropriation "equal to a year's rate of the whole colony," for the establishment of a college. "The Court agree to give Four Hundred Pounds towards a *School or College*, whereof Two Hundred Pounds shall be paid the next year, and Two Hundred Pounds when the work is finished, and the next Court to appoint where and what building." In 1637 the General Court appointed twelve prominent men "to take order for a College at Newtown." The name of the town was soon afterward changed to Cambridge, because so many who were interested in the new college had been educated at the University of Cambridge. In 1638 John Harvard, a non-conforming clergyman, a minister at Charlestown, bequeathed half his property and his library, of some three hundred volumes, to the new college, upon which his name was placed. "The value of this bequest was more than double the entire sum originally voted by the Court." In that year the first college class was formed. On the new college gate is the inscription which relates the purpose of the men who thus established the institution, as it was written in 1642: "After God had carried us safe to New England, and we had builded our houses, provided necessities for our livelihood, reared convenient places for God's worship, and settled the civil government, one of the next things we longed for and looked after was to advance learning and perpetuate it to posterity, dreading to leave an illiterate ministry to the Churches when our present ministers shall lie in the dust." Thomas Shepard was one of the twelve men to whom the establishment of the college was intrusted. The reasons given for erecting the college here were that this was "a place very pleasant and accommodate," and "under the ortho-

dox and soul-flourishing ministry of Mr. Thomas Shephard." It has been said that that Massachusetts Assembly was "the first body in which the people, by their representatives, ever gave their own money to found a place of education." Thus upon the shore of the unplanted sea, three thousand miles from the schools in which they had been nurtured, on the borders of an untraversed wilderness, among perils and privations, in the greatness of their hearts these exiles, builders, prophets, founded their school of learning and religion. They gave it a worthy name. Of John Harvard, Thomas Shepard wrote, "This man was a scholar and pious in his life, and enlarged toward the country and the good of it in life and death." This was a college of the people. John Harvard was the son of a prosperous butcher. His mother was the daughter of a Stratford alderman. She was three times married, and there came into the hands of her eldest son money from the butcher, cooper and grocer, and money from his brother, a cloth-worker. It was a college for the people, and devoted to their advantage. Its method and spirit were to make men, that a nation might be made. The influence of the Colonial clergy was naturally pronounced in the college, as it was in the community. In 1642 the Board of Overseers was established, and the teaching elders of Cambridge, Watertown, Charlestown, Boston, Roxbury and Dorchester were made members of it. The ministers gave as they were able, and the people aided their generous design. The list of donations is as pathetic as it is creditable. Out of the homes came the benefactions,—a great silver salt and a small trencher salt, a silver tankard and a pewter flagon, a silver goblet and a silver bowl, a fruit-dish and a sugar-spoon, thirty ewe sheep and nine shillings' worth of cotton cloth. Friends abroad sent their gifts and blessing to a cause which they held in honor.

There is no need that the history of the college should be told here. But it should be marked that its establishment was a part of the religious life of the Colony and that from the beginning it was closely connected with the Cambridge church. We find Mr. Shepard at one time addressing a memorial to the commissioners of the United Colonies, asking a general contribution for the maintenance of poor scholars, to the end "that the Commonwealth may be furnished with knowing and understanding men, and the churches with an able ministry." He begs that it may be recommended to every family throughout the plantation, able and willing to give, to contribute a fourth part of a bushel of corn, or something equivalent to this, as "a blessed means of comfortable provision for the diet of such students as stand in need of support." The plan was approved and adopted. This was the first provision made in New England for the benefit of indigent scholars. What he asked others to do he did himself. What was done in other churches was done in his church.

The administration of Nathaniel Eaton, the first principal of the college, was very unpromising and must have given the church much trouble. His faults were notorious, and he was dismissed from his office and excommunicated from the church. He entered the Church of England and became the violent enemy of those who had trusted him and been deceived. Mr. Shepard's relation to this man, and his conscientiousness and charity, are revealed in the record in his little book: "The sin of Mr. Eaton was at first not so clearly discerned by me; yet after more full information I saw his sin great, and my ignorance and want of wisdom and watchfulness over him very great, for which I desire to mourn all my life and for the breach of his family."

It must have been to Mr. Shepard and the church a great relief and an especial joy when, in 1640, the Reverend Henry Dunster was made president of the college. Of him Mr. Shepard writes: "The Lord about a year after graciously made up the breach by one Mr. Dunstar, a man pious, painfull and fit to teach and very fit to lay the foundations of the domesticall affairs of the college; whom God hath much honored and blessed."

Mr. Shepard seems to have been at this time in an unusually happy frame of mind. "Thus the Lord hath been very good unto me, in planting the place I lived in with such a merey to myselfe, such a blessing to my children and the country, such an opportunity of doing good to many by doing good to students, as the school is."

Thus the church and the college began to move on together, with one general design. It has been noticed that Margaret Shepard died very soon after reaching Newtown. In 1637 Thomas Shepard married Joanna, the daughter of Thomas Hooker, his predecessor here. His record is as follows: "Oct., 1637. The yeare after these wars in the country, God having taken away my first wife, the Lord gave me a second, the eldest daughter of Mr. Hooker, a blessed store; and the Lord hath made her a great blessing to me to carry on matters in the family with much care and wisdom and to seeke the Lord God of her father." She is described as a woman of remarkable loveliness and wisdom. But after less than nine years of married life she, too, was taken away.

Those were exciting days in which things were starting in this new world. The events may not seem to us very large, but they were of vast importance in that time of beginnings. When the church here was organized trouble had already started in the Colony in connection with that resolute and restless woman whose name is "dismally conspicuous in the early history of New England." Mrs. Ann Hutchinson had been attracted from England by her desire to continue to enjoy the preaching of Mr. Cotton. Her husband, who had left a good estate in Lincolnshire, is described as "a man of very mild temper and weak parts, and wholly guided by his wife." She was des-

tinged to encounter men who would not be so submissive. They came in the fall of 1634, and she soon showed herself a kind neighbor, especially to the sick, and won the esteem of the people, over whom her attentions and abilities gave her influence. She became connected with the Boston Church and before long avowed doctrines at variance with those commonly held here. Her house in Boston was where the Old Corner Book Store now stands.

In October, 1636, Governor Winthrop gives this account of her: "One Mrs. Hutchinson, a member of the church in Boston, a woman of ready wit and bold spirit, brought over with her two dangerous errors: 1st, that the person of the Holy Ghost dwells in a justified person. 2d, that no sanctification can help to evidence to us our justification. From these two grew many branches, as 1st, our union with the Holy Ghost, so as a Christian remains dead to every spiritual action, and hath no gifts nor graces other than such as are in hypocrites, nor any other sanctification but the Holy Ghost himself." A person was to find the evidence that he was a Christian in an immediate revelation made to his own soul. To receive this doctrine was to be under a "covenant of grace." To depend upon other evidence, such as conduct and promise, was to be under "covenant of works." There were thus two parties. The party which Mrs. Hutchinson headed was called by two borrowed names—Familists and Antinomians. We need no testimony to tell us what the people of Cambridge were talking about in those days. We can readily reproduce the ecclesiastical life, as it was manifested in sermons and discussions, in the meeting-house and on the street. But we have Thomas Shepard's record: "No sooner were we thus set down and entered into church fellowship, but the Lord exercised us and the whole country with the opinions of Familists, begun by Mrs. Hutchinson, raised up to a great height of Mr. Vane, too suddenly chosen Governor and maintained too obscurely by Mr. Cotton, and propagated too boldly by the members of Boston and some in other churches." Mrs. Hutchinson's views spread rapidly. She gathered weekly assemblies of women before whom she expounded her opinions and denounced the ministers who were opposed to her. Ignorant men and women were put forward as preachers, with the boast that they could excel the "black coats" who had been trained at the "Ninniversity." The associations of common life became infected by the disputes. Even the marching of troops which had been raised to assist Connecticut against the Indians was opposed on "the ground the officers and soldiers were too much under a covenant of works." It is difficult to comprehend this, until we remember that religious opinions were intimately and vitally connected with public and private affairs. Even English congregations in Holland had gone to pieces by falling upon similar contentions. The Colony here was in serious peril. The towns and churches in the country were, for the most

part, opposed to the troublesome woman. Boston was her stronghold, though even there she was stoutly resisted by Winthrop, Wilson and others. Vane, the boy Governor, entered into the strife "with all possible zest." The majority of the General Court were against Mrs. Hutchinson, and ordered that its session of 1637 should be held at Newtown. Here, on the 17th of May, the court met, in an excitement which threatened civil war. Mr. Wilson, the minister, in his zeal, got upon the bough of a tree, and there made a speech, advising the people to look to their charter, etc., etc. There was an election of Governor, and Winthrop was chosen. Vane soon afterwards returned to England, and one element of the strife was removed. After discussion there was the prospect of a peaceful settlement of the difficulties, and the ministers, with the consent of the magistrates, called an ecclesiastical synod. It was the first synod held in America, and it met with the church in Newtown. It was a grave and reverend assembly which was thus convened in the humble meeting-house near the river. Mr. Shepard opened the first session with a "heavenly prayer." Mr. Hooker, of Hartford, and Mr. Bulkeley, of Concord, were the moderators. The sessions continued for several weeks. Eighty-two opinions were condemned with great unanimity. Among these were the peculiar views of Mrs. Hutchinson and her adherents. Certain questions of church discipline which had arisen were decided, and with freedom of speech matters were carried on peaceably and "concluded comfortably in love." Mr. Shepard made a record of the chief business in this wise: "These errors, thorow the grace and power of Christ, were discovered, the defenders of them convinced and ashamed, the truth established, and the consciences of the saynts settled; there being a most wonderful presence of Christ's spirit in that assembly held at Cambridge, 1637, about August, and continued a month together in publike agitations; for the issue of the synod was this: 1. The Pequot Indians were fully discomfited, for as the opinions arose, wars did arise, and when these began to be crushed by the ministry of the Elders and by opposing Mr. Vane and casting him and others from being magistrates, the enemies began to be crushed and were perfectly subdued by the end of the synod.

"2. The magistrates took counsel and exiled Mr. Wheelwright, Mrs. Hutchinson and diverse flanders whom the Lord did strangely discover, giving most of them over to all manner of filthy opinions, until many that held with them before were ashamed of them; and so the Lord within one year, wrought a great change among us."

Mrs. Hutchinson was tried before the General Court for railing at the ministers and continuing her lectures in defiance of the Synod. A sentence of banishment was passed, but as it was winter she was committed to a private house in Roxbury. Her conversation there was so offensive that the church in Boston cited her to

appear and answer to the charge of holding gross errors. She retracted some of her opinions and was admonished for holding others. She was placed under instruction, and not only retracted all the peculiar opinions imputed to her, but went so far as to say that she had never held them. A question of veracity was raised and decided against her, and she was excommunicated for having "impudently persisted in untruth." This was the end of her power and party here. She was ordered to leave the jurisdiction. With some of her friends she went first to Rhode Island. In her banishment her heart turned to Vane and she wrote him of her experience. In 1638, or near that time, we find Roger Williams writing of these exiles: "I find their longings great after Mr. Vane, although they think he cannot returne this year; the eyes of some are so earnestly fixed upon him that Mrs. Hutchinson propoeth if he come not to New, she must to Old England." Her after-life was troubled and troublesome. She became a widow, and finally moved to a place within or near the Dutch border, where the whole family, except a daughter of eight years, was murdered by the Indians. But after her departure from Massachusetts a long period of tranquillity was enjoyed here. Mr. Shepard gratefully acknowledges that by God's great care and goodness this town had been "kept spotless from the contagion of the opinions." This was undoubtedly due in large measure to Mr. Shepard's influence, and it is given by him as one of the reasons which led the General Court to decide to place the new college here.

There were many matters to be settled by study and experience in the new enterprise which had been undertaken in the New World. The founders were not quite separate from those who had been left. In the year in which Shepard began his ministry here, some of the Puritan ministers in England, hearing that the churches on this side had adopted a new and questionable mode of discipline, sent a letter of inquiry upon the matter. The questions were concerning a form of prayer and a liturgy; the proper subjects of infants' baptism and admission to the Lord's table; the removal of members from one church to another; the relation of a minister to his own church and to other churches, and similar things. There was a careful discussion, in which Shepard bore his part, and he joined with Mr. Allen, of Dedham, in the publication of a work explaining and defining the usages here. This solved various perplexing matters and gave satisfaction to the English brethren. Upon the principles which it expounded the churches conducted their affairs, until it became desirable to have a more formal constitution. In 1646 the General Court took up the matter of calling a Synod. It was seen at once that it would not do for the government even to seem to impose any laws or methods upon the churches. They had done with all that. But it was recommended that a Synod

should be called. This was done, and the Synod met in Cambridge in the autumn of 1646, and after necessary adjournments was finally convened in 1648. It was a noble gathering. There were men in it who had won fame in the mother-land and were illustrious here. An old writer has truly said, "They were Timothys in their houses; Chrysostoms in their pulpits; Augustines in their disputations." Of the Cambridge platform mention has been made in another connection. Its promotion was a notable event in the ecclesiastical life, and its name is a household word.

Our national connection with the Indians is far from satisfactory. It is pleasant to relieve the picture by brighter shades from the earliest times. The settlers had it as a distinct purpose to be of service to the heathen whom they found here. Preaching was sustained among them by legal permission. Their rights were protected by a special court. The people sought to be just in their dealings with them. The college turned its attention to their education. A brick building was erected for their accommodation by the Society for Propagating the Gospel, and was known as the Indian College. Several entered as students, but only one attained to academic honors. There was an effort to train up a native ministry, but this proved ineffectual. John Eliot has gained an immortal name by his efforts for their benefit. In his labors he had the counsel and assistance of Thomas Shepard. Eliot's first permanent missionary station was established at Nonantum, in Cambridge, in 1646. To the congregation gathered there Shepard gave his care and work. He wrote tracts which were translated into the Indian tongue. A long letter written by him to a friend in England is entitled, "The Clear Sunshine of the Gospel Breaking Forth Upon the Indians in New England." He called it "An Indian Sermon."

Daniel Gookin, a member of the Cambridge Church, was an earnest co-worker with Eliot and Shepard. He removed here from Virginia in 1644, and attained military and political station. He was made superintendent of all the Indians who had submitted to the government of Massachusetts; was one of the licensers of the printing-press, and in 1681 was appointed major-general of the Colony. He was a man of integrity and force. His monument is in the old church-yard. His son was the fourth pastor of the Cambridge Church.

Eliot's translation of the Indian Bible was printed here by Samuel Green and Marmaduke Johnson. This was the first Bible printed in America. It was followed by numerous works in the Indian language. The Reverend Dr. Albro has said, "Thus Cambridge has the honor of furnishing the first Protestant tract in a heathen language, as well as the first heathen mission and the first Protestant translation of the Bible."

Several events of less importance may properly find

a place at this point in the narrative. It is interesting to find the name of the minister and the affairs of the church in the public records. The General Court which met here in 1636 made a grant of fifty pounds to Mr. Thomas Shepard. In the town records of 1638 is a grant to him of two and two-thirds acres of land on the road to Charlestown. In 1647 there is a grant of six acres of meadow land. In 1650 there is an entry stating that three hundred acres of land beyond Watertown Hill had been formerly given to Mr. Shepard and also two hundred acres more near Mr. Samuel Shepard's farm. In 1640 Mr. Shepard was brought into great embarrassment through the depressed financial condition of the colonists. It was a time of extremity. There was no money. Mr. Shepard's salary was then seventy pounds, payable in corn, which in this year was made legal tender for new debts. The emergency was so pressing that a removal to Connecticut was discussed. Mr. Hooker urged this removal upon his son-in-law in a lay letter which has been preserved.¹ He wrote, "I cannot see in reason but if you can sell and the Lord afford any comfortable Chapman, but you should remove. For why should a man stay until the house fall on his head? . . . If I were in your places, I should let those that must and will transport themselves as they see fit, in a way of providence and prudence. I would reserve a special company, but not many, and I would remove hither." The matter was of painful interest. To Mr. Shepard it was of deep personal concern. It threw him upon his habit of almost morbid self-examination and self-depreciation. In his "Meditations and Experiences," under date of Feb. 14, 1640-41, he writes, "When there was a *Church meeting* to be resolved *about our going away*, [viz., to *Matamesek*], I called on myself as poor, and as unable to resolve myself, or to guide others or myself in any action, as a Beast." In October, 1640, the Court proposed to make to Cambridge a grant of Shawshine for a village. In 1643-44 the grant was made. Lands at Shawshine were assigned to some persons, which gave others more room, and the church and elders stayed in their place.

In 1648, at a general town-meeting, it was voted that there should be a farm laid out of a thousand acres, and improved for the good of the church, and that part of the church that shall here continue. In 1655 Shawshine was incorporated as Billerica. The thought of removal seems in this adjustment to have passed away. The census of 1647 gives as the number of ratable persons in the town, one hundred and thirty-five, with ninety houses.

Among the entries in the old church-book are some which are characteristic of the simplicity of the times. "Item, Mr. Harlakindon gave the church a legacye of 20*l*. wch we received a young cow for it of Mr. Pelham in the beginning of the year 1640. We

gave the summers milke of the cow to brother Towne and brother John French; the first calfe dyed. The winteringe cost to John Stone, 25*l*. wch sum the second calfe was sold for. The second summers milke we gave to sister Manninge and brother John French. The 3d summers milke was yielded Elder Frost and alsoe all the winteringe of it. The beginning of the year 1643 we yielded it Elder Frost for his owne; at that time it was worth but 5*l*." This fall in the value of the church cow was due to a general decline. In 1640 Winthrop says that "cattle and all commodities grew very cheap." In Roger Harlakenden's will, in 1638, is a bequest of forty pounds to Mr. Shepard, "and to our elders that wch is in their hands, and to the pore brethren of our congregation twentye pounds to be ordered by Mr. Shepard."

There is a list of the weekly contribution which in nine months came to nearly fifty pounds. There are records like these:

	£	s.	d.
Imprimis for eleven quarts of red wine for the use of the Lords' table upon the 20 th day the tenth month at 4 <i>l</i> a quart	0	14	0
And for bread for the Lords' table at that time 8 <i>l</i> . For a messenger to go for the wine 12 <i>l</i>	0	1	8
And for a leather pillow to put in the cushion to the desk 5 <i>l</i> ; it was dyed 5 <i>l</i>	0	5	0
Payd for sendinge a messenger (goodman Crackbone) to Charlestowne and Roxbury to stayne helpe for preachinge in our pastor's weakness	0	2	0
Payd to goodman Line for 5 quarts and 1/2 pint of wine	0	6	6
Payd by brother Towne for his half year's allowance	1	5	0
And payd him for 5 times goinge with messages to the church	0	3	4
Given to our brother Hall the 11 th of the 4 th month toward the rearing of his house that was blown down	1	0	0
For the refreshing of my brother Sill in time of fayntnes, sent him 4 pints of sack, 2 <i>l</i> 4 <i>l</i>	0	2	4
Payd to my brother Cane for goinge to Salem for a message to Mr. Philips when he was about to come to us	5	0	0
Payd the hyman that brought Mr. Philips and for his goods, bringing from Salem when he removed to us	0	0	0

There are several other entries relating to Mr. Philips. He was the Rev. John Phillips. It is clear from this record, that it was proposed to make him the associate of Mr. Shepard, as the teacher of the church. He came here from Salem in 1639, and in 1640 "took office" in Dedham. It is not known why this change was made in his plans. At Dedham it was regarded as a special providence that he had not settled elsewhere, but could come with his gifts and his fame to be the minister there. The house which he built "anent Charlestowne lane, with the land adjoining and wood lot," was sold by the town to Thomas Danforth, the Deputy for fifty pounds, and the property long remained in the Danforth family.

A few more extracts may be made from the old accounts:

	£	s.	d.
[1639.] To Elder Frost we sent the 15 of the 5 th month in beere, cheese, candle and money to buy corne, in all 20 <i>l</i>	1	0	0
Payd my brother Towne his half year's allowance 30 <i>l</i>	1	10	0
Payd him for paynes taken more than ordinary in making cleane the meetinge house in the time of its repayreinge 12 <i>l</i> 0 12 0	12	0	12
Payd for 3 times going to call the church together at 8 <i>l</i> a time 6 <i>l</i>	0	6	0
[1643.] Payd our brother Manninge for a helpe	0	1	6
[1644.] Payd Mr. Palgrave for phisic for our sister Albone	0	2	6

¹ Paige's "History of Cambridge," p. 46.

For 4 years' rent for our sister Allbone (beside 5 months' time allowed her for about 7½ charges in repayer web she did) I say 4 years 4 0 0
 [1645.] Paid for a goat for goody Allbone to Goodman Prentiss. 0 11 0

Elsewhere we find these records: 1646, Nov. 5. The Townsmen ordered "that there shall be fifty shillings paid unto Tho. Langhorne, for his service to the town in beating the drum, this two years last past."

In 1642 "It is ordered that, according to an order of Court, made the last General Court for the townsmen to see to the educating children, that John Bridge shall take care of all the families of that side the highway his own house stands to by Bro. Winship's," and so on dividing the town into six parts.

In the course of time the meeting-house came to need attention. It deserved it, for its constant and its occasional service. There the church had its beginning. There, it appears, the first Harvard commencement was held in 1642. There the Cambridge Platform was framed in 1648. Other events of great importance to the community found a place within its lowly walls.

In February, 1649, at a meeting of the whole town, "it was voted and agreed by a general consent, that the meeting-house shall be repaired with a 4-square roof and covered with shingles, and the charge thereof levied upon the inhabitants of the town by equal rate. "Either because it was found cheaper to build a new house, or a new house was desired, or another site was preferred, three weeks later: "It was voted and agreed that the five men chosen by the town to repair the meeting-house shall desist from the same and agree with workmen for the building of a new house about forty foote square, and covered as was formerly agreed for the other." It was also agreed that the new house should stand on "Watch-house Hill. This was very near the place where Dane Hall now stands, and near the parsonage.

But it was not to be given to Thomas Shepard to fill the new sanctuary with the sound of the "silver trumpet, from whence the people of God had often heard the joyful sound of the gospel." His constitution had never been vigorous, and his labors and trials must have impaired his health. He describes himself as "very weak and unfit to be tossed up and down and to bear persecution." Besides his public sorrows, there were afflictions in his own house which grieved his sensitive heart. One child had died in England; two children died here. His wife died soon after his coming. His second wife died in less than nine years after their marriage. Yet his life was not altogether sad. He married for the third time. The third wife, Margaret Boradell, or Borrowdale, the sister of "John Borrowdale, of London, Gentleman," became the wife of his successor. Four sons remained to him when he died, three of whom served in his own profession. The fourth died in his youth.

In August, 1649, when returning from a meeting of ministers at Rowley, "he fell into a quinsie, with a

symptomatical fever," and on the 25th day of the month he passed away from earth. A writer of his own time mentions the death of Mr. Hooker, and Mr. Phillips, of Watertown, and that of "the holy, heavenly, soul-affecting, soul-ravishing minister, Mr. Thomas Shepard, pastor of the church at Cambridge, whose departure was very heavily taken by all the people of Christ round about him; and now New England, that had such heaps upon heaps of the riches of Christ's tender, compassionate mercies, being turned from his dandling knees, began to read their approaching rod, in the bend of his brow and frowns of his former favorable countenance towards them."

On the day of his death, with perfect memory and clear understanding, Mr. Shepard made his will, with a brief statement of his faith, and gave small bequests to his sons and a few friends, and left the rest of his estate to his wife. The inventory of his possessions amounted to £810. Some of his last words have been preserved. To several young ministers who visited him not long before the end, he said, "Your work is great, and calls for great seriousness. As to myself I can say three things: that the study of every sermon cost me tears; that before I preached a sermon I got good by it myself; and that I always went up into the pulpit as if I were to give up my account to my master." He was solicitous regarding the one who should take his place, and when he found that the man of his choice had commended himself to his people, he was content to depart. So he died, in the forty-fourth year of a large life. His mortal part was laid in the village grave-yard. But nothing now marks the spot. His work is his memorial.

"His name and office sweetly did agree;
 Shepard by name, and in his ministry."

It is evident that Mr. Shepard was greatly esteemed and with good reason. He was a thoughtful, laborious man. He was a scholar. His words are good reading to-day. Some one has made the calculation that in Jonathan Edwards' famous "Treatise concerning the Religious Affections," of the two hundred and thirty-two quotations, more than one-half are from Shepard. He took time to prepare himself for his public work. It is said that he always finished his preparation for the pulpit by two o'clock on Saturday afternoon, accounting "that God would curse that man's labors who goes lumbering up and down in the world all the week, and then upon Saturday goes into his study, when, as God knows, that time were little enough to pray in and weep in and get his heart into a frame fit for the approaching Sabbath." Some of the terms in which he was named have been given. He was "that gracious, sweet, heavenly-minded, and soul-ravishing minister, in whose soul the Lord shed abroad his love so abundantly that thousands of souls have cause to bless God for him." "A man of a thousand, and endowed with abundance of true, loving knowledge for himself and

others; yet his natural parts were weak, but spent to the full."

"Shepherd's sweet sermons from thy blessing came"—
 "Oh Christ why dost thou Shepherd take away,
 In erring times, when sheepe most oft do stray?"

We are permitted to see the influence of Mr. Shepard upon certain individuals, and from them to infer his influence on others. This belongs in the annals of the early church as a part of the church life.

Edward Johnson came hither for the second time in 1636, a zealous Puritan. He arrived when the Antinomian conversation was at its height, and was nearly beside himself through the commotion. Leaving Charlestown, "turning his face to the sun, he steered his course toward the next town; and after some small travel, he came to a large plain. No sooner was he entered therein, but hearing the sound of a drum, he was directed toward it by a broad beaten way. Following this road, he demanded of the next man he met what the signal of the drum meant. The reply was made that they had as yet no bell to call men to meeting, and therefore made use of a drum. 'Who is it,' quoth he, 'lectures at this town?' The other replies, 'I see you are a stranger new come over, seeing you know not the man; it is one Mr. Shepard.' 'Verily,' quoth the other, 'you have hit the right. I am new come over, indeed, and have been told since I came, that most of your ministers are legal preachers; and, if I mistake not, they told me this man preached a finer covenant of works than the others. But, however, I shall make what haste I can to hear him. Fare ye well.' Then hastening thither, he crowdeth through the thickest where having stayed while the glass was turned up twice, the man was metamorphosed; and was fain to hang down the head often, lest his watery eyes should blab abroad the secret conjunction of his affections, his heart crying loud to his Lord's echoing answer, to his blessed spirit, that caused the speech of a poor, weak, pale-complexioned man to take such impression in his soul at present, by applying the word so aptly, as if he had been his privy counselor; clearing Christ's work of grace in the soul from all those false doctrines which the erroneous party had affrighted him withal; and he resolves, the Lord willing, to live and die with the ministers of New England, whom he now saw the Lord had not only made zealous to stand for the truth of his discipline, but also for the doctrine, and not to give ground one inch." Mr. Johnson was a man of learning and property; and had a leading part in the erecting of a church and town at Woburn and in the administration of public affairs.

As we read the names of those who were in college during these years, we have another indication of the influence of the church. Out of this happy seminary, writes Cotton Mather, "there proceeded many notable preachers, who were made such very much by their sitting under Mr. Shepard's enlightening and

powerful ministry." Among these young men was William Hubbard, long the most eminent solicitor in Essex County; and Samuel Mather, of that house whose name and deeds are intertwined with the early church history of the Colony; and Samuel Danforth, tutor and fellow of the college; and William Ames, and John Brock. There were John Rogers, president, and William Oakes, pastor and president; and Leonard Hoar, president; and Samuel Phillips, "an incomparable man, had he not been the father of Samuel."

There was another student, of whom special mention must be made. This carries our narration forward. At the head of the names of the class of 1647 stands Jonathan Mitchel, Mr. Scovius. He was born in 1624 in Yorkshire, "of pious and wealthy parents," who sought "to make him learned by a proper education." In his tenth year he had a "sore fever," which "settled in his arm with such troublesome effects, that his arm grew and kept a little bent, and he could never stretch it out right." When he was about eleven years of age his parents were driven out of England by the "unconscionable impositions and persecutions of the English hierarchy."

They reached Boston in August, 1635. The family settled in Connecticut, and for several years the boy was employed in secular affairs. But he longed for a "learned education," and prevailed on his father to allow him to enter college, which he did in 1645. "He had a clear head, a copious fancy, a solid judgment, a tenacious memory, and a certain discretion, without any childish lascivety or levity in his behavior, which commanded respect; . . . so that . . . they that knew him from a child, never knew him other than a man." He has come down to us as the "Matchless Mitchel." His serious impressions began very early, and were deepened and guided in the village church. In his own words: "Unless it had been four years living in heaven, I know not how I could have more cause to bless God with wonder, than for these four years." After graduating he was made a fellow of the college, and was for a time a tutor.

His services as pastor were sought by several of the most considerable churches in the country. "The Church of Hartford in particular, being therein countenanced and encouraged by the Reverend Mr. Stone, sent a man and horse above one hundred miles to obtain a visit from him, in expectation to make him the successor of their ever-famous Hooker." There he preached his first sermon, and on the next day he was invited to become the minister of the church. Large inducements were offered him. He did not accept the proposals, because before his journey Mr. Shepard, with the principal persons here, had prayed him to return to them, "as he did upon divers accounts most belong to Cambridge, and Cambridge did hope that he would yet more belong unto them." He preached here on the

12th of August, 1649. In the evening Mr. Shepard told him "This is the place where he should, by right, be all the rest of his days; and inquiring of some good people how Mr. Mitchel's first sermon was approved among them, they told him very well. Then said he, my work is done!" In less than a fortnight Shepard's work was indeed done. Mitchel received a unanimous invitation to become the pastor in his place, and he was ordained on the 21st of August, 1650. The neighboring pastor performed the service of ordination, and the Reverend John Cotton gave him the right hand of fellowship on behalf of the ministers and churches. His esteem for those who had made him their minister is manifest in his own words: "They were a gracious, savowry-spirited people, principled by Mr. Shepard, liking an humbling, mourning, heart-breaking ministry and spirit; living in religion, praying men and women. Here I might have occasion of many sweet heart-breakings before God, which I have so much need of."

His entrance into his parish was complete. He was to have married Sarah, the daughter of Mr. Cotton. When he "addressed himself unto the venerable old Mr. Cotton for leave to become his son-in-law," Mr. Cotton, "prognosticating the emnence which he would arrive unto, gave leave unto it." "But the immature death of that hopeful young gentlewoman" prevented "so desirable a match." "The young gentlewoman whom his predecessor had married a little before his decease, he now also married upon the general recommendations of that widow unto him; and the epithalamiums with which the students of the college then celebrated their marriage withal were expressive of the satisfaction which it gave unto all the good people in the vicinity." Thus, on the 19th of November, 1650, Margaret Shepard became Margaret Mitchel. In the following May the General Court confirmed a deed "Wherein is conveyed to Mr. Jonathan Mitchell, now husband of Margaret, the relict of the said Mr. Sheapheard, a dwelling-house, yards, orchards, and seven acres of land adjoining thereunto, in behalf of his said wife."

Thus hopefully, happily, the second pastorate of the church began. The man was prepared for the work, but there came with it enough of adversity to make proof of his courage and constancy. It is singular that his first public trial came from one from whom he could have expected only comfort and support. Henry Dunster, president of the college, was, to use the language of Cotton Mather, "unaccountably fallen into the briars of antipedobaptism; and being briar'd in the scruples of that persuasion, he not only forbore to present an infant of his own unto the Baptism of our Lord, but also thought himself under some obligation to bear his testimony in some sermons against the administration of baptism to any infants whatsoever." Mr.

Dunster had come from England in 1640, holding orders, it is supposed, in the English church, but in strong sympathy with the Puritan movement. He had a high reputation for piety and learning, and was almost immediately called to preside over the college, with the title of president. Mr. Shepard describes him as "a man pious, painful and fit to teach, and very fit to lay the foundations of the domesticall affairs of the College, whom God hath much honored and blessed." He was received to the church here as an accession of strength. He preached in the neighboring churches with great acceptance. After Mr. Shepard's death he was called "to supply" the vacant pulpit. He was in accord with the doctrines of the church, although he thought that baptism by immersion was to be preferred. In his confession he said, concerning baptism: "I believe that only believers and their seed ought to be received into the church by that sacrament. . . . And as children, so those that come to mature age ought to be received into the church by baptism. And concerning the outward elements, something there is concerning sprinkling in the Scripture; hence not offended when it is used." It appears to have been in 1652 that he changed his views regarding the baptism of children. The change, which he publicly announced and defended, created a marked sensation. It must have made the staple of much of the social and ecclesiastical life of the community. We quote again from the "Magnolia:" "The brethren of the church were somewhat vehement and violent in their signifying of their dissatisfaction at the obstruction, which the renitencies of that gentleman threatened on the peaceable practice of infant baptism, wherein they had hitherto walked; and judged it necessary for the vindication of the church's name abroad in the country, and for the safety of the congregation at home, to desire of him that he would cease preaching as formerly, until he had better satisfied himself in this point now doubted by him." "The overseers of the college became solicitous that the students there might not be unawares ensnared in the errors of the President. Wherefore they labored with an extreme agony, either to rescue the good man from his own mistake, or to restrain him from imposing them upon the hope of the flock." The points at issue cannot be discussed here. They were of the greatest importance in the minds of those who had the church and the college in their charge. The doctrine in question was a part of their life, and was hallowed by the most sacred associations. If Dunster could claim consideration on account of his character and office, it was, on the other hand, specially important that such a man should be right. This they felt and they acted on their conviction. Their fear went further than this. For a hundred years the name Anabaptist had been connected with fanaticism and extravagance. In Germany this sect denied the authority of magistrates, opposed all laws,

made war against governments, rejected nearly all the Christian doctrines, and was guilty of the most seditious and vicious practices. There is no necessary connection between the belief out of which the name sprang and the enormities into which many rushed who held it. Nothing could be further from such conduct than the behavior of Dunster. It is not the only time that men have been frightened by a word. The name increased the dread with which the opinions of the president were regarded. In view of the horror which belonged with the name of Anabaptist, it is not very surprising that in 1644 there was a decree of the Court that any person who should openly condemn or oppose the baptizing of infants, or should go about secretly to draw others from the approbation or use of the ordinance, or should purposely depart from the congregation where it was administered, or deny the lawful authority of the magistracy, and should obstinately continue in this opposition after due time and means of conviction, should be sentenced to banishment. Two years after this decree the Court declared, "For such as differ from us only in judgment, . . . and live peaceably amongst us, without occasioning disturbance, etc., such have no cause to complain; for it hath never been as yet put in execution against any of them, although such are known to live amongst us." It was hard for the church to rebuke a man like President Dunster, who had been to them as a pastor. It was a hard position in which Mitchel was placed. He felt himself "embarrassed in a controversy with so considerable a person, and with one who had been his tutor, and a worthy and a godly man." He was slow to proceed to the action which seemed to be demanded. He thought the church too much excited, and said "that some light and less heat would do better." But he was greatly oppressed. "This business did lie down and rise up, sleep and wake with me." He labored in private with Dunster, but it was of no avail. He fasted and prayed; he sought help from neighboring ministers; then publicly and formally opposed the new teaching of his venerated president. "It was a dismal thing to me, that I should live to see truth or peace dying and decaying in poor Cambridge." He is said to have "preached more than half a score of ungainsayable sermons" upon the subject which occupied the mind of the church, and to have rendered service to other churches in the same cause.

The magistrates asked the ministers to examine into the matter and to inform them "how the matter stands with him in respect of his opinions." Accordingly a conference of ministers and elders was held for two days in Boston, in February, 1653-54. The president could not be drawn from his opinions by persuasion or argument, and on the 3d of May, 1654, the General Court commended it to the overseers of the college and the selectmen of the several towns, not to permit any person to be continued in

the office of instructing the youth in the college or schools who "have manifested themselves unsound in the faith, or scandalous in their lives, and not giving due satisfaction according to the rules of Christ." The president probably thought that this vote was directed against himself, and he thereupon addressed a letter to the General Court tendering the resignation of his office. The Court referred the matter to the overseers, instructing them "to make provision, in case he persist in his resolution more than one month (and inform the overseers), for some meet person to carry on and end that work for the present." He could have retained both his office and his opinions, if he could have consented to be silent in regard to his dissenting views. This was out of the question.

On the 30th of July, 1654, "Mr. Dunster spoke to the congregation in the time of the public ordinance, to the interruption thereof, without leave, which was also aggravated in that he, being desired by the Elder to forbear and not to interrupt an ordinance of Christ, yet notwithstanding he proceeded in way of complaint to the congregation, saying I am prohibited to speak that in Christ's name which I would have testified. But "in his following speech" he declared his views regarding the baptism of children, in which he was at variance with the church. In the following April he was indicted by the grand jury "for disturbance of the ordinances of Christ upon the Lord's day at Cambridge . . . to the dishonor of the name of Christ, his truth and minister." The Court, after hearing the evidence, ordered that "at the next Lecture at Cambridge," Mr. Henry Dunster "should (by such magistrates as should then be present) be publicly admonished, and give bond for his good behavior." He acknowledged that he had said, in substance, the things which were alleged, but he denied that he was conscious of doing or saying anything contemptuously or in open contempt of God's word or messengers. In July, 1655, the overseers informed Mr. Dunster that the welfare of the college and of the colony made his removal necessary. In October he gave in his final resignation. Thus his fourteen years of zealous and helpful service came to an end.

Mr. Dunster was left in a peculiarly difficult position. With no office and a blemished repute, though with a blameless life, in which way could he turn? He petitioned the General Court that he might remain in his house until his accounts were settled, and that he might be allowed to "prosecute the spiritual and temporal weal of the inhabitants" of the colony, "in preaching the Gospel of Christ, teaching or training up of youth, or in any other laudable or liberal calling, as God shall chalk out his way, and when, and where, and in what manner he shall find acceptance." His petition was denied. The reply was signed R. Bellingham, Governor. Mr. Dunster sent in another petition begging for himself and his family the privilege of remaining in the president's house till a removal could be more easily accomplished. The first

reason he gave for his request shows the propriety of it. "The time of the year is unseasonable, being now very near the shortest day, and the depth of winter."

The Court granted him leave to remain till the following March. In due time Mr. Dunster moved to Scituate, where for a few years he was employed in the ministry, serving, though probably not as pastor, the church which had for about twelve years enjoyed the teaching of the Rev. Charles Chauncy, who was made Dunster's successor in the presidency. He died in 1659. In his will he mentions his "reverend and trusty friends and brethren, the president of the college and the pastor of the church of Cambridge." He gave gifts to both and made them appraisers of his library. He directed that his body should be taken to Cambridge, there to be interred by his loving wife and other relatives. He was brought back as he desired and laid in the old church-yard. The stone which marked the grave has disappeared. A new slab, with an elaborate Latin inscription in Dunster's memory, lies over the grave in which probably Mr. Mitchel was laid. The monument should be removed, but the fame of Dunster will survive though the place of burial is not known. The esteem in which he was held by Mr. Mitchel is evinced by an elegy which he wrote in his memory, a portion of which may well be copied to show the spirit of the writer:

"Where faith in Jesus is sincere,
That soul, he saying, pardoneth;
What wants or errors else be there,
That may and do consist therewith,

"And though we be imperfect here,
And in one mind can't often meet,
Who know in part, in part may err,
Though faith be one all do not see't.

"Yet may we well the rest obtain
In everlasting bliss above,
Where Christ with perfect saints doth reign,
In perfect light and perfect love;

"Then shall we all like-minded be,
Earth's duty is there full grown;
There one truth all both love and see,
And thence are perfect made in one."

President Chauncy was inaugurated November 27, 1651. He was a notable addition to the church. He was of Trinity College, Cambridge, and a successful and eminent minister in the English Church. But he was of those who could not consent and conform to all which was required, and he was suspended and silenced by America's benefactor—Archbishop Laud. "Few suffered more for non-conformity than he, by fines, by gaols, by necessities to abscond, and at last by an exile from his native country." He came to New England and found a home in Scituate. But things improved in England, and he was invited to return to his former charge at Ware, in Hertfordshire. He came to Boston, intending to embark, when the invitation to the college changed his plans. He was then sixty-two years old. His salary was a hundred pounds per annum. For seventeen

years he held his important office, "and by the manner in which he filled his station fully sustained his high character for talents, learning and piety, and satisfied the expectation of the public." "It is a remarkable fact that the church in Cambridge, with which he connected himself, considered his residence at that place so great a blessing that in a year or two after he came there they kept a whole day of thanksgiving to God for the privilege by which they were thus distinguished."

There was another important discussion upon the subject and subjects of baptism in which Mr. Mitchel had a prominent part. The first settlers here were for the most part members of the church, and their children were duly baptized. But in the course of time there came on another generation of children, many of whose parents had not renewed their baptismal obligations and had not connected themselves with the church. By the rules then in force these persons could not have their children baptized. Yet it was felt that the children of persons who had been baptized should be regarded differently from Indians or others who were living in paganism. It was held by many that if baptized persons, even if not considered regenerate, were willing to renew the baptismal covenant and become subject to church discipline, their children could properly be baptized. This feeling and practice were growing in the churches, when a synod of the elders and messengers of the churches was called. This was held in Boston in the spring of 1662. Mr. Mitchel was a member of the synod. The result of its deliberations was the declaration of the independence of each church and the duty of the communion of churches—that is, Congregationalism. In regard to baptism, the synod framed what is historically known as the Half-way Covenant, which granted baptism to the children of certain persons who were not considered qualified for admission to the Lord's table. The result was chiefly composed by Mitchel, and its defense fell largely upon him. It was an important element in the ecclesiastical life of the town. In connection with this there arose the practice of administering baptism to adults who were not esteemed regenerate, but who owned the covenant and submitted themselves to the care of the church and were of proper moral character. This gave such persons a better standing in the community, and was of especial value so long as suffrage was confined to church members, and there were many persons who otherwise would be denied the full privileges of citizens, though fitted for it by age and character. The Cambridge records have three lists of persons in some kind of connection with the church. These have already been mentioned.

The list of the "Persons, adults, who owned the Covenant and were baptized" extends to 1782, and is quite largely made up of negro servants. The use of the Half-way Covenant gradually became less common, until it finally ceased. A recent writer remarks:

"The Half-way Covenant, the concession of the church, in order to a more pliable connection with the State, was still in force after the State had been practically divorced from the Church—a continual source of weakness and depression. It had been, indeed, one object of the Half-way Covenant to overcome the Anabaptist principle by attaching increased importance to baptism." In his time, Jonathan Edwards took strong ground against it. "Most of the Puritan churches accepted his principles, banished the Half-way Covenant, and took on the form which they still retain." During Mitchel's ministry there was excitement in Cambridge from a very different source. In 1656 "an accursed and pernicious sect of heretics, lately risen up in the world, who are commonly called Quakers," made their appearance in Boston. The severe measures which were taken to suppress them did not accomplish their purpose. There was not much trouble in Cambridge, but enough to disturb the little scholastic community. "Elizabeth Horton went crying through the streets that the Lord was coming with fire and sword to plead with them." She was "laid hold of by a blood-thirsty crew, and early in the morning had before Thomas Danforth and Daniel Goggings (two wicked and bloody magistrates), who committed her, and whose jayler thrust her into a noisome, stinking dungeon, where there was nothing to lie down or sit on, and kept her there two days and two nights, without helping her to bread or water; and because one Benanuel Bower (a tender Friend) brought her a little milk in this her great distress, wherein she was like to have perished, they cast him into prison for entertaining a stranger, and fined him five pounds. They ordered her to be sent out of their coasts towards Rhode Island, and to be whipped at three towns, ten stripes at each, by the way."

She came back to Cambridge, was again put in prison, and whipped three times, as before. Thus she passes out of this history. But Benanuel Bowers remains. His wife was Elizabeth Dunster, whom President Dunster, in his will, calls "my Cousin Bowers," with a legacy of five shillings apiece to her and her children. The Bowers family held all those of the Cambridge congregation who are known to have openly avowed the sentiments of their distinguished kinsman. In 1656 Mr. Bowers was arraigned before the County Court "for absenting himself from the ordinance of baptism, and was only admonished."

It appears to have been in 1662 that the first Quaker missionaries came to Cambridge. Benanuel Bowers was then a Quaker, and the law was enforced against him by Danforth and Gookin. His wife and daughter suffered with him in the same faith. At the County Court in 1663 he was convicted of absenting himself from church for about a quarter of a year and of entertaining Quakers in his family. He was fined twenty shillings for his absence from church, and four pounds for his hospitality, with three shillings by way

of costs. Year after year he was fined for the absence of himself and wife from church. In 1666 he was fined for coming into the meeting-house with his hat on; in 1673 for "slandering and reviling the court, and for servile labor upon the Lord's Day;" in 1676, for "profane and wicked cursing." After a time he refused to pay fines, and passed more than a year in prison.

From time to time he petitioned for release. He claimed that he had attended worship according to his own faith and conscience. He complained of hard usage. He appealed to those who knew him to bear witness to his character. "I am about sixty years of age, thirty of which I have dwelt within about a mile of Cambridge town. What my life and conversation hath been amongst them, and what I have suffered these fifteen years for not going to the public meeting, is well known to many of my neighbors." In 1677 the court ordered that the marshal-general should levy upon the estate of Bowers the fines which had been imposed on him, and that thereupon he should be set at liberty.

But his troubles were not ended by his release. While in prison he vented his rage at his treatment in "a paper of scurrilous verses, wherein the honored Mr. Danforth and others were defamed." He sent the verses by his wife to the house of Mr. Danforth, who laid the matter before the Court. The magistrates sentenced Bowers to be severely whipped with twenty stripes or to pay a fine of five pounds.

Mr. Bowers went to church on one occasion, at least, in 1677, when, after the services were closed, he stood on a bench and began to speak to the people. Mr. Oakes, who was then the minister, tried to stop him, but did not succeed. He gave him leave to reply to anything which had been said if he would do it on a week-day. Major Gookin commanded the constable to carry him out of the meeting-house, but he continued to bring his charges against Magistrate Danforth, and desired the church to take notice thereof. In December Bowers and his wife were convicted of slandering the magistrate, and were sentenced to be openly whipped fifteen stripes apiece and to pay five pounds apiece in money, and to stand committed until the sentence was executed. This is substantially the history of the sad Quaker episode, so far as the records of Cambridge present it.

In 1681 and 1682 Mr. Bowers was fined for non-attendance on public worship, but of the latter years of his life very little is known.

The witnesses of his will were men of prominence—one of them the president of the college, and the others orthodox ministers. "This fact," remarks Dr. Paige, "justifies the presumption that he did not regard them as persecutors, and that they did not consider him to be an arch-heretic."

From this more public life of the Cambridge Church and minister we return to local affairs. What was Cambridge then? From an estimate made by the

selectmen in 1647, two years before Shepard's death, it appears that there were here 135 ratable persons, ninety houses, about 2600 acres of land, 208 cows, 131 oxen, twenty horses, with other property of different kinds, making up a valuation of less than £2000. Johnson describes Cambridge in 1652, as "compact closely within itself, till of late years some few straggling homes have been built. It hath well-ordered streets and comely, completed with the fair building of Harvard College. The people are at this day in a thriving condition in outward things." He confirms what others have said, "that they have hitherto had the ministry of the word by more than ordinary instrument." Attention was given to the cultivation of orchards. The orchard of the college is mentioned in the town record. The first license for an inn appears to have been given in 1652. In 1656 a committee was appointed to execute the order of the General Court for the improvement of all the families in spinning and clothing. In 1662 Mr. Mitchel and Captain Daniel Godkin were appointed "Licensers of the press." About the time of Mr. Mitchel's nomination the second meeting-house was completed on Watch-house Hill. It must have been a conspicuous building as it stood "forty foot square" on that eminence. In 1652 the church agreed to divide the farm in Shawshine, and assigned 500 acres to Mr. Mitchel. In 1656 the people on the south side of the river requested that they might have "the ordinances of Christ amongst them, distinct from the town." The town did not think it expedient to grant this request and thus divide the church. A few years later the inhabitants of Cambridge village had become so numerous that they formed a distinct congregation, and they were freed from contributing towards the ministry on the north side of the river, so long as an able ministry was sustained on the south side. In 1664 a new church was organized in Cambridge village. The village was incorporated as a distinct town in 1687-8, and in 1691 received the name of Newtown, which had long before been surrendered here. The protest which Cambridge made against the ambitious design of the village is almost ludicrous as we read it now. "Now that Cambridge cannot spare what they desire we shal thus prove:" "That our town is thus situated, narrow and long on each wing, Watertown and Charlestown nipping us up close on each side, there needs no proof. . . . We must be no town, nor have no Church of Christ nor ministry among us, in case we be clipped and mangled as the petitioners would have." "These long-breathed petitioners, finding that they had such good success that they could never cast their lines into the sea but something was caught, they resolved to bait their hook again." It is strange reading now, but it was very serious dealing then.

The records preserve various matters of detail in the parish life. In 1660 sundry young men received permission "to build a gallery on the south beam."

In 1666 Mr. Mitchel received a further grant of land. Among financial affairs is a vote in 1657 appointing a committee to make a levy of £240 for the maintenance this year, and for the payment of the debts of our reverend pastor, Mr. Mitchel. In the accounts are these items:

		£	s.	d.
20, 3, 67.	to bro. Oakes when he went to Rehoboth, in silver,	0	6	0
22, 4, 67.	Paid to Daniell Cheavers for veall to Mr. Channcy when he was sick	0	5	0
3, 12, 67-8.	Paid to Mrs. Danforth in her husband's absence in silver, the sume of 25 shillings for wine, sugar and spice at the buriall of Mrs. Chauncy who deceased the 21 of the 11 th 67	1	5	0
27, 4, 68.	Paid to John Sheapheard for a fower gallon bottell to bring sack for the sacrament	0	3	9

The times which we have been reviewing were eventful days for England. Thomas Shepard died in the year in which Charles I. was beheaded, and the Commonwealth declared. It was a period which called for all the prudence of the Colonies. They admired the valor of Cromwell, who was the champion of their own ideas. But they refrained from asking any favors from the Puritan Parliament. Massachusetts kept silent when Cromwell was made a monarch. She was able to shelter three men who had signed the death-warrant of the King and fled from the vengeance of Charles II. Of these, Whalley and Goffe came immediately to Cambridge, where they intended to reside. The Act of Indemnity from which they were excluded did not reach this country for several months. Meanwhile, and for months afterward, they were treated with consideration, though at last there was a division of feeling among the magistrates regarding their duty. They were admitted into the best society here. They attended public worship and lectures, and took part in private devotional meetings, and were received to the Lord's Table. In showing them such favors, Mr. Mitchel was not aware of their exact relation to their government. He wrote afterwards in his own vindication: "Since I have had opportunity, by reading and discourse, to look into that action for which these men suffer, I could never see that it was justifiable." It is plain that the people had enough to talk about during Mitchel's pastorate. There was the case of Dunster, and of the Quakers. The Half-way Covenant was a lasting theme for conversation. Events of interest were taking place beyond the seas. The Waldenses were persecuted by the Piedmontese; Pascal died, and Jeremy Taylor; the first idea of a steam-engine was suggested. "The Pilgrims' Progress" was published. Eliot's Bible was printed. London was smitten with the great plague and devastated by the great fire. The Triple Alliance was formed for the protection of the Netherlands, and there were other events of importance, of which tidings came in the ships whose arrival was eagerly awaited.

But the end came to the busy and prosperous ministry of the "matchless Mitchel." In the summer of 1668, "in an extreme hot season," after he had been

preaching from the words, "I know that thou wilt bring me to death, and to the house appointed for all living," a putrid fever arrested him with a mortal malignity, and on the 9th of July "it pleased God to take him to rest and glory," in the forty-fourth year of his age. His departure caused a great lamentation among his own people and throughout the churches. "The chief remaining pillar of our ministry," as Hale ventured to designate him, had fallen. Only one sentence has come down to us from his last hours. To a young man standing by his bed he said: "My friend, as a dying man, I now charge you that you don't meet me out of Christ in the day of Christ." In the old church records is an entry of £8 13s. 6d., paid in silver, by the appointment of the committee for the minister's house, unto the Deputy-Governor, Mr. Francis Willoughby, for the discharge of Mr. Mitchell's funeral. There is this entry, also: "To Goodman Orton, of Charlestown, for making a tapanling to wrap Mr. Mitchell, and for doing something to his coffin that way, 4s." This was made necessary by the time and manner of his death, and his own condition; for, as Cotton Mather narrates, "Mr. Mitchell had, from a principle of godliness, used himself to bodily exercise; nevertheless he found it would not wholly free him from an ill habit of body. Of extreme lean, he grew extreme fat." His body was wrapt in the cerecloth, tansy was strewed about it, and he was laid in "God's Acre," in all probability in the grave now covered by Henry Dunster's memorial slab.

The testimony to the life and work of Mr. Mitchell does him the highest honor. Mather pronounced it an eminent favor of God to the church to have "their great breach thus made up, with a man so much of the spirit and principles of their former pastor, and so excellently qualified with respect to the college." His labors were "wonderfully blessed; for very many of the scholars bred up in his time (as is observed) do savor of his spirit for grace and manner of preaching, which was most attractive." He "was a mighty man in prayer, and eminent at standing in the gap." Mather says: "Though he was all along in his preaching as a very lovely song of one that hath a pleasant voice, yet, as he drew near to the close of his exercises, his comely fervency would rise to a marvellous measure of energy. He would speak with such a transcendent majesty and liveliness that the people would often shake under his dispensations as if they had heard the sound of the trumpets from the burning mountain, and yet they would mourn to think that they were going presently to be dismissed from such an heaven upon earth."

He took a prominent part in the affairs of the college of which he was an alumni and a fellow. "The college was nearer unto his heart than it was to his house, though next adjoining it." He was a hard student himself, an "over-hard student," one says, and "he loved a scholar dearly; but his heart was

fervently set upon having the land all over illuminated with the spirit of a learned education. To this end he became a father to the college which had been his mother." President Chauncy said: "I know no man in this world that I could envy so much as worthy Mr. Mitchell." Richard Baxter said of him, "that if there could be an Ecumenical Council of the whole Christian world, that man would be worthy to be the Moderator of it." Increase Mather exhorted the members of the college: "Say each of you, Mitchell shall be the example which I shall imitate." The Quinquennial Catalogue gives the names of many who must have come under his influence. Among the students of his time were William Stoughton, Leonard Hoar, Michael Wigglesworth, Thomas Shepard, Increase Mathers, Samuel Willard, Solomon Stoddard, Abraham Pierson, and others whose names came to be well known. While we read such tributes to the man, it is almost painful to look upon his estimate of himself. He wondered what the people of God saw in him, that they so much desired his labors among them. Kept from preaching by a hoarse cold, he makes this record: "My sin is legible in the chastisement: cold duties, cold prayers (my voice in prayer, *i. e.*, my spirit of prayer, fearfully gone), my coldness in my whole conversation—chastisement with a cold; I fear that I have not improved my voice for God formerly as I might have done, and therefore he now takes it from me." He wrote long lamentations at the death of several lovely children in their infancy, and humbled himself with his bereavement. The churches sought his assistance in difficult matters and relied on his judgment; yet he felt his own unfitness for such service. "Sometimes I am ready to resolve to put forth myself no more in public work, but keep myself silent and unengaged, as I see others do." In view of death he "fell to admiring the manifold grace of God unto him, and exclaimed: 'Lord, thou callest me away to thee; I know not why, if I look to myself; but at thy bidding I come.'" When he was gone "it was feared there would be few more such ripe grapes to be seen growing in this unthankful wilderness." Mr. Sibley writes: "The universal sentiment and grief were expressed in several quaint epitaphs like the following:"

"An epitaph upon the deplorable death of that super-eminent minister of the gospel, Mr. Jonathan Mitchell."

"Here lies the darling of his time,
Mitchell, expired in his prime;
Who four years short of forty-seven
Was found full ripe and plucked for Heaven
Was full of prudent zeal and love,
Faith, Patience, Wisdom from above;
New England's stay, next ages' story,
The Churches' Gemme; the college glory—
Angels may speak him; Ah! not I,
(Whose worth 's above hyperbole)
But for our loss, we'll in my power,
I'd weep an everlasting shower."

"Epitaphium.
Here lies within this comprehensive span,
The Churches, Courts and Countries Jonathan,
He that speaks Mitchell, gives the school the lie,
Friendship in Him gained an ubiquity."
Vixit post funera virtus.

F. D.

It was more than three years before the church had another pastor. In the interim the pulpit was occupied by President Chauncy and others. In 1669, December 20, the town voted that "fifty ponnbs be paid to Mr. Channey and such as labor among us in preaching the word," and thirty pounds to "Mistris Mitchell." A year later forty-five pounds was voted to Mr. Chauncy and thirty to Mrs. Mitchell. The religious work of the church was carried on, although there was no pastor. In February, 1668-69, certain fitting men were appointed to catechize the youth of the town. The town was divided into districts for this purpose. In May, 1669, "The selectmen, taking into consideration, upon the complaint of some of the idleness and carelessness of sundry persons in the time of public worship, upon the Sabbath day, by keeping without the meeting-house, and there unprofitably spending their time, whereby God's name is dishonored,—they do order, for the time being, that the constable shall set a ward of one man during the time of public worship, one in the forenoon and another in the afternoon, to look unto such persons, that they do attend upon the public worship of God, that God's name and worship be not neglected nor profaned by the evil miscarriage of such persons." The town also improved the time and prepared for a new minister by building a parsonage. The ministers had hitherto lived in their own house. In 1669, July 5, a committee was appointed "to take present care to purchase or build a convenient house for the entertainment of the minister that the Lord may please to send us to make up the breach that his afflicting providence hath made in this place; and that the charge thereof be levied on the inhabitants, as is usual in proportion in the maintenance of the ministry." In the following September the church voted to sell its farm at Billerica, and that the proceeds be improved for the building of a house for the ministry. In the ancient church-book there is the record of a committee which was "chosen for that purpose, which tooke care for the same, and to that ende bought fower akers of land of widdow Beate to set the house upon, and in the yeare 1670 thereare was a house erected upon the sayd land of 36 foote long and 30 foote broad; this house to remayne the church's and to be the dwelling place of such a minister and officer as the Lord shall be pleased to supply us withal, during the time hee shall supply the place amongst us. The chargis laid out for the purchas of the land and building of the house and barne, inclosing the orchyard and other accommodations to it:

	£	s.	d.
The purchas of the land in cash	10	0	0
The building and finishing the house	263	5	6

The building the barne	42	0	0
The inclosing the orchyard and yards, and repaying the fences, building an office-house, and planting an orchyard with trees, and seeing some part of the house, and laying a duple floote on some part of it	27	1	10

The house was on the north side of Harvard Street, nearly opposite Chestnut, now (Plympton) Street, within the present college grounds, and on a glebe of four acres. We may follow the house-building a step further by copying another record.

"In the yeare 1676 the hall and hall-chamber were sealed, and another floore of bords was layed upon the ehichin chamber. The particular chargis:

	£	s.	d.
20 bushels of lime and the feching it	1	1	8
800 of earth, 6 ^s 8 ^d , a bushel of hayer, 1 ^s	0	7	8
3 peckes of—it looks like—shreds, 1 ^s 6 ^d ; lumpblack, 8 ^d	0	2	2
3560 nails, 8 ^s , 10 ^s 3 ^d	0	8	10½
The masons' worke	1	4	0
For bricke, and sand, and help to brick the kichen	4	6	4½

We may copy two other records which belong to this period.

March 6, 1668-9. To Deacon Stone by a pair of shooes and a pound of sugar, because the deacon had silver though they cost him 4 ^s 6 ^d , had but	0	3	6
26, 4, 1670. Payd in silver, by the apoyntment of the Committee for the mynister house unto the deputie governor, Mr. Francis Willoughby, by Deacon Stone and Thomas Chesholm, as appears by his discharg wch Deacon Stone hath for the discharg of Mr. Mitchell's funerall the sum of eight pounnd, thirteen shillings, six pence. I say the sum of	8	13	6

In 1668, the year in which Mr. Mitchel died, the church invited Mr. William Stoughton, or Stoutton, as the old record gives it, to become the pastor. He graduated in the class of 1650, and afterwards studied divinity and preached in England with acceptance. He returned to New England in 1662, and was repeatedly asked to become the minister of Dorchester, his birth-place. Though he was "an able preacher and very pious," he was not "persuadable to take any office charge in any church." He was therefore "chosen into the magistracy, and he rendered much important service to the colony. His benefactions to the college exceeded those of any other person during the century." Not long before his death he erected a College Hall which took his name. This Hall was taken down in 1780, and in 1804-5 another Stoughton Hall was erected on a site nearer the north side of the yard. Failing to secure Mr. Stoughton as the minister, the church turned its eyes to one who had been favorably known as a student. The old record must tell the story. "After sume time of seeking God by prayer the Lord was pleased to guide the church to make theare application to Mr. Urian Oakes in Old England, which to further the same theare was a letter sent from the church with a messenger namely, Mr. William Manning with a letter; alsoe sent by severall magistrates and ministers to invite him to come over and be an officer amongst us, which he after counsell and advice did except but

devine providence did hinder him for that yeare by reason of a sickness the Lord was pleased to visit his wife withall and afterward tooke her away by death which hindered him for that yeare. The church the next yeare renewed againe theare call to him by another letter, but then he was hindered by an ague that he was long visited withall in the yeare 1670. Thease providences interfering, the church was in doubt wheather to waight any longer, but after sume debate the church was willing to waight till the spring in the yeare 1671, and then had an answer early in the yeare of his purpose to come over that summer, which was accomplished by the good providence of God, hee arriving in New England July the 3, 1671, and finding good acceptance both by the church and towne and in the country and joined a member with our church and was ordained pastur of our church November the eight 1671."

Urian Oakes was born in England about 1631, and was brought to New England in his childhood. He "was a lad of small, as he never was of great stature." But he seems to have been an amiable boy, for observers "make this reflection, If good nature could ever carry one to heaven, this youth has enough to carry him thither." He was precocious, and published "a little parcel of astronomical calculations." He graduated in 1649, and continued to reside at the college and board in Commons till 1653. "He returned into his native country about the time of the Rump." After serving for a time as chaplain to a person of note he was settled in the ministry at Titchfield, in Hampshire, where he labored with great devotion. In 1662 he was silenced with other non-Conformists; but after a time, "when the heat of the persecution was a little abated, he returned unto the exercise of his ministry." His friends here watched his course, and when the time came invited him to come back and be the minister of Cambridge. To this he consented, as we have seen, and as the "Magnolia" expresses it, "The good stork flew over the Atlantic Ocean to feed his dam." In the public records is an account of a meeting of the church and town to express thanks to Mr. Oakes for leaving England and coming hither, and the continued desire that he would join in fellowship here, that he might be made the pastor, and to entreat him to remove himself and his family into the new minister's house. The deacons were authorized to provide for his accommodation, and it was voted "that half a year's payment forthwith be made by every one, according to their yearly payment to the ministry; and the one-half of it to be paid in money, and the other in such pay as is suitable to the end intended." We have this record: "August the 9th 1671. Delivered to William Manning sixty pounds in silver to pay Mr. Prout toward the transportation of Mr. Urian Oakes, his family and goods, and other disbursements and for John Taylor his passage, I say payed him the just sum of 60*l*. 0. 0. Let it be taken notice of that Mr.

Prout does demand thirteen pounds more due to him." Another record shows that Mr. Prout's claim was satisfied: "Disbursed for Mr. Oakes' transportation from Old England with his family 73*l*." Mr. Oakes was ordained to the ministry here, November 8, 1671. The expenses of the ordination are worth mentioning for the light they throw on the customs of the times:

	£	s.	d.
It. 3 bushels of wheate	0	15	0
It. 2 bushels $\frac{1}{2}$ of malt	0	10	0
It. 4 gallons of wine	0	18	0
It. for beefe	1	10	0
It. for mutton	1	4	9
It. for 30 <i>l</i> of butter	0	15	0
It. for foules	0	14	9
It. for sugar, spice and fruite and other small things	1	0	0
It. for labour	1	8	6
It. for washing the table lining	0	6	0
It. for wood 7 <i>s</i>	0	7	0
It. suit 7 <i>l</i> 3 <i>s</i> 3 <i>d</i> .; bread 6 <i>d</i>	0	9	9
	9	17	3

	£	s.	d.
Gathered by contribution of the church the Saboth before the ordination for the sayde occasion	4	7	1
And the remainder of the charge was defrayed out of the weekly contributions	5	10	2
	9	17	3

In 1673, Mr. Oakes preached the annual election sermon, in which he declared himself heartily "for all due moderation." "Many a man hath a good heart and affections under the bad conduct and ill steeridge of a very weak head. Nevertheless I must adde (as I have great reason) that I look upon an unbounded toleration as the first born of all abominations." He reminded his hearers that New England "is originally a plantation not for trade but for religion." Mr. Oakes was elected a fellow of the college soon after his ordination. After the death of Mr. Chauncy, Leonard Hoar, a clergyman and physician, was chosen president of the college. He was the first graduate to be placed in this exalted position, which has since always been filled by a graduate. President Hoar had not been in office long before trouble came to him. The account of them does not belong in this narration. But the man "who was last year highly courted to accept the place, was now by some wished out of it again." There soon came to be "uncomfortable notices and debates." The students took a strong dislike to the president, and did what they could to annoy and injure him. Cotton Mather says, they "turned cudweeds and set themselves to travestie whatever he did and said." "I can scarcely tell how," but he fell "under the displeasure of some that made a figure in the neighborhood. . . . In a day of temptation which was now upon them, several very good men did unhappily countenance the ungoverned youths in their ungovernableness." Mr. Oakes was closely connected with college affairs, but his relations to the president are not clearly defined. In 1673, with Thomas Shepard and two others, he resigned his seat in the corporation. He was re-elected, but did not

accept the appointment till March 15, 1675, the day on which President Hoar resigned. Mr. Oakes suffered much at the time of these difficulties in the college. "Mr. Oakes hath had a distemper hang upon him, which hath much weakened him, the greatest occasion of which is, I think, some exercise of mind." Governor Lovett adds that Mr. Oakes "thinks it is the remayne of his sickness long agoe in England. I have been afraid lest he may be of noe long continuance with us, but a graine of hopes that he may get over it." Mr. Oakes was asked to accept the presidency of the college. This he declined to do. He was asked to accept the office *pro tempore*. "In answer thereto he declared a deep sense of his unfitness for the work; yet, considering the present exigency the society was now in and confiding in the overseers seasonably to endeavor the settling a fit person for that work, manifesting his willingness to accept of that place for a time, God enabling by health and strength, and so far as his church consented." The Legislature "ordered an allowance of one hundred pounds in money by the year." In October, 1675, the General Court thanked him for his care and pains, and desired him "to continue his labors as President of the said College, which hath been, by the blessing of God, of so great advantage." "He did the services of a President even as he did all other services, faithfully, learnedly, indefatigably." In February, 1679-80, he was again unanimously chosen president by the fellows, and the House of Representatives voted that "for the better encouragement of himself and also of the church for providing help for carrying on that work, which hereby he may be in part diverted from, or need assistance, this Court doth order that fifty pounds per annum, in country pay, be allowed the Reverend Mr. Oakes, in the considerations aforesaid, over and above the hundred pounds in money already settled, provided he accept the presidency." He finally consented to this persistent appeal and was inaugurated on Commencement Day, 1680. He was not to serve the college much longer. He had been long subject to a quartan ague, and "was at last seized with a malignant fever." "When he had lain sick about a day or two, . . . his church coming together with expectation to have the Lord's Supper on the Lord's Day administered unto them, to their horror found the pangs of death seizing their pastor, that should have broken to them the bread of life." The end came on the 25th of July, 1681, in the tenth year of his ministry here and in the fiftieth year of his age. He was borne to his grave in the ancient God's Acre. The memorial slab which marked the grave has been taken away for some ignoble use, but another stone, with an elaborate inscription in Latin, has supplied its place. There is one memento of his burial in an entry in the college books, where are "charges of £16 16s. 6d. for scarfs and gloves, and

£8 14s. for twelve rings at Mr. Oakes' funeral." Increase Mather's testimony may stand for many which could be given: "It may, without reflection upon any, be truly said, that he was one of the greatest lights that ever shone in this part of the world, or that is ever like to arise in this horizon."

Mr. Oakes' ministry fell in disturbed times. Not only was the college in a disorganized state, but the Colony itself was in peril. The reading of Dr. Palfrey's "History of New England" will recall the continuous events which kept the whole community excited and alarmed. It was a day when every man who loved New England and believed in its liberty and loyalty was forced to do his best thinking. The men of Cambridge were not lacking in this. It is a part of the civil history, but it is a part of the ecclesiastical history also. The encroachments of the British government upon the privileges of the charter were unceasing. A few months after Oakes' death the King declared his resolution to have the charter, with all its powers, "legally evicted and made void." In 1684 a decree was passed vacating the charter. "Massachusetts, as a body politic was no more. The elaborate fabric, that had been fifty-four years in building, was leveled with the dust." We have only to read of these things to know what ministers and people were saying and doing in those days which tried their souls.

There was much excitement, too, through the renewed activity of the Anabaptists and Quakers. Rev. Samuel Danforth, in a letter to his brother Thomas, in 1670, writes: "The truth is, matters are so circumstanced that a man can hardly come into any company and enter into any discourse, but before he is aware he finds himself in the like ran and sieve as that wherein Satan winnowed Peter in the high priest's hall." The views and teachings of Mr. Oakes on the limits of toleration have been already given. In June, 1671, just before the arrival of Mr. Oakes from England, the freemen of Cambridge presented to the General Court a long memorial, in which they recited their afflictions because of Quakers, Anabaptists and Familists, and petitioned "that the laws here established against the wicked practices of these obstinate offenders may be fully executed, all discontentments that may tend to give any discouragements thereto notwithstanding."

The witchcraft delusion, which had its centre in Salem and thence spread widely, was at a period later than that we are reviewing. There was trouble from this cause here, as in other places. A woman "crazed, distracted and broken in mind" was imprisoned on suspicion, but was acquitted when tried. A woman named Kendal was accused and put to death through false witness. But as early as 1659 there had been trouble here. The widow Winifred Holman and her daughter, Mary, who lived where the Botanic Garden now is, were accused by her opposite neighbor, John Gibson, and his wife and son and daughter. A war-

rant was issued for the arrest of the Holmans, but there is no account of their trial, and it is probable that no indictment could be found against them. But they were not content with this termination of the matter, and they brought suit against their accusers for defamation and slander. The church came to their help. Deacons John Bridge and Gregory Stone and others certified that Winifred Holman was well known to them, and that she "is diligent in her calling, and frequents public preaching and gives diligent attention thereunto." Judgment was given against the mother, but the daughter sustained her case against John Gibson, Jr., and he was required to acknowledge that he had "wronged and scandalously slandered her," or else to pay her five pounds. He chose to make the acknowledgment and to have her forgiveness of his trespass. Those who wish to read the mass of wearisome testimony are referred to Dr. Paige's "History of Cambridge."

As we pass from the third minister of the church we may set at the line of transition a portion of the elegy which he composed in memory of one whom he describes as "that reverent, learned, eminently pious, and singularly accomplished divine, my ever-honored brother, Mr. Thomas Shepard, the late faithful and worthy teacher of the Church of Christ, at Charlestown, in New England:

"Oh! that I were a poet now in grain!
How would I invoke the muses all
To deign their presence, lend their flowing vein,
And help to grace dear Shepard's funeral!
How would I paint our griefs, and succors borrow
From art and fancy, to lull out our sorrow!

Cambridge groans under this so heavy cross,
And sympathizes with her sister dear—
Renews her grief afresh for her old loss
Of her own Shepard, and drops many a tear—
Cambridge and Charlestown now joint mourners are,
And this tremendous loss between them share."

It has seemed best to make this narrative of the early history of Cambridge somewhat full, because it is the beginning of a long course of events, and the remoteness of the time gives a special interest to all which is connected with it. From this point the record must be more general. But for nearly eighty years longer the ecclesiastical history of Cambridge is the history of one church and is, therefore, in good measure, the property of all the churches which have gathered around it.

In the old church-book good Deacon Cooper places this among "severall providencis of God to the church of Cambridg:—" "Mr. Oakes, our pastor, being chosen to be president of the college about a year before his death, it pleased the Lord to guide our church to give Mr. Nathaniel Gookin a call to be helpful in the ministry in order to call him to office in time convenient, which some time after our pastor's death our church did give him a call to the office of pastor which call he did accept of and was ordained pastor of our church November 15, 1682. Also, there were ordained the same day two Ruling Elders of our

church, namely, Deacon John Stone and Mr. Jonas Clarke, to the office of Ruling Elders."

The account of the ordination expenses resembles that which has been given in the case of a former minister. It includes: "Provision for 80 persons. For burnt wine, sugar, brandy before dinner. Wine for the messengers in the morning; for cakes and rosewater, loaf sugar and spice, butter and pork." The total cost was £13 14s. 2d. The Rev. Nathaniel Gookin was a son of Major-General Daniel Gookin, the associate of the Apostle Eliot in his labors for the Indians, and a man distinguished for his integrity and benevolence. The son was born in Cambridge, October 22, 1656. He graduated in 1675. He was, therefore, twenty-six years old when he was ordained. Less is known of him than of the other ministers of the church. The records of his time are very incomplete. It is strong testimony to his ability and character that he was called to be the associate of President Oakes, and was afterwards placed over the church. Judge Sewall gives an account of the ordination: "Mr. Sherman ordains Mr. Nath. Gookin pastor of Camb. Church. Mr. Eliot gives the right hand of fellowship, first reading the Scripture that warrants it. Mr. Sherman, Eliot and Mather laid on hands. Then Mr. Gookin ordained Deac. Stone and Mr. Clarke Ruling Elders. The presence of God seemed to be with his people. Mr. Jona. Danforth, the Deputy Governor's only son, lay by the wall, having departed on Monday morning (13th) of a consumption."

Mr. Gookin married Hannah, the daughter of Habijah Savage, who was the grandson of the noted Ann Hutchinson. Mr. Gookin was a fellow of Harvard College. His son and grandson were successively ministers of Hampton, N. H., and were highly commended for their worth and work. Of the latter it is said that he was "both ways descended from those who have been stars of the first magnitude."

There are not many traces of the ministry of our Mr. Gookin. There is an account of the money paid him from time to time for his services. The amounts vary, being sometimes less than a pound, at other times ten pounds or more. There is a record of the contributions on the Sabbath. The sum collected in this way was usually about one pound. Of the pastor's salary about fifty pounds appears to have been collected in the church. It is interesting to notice the care which was taken of the poor. Contributions for their relief—and frequently for a single person—were made on the Sabbath. We have the careful record of the sums raised and the uses to which they were applied. There were collections occasionally for the redemption of captives. At one period "the scholars" made their contribution, which was entered by itself and appropriated, according to their wish, for the benefit of the minister. The students' contribution is only found, however, in the interval after Mr. Gookin's death. These items are signifi-

cant. Contributions were taken in 1683 for Joseph Green, in 1684 for Moses Evers, in 1685 for Thomas Gould, who were in "Turkey slavery." In 1686 there was a collection for poor Frenchmen who had come here for shelter, and in 1692 for "York captives with the Indians." In 1686 seven pounds were given to John Parker, at the "Village," whose house had been burned. Another contribution was for the relief of Widow Crackbone and her son, "her being distracted." In 1689 Widow Arrington and her family, "they being under the afflicting hand of God, her sons were taken away by death, and her daughter and a grandchild." The sum in cash was £6 18s. The sum in common pay was £1 2s. 6d.

In 1680 statistical returns were made by a committee in response to an order of the General Court,—121 families were reported, and 169 ratable polls, or males sixteen years of age. The annual allowance to the pastor is given as £51 in money; in goods and provisions £78 13s.; "Sum is £129 13s. 0d., with his dwelling in the house built for the ministry, with four acres of land adjoining thereunto; also about twenty loads of wood annually carried to his house." That was for Mr. Oakes. In June, 1680, it was voted to give Mr. Gookin £100 for that year and to pay the remainder to Mr. Oakes. June 28, 1680, it was "Voted and agreed that five hundred acres of the remote lands, lying between Oburne, Concord and our head-line, shall be laid out for the use and benefit of the ministry of this town and place, and to remain to that use forever." In 1682 the "Farmers" who were living in what is now Lexington complained that they were too far from the church, the nearest of them being five miles distant, and petitioned the General Court that they might be set off as a separate parish. Cambridge made opposition and the petition was refused. It was made again in 1684, and yet again in 1691, when it was granted, and the "Farmers" were allowed "to provide for themselves a person that may be meet and able to dispense unto them the word of God." A separate service was soon established, but it was not till 1696 that a church was formed and a minister ordained.

Nothing of marked importance seems to have been done in the town during Mr. Gookin's pastorate. Mr. Mitchel was still kindly remembered, for in 1687 a grant of ten pounds was made to "Mistress Mitchel." The corporation of the college in 1691 appropriated five pounds toward the repairing of the meeting-house, "provided that this present allowance shall not be drawn into a precedent for the future, and that the selectmen shall renounce all expectation of such a thing for the future." But if things were quiet in the town there was enough abroad to engross the minds of the people, for in this time James II. ascended the throne and entered on his troubled and bloody reign, to be thrust down and driven out when William and Mary assumed the crown at the hands of the people, and brought in a new era, with new liberties

for these Colonies. The "Glorious Revolution" must have stirred the subjects of the English throne who were 3000 miles away, and must have entered into the thanksgiving and the preaching and talking along the streets, and in the church and the home. In 1689 the new sovereigns were proclaimed in Boston with much ceremony. Doubtless Cambridge was there, bearing its part in all which was done. Then followed the war with the French and Indians, in which the Cambridge people shared the common burden and peril. In Massachusetts, in connection with the expedition against Canada, in 1690, the first paper money was issued by the Colonies. It was a euri-osity which the students and towns-people must have seen and talked about.

Meanwhile the minister's work went on. In a small, oblong, leather-covered book, now the property of the Shepard Historical Society, and having in it the names of Joseph Baxter, of the class of 1693, and Benjamin Collman, of the class of 1692, afterwards the first minister of the Brattle Street Church in Boston, are reports of sermons preached by Mr. Gookin in 1690, when these young men were in college. Occasionally there is the report of a sermon by some other preacher. The sermons were on thoughtful, vigorous themes, and we may believe were worthy of the preacher and his hearers. In doctrine they were in accord with the faith of the churches. Mr. Gookin seems to have attended closely to his personal work, and not to have been diverted from it by public affairs.

At length we come upon this entry in the old book: "Mr. Nathaniel Gookin, our pastor, departed this life 7th day of August, 1692, being the Sabbath day at night, about nine or ten o'clock at night." It must, however, have been the 14th of August that the end came. The record was made some time after the event, and continues: "Elder Clark departed this life 14th January, 1699 or 1700, being the Sabbath day. Our pastor Mr. Nathaniel Gookin's wife, Hannah, died 14th day of May, 1702, and was buried 16th day of May at the town's charge." Her grave is in the old burying-ground and is plainly marked; the grave of Mr. Gookin is not now marked, but a monument by the side of his wife's, from which the inscription has crumbled away, is supposed to cover the spot where the fourth minister of the Cambridge Church was buried. In the November after his death, at a public meeting of the inhabitants of the town, it was voted that "the selectmen should make a money-rate to pay the expenses and defray the charges, which amounted to about £18 in money, of our Pastor Gookin's funeral charges."

We close the record of this brief life with entries in Judge Sewall's diary—"Monday, August 15, Mr. Joseph Eliot comes in and tells me the amazing news of the Rev^d. Mr. Nathaniel Gookin's being dead; 'tis even as sudden to me as Mr. Oakes' death. He was one of our best Ministers, and one of the best friends I had left.

"August 16, 1692. I went to the Fast at Roxbury and from thence to the Funeral of Mr. Gookin. Mr. Mather, Allen, Morton, Willard, Bayly, Hobart, Bearers. Has left a Widow, a Son and Daughter."

After the death of Mr. Gookin the pulpit was filled by various preachers. We have a long list of their names, with the amount paid to each. Among the names are Mr. Mather and Mr. Brattle. The amount paid for a single sermon was ten shillings; for a whole day's service one pound was the regular stipend. The gifts of the students seem to have been added to the amount granted by the people. There is a pleasant record which tells us that during this interval Mr. Increase Mather preached much, and gave his pay to Mrs. Hannah Gookin, widow. She was also paid for entertaining the ministers who preached at this time. The Rev. Increase Mather was unanimously invited to assume the pastoral care of the church; but the people among whom he had labored for thirty-six years were not willing to release him, and this, with other obstacles to his removal, led him to decline the proposal. But it is a sign of the importance and standing of the church, that it dared look so high for a minister, and call a man of Mr. Mather's prominence.

After the office had been vacant for four years, the Rev. William Brattle was invited to become the minister of the church, and he accepted the call. He had supplied the pulpit after Mr. Gookin's death and he was ordained as the minister November 25, 1696. He was thirty-four years old and came of a wealthy and prominent family. He graduated in 1680, and was afterwards tutor and fellow in the college. He was one of the first to be made Bachelors of Divinity. In 1688-89, he was in Europe with his friend Samuel Sewall, who wished to be with Mr. Mather, who was seeking to advance the interests of the Colony, which was without a charter or a settled government. Judge Sewall's diary has records of the visit: "February 7th. Mr. Brattle showed me Gresham College, by Mr. Dubois his kindness and cost.

"February 11th. Mr. Brattle and I went to Covent Garden and heard a Consort of Musick.

"July 8th. Went with Mr. Brattle and swam in the Thames, went off from the Temple Stairs, and had a wherry to wait on us. . . . I think it hath been healthful and refreshing to me."

The church records are complete from the time of Mr. Brattle's accession. He made an entry of the day when he "succeeded the Rev. Mr. Nathaniel Gookin, and was ordained a minister of Jesus Christ and a pastor to the flock at Cambridge, November 25, 1696, per the Rev. Mr. Inc. Mather. The Rev. Mr. Morton, Mr. Allen and Mr. Willard laid on hands. The Rev. Mr. Sam^l Willard gave the right hand of fellowship. *Deus sit gloria, Amen.*" He preached his own ordination sermon from the words, "I have planted, Apollos watered; but God gave the increase." A sermon was preached on the same occasion by Mr.

Mather from Revelation i. 16: "And he had in his right hand seven stars." Mr. Brattle's independence was shown in his refusal to have an elder, who was a layman, join in the laying on of hands. The charges of the ordination are entered as about £20. There was "laid out about the repairing of the ministerial house for Mr. Brattle £10 18^s 8^d." The salary of the minister had been fixed after Mr. Gookin's death, when the town voted "to give to the next minister that the church and town shall settle among them ninety pounds per annum, in money, so long as he shall carry on the work of the ministry in Cambridge." In 1712-13 it was "voted, that the sum of ten pounds per annum be added to the salary of the ministry in this part of the town, instead of the annual custom of carting of wood; so that the said salary is an hundred pound per annum." But the custom of carting wood to the parsonage was not entirely abandoned at that time. There are long lists of the donors of wood. In 1697 Mr. Brattle received twenty-two loads, and he usually received more than that till the custom was changed. There are also accounts of wood for which he paid. There is in 1697 a long list of donations headed: "Sent in since November 3d, the day that I was married." The list extended through more than a year, and is composed of articles for his table, with the names of the givers and the value of their gifts. The beginning is in this way:

"Goody Gove, 1 pd. Fresh Butter, 8^d; Mrs. Borden, 1 pd. Fr. Butter, 8^d; Doct. Oliver a live Pork, 2^s; Sarah Ferguson, 1 pig, 1^s. 9^d." The Cutter Genealogy has a list of gifts to Mr. Brattle, in '97, including from Mrs. Amsdel a "rib-spaur of pork."

There are in the records accounts of similar donations afterwards. His private affairs are closely associated with his public relations, and we have another account which is entitled: "Housekeeping Dr., since we were married November 3, 1697." The list opens with "2 powthering Tubs, 9^s; 1 Tub of Beef 154 pds. salted October 29, £1 18^s. 6^d; wine w^o married and wine to 7th day, £3; Bear 19^s. 6^d."

At the end of the church-book are various statements regarding the minister's gardening, the weather, etc. Of 1697 we read, "The winter this year was a very severe winter for cold and snow. The ground was covered with snow from the beginning of December to the middle of March; many snows one upon another; in February it was judged to be three foot and a half deep on a level." "Charlestown ferry was frozen up so that the boat did not go over once from January 17 to February 28, in which time I rode over upon the ice." The summer following this hard winter was a very fruitful summer. In February and March, 1700, he was planting his garden.

In 1696-97 there was important action by the church concerning the reception of members. The subject occasioned much discussion. The result was, in brief, that persons desiring to enter the church should be excused, if they so desired, from a public

relation of their religious experience, and should privately give satisfaction to the elders regarding their religious character. The minister was to state to the church the ground of his satisfaction with the candidates some time before they were to be admitted, and they were to be propounded in public, that if any one knew any reason which should justly bar them from communion he could privately inform the elders. The vote of the church upon receiving persons who had been duly propounded was to be taken by "handy vote, or silence, or any other indifferent sign," at the discretion of the elders. Those who were accepted by the church were publicly to make "profession of their faith and repentance in their covenanting with God." This method does not differ essentially from that which is now employed in Congregational Churches. It leaves the whole matter with the church, and the application of the general principles will depend upon the spirit of each church in each case. During Mr. Brattle's ministry of twenty years, 364 persons were admitted to the church; 724 children were baptized.

In February, 1700, Mr. Brattle was "taken sick of a fever," and was "very ill, near to death." In about a fortnight he was able to be out—"Deo sit gloria. Amen." He was often interrupted during his ministry by pains and languishments. At length the end came to him, also. February 15, 1716-17, "The Rev^d. Mr. Brattle, Pastor of the church of Christ in Cambridge, departed this life." He had borne his sufferings "with great patience and resignation, and died with peace and an extraordinary serenity of mind." "He was greatly honored at his interment." It was the day of "The Great Snow," and the principal magistrates and ministers were detained here for several days.

Let Judge Sewell give his account of these events: "1716-17, February 15, 6. The Rev^d. Mr. William Brattle died last night at midnight. He was a Father to the Students of Harvard College and a Physician, My Fast Friend. I wish it be not portentous that Two such great men should fall in one week. *Deus avertat omen.*" The reference is to the Rev. Ebenezer Pemberton, of Boston, who died on the 13th.

"Febr. 16, 7. Is a great Storm of Snow and Sleet, so that the burying of Mr. Pemberton is put off to Monday, and notice sent accordingly. Feb. 18, 2. Great storm of snow; yet good going under foot. Mr. Pemberton is buried between 4 and 5, in Mr. Willard's Tomb. Feb. 20. . . . About $\frac{1}{2}$ an hour past one my son and I set out for Mr. Brattle's Funeral in Capt. Belcher's sley; got thither in good time. Bearers, President Mr. Anger, Mr. Hancock, Mr. Wadsworth, Mr. Bradstreet, Mr. Stephens, Scarves and Rings. Governour and Govr. Dudley went first; Govr. Usher and Sewall 2d. Were many ministers there; Mr. Rogers and Fitch, from Ipswich, came home from the Burying-place. Cousin Elithrop drove. Got home very seasonably. Another snow

coming on. *Laus Deo.* Feb. 21, 5. Extraordinary storm of snow; yet many were at Lecture to hear Mr. Colman preach the Funeral Sermon of Mr. Pemberton and Mr. Brattle, from *Joel*, 9: 4. Compared Mr. Pemberton to *Elijah*; Mr. Brattle to *Moses*. After Lecture the storm increases much, grows more vehement." Mr. Brattle remembered the church in his last testament: "As a close to this part of my will, it is my desire to consecrate, and with humility I bequeath and present to the Church of Christ in Cambridge (my dearly beloved flock), for a Baptismal Basin, my great silver basin, an inscription upon which I leave to the prudence of the Reverend President and the Rev. Mr. Simon Bradstreet."

The character of Mr. Brattle was held in general esteem. He was a man of marked politeness and courtesy, of compassion and charity. He had a large estate and he scattered his gifts with a liberal hand, yet without ostentation. He was patient and pacific in his temper, and "seemed to have equal respect to good men of all denominations." "With humility he united magnanimity; and was neither bribed by the favor nor overawed by the displeasure of any man." He was of "an austere and mortified life, yet candid and tolerant towards others." He had great learning and ability, and bore a high reputation as a preacher. His manner in the pulpit was "calm and soft and melting." His sermons show that he was thoroughly of the Puritan school in theology; yet in ecclesiastical usages he was liberal. When the Brattle Street Church was founded in Boston, by men who sought larger liberties in the ordering of their ecclesiastical affairs, the movement enlisted his sympathy. When Mr. Colman was called to this Manifesto Church, Mr. Brattle wrote to him: "As for my own part, I shall account it a smile from heaven upon the good design of these gentlemen, if you can send them answer of peace." Of himself he wrote in 1715: "I can't but look upon myself as a standing instance of the infinite power and infinite goodness of God." His friend, Mr. Colman, said of him: "They that had the happiness to know Mr. Brattle knew a very religious, good man, an able divine, a laborious, faithful minister, an excellent scholar, a great benefactor, a wise and prudent man, and one of the best of friends. The promotion of religion, learning, virtue and peace everywhere within reach was his very life and soul, the great business in which he was constantly employed, and in which he principally delighted. Like his good Lord and Master, he went (or sent) about doing good. His principles were sober, sound, moderate, being of a catholic and pacific spirit."

His relation to the college has been mentioned. In the absence of President Mather in England "the administration of the college," writes Mr. Sibley, "was carried on by the Tutors, John Leverett and William Brattle. . . . These two wise and efficient officers appear to have constituted the whole

College Faculty, and to have had almost exclusive direction of the studies and discipline." After the death of his brother, in 1713, Mr. Brattle, who was his sole executor, acted as treasurer of the college for two years, "and in 1715 delivered to his successor nearly three thousand eight hundred pounds of personal estate, and a real estate yielding two hundred and eighty pounds."

A little is known of Mr. Brattle's life in smaller matters. He was a singer. Judge Sewall has an entry in 1701: "I went to the Manifesto Church. . . . They sang the second part of the sixty-ninth Psalm. Mr. Brattle set it to Windsor tune." At an earlier date Mr. Brattle sets Oxford tune.

In 1708 the judge remonstrates with Mr. Henry Flint regarding the application of saint to the apostles and evangelists. "He argued that saying Saint Luke was an indifferent thing; and 'twas commonly used; and therefore he might do it. Mr. Brattle used it."

Again, he cites Mr. Brattle as one of the men who had respect to nature and did not cut off their hair and put on a wig. In 1702 he had this cheerful entry: "Mr. Brattle came to us and smoked a pipe."

The town records give us the close: "6th February, 1716-17. At a meeting of the inhabitants orderly convened, voted, that the charges for wines, scarfs, and gloves for the bearers at the funeral of our late Pastor, Rev. Mr. William Brattle, be defrayed by the town, under the direction of the deacons and selectmen."

There are here and there in the public records items of more or less interest in connection with the church. There is a vote that a pew be made and set up in the southwest corner of the meeting-house for the family of the minister; Mr. John Leverett and Dr. James Oliver have convenient places provided for their families. Here is a tax ordered, payable in money, for repairing the meeting-house, ringing the bell and sweeping. The little meeting-house bell was given to the farmers and a new one was received from Captain Andrew Belden, who received thanks in return. The school-house was ordered to be rebuilt. A public contribution was taken for the relief of sufferers of a recent fire. A grant was made to Mrs. Hannah Gookin to pay her house-rent in 1701. The selectmen, with the consent of the pastor, who was deeply interested in the transaction, were "empowered to rent about five hundred acres of land laid out for the ministry, so that it shall become profitable to the university." Then, in February, 1703, at a town meeting, it is voted "that the inhabitants apprehend it necessary at this time to proceed to the building a new meeting-house, and in order thereunto there was chosen" a committee of seven, "to consider of the model and charge of building said meeting-house, and report of the same to the inhabitants." In 1706 the third meeting-house was built on or near the site of the second, and the first service in it was held on

the 13th of October in that year. The corporation of the college voted £60 towards the building of this house, and instructed Mr. Leverett and the treasurer to "take care for the building of a pew for the President's family," and about the students' seats; "the charge of the pew to be defrayed out of the college treasury."

There was, in 1722, special interest in the church, when "Mr. Judah Monis, a Jew by birth and education, being converted to the Christian faith, owned the covenant, and was baptized and declared a member in full communion with the Church of Christ, after a prayer and discourse made by Mr. Colman, from John v. 46, and a discourse of his own from Psalm cxvi. 10, answering the common objections of the Jews against Christ's being already come, and giving a confession of his faith in the close. Sang part of the 110th Psalm, which solemnity was performed in the College Hall. *Soli Deo Gloria.*" Mr. Monis was a useful member of the church, and a fund left by him is still used for the benefit of the widows and children of Congregational ministers. He was an instructor in the college from 1722 to 1760. "All the students, except the freshmen, were obliged to attend, four days in the week, the exercises of Judah Monis, a converted Jew, who was instructor in Hebrew, unless specially exempted."

The period we have just been reviewing presents many events which must have engaged the minds of the good people here. Queen Mary died in 1694, and William III. in 1702. In 1697 the peace of Ryswick closed the war between England and France. The next reign was largely occupied by the "War of the Spanish succession." Thus even this country was for twenty-five years preceding the peace of Utrecht kept in the commotion of war, which reached this side of the sea. A large part of the men were in actual service, while those at home were compelled to guard their houses and families against treacherous foes. It is estimated that during these wars not less than eight thousand of the young men of New England and New York fell in battle or by disease contracted in the service. Most of the households mourned for friends dead or carried into cruel captivity. It was a gloomy time; the resources of the country were greatly reduced, fields were untilled, towns lay in ashes. The reign of Anne was marked by the constitutional union of England and Scotland, which ended the prolonged contest between those countries. The reign was marked, also, by its progress in science and literature. It was the time of Addison, Steele, Pope, Swift, Locke and Newton. Some of the glories and advantages of England's "Augustan Age" were enjoyed in the New England.

We return to our own modest history. After Mr. Brattle's death the church proceeded carefully to select a man who should enter into the place he had left vacant. A meeting of the church was held April 19, 1717. President Leverett opened the meeting

with prayer. After deliberation nominations were in order, and three clergymen were proposed for the office to be filled: Henry Flint, Jabez Fitch and Nathaniel Appleton. A ballot was taken and Mr. Appleton was found to have thirty-eight votes and Mr. Flint eight. An effort was made to make the vote unanimous by a hand ballot, and all but two are said to have lifted up their hands. "The moderator concluded the meeting with returning thanks to God for the peaceable and comfortable management of the affairs of the church. *Locus Deo.*" The election gave great pleasure to the corporation of the college, who chose the new minister to be a fellow in Mr. Brattle's place, not even waiting for his ordination.

Mr. Appleton was born at Ipswich December 9, 1693, and was the son of the Hon. John Appleton, one of the King's Council, and for more than twenty years a judge of Probate in Essex County. His mother was the eldest daughter of the Reverend President Rogers. He graduated in 1712, and, although receiving generous proposals to enter into business, adhered to his purpose to prepare himself for the ministry. He was ordained pastor of the church October 9, 1717. Dr. Increase Mather preached on the occasion from Ephesians iv. 12, and gave the charge. Dr. Cotton Mather extended the right hand of fellowship. Mr. Angier, of Watertown, and Mr. Rogers, of Ipswich, joined them in the laying on of hands. This was the beginning of a ministry which reached into its sixty-seventh year, the longest which the church has known. The written records of his labors as pastor comprise little more than long lists of persons received to the church, of adults and children baptized and of persons married. The summing up gives us 2048 children baptized and 90 adults. There were 784 admitted to the fellowship of the church. But figures give but a poor idea of the work of so long a ministry and of its results.

His connection with the college continued until 1779—more than sixty years. He filled the office of fellow with fidelity and discretion, and essentially promoted the interests of this "important seminary." At the commencement in 1771 the college conferred on him the degree of Doctor of Divinity, in consideration of his "having been long an ornament to the pastoral character, and eminently distinguished for his knowledge, wisdom, sanctity of manners and usefulness to the churches, and having for more than fifty years exerted himself in promoting the interests of piety and learning in this society, both as a minister and as a Fellow of the Corporation." This honor was the more marked in that it had only once been conferred, and that instance was seventy-eight years before, when Increase Mather was the recipient.

Traces of his faithfulness as a minister are to be seen through the church records, with the mention of events which concerned his relation to the church.

We come upon his vigilance in 1731 and afterwards, when certain persons had fallen into open sin.

In February, 1734-35, the church and congregation met in solemn assembly and spent the forenoon in prayer and preaching. The sermon was from Ezra xiv. 5, 6. In the afternoon several votes were passed, expressing the apprehension of a sad decay of piety, and rehearsing the many ways in which persons had proved false to their covenant, and run into innumerable temptations and hazarded their souls. They feared that these evils resulted from a neglect to watch over one another, as they had covenanted to do. With deep contrition they promised to amend their lives, to discountenance sinful practices, and to deny themselves even their lawful liberty to prevent others from stumbling. They promised to be watchful and helpful. They voted, finally, that a suitable letter should be prepared by the pastor and sent to the inn-holders and retailers of ardent spirits, exhorting them to do all they could to prevent intemperance, gaming or any disorder at their houses. These general measures do not seem to have been sufficiently effective, for two years later, at a meeting of the church, a committee was appointed to consult with the pastor "about such measures as shall be thought most likely under the Divine blessing to reform the growing disorders that are among us." The committee in its report advised that nine of the brethren be appointed "to inspect and observe the manners of professing Christians, and such as are under the care and watch of this church." They were to inquire into any sinful and disorderly behavior of which they might hear, and administer admonition with faithfulness and tenderness. If such private treatment did not succeed, they were to advise with the pastor about more public action. In the case of such open and scandalous offences as required the notice of the church, they were to bring the matter properly before the church. But the appointment of the committee was not to excuse other Christians from the usefulness to which they were pledged. The committee was appointed and entered upon its work. The plan appears to have worked well, for year by year afterwards we have a record like this: "The brethren voted to choose a Committee to inspect the manners of professing Christians, etc., according to the method agreed upon April 19, 1737." The church was evidently striving to fulfill its own obligations, and at the same time not to encroach on the freedom of any person. The offences were real, would be real now, and there was an honest effort to bring them to an end.

Another matter entering largely into the records concerns the lands belonging to the church. These have already been mentioned more than once. There is a catalogue signed "N. A.," and entitled "Lands belonging to the Church and Congregation in Cambridge for the Use of the Ministry." The list includes three small lots of four, eight and three acres, and a lot of forty acres in Menotomy, called Bare Hill. Besides these there was a lot of twenty acres in

Newton, "the gift of Mr. Thomas Beale to the church of Christ in this place and town of Cambridge, whereof he was a member." There was, also, a farm of five hundred acres at the farther end of Lexington, towards Bedford, given in former time by the proprietors of the town for the use of the ministry. It was found expedient early in Mr. Appleton's ministry to sell the land in Newton and Lexington. The proceeds of the former were invested in bonds, and the income was to be used as the church should direct. Of the money received for the Lexington lands, £130 was reserved for the erection of a parsonage; the rest was applied to the purposes of the original donation. Inasmuch as the proceeds of the Lexington farm were to be for the minister's benefit, he made an arrangement with the town whereby he was to receive two-thirds of the interest which accrued from the investments of the money received by the sale of the land. The remaining third was to be added, by the minister's proposal, to the principal. The fund was to be in the hands of a treasurer nominated by the minister and approved by the town. Mr. Appleton solemnly charged the people of the parish to abide strictly by the arrangement which had been made, and never suffer the third of the interest to be applied to any other use than the increasing of the fund. He expressed the hope that no successor of his in the ministry would ever desire or demand more than two-thirds of the interest money. "Nay, let me add, what some of you may easily compute, that by keeping this vote and agreement, of adding one-third of the interest to the principal, sacred and inviolable, that by the 3d or 4th generation it will of itself afford a comfortable and decent support for a minister, without any tax upon the people."

We can trace this matter further. The minister of 1800 writes that this fund, by its own accumulation, and by the addition of the product of ministerial lands sold in 1795, has become greatly auxiliary to the support of the ministry. From time to time a committee was appointed to examine into the state of the church stock of moneys, bonds or notes in the hands of the deacons. In 1773 such a committee made a long report, in which they recommended that, after allowing the funds to increase by interest for fourteen years, for the next fifteen years one-third of the interest should be used for the support of the ministry, and that after that time two-thirds of the fund should be employed in this way, and the remainder added to the principal. In order that the fund might be further increased, the committee recommended, also, to the members of the church that, whenever they came together "to commemorate the death and sufferings of Him who spared not to shed His precious blood for us, they would express their thankful remembrance of the benefit they have received, by cheerfully contributing a small part of the substance with which God has blessed them for the important purposes of continuing and spreading

amongst mankind that pure and undefiled religion which Christ appeared on earth to propagate." They entered into an elaborate statement "to show that a very small part of our substance, properly applied, would produce a very considerable effect" in enlarging the resources of the church.

The church records present various matters which were of importance in their day and are still interesting. We have Mr. Appleton's wood account, beginning in 1729: "My good friends and neighbors have, for several years past, in the fall of the year, brought me a considerable quantity of wood gratis, some years between thirty and forty loads, sometimes above forty loads, which good and laudable custom, that had been dead for some years before the Reverend Mr. Brattle's death, was revived by good Father Pattin about ten years ago, and continued by the friendship of the people." Then follow the names of the donors year by year, with the quantity of their gifts. In 1732 the people of the northwesterly part of the town were formed into a separate precinct, and in 1739 a church was gathered there. To this new church the church here gave £25 "to furnish their communion-table in a decent manner." In 1731 and 1734 additions were made to the communion service of the church here by private gifts. In 1740 "the Hon. Jacob Wendel, Esq., from his regard to this place," presented "to the minister of the first church, for the time being, a large handsome Bible for the use of the church," and the gift was suitably acknowledged.

There was another change in regard to the method of receiving members. Those who wished had already been excused from a public recital of their religious experience. In 1757, at a church-meeting, "some of the honorable brethren of the church moved that for the future it might not be insisted upon with such who should be admitted into the church to come forth and stand in the front alley or aisle at the time of their admission; alleging that it was disagreeable and surprising to some persons, and had been offered by way of objection by some persons, and had been such a stumbling-block to them as to prevent their offering themselves for admission; and considering it was but a mere circumstantial thing, and a matter of indifference, and considering also that the practice of other churches allowed persons to stand in their own proper places, all the time of admission. Therefore, the brethren agreed to leave the matter to the discretion of the pastor, at the same time manifesting that they did not insist upon the standing in the aisle or alley, and that they should be well satisfied if they appeared in any of the seats or pews that joined upon the front alley, so as to be fairly before the pastor and in view of the assembly; and to this no one of the brethren offered the least objection, although they were desired to do it if they had any objection to offer." This action marks the willingness of the church to regard the

wishes of each person in all matters which had not a distinct and essential religious character.

We are brought in our survey to the days of the Revolution. As early as 1765 the people of the town had formally instructed their representatives to give no aid to the operation of the Stamp Act, but to do all they could for its repeal. They ordered that their action should be recorded in the town-books, "that the children yet unborn may see the desire that their ancestors had for their freedom and happiness." The part which Cambridge had in the events of the weary, costly, glorious years which followed is not to be told here. Cambridge was long the headquarters of the American army, and the meeting-house stood in the midst of stirring scenes. It opened its doors and extended its kind offices to the soldiers who mustered around it. There Washington and his companions in arms came to worship. There the delegates from the towns of the States met in 1779 and framed the Constitution of the Commonwealth, which the next year was ratified by the people. The preaching of the pastor, his prayers, those of his church, glowed with patriotic fire. We know the men. Here in 1774, when public and private affairs wear a gloomy aspect, they are found keeping a day of humiliation and prayer, as in other places. Yet they kept up the work of the church, for on this very Fast Day they chose two deacons.

There is a glimpse at the times in the simple receipts which are in the church-book, signed by the minister in acknowledgement of his salary. There is one when he received £3. 2s. in Continental bills, which, "although they are exceedingly depreciated yet, considering the contributions and subscriptions they have afforded for my relief, and considering the additional grant they have made to my salary for 1778, I accept of this in full for my salary for the year 1777." His salary had been £100, and could not have been greatly increased, yet the next year he gave a receipt for £600, and the next for £750, and in 1783 for £2000 paper currency, and £25 silver currency. There is a touching pathos in the statement by the good man as he took his bills and called them money, "although they are greatly depreciated."

He was close upon ninety years of age. We find the fact of his advanced years creeping quietly into the records. 1777, April 25: "Whereas our Rev. and very aged pastor is at present under such bodily infirmities as to render it doubtful whether he will be able to administer the sacrament on the approaching Sabbath, voted, in such case, it is agreeable and is the desire of this church that the Hon. and Rev. President Langdon should administer the same, and at any other time when necessary occasion calls for it." The following Thursday was to have been a day of "Public Fasting and Prayer," but "the aged pastor, through bodily disorders was unable to carry on the services of the Fast, neither could help be obtained, so that there was no public service on the Fast." By 1782 the peo-

ple had come to talk seriously of the need of "a more fixed and settled provision for the preaching and administering the gospel ordinances among them," and it was decided by the church that it was desirable to settle another minister if the right man could be procured, and the parish committee was desired to consult the parish in regard to the matter. We have Mr. Appleton's record of July 30, 1783, which "was observed as a day of Fasting and Prayer by the church and congregation to seek of God divine direction and assistance in the important affair of procuring a more fixed and settled preaching and administration of the word and ordinances among us, considering the very advanced age and growing infirmities of their aged pastor. The Rev. Mr. Eliot began with prayer; Rev. Mr. Cushing preached A.M.; Rev. Mr. Jackson began with prayer; Rev. Mr. Clarke preached P. M." As the general desire of the brethren of the church, "as well as in compliance with his own inclination and earnest wishes," the pastor called a meeting of the church for the purpose of choosing one to be his colleague in the ministerial office, if the church should see fit. When the meeting was held the pastor was unable to attend and Deacon Aaron Hill was moderator. A committee was appointed "to wait on the President of the University and request him to pray with the brethren on the present occasion." The president complied with the request, and received the thanks of the brethren. It was voted by a large majority to proceed to the choice of an associate pastor, and the Rev. Timothy Hilliard was chosen to that office. The parish concurred in this action and Mr. Hilliard accepted the invitation. A council of the churches of the vicinage was called, and on the 27th of October, 1783, Mr. Hilliard was installed. He preached on the occasion from Titus ii. 15: "Let no man despise thee." The Rev. Mr. Clarke, of Lexington, prayed before the charge, which was given by the Rev. Dr. Cooper, of Boston. The Rev. Mr. Cushing, of Waltham, gave the right hand of fellowship. "The greatest order, decency and sobriety were observable through the whole. *Soli Deo Gloria.*"

Mr. Appleton soon gave over the church-book into the care of his colleague, which was virtually the relinquishment of the staff of office, which his decrepit hand could no longer hold. In the following February "he departed this life, in the ninety-first year of his age and sixty-seventh of his ministry."

1784, February 15. This day his funeral solemnity was attended. The body was carried to the meeting-house. Rev. Mr. Cushing of Waltham, prayed. The surviving pastor of this church delivered a funeral address. A funeral anthem was sung, after which the procession advanced to the burying-place, and the body was admitted to the tomb."

A long Latin epitaph covers the stone upon his grave. After the Latin are two lines in his own tongue: "They that be wise shall shine as the brightness of the

firmament, and they that turn many to righteousness, as the stars forever and ever."

We have had many indications of the character of the sixth minister of the First Church in Cambridge, and of the esteem in which he was held. Testimony to the man is abundant—in his work, in his published discourses, and in the tributes of those who knew him. The words of Dr. Holmes, one of his successors, are plain and strong: "Dr. Appleton, if venerable for his age, was more venerable for his piety. His religion, like his whole character, was patriarchal. Born in the last century, and living till near the close of this, he brought down with him the habits of 'other times.' In his dress, in his manners, in his conversation, in his ministry, he may be classed with the Puritan ministers of revered memory, who first came to New England. His natural temper was cheerful; but his habitual deportment was grave. Early consecrated to God, and having a fixed predilection for the ministry, he was happily formed by the union of good sense, with deep seriousness, of enlightened zeal with consummate prudence, for the pastoral office. He preached the gospel with great plainness of speech, and with primitive simplicity. Less concerned to please than to instruct and edify, he studiously accommodated his discourse to the meanest capacity. To this end, he frequently borrowed similitudes from familiar, sometimes from vulgar objects; but his application of them was so pertinent, and his utterance and his air were so solemn, as to suppress levity and silence criticism. . . . So great was the ascendancy which he gained over his people, by his discretion and moderation, by his condescension and benevolence, by his fidelity and piety that, while he lived, they regarded his counsels as oracular; and, since his death, they mention not his name, but with profound regard and veneration."

Dr. Appleton was esteemed a wise man by the neighboring churches, and his advice was sought. His own church was "respectable for wealth, influence and numbers," but his influence was felt throughout the province. His portrait by Copley hangs among those of other worthies, on the college wall, and fittingly represents him holding in his hand a volume of Dr. Watts, entitled, "Orthodoxy and Charity." His manuscripts were burned in Boston in the fire of 1794. But a goodly number of his sermons are in print, with a work published in 1728 with the title, "The Wisdom of God in the Redemption of Man." He left a legacy of forty pounds for the benefit of the poor of the church; and one of twenty-six pounds Massachusetts currency, to the college for a scholarship, in addition to thirty pounds previously given by him.

Mr. Appleton was married, in 1720, to Margaret, daughter of the Rev. Henry Gibbs, of Watertown. The tradition of the manner in which he obtained his wife, by a device which sent his rival in pursuit of his runaway horse, indicates that while his prudence was "consummate," his deportment in his youth was not always severely grave. Twelve children were born

to him. One son was a merchant in Boston and a zealous patriot during the Revolution, and for many years was commissioner of loans. Two daughters married clergymen.

Before we pass to the next ministry there are a few others events which should be mentioned. After Mr. Appleton had been invited to the church, a committee was appointed by the town to consider the expediency of raising the meeting-house, so that an upper tier of galleries could be put in. The college agreed to bear one-seventh part of the expense of this alteration, on condition that certain parts of the house should be reserved for the use of the scholars. The project seems to have been abandoned. In 1746 the parish proposed to repair the meeting-house, and the college agreed to pay a portion of the cost. There was a difference of opinion regarding the work which should be done, and the extensive repairs were given up; but it would appear that the immediate necessity was met by making the roof tight, and mending the windows, doors and seats.

It is very probable that some thought the time was not remote when a new house would be required, and that it would not be good economy to spend much money on the old building. In 1753 the inhabitants voted, to build a new meeting-house upon some part of the hill, on which their house was then standing. The college agreed to pay one-seventh part of the cost upon certain conditions, and with proper care that their action should not be taken as a precedent. The students were to have the improvement of the whole front gallery, and one of the best pews was to be set apart for the president. A petition was sent to the General Court, asking such help in the affair as should seem meet to the legislative wisdom and generosity. The college afterward agreed to add twenty pounds to its previous subscription. There was a protracted negotiation with the college, but at last, November 17, 1756, the house was raised. Divine service was first performed in it July 24, 1757. This, the fourth meeting-house, remained until 1833. President Quincy has said of it, "In this edifice all the public commencements and solemn inaugurations during more than seventy years were celebrated, and no building in Massachusetts can compare with it in the number of distinguished men who at different times have been assembled within its walls." There Washington and his officers worshipped. There the Constitution of Massachusetts was framed. There Lafayette received the address of welcome in 1824. A large stone from the foundation, one which had very likely served the preceding houses, has been built into the walls of the Shepard Memorial Church, inscribed with the date 1756.

In 1749-50 a committee was appointed by the parish "to treat with the governors of the college, in order to their assisting of said precinct in the support of Mr. Appleton."

A law was passed that if any dog was found in the

meeting-house on the Lord's Day, in time of public worship, the owner should be fined.

Provision was made for the care of the "French neutrals."

The court-house was to be rebuilt, as far as possible, from the materials of the meeting-house about to be taken down.

In 1761 an Episcopal Church was opened here, at the desire "of five or six gentlemen, each of whose incomes was judged to be adequate to the maintenance of a domestic chaplain. A missionary was appointed to the care of the church by the English Society for Propagating the Gospel in Foreign Parts."

In 1764 the college suffered a severe loss by the burning of Harvard Hall, which contained the library, the philosophical apparatus and other things of value. This was of great interest to the church.

In 1747 the inhabitants on the south side of the river had made known their desire to be formed into a separate religious precinct. There was opposition to this, and the proposal was defeated. It was renewed with much pertinacity in 1748, 1749, 1758, 1774. Religious services were held there, and a meeting-house erected, and in 1779 the people on the south side were incorporated "as a separate precinct, with authority to settle a minister, and to provide for his support by a parish tax." Certain persons were by name exempted from the taxing, so long as they preferred not to be reckoned in the new precinct.

In 1780 the church members on the south side of Charles River in Cambridge presented a petition to the church, signifying their desire to be dismissed and incorporated into a distinct church, for enjoying the special ordinances of the gospel more conveniently by themselves." The church complied with the request, and, on the 23d of February, 1783, the church was organized. The Rev. John Foster was ordained to the pastoral care of the church November 4, 1784.

It was during Dr. Appleton's ministry that George Whitefield was arousing and exciting the country by his marvelous preaching. In 1740 he came to Cambridge to see and to preach, and he made a sad report of what he saw.

He found the college with the president, five tutors and about a hundred students. As he viewed matters, the college was "not far superior to our universities in piety and true Godliness. Discipline is at too low an ebb. Bad books are become fashionable amongst them. Tillotson and Clarke are read instead of Shepard and Stoddard and such like evangelical writers; and, therefore, I chose to preach on these words: 'We are not as many, who corrupt the Word of God;' and God gave me great freedom and boldness of speech. A great number of neighboring ministers attended, as, indeed, they do at all other times. The president of the college and ministers of the parish treated me very civilly. In the afternoon I preached again, in the court. I believe there were

about seven thousand hearers. The Holy Spirit melted many hearts." President Quincy intimates that Whitefield had been misinformed about the college by some disaffected persons. His preaching here seems to have had results which were approved. The visiting committee of the overseers, in 1741, reported that "they find, of late, extraordinary and happy impressions of a religious nature had been made on the minds of a great number of students, by which means the college is in a better order than usual, and the exercises of the professors and tutors better attended."

Tutor Flynt wrote of Whitefield: "He appears to be a good man, and sincerely desirous to do good to the soul of sinners; is very apt to judge harshly and censure in the severest terms those that differ from his scheme. . . . I think he is a composition of a great deal of good and some bad, and I pray God to grant success to what is well designed and acted by him."

The college faculty retaliated the charges brought against the college in the hot discussions of the time by publishing their testimony against Whitefield, calling him very hard names. He replied, and the controversy went on. "Whitefield was sore beset. In letters to various friends he expressed more diffidence than might have been expected from a young man who had drunk so deeply into the intoxication of popular applause." He saw something of his error. "I certainly did drop some unguarded expressions in the heat of less experienced youth, and was too precipitate in hearkening to and publishing private information." He assured the faculty of his "sorrow that he had published his private information . . . to the world." Twenty years later, when the library had been burned, he gave to the college his "journal and a collection of books; and also by his influence he procured a large number of valuable books from several parts of Great Britain."

In all these events the church in Cambridge was most deeply concerned. The times required all the discretion of the ministers. At a meeting of the Association of Cambridge and the neighboring towns, in January, 1744-45, "the Rev. Mr. Appleton, having applied to his brethren" for advice, after prayer and discussion, "it was unanimously voted that it is not advisable, under the present situation of things, that the Rev. Mr. Appleton should invite the Rev. Mr. Whitefield to preach in Cambridge. And they accordingly declared, each for themselves respectively, that they could not invite the said gentleman into their pulpit."

June 27, 1745, there appeared this notice in the *Boston Weekly News Letter*: "WHEREAS, it is reported in the *Gazette or Journal*, of this week, that the Rev. Mr. Whitefield preached last Saturday at Cambridge, to prevent misapprehension and some ill consequences which may arise from thence, you are desired to give your readers notice that he preached on the Common, and not in the Pulpit; and that he did it, not only

without the consent, but contrary to the mind of the Rev. Mr. Appleton, the minister of the place."

But the church here felt "The Great Awakening" which had begun at Northampton in 1734, under the powerful preaching of Jonathan Edwards, and had spread to the surrounding towns and quickened the Boston churches. The visits of Whitefield and Tennent enlarged the interest which the churches here were feeling. We have the testimony of Tutor Flynt's diary: "Many students appeared to be in a great concern as to their souls, first moved by Mr. Whitefield's preaching, and after by Mr. Tennent's and others, and by Mr. Appleton, who was more close and affecting in his preaching after Mr. Whitefield's being here."

With this we close our account of Mr. Appleton's ministry and pass to that of his associate and successor. The death of Dr. Appleton left his colleague the sole pastor of the church. This had doubtless been foreseen in his settlement. The Rev. Timothy Hilliard was the son of a worthy farmer and deacon, and was born in Kensington, N. H., in 1746. In his youth he showed an unusual facility in acquiring knowledge, and manifested an amiable and cheerful disposition. President Willard, who was his contemporary in college, bore witness that "while he was a student he made such advances in the various branches of useful learning as laid the foundation for that eminence in his profession to which he afterward attained. . . . His pulpit performances from the first were very acceptable," whereon he was called to preach. He graduated with high honor in 1764. In 1768 he was appointed chaplain of Castle William. After a few months in that service he was appointed a tutor in Harvard College. He discharged his duties with fidelity and success for about two years and a half, when he was invited to become the minister of Barnstable, where he was ordained, April 10, 1771. He remained in that position about twelve years, discharging its duties with his usual diligence. He was highly esteemed as a preacher and a pastor, not only in his own parish, but through that part of the country. The chill, damp air of the sea had an unfavorable effect upon his health, and he was obliged to resign his charge. He was soon invited to Cambridge, and was installed here, as we have already seen. He continued in the ministry here until his death, which occurred on the Lord's Day morning, May 9, 1790, when he was in the seventh year of his ministry here, and the forty-fourth year of his age. The records of his pastorate are made up of the usual parochial events. There were one hundred and forty-five baptisms, and twenty-three persons were received to the church. The "Committee to inspect the manners of professing Christians" seems to have been discontinued after Dr. Appleton's death. Care was taken of the funds belonging to the church, provision was made for the poor, and the legacy of the late pastor was applied according to his directions. The years

of the Revolution, and those which immediately followed it, were a dreary time for the churches. Many persons had been drawn away from the restraints of the law and the influence of the sanctuary and exposed to the excitement and temptation of a soldier's life, often among the unprincipled strangers from other lands. With the war uppermost in men's minds, religion suffered a decline. Errors of belief and practice, corruptions of divers kinds, came in like a flood. The Sabbath lost its sacredness, the Bible its authority, the church its sanctity. The preacher's task was doubled. The minister here felt the force of the conflict and the greatness of the issue. Mr. Hilliard was thoroughly in earnest. Both the learned and the unlearned were profited by his judicious, instructive, practical teachings. His sermons were of cost to him, and hence were of value to his hearers. The government of the college regarded him as "an excellent model for the youth under their care who were designed for the desk, and considered his introduction into this parish a most happy event." He excelled in public prayer, and was "tenderly attentive to the sick and afflicted." His temper was amiable, candid, liberal. While not ranking among what are called popular preachers, he had fine pulpit talent, and his ministrations were highly acceptable to the churches. His reputation was increasing when he died. He had much influence in ecclesiastical councils and associations, and his brethren paid him a marked respect. He was watchful of the welfare of the College of which he was a son and an overseer. In person he was rather spare, of a medium height, with an intellectual and attractive countenance. His portrait in the library of the Shepard Memorial Church presents him with a grave face and the aspect of a man thoroughly devoted to his sacred calling. His last illness was very short, and he met death with the calmness which was becoming in such a man. He mentioned his people with affection, and with satisfaction testified "that he had not shunned to declare to them the whole counsel of God, having kept nothing back through fear or any sinister views." His "bereaved, affectionate flock" erected a monument to his memory, and inscribed upon it the virtues that adorned his life,— "In private life cheerful, affable, courteous, amiable; in his ministerial character, instructive, serious, solemn, faithful."

Dr. Holmes tells us that "all the ministers, since Mr. Mitchel, have resided at the parsonage." The minister's house, which was built in 1670, became dilapidated in the course of years, and in 1718 the town made a grant "of two hundred and fifty pounds for the building of a new parsonage-house, provided the sum of one hundred and thirty pounds of the said money be procured by the sale of town, proprietary or ministry lands." It would appear, however, that additions were made to the old house. Dr. Holmes states, in 1800, that "the front part of the present house at the parsonage was built in 1720." In 1843 the house was taken down.

Mr. Hilliard died in 1790. His publications were five sermons, including a Dudleian Lecture.

It was to be nearly two years before the church had another minister, and his ministry was to be most eventful. There were then in Cambridge a few more than two thousand people. In ten years there was a growth of three hundred and thirty persons. The buildings and grounds of the college gave character to the town, and near at hand were the meeting-house of the First Church, the Episcopal Church, the county court-house and jail, and the Grammar School-house. In 1800 the historian writes: "West Boston Bridge, connecting Cambridge with Boston, is a magnificent structure. . . . It is very handsomely constructed; and when lighted by its two rows of lamps, extending a mile and a quarter, presents a vista, which has a fine effect. The bridge was opened for passengers November 23, 1793, seven months and a half from the time of laying the first pile. The bridge cost \$76,700. A toll was "granted to the proprietors for seventy years." "The erection of this bridge has had a very perceptible influence on the trade of Cambridge, which, formerly, was very inconsiderable." There were then in the town "five edifices for public worship, and six school-houses." "The grounds of Thomas Brattle, Esquire, are universally admired, for the justness of their design, and the richness, variety and perfection of their productions. In no part of New England, probably, is horticulture carried to higher perfection than within his enclosure."

Cambridge was an inviting place of residence when the eighth minister came to the ancient church. He was born in the town of Woodstock, now in Connecticut, but then within the bounds of Massachusetts. He graduated at Yale College in 1783. His college life lay within the days of war. He felt the stir of the times, but pursued his studies with diligence and was considered one of the most accomplished scholars in his class. In his sophomore year he connected himself with the College Church. In the year following his graduation he was in South Carolina. While there the church and society at Midway, Ga., learning that he intended to enter the ministry, invited him to preach for a year, and, in 1783, he began his labors there. This church and society had removed from Dorchester, Mass., about the year 1700, and had first settled in South Carolina, at a place which they named Dorchester. Some fifty years later they moved to Georgia. The society was broken up and dispersed by the war, and the meeting-house, with most of the dwellings and the crops, were burned by the British troops. On the return of peace the people came back to their old home and resumed their common life. It was at this new beginning that Mr. Abiel Holmes, then in the twenty-first year of his age, was called to their service. When he was about to return to the North, in the following year, he was earnestly solicited to obtain

ordination and then to resume his ministry in Georgia. He consented to this, and was ordained in the College Chapel at New Haven, on the 15th of September, 1785. The sermon, by the Rev. Levi Hart, of Preston, Conn., was entitled: "A Christian minister described, and distinguished from a pleaser of men." The prayer of ordination was by President Stiles. He went back to Georgia and continued his labors there for about four years longer, when it was found that his health was unfavorably affected by the Southern climate, and he resigned his charge and came to New England. Mr. Holmes was invited to preach at Cambridge with a view to his settlement, and was soon called to the pastorate. He replied: "In respect to the office of which you have asked my acceptance, I can truly say that I consider it above my years and improvements. But the singular candor with which you received me and my ministrations while I was with you, and the remarkable unanimity with which the transactions relative to my proposed settlement among you were conducted, silence my objection on this head." A council was called in the usual manner and it met at the parsonage. President Willard was chosen moderator. After the examination the council adjourned for dinner at Mr. Owen Warland's. After dinner the brethren of the church received the pastor-elect to membership. Then the council, with the pastor-elect, preceded by the church and as many of the other inhabitants of the parish as were present, proceeded to the meeting-house, where the services of installation were held. The sermon was by Rev. James Dana, D.D., of New Haven, from the words, "My doctrine is not mine, but his that sent me." The record closes in this way: "Throughout the whole process the greatest order, decency and harmony were observable. *Soli Deo Gloria.*"

Thus the Rev. Abiel Holmes entered upon his long pastorate here. In his first sermon after his installation he said: "The place in which I stand reminds me of my venerable predecessors in the ministry. . . . Other men labored, and I am entered into their labors. Such an one as Paul the aged no longer addresses you from this pulpit, but a youth who would have esteemed it a singular honor, as a son with a father, to have served with him in the gospel. May the examples and counsels of your worthy pastors who have gone to rest be long kept in faithful remembrance among you; and may the recollection of their excellent characters excite your present minister to fidelity in the very arduous and important work to which he is reservedly devoted."

The records of the church during Mr. Holmes' ministry are in his own handwriting, which is almost as plain as printing, and they exhibit the method and accuracy which marked his whole life. From these records and collateral sources we are able to make out the history of those years. The chronological order will be followed, for the most part.

The first matter in the records proper of this period is the report in 1792 of "a committee appointed to inquire into the state of the church stock and of the fund appropriated to the poor of the church." It appears that the deacons had in their charge £356 19s. 8½*d.*, which was nearly all invested and drawing interest. One-third of the interest was to be paid to the treasurer of the parish, by vote of the church. In the account of the fund for the poor, the deacons were charged with £82 7s. 6½*d.*, which had been properly distributed, or was still invested, except a very small balance. The deacons declared their agreement to the report of the committee. The church passed a vote of thanks to "Deacon Hill for his generous services in providing for the communion and negotiating the funds of the church." This examination was repeated annually, and the vote of acknowledgment was regularly passed for several years, enlarged, however, by thanks "to the deacons in general for their services in behalf of the Church." The last of these monetary statements was made in 1830, when the funds of the church had increased to \$3236.99, and the fund for the poor to \$667.18.

The first statement made by the deacons is signed by Aaron Hill, Gideon Frost and James Munro. In the same year Deacon Hill died after a service of eighteen years, and Captain John Walton was chosen to fill the vacancy. He died thirty-one years afterwards, in 1823. In 1803 Deacon Frost died, after serving twenty years, and Mr. William Hilliard was chosen in his place. Concerning him the pastor wrote, in a note: "He is in his twenty-sixth year, is a son of my worthy predecessor in the ministry, and, though recently admitted into our church, has been several years a member of a church in Boston, and has had frequent communion with us." He remained in office until his death, in 1836—a period of thirty-two years. Deacon Munro died in 1804, having been twenty-one years in this office. In his place, Mr. Josiah Moore was chosen. He served for nine years, and died in 1814. His house stood where the Shepard Memorial Church was afterwards erected.

In 1818 Mr. James Munroe was elected deacon. The record proceeds in this way: "Sept. 6.—After the morning sermon (Lord's Day), the pastor, having admitted four members in full communion into the church, mentioned the election of Brother James Munroe to the office of Deacon, and his acceptance. The deacon-elect, signifying his acceptance by taking his seat, this day, with the deacons, near the Communion-table, rose, on being addressed by the pastor, who briefly stated to him the duties of the office to which he was elected, exhorted him to fidelity, and announced him a deacon of this church. In the concluding prayer, immediately following, he was commended to the peace and blessing of God." He remained in this office until his death, in 1848. Of Deacons Hilliard and Munroe a later pastor said: "In many respects dissimilar, they were alike in

their love of the truth, in their zeal for the glory of Christ, and in their efforts and sacrifices for the welfare of the church."

In this connection we may bring together a few changes in regard to the Communion of the Lord's Supper. It had been the usage of this church to have this ordinance administered once in eight weeks. This caused inconvenience, as the particular days were not specified. Accordingly, in 1797, at the suggestion of the pastor, the church decided to have the communion on the first Lord's Day of every other month, beginning with January.

In September, 1816, there is this entry: "It had been the usage of the church, at the Communion service, for the members to remain in their own pews. To lessen the time and to facilitate the duties of this service, on the suggestion of the deacons, the pastor recommended it to the communicants to seat themselves in the pews on the broad aisle. These pews were, accordingly, occupied at the Communion this day." In 1825 the time for the lecture preparatory to the communion was changed to the evening, and it was voted "that the examination of the annual accounts of the church take place at the lecture previous to the first Sunday in March." At the same meeting it was voted that the Sabbath service from September to March should begin at half-past two o'clock, and during the rest of the year at half-past three. In 1826 "two of the tankards and two cups were recast, and two cups altered in such a manner as now made seven cups of a uniform shape and size. A new silver spoon and six Britannia-ware dishes, more adapted to the use for which they are designed, were also procured."

There are three cases of church discipline on record in this period. All were for offences which would at any time demand attention, and the proceedings were marked by carefulness and fidelity. The first case was settled by the satisfactory confession of the offender, after the admonition of the pastor had brought him to repentance. The second resulted in excommunication, after persistent efforts to bring the offender to amendment. Four years afterwards, upon her contrition and desire for forgiveness and restoration, she was taken again into the fellowship of the church, and the pastor "exhorted the members to conduct toward her accordingly." The third instance was that of a man who had "renounced his Christian profession . . . and proved himself to be, not merely an apostate from the Christian Church, but an enemy to the Christian religion." The earnest efforts of the church to reclaim him were ineffectual, and he was finally cut off from the membership which he had renounced.

Let us turn to pleasanter things. In 1805 a committee, consisting of the pastor and two others, was appointed to consider the expediency of "procuring religious books for the use of the members of the church. The report recommended that a contribu-

tion should be made by the church for that purpose, and this course was adopted. The committee prepared a list of about twenty volumes, which were deemed suitable for the designed object. The list began with "The Holy Bible." Then followed "Leslie's Short and Easy Method with Deists," Baxter's "Saints' Rest," Doddridge's "Rise and Progress of Religion," "Wilberforce on Christianity," and kindred works. It is clear that the reading was to be of a very decided character. The books named were highly and deservedly approved in the churches. If they are not much read now, it is to be doubted whether works of a higher order have supplanted them. The estimated cost of the books proposed was \$13.50. The deacons were desired to solicit donations of money, or of any of the books which had been designated, that the library might be started. The response was generous, and the library was established and placed under the care of the church, which was annually to choose a librarian and a committee on books. The title agreed upon for the new organization was "The Library of the First Church." The pastor was chosen librarian. Probably the project was his in the beginning. A catalogue was printed, embracing 109 books.

This is the place to bring together a few other matters of a similar character. In the summer of 1815 a Sabbath-school was opened at the meeting-house, with the design of promoting "the moral and religious improvement of children and youth." During three summers the school was taught by Miss Mary Munroe and Miss Hannah Tenney. Five other young ladies came to their assistance, and Mr. James Farnsworth, master of the grammar school, tendered his services for the instruction of boys. "More than eighty children of both sexes received instruction at the Sabbath-school. They were taught to read and to commit to memory select portions of the Bible, catechisms, hymns and prayers, and to answer Cummings' questions on the New Testament. Books and tracts were early provided for their use. In 1819 the pastor presented the design and needs of the school to the congregation, "and a collection was afterwards taken for purchasing small books to be distributed among the children as an encouragement for punctual attendance, correct lessons and good behavior."

"In 1827 books and tracts were collected by subscription for a juvenile library." A Board of Trustees was chosen, of which the pastor was the head. He was also librarian. In July, 1831, seven trustees were elected, and Miss Mary Ann Sawyer became librarian. The trustees were authorized to make selections from the library in order to form a Sabbath-school library for the Shepard Sunday-school. We are now carried beyond Dr. Holmes' pastorate, but it seems best to continue this account of the school. In 1832 it was voted that "Mr. Stephen Farwell, then superintendent in the Sabbath-school, be appointed and requested to deliver the books selected for the use of the Sabbath-school." Afterward, in 1835, a

Sabbath-school society was formed "for the purpose of promoting more effectually Sabbath-school instruction," and both libraries for the young were transferred to its care, and were brought together under the name of "Juvenile and Shepard Sabbath-school Library."

We now come to transactions affecting the connection between the church and the college. From the first they had held their Sunday services together, and the relation had been very intimate. In 1814 the corporation and overseers decided that it was best for the members of the college to hold religious services by themselves. It was thought that this change would secure services which would be more directly appropriate to those connected with the college, and would give an opportunity for transferring to Sunday certain discourses which had been delivered on a week-day. The approved practice of other colleges favored the change. The completion of University Hall, which contained a commodious chapel, made a good occasion for the proposed measure. It was designed to have a church organized and to have religious ordinances duly administered. Members of the college government, with their families, and students, graduates and undergraduates were to be the only stated communicants. A committee, including the reverend president, was appointed to notify the minister and congregation of the parish of the design, and "to express the sentiments of regard and fraternity felt by the members of the several college Boards, and the desire of Christian and friendly communion between the two societies." President Kirkland, as chairman, addressed a letter to the pastor, and the church and congregation, laying the matter before them in appropriate terms. He said: "The ties of neighborhood and friendship, the sympathy and regard naturally produced by a communion in religious acts, and the experience of edification and comfort in attendance upon your services, combine to make us wish to continue going to the house of God in company." The committee expressed the belief that the separation, although in some respects painful and undesirable, would, on being viewed in all its bearings, receive approval. A conference was held to determine the future relations of the parish and college. When the proposals of the college had been received, the church voted "that the reasons assigned for the proposed measure, so far as it respects this church, are entirely satisfactory, and that the church is ready to concur in the change." Those who were to leave the old church for the new one were to be dismissed in the customary manner. Five delegates, with the pastor, were appointed to assist in the formation of the new church, and the pastor was "requested to reciprocate the assurance of regard and fraternity so kindly expressed by the university toward us." The pastor accordingly replied to the letter of the president in words full of feeling. He said: "Allowing ourselves, however, to be influenced on this occasion by no other

consideration than a regard to the best interests of the university, we cannot but acquiesce in a measure designed for its benefit. Our prayer to God is that it may, in all respects, be of kindly and salutary influence, and particularly that it may conduce to the religious interests of the university—a seminary consecrated 'to Christ and the Church.'" The president and fifteen others signed the covenant upon which the church was to be formed. This is dated "Harvard College, November 6, 1814." The record of the church closes with the statement that "on the morning of Lord's Day, 6 November, 1814, the church was organized at University Hall, in the presence and by the assistance of the pastor and delegates of the First Church in Cambridge." It was an interesting and important event in the history of both church and college.

In the following year the pastor made a discovery of great interest and value. There was no catalogue of the members of the church in its earliest years, though many names could be inferred from the fact that a freeman was of necessity a member of the church. Even with this method but a portion of the names could be obtained. But in 1815 Dr. Holmes found among the collections of the Rev. Thomas Prince, who had been the minister of the old South Church in Boston, and who died in 1758, a manuscript register, in the handwriting of Rev. Jonathan Mitchel, containing a list of the members of the church under this title: "The Church of Christ at Cambridge, in New England. The names of all the members thereof that are in full communion; together with their children who were either baptized in this church or (coming from other churches) who were in their minority at their parents' joyning, taken and registered, in the 11 month, 1658." Dr. Prince was a noted collector of books and papers relating to the history of New England, and he doubtless regarded this paper as of rare worth. The church directed that this list should be bound up with the records, and that blank leaves should be left for the record of other papers. It is much to be regretted that the list of members cannot be continued through the years which intervened before the settlement of Mr. Brattle. This is now impossible.

Another blank-book was to be procured "for the preservation of the reports on the state of the church stock, etc.," and other important papers suitable to be preserved with them; such as Acts of the Legislature relative to parish and ministry lands, the setting off of parishes within the town of Cambridge, etc., etc.

In 1807 Dr. Holmes left the ancient house in which the ministers had so long resided, and removed to the house in Holmes' Place, so well known through the writings of his son, Oliver Wendell Holmes. "The gambrel-roof house" remained in the family until a few years since, when it passed into the possession of the college. It was subsequently taken down; but the work of the photographer will preserve the familiar appearance of it.

In 1807 a meeting-house was erected in that part of the town which was already rejoicing in visions of commercial prosperity, and which, in anticipation of its importance, had been made a port of entry and was designated as Cambridgeport. That part of the town had been under the care of the minister of the First Church, "who was wont in his visits to distribute catechisms and hymn-books, and to question the children upon religious doctrines and duties." The new church will have its own place in this narration. But some things concerning it properly belong here. "In 1805 Royal Makepeace and others were incorporated for the purpose of building a meeting-house, by the name of Cambridgeport Meeting-House Company, and the next year they proceeded to erect a large brick edifice on Columbia Street, between Harvard Street and Broadway, which was dedicated Jan. 1, 1807, and was the first house of public worship in Cambridgeport." The sermon of dedication was preached by Dr. Holmes. "By an act passed March 1, 1808, the proprietors of the meeting-house, together with all the inhabitants and estates in the Fifth School District in Cambridge, east of Dana Street and a line extended in the same direction northerly to Charlestown (now Somerville), and southerly to the river, were incorporated as the Cambridgeport Parish; and, Feb. 2, 1809, the proprietors (reserving private ownership of pews) conveyed to the parish the meeting-house and lot, containing two acres, together with a parsonage lot at the northeasterly corner of Harvard and Prospect Streets." A church was organized in connection with the new parish, July 14, 1809. The first pastor was settled in 1814. In a small book, entitled "Two Hundred Years Ago; or, a Brief History of Cambridgeport and East Cambridge, with details of some of the early settlers. A Christmas and Birthday gift for young persons," we are taken back to that day. "At the close of this year we had the satisfaction of knowing that we were to have a permanent minister, Mr. Thomas Brattle Gannett having accepted our unanimous call, to the great joy of all the parish. He was installed pastor of the Cambridgeport Parish January 1st, 1814. Notwithstanding the roads were almost impassable, the church was filled to overflowing." Dr. Holmes preached at the ordination of Mr. Gannett, from the words "I am made all things to all men, that I might by all means save some." One who afterwards wrote the history of that church, said of the sermon and the preacher, "It reads as placid as he looked. . . . It is another instance of that now lost art of felicitously weaving in Scripture language with the texture of every sentence and the expression of every thought, which gave such peculiar unction to the most common utterances of the older divines." Mr. Gannett was born in Cambridge, February 20, 1789, and graduated at Harvard College in 1809. He remained with the church for twenty years, when he was dismissed at his own request, after

"a singularly blameless ministry." He took no active part in the theological contest which here fell in the years of his pastorate, "but devoted himself entirely to the inculcation of those moral duties and Christian graces which become the true disciples of Christ." After his resignation he resided in Cambridge for ten years, holding the office of town clerk in 1840-42, and serving as a Representative in the General Court in 1834, 1835, 1837, 1838. He removed to South Natick in 1843, and there ministered to the Unitarian Church. There he died, April 19, 1851.

Among other memorials of Dr. Holmes' ministry is "A sermon delivered at the Episcopal Church in Cambridge, by the request of the Wardens and Vestry, December 25, 1809, in celebration of the nativity of our Blessed Saviour. By Abel Holmes, D.D., Minister of the First Church in Cambridge." The text was, "The desire of all nations shall come." At that time the Episcopal Church was for the most part supplied by lay readers. Affixed to the sermon is this note: "At a meeting of the congregation belonging to the Protestant Episcopal Church in Cambridge, January 7, 1810—voted, That the thanks of this Society be presented to the Rev. Dr. Holmes for the learned and appropriate discourse by him delivered in this Church, on the last Christmas day; and that he be requested to furnish a copy of the same for the press." The note is signed William Winthrop, Sen. Warden.

In connection with the service of song in the house of the Lord it is of interest to find one of Dr. Holmes' sermons inscribed, "This day Watts's Psalms and hymns introduced instead of Tate and Brady." It was preached in the afternoon of June 29, 1817. The text was, "Let the word of Christ dwell in you richly in all wisdom; teaching and admonishing one another in psalms and hymns and spiritual songs, singing with grace in your hearts to the Lord."

Some extracts from the sermon will show its spirit and show, also, the hope of the preacher. "To the skilful performance of the choir we are much indebted for the order and harmony, the solemnity and effect, with which this part of Divine service is performed. The style of sacred music is, of late years, essentially improved; and the exclusion of light and unhallowed airs, so foreign to the solemnity of the subject and the place, is itself highly favorable to our improvement in piety and devotion and, at the same time, more easily admits the union of a great proportion of the assembly in this common duty,—the social praise of Almighty God. Let us not, then, leave this interesting, improving and delightful service to be performed wholly by others. Let none be listless, or indifferent to it. Let none regard it as a mere entertainment. Above all, let none either perform, or hear it performed, with levity. Let us all be supplied with books. Let those who can, with any propriety, bear a part in singing the high praises of God; and let the rest have their eyes fixed on the psalm or hymn

that is sung, and join with the understanding and affections in the sublime employment, and thus make melody, at least in their hearts, to the Lord. And here, my brethren, I would suggest to you the propriety of performing this part of the service, even when we do no more than perform it in heart, in a standing rather than in a sitting posture."

An organ was placed in the church in 1827, and the sermon on music was repeated, with the insertion of these remarks: "The introduction of an organ, instead of diminishing, should increase the number of singers in the congregation. It is not, you will remember, intended as a substitute for the voice, but as an aid to it. It may be accompanied by those who are not thoroughly skilled in music, though great care should be taken not to violate either the time or the harmony. In the use of this instrument, it is hoped and believed great regard will be shown to the spiritual nature of the worship which it is intended to aid. It is not meant for an entertainment, but for an improvement; not simply to delight the ear, but to inspire the heart. It will not, I trust, be suffered to overpower the vocal music, of which it should be but an accompaniment. Let us have the distinct articulation of the human voice, that it may not give an uncertain sound, or be so merged in the sound of an instrument, that the meaning cannot be understood. Let us remember, my brethren, that we are required to sing with the spirit and with the understanding." Whatever improvements the years may have brought, the opinions and desires of Dr. Holmes are as timely to-day as when they were first expressed.

We are brought now to events of a more weighty and less pleasing nature. In 1827 there was formed "The First Evangelical Congregational Church in Cambridgeport." The distinctive word in this title is "Evangelical." That word had come to bear a precise, and, in some degree, a denominational significance. It marks the controversy which engaged the religious world in this region and had very serious results for many churches. Into the general movement we do not propose to enter. We are only to recall facts, without opinions. So far as the First Church in Cambridge is concerned, the facts are in print, in rare pamphlets and in local histories, and need only a brief rehearsal in these pages.

On the 20th of July, 1827, a memorial, signed by sixty-three members of the parish, was presented to Dr. Holmes, remonstrating with him for discontinuing professional exchanges with certain clergymen, and recommending a return to his former custom. It was not a question of courtesy, but one of a much graver nature. We must go back a little. As early as 1787 Unitarianism, which had been adopted by many persons, ministers and others, became a "substantial reality" in this community by the action of the society worshipping in King's Chapel, Boston, which modified the English Liturgy it had been

using. The minister had changed his own doctrinal views, and the change in the service of the church followed. For many years this remained the only conspicuous church in New England which was confessedly Unitarian. The new views, however, extended and became very influential. By the time which we are now reviewing, a large part of the ministers of the churches in this neighborhood had embraced the new principles of belief. "The Unitarian Association" was formed about this time. Of course, all this changed the relations in which ministers stood toward one another. Freedom of professional intercourse became restricted. There were men of all degrees of conviction and confession, with extreme men on both sides and those of moderate views standing between them, some nearer one end and some nearer the other. The minister here knew all this, and was affected by the movement in which he was not disposed to take a prominent part. But it came to pass here, as elsewhere, that some ministers who had been invited to his pulpit no longer received such proposals. It was less the fact than the occasion and meaning of it which attracted attention and led to the action which has already been mentioned. A large majority of the legal voters in the affairs of the parish were found on the Unitarian side. They complained of the change in the pastor's practice, and asserted that he was changing the policy of the church, and deviating from the custom of his immediate predecessors, and departing from the views which had governed his own procedure and shaped his own preaching. They complained that, while he excluded some ministers whom they liked to hear, he introduced other preachers whose teaching was offensive to them. Out of this state of things grew the memorial, in which the signers gratefully testified to the order, peace and harmony with which the church and society had walked together, and expressed their fear lest there should arise disaffection and disunion in consequence of the pastor's action. They requested him "to exchange a reasonable proportion of the time with such respectable clergymen of liberal sentiments in this vicinity as had heretofore been admitted into his pulpit, and with others of similar character." The pastor replied, in dignified terms, that he thought a personal interview with him would have been more favorable to truth and peace. To show that the charge complained of was not altogether on one side, he said that some liberal ministers were of the opinion that such exchanges as were proposed were not desirable. He added: "The subject is believed to be uniformly left to the discretion of the pastors, who are, or ought to be, the best judges of what is profitable for their hearers, and who are bound religiously to determine what is right and consistent for themselves." We cannot pursue the controversy, which was prolonged and intense. The effort of the parish was to secure the preaching of Unitarian ministers for a portion of the time by

exchanges, or by the settlement of a colleague, or by the introduction of such ministers at times when there was no established service. To neither of these measures would Dr. Holmes consent. He claimed that he must adhere to the principles of the church during its entire history; that he could not depart from them, or suffer others to lead the people away from them. The Shepard Historical Society has a written document which he prepared and entitled, "Religious Principles of the Ministers of Cambridge." By citations from their writings, he traces the line of doctrinal teaching from Shepard to himself, and adds: "Doctrines held and taught by the present pastor from the commencement of his ministry here to this time; collected from his discourses on the anniversary of his installation." The object was to show that he was continuing the instruction for which he was called to the church. The church upheld the pastor in his course, and expressed their approval of his teaching. They remonstrated in writing against the action of the parish. "Let us not attempt to drive from us a man by urging upon him a course of measures which, should he submit to them, would render him a stranger among his brethren, not satisfy those who make the demand, and would leave him dishonored in his own eyes and in theirs. . . . We also apprehend that, were the females of this parish allowed to come here and speak, a majority of them would entreat you to forbear; and we would hope that we shall not be regardless of their feelings, because they are not allowed the poor privilege of begging you to consider them." It became evident that the matter was not to be settled by discussion, and men turned to the congregational method of relief. The parish proposed to the pastor that an ecclesiastical council should be called to advise in the premises. The church and a minority of the parish declared that usage in New England, and invariably in this parish, required that the church and parish should concur in all matters touching the settlement or the removal of a minister. It was, therefore, proposed that the church should be a party in calling the council. To this the parish refused to accede. The parish said that if the church were admitted "they would make all the resistance in their power to the attempts of the parish to remedy the evils of which they complained, and would give Dr. Holmes all their assistance and support in his opposition to the principles and wishes of the parish." The church was not allowed to join in calling the council. Dr. Holmes said "that he was not at liberty to overlook or to interfere with the equitable claims of the church, and that he would consent to a mutual ecclesiastical council, if regularly called, according to the usage of our churches; that is, by the church and parish together."

The discussion effected nothing, and the parish proceeded to call an *ex parte* council, which assembled in the Old Court-House on the 19th of May, 1829. It

was composed of the representatives of six Unitarian churches. A copy of the complaint against the pastor was given to him before the meeting of the council. When the council assembled Dr. Holmes denied its jurisdiction, and the church and a minority of the parish also remonstrated. The council, by a committee, gave Dr. Holmes and the remonstrants an opportunity to present further information. The pastor received the committee with his accustomed courtesy and replied "that he had no further communication to make to this council." The complaint of the parish was heard, evidence was received, an argument was made by the counsel of the parish, Hon. Samuel Hoar. The council finally voted "that the First Parish in Cambridge have sufficient cause to terminate the contract subsisting between them and the Rev. Dr. Holmes as their minister, and this council recommend the measure as necessary to the existence and spiritual prosperity of the society." The parish accepted and confirmed the "result" and voted, June 8, 1829, that the "Rev. Dr. Abiel Holmes, be, and he hereby is, dismissed from his office of minister of the gospel and teacher of piety, religion and morality in said parish, and that all connection between said Holmes as such minister, or teacher, and said parish, do and shall henceforth cease." A grant of three months' salary was made "to said Holmes, on equitable principles, but not as legal right," and he was to have the use and occupation of the real estate held by him as pastor of the parish "until the 25th day of January next, but no longer."

In a communication made on the 12th of June the committee of the parish inform Dr. Holmes that "they have employed a preacher to supply the pulpit in the meeting-house of the First Parish in Cambridge on the next ensuing Sabbath, that they will procure and employ a preacher or preachers for the succeeding Sabbaths, and that your services will not be required or authorized in the public religious services in the meeting-house in said parish hereafter." Dr. Holmes had not consented to the council, but had entered his protest against it. He did not accept its result. He wrote in reply to the notice which had been served on him: "I now give notice to you, and, through you, to the inhabitants of the parish, that I still consider myself as the lawful minister of the parish, and hold myself ready to perform any and all the duties, in or out of the pulpit, which belong to my office as pastor of the First Church and Society in Cambridge." The closing communication was addressed to Dr. Holmes by the parish committee. They say, "In answer to your said letter, said committee, in behalf of said parish, state to you that said council had jurisdiction of the complaint exhibited to said council against you; that said result is legal and valid; that said dismissal from said office conforms to said result and to law; that your connection with said parish as their minister is legally dissolved; that you are not the minister or pastor of said parish, nor

have you been such minister or pastor since said dismissal; that as such minister or pastor you do not owe any such duties as aforesaid to said parish, and that said parish refuses to accept from you any service, or services, as such minister or pastor thereof. Hereafter you cannot occupy nor use the pulpit of the meeting-house of said parish, as it will be exclusively appropriated to such preacher or preachers as said parish shall employ to supply it."

Thus the pastor of thirty-eight years was turned from the door of the meeting-house. There was but one course open to the church, and that was to withdraw from the meeting-house from which their minister was excluded. The church and pastor crossed the street and began religious services in the Old Court House, in the presence of "a full, attentive and solemn assembly." On his last Sabbath in the meeting-house Dr. Holmes preached from the words, "I have no greater joy than to hear that my children walk in truth." The next Sabbath morning he preached from the words, "Beloved, think it not strange concerning the fiery trial which is to try you, as though some strange thing happened unto you; but rejoice inasmuch as ye are partakers of Christ's sufferings; that, when his glory shall be revealed, ye may be glad also with exceeding joy." The encouragement was commended to "all who are in affliction, and especially to the church and the attendant worshippers constrained to assemble in this place."

"The whole number of members belonging to the church at that time was about ninety, fully two-thirds of whom followed the pastor and attended upon his ministry. The number of male members was twenty-one, fifteen of whom were the uniform friends and supporters of the pastor, and two only took an active part in the measures of the parish" for his dismissal. Of the whole number who usually worshipped in the meeting-house previous to the separation, about one-half withdrew and worshipped stately where the church and pastor continued their services.

On the 17th of June, 1829, an advisory council met at the invitation of the church and pastor. After hearing the statements which were made by those who sought advice, the council reached this "result:" "As Dr. Holmes is still, according to ecclesiastical usage, the pastor and minister of the First Church and parish in Cambridge, and as the parish has by its votes excluded him from its pulpit, the council approve the course pursued by him in continuing to perform parochial duties whenever and to whomsoever he may have opportunity, and advise him and the church and other friends of truth not to forsake the assembling of themselves together, but to maintain Divine worship and the celebration of Divine ordinances." The church accepted this advice and resolved to follow it faithfully. As the church was now separated from the parish, after a union of nearly two hundred years, it was necessary,

in accordance with the custom of the times, to organize another society, which should include persons who were not members of the church, and should be in the place of an organized parish in connection with the church. Such a society was formed, and it was voted unanimously that it should be called "The Holmes Congregational Society." Dr. Holmes declined the proffered honor, and advised that the new society should bear the name of the first minister of the church. In accordance with this wish the new body took the title which it still bears: "The Shepard Congregational Society." The pastor could not connect himself with this organization, because he held that he had not been legally or regularly dismissed from his connection with the old parish, which he had served so long. But the church joined itself to the new society in order to maintain "the worship and ordinances of the gospel, according to the established principles and usages of Congregational churches in this Commonwealth."

In the records is an account of a meeting of the church held on the 20th of November, 1829, at the house of Mr. Jacob H. Bates. The record is too long to be copied here, and it is already in print. It begins: "Whereas the Rev. Dr. Holmes, the pastor of this church, has been excluded by a committee of the First Parish in Cambridge from the desk and sanctuary where he has so long officiated, under pretence that he is legally dismissed from office," and after declaring the views of the church in regard to Dr. Holmes and the parish, continues: "In consideration of all the circumstances, and having consulted with the Rev. Dr. Holmes, our pastor, whose relation to us as a church we wish to hold sacred and inviolate, and finding that in present circumstances the choice of a colleague pastor meets with his entire approbation; therefore, voted, 1st, that until such time as our rights, with those of our pastor, shall be respected, and the privileges of the gospel ministry be enjoyed, as heretofore, in connection with the First Parish in Cambridge, we will, as a church, accede to the invitation of the Shepard Congregational Society and co-operate with it. . . . Voted, 2d, that in pursuance of their object, and subject to the several conditions expressed in the first vote, the church now unite, and call Mr. Nehemiah Adams, Jr., who has been heard by us for several Sabbaths with high approbation, and in whom we have full confidence, to the office of colleague pastor in this church in connection with the Rev. Dr. Holmes as senior pastor." The society concurred in this vote, and Mr. Adams was called. The salary offered him was \$850 for the first year, to be increased \$50 each year until \$1000 was reached. It is said, however, that by private subscription the salary was made \$1,000 from the beginning. The invitation was given and accepted. The Baptist Church of Cambridgeport kindly offered its house for the service of ordination. The council met on the 17th of December, 1829.

Twenty-three churches were represented. The list of ministers contains many names well known then and afterwards. There were John Codman, William Jenks, Lyman Beecher, Edward Beecher, Benjamin B. Wisner, Moses Stuart, George W. Blagden, Samuel M. E. Kettle, better known as William M. Rogers. Dr. Codman was moderator. The action of the previous advisory council was submitted by the church, and a remonstrance which had been presented to the pastor-elect by a committee of those members of the church who had remained with the parish. After the preliminary proceedings common in such cases the services of ordination were held. The sermon was preached by Professor Stuart, and Dr. Holmes gave the charge to the pastor. Mr. Adams was born in Salem, Mass., February 19, 1806, and graduated at Harvard College in 1826, and at Andover Theological Seminary in 1829. His services were sought elsewhere, but he was persuaded to accept the Cambridge invitation. It was thought by many that he was especially needed at a time when the faith of churches and individuals was in question. Dr. Holmes was in his sixty-sixth year, and did not feel equal to the labors which were incident to the new conditions of the church.

Dr. Holmes' sermons, at this period, give an insight into the state and feeling of the people. One manuscript is marked, "June 7, 1829: in meeting-house." Another, "June 14, 1829: A.M. Camb. Court-house." These have been already mentioned. One sermon is marked: "Dec. 20, 1829, A.M., 1st Sabbath after ordination of Mr. N. Adams." The text was happily chosen: "Now if Timotheus come, see that he may be with you without fear; for he worketh the work of the Lord, as I also do." He said: "Receive him. Treat him with candor and equity; preserve unity and peace; and pay an attentive and serious regard to his ministry."

The services of the Sabbath were divided between the two ministers—the senior preaching in the morning and the junior in the afternoon and evening. The congregations were good, especially in the evening, when many visitors would come to hear the new minister in a place usually devoted to other purposes. There were large additions to the membership of the church. Meetings for prayer and religious conference were held for a time in private houses, and were finally established in a large room fitted up for that purpose, in the house at the northwest corner of Mt. Auburn and Brighton Streets. There were times when the people carried their own lamps for the evening services, which gave the bystanders a chance to use their cheap wit.

When they felt able to do so, the church and society erected a meeting-house on the corner of Mt. Auburn and Holyoke Streets. To do this they needed and procured the assistance of many friends, near and remote. Indeed, they were assisted, at first, in supporting their regular services. It is believed that

the senior pastor drew no salary after the separation. The land for the new house was given by Miss Sarah Ann Dana. It is said that Dr. Holmes was the largest contributor to the building fund. Ground was broken at six o'clock on the morning of the 5th of August, 1830. On the 21st of September the corner-stone was laid with an address by Rev. Samuel Green, of Boston. One sentence will show something of the feeling which marked the occasion: "We speak with pride and boldness, as becometh the descendants of Puritans on Puritan ground." On the 23d of February, 1831, the house was dedicated with a sermon by the senior pastor from Jeremiah vi. 16: "Thus saith the Lord, Stand ye in the ways, and see, and ask for the old paths, where is the good way, and walk therein, and ye shall find rest for your souls." The new house was much admired. Henry Greenough was the architect. Washington Allston furnished the plan of the house and had much pride in the building. He liked to take strangers at evening to a particular spot, about a hundred yards south-east of the church, where he would bid them mark the simple beauty of the unassuming structure, repeating the familiar lines:

"If thou would'st view fair Melrose aright,
Go visit it by the pale moonlight."

A silver plate enclosed in a box of lead was placed under the corner-stone, with this inscription:

"To Jesus Christ and the Church, The Pillar and Ground of the Truth
—First Church and Shepard Society, in Cambridge."

ABEL HOLMES,	} Pastors :
NEREMIAH ADAMS,	
WILLIAM HILLIARD,	} Deacons.
JAMES MUNROE,	
XXI September, MDCCCXXX."	

But the troubles were not over. In 1831 Abel Whitney, deacon of the First Parish Church, demanded certain articles of church property, to wit: the church fund, the poor's fund, the communion service and baptismal basin, the church record and papers, the library and a few minor things. The demand was refused, and a suit at law was begun against Deacons Hilliard and Munroe, as representing the church, and they were held to answer in the sum of five thousand dollars. The church appointed a committee to take legal advice and to defend the church so far as it could be done, or, if it was necessary, to surrender the property. They found that by a decision of the Supreme Court of the State the church could not retain the property and it was accordingly given up under the constraint of the decision. The decision under which they were obliged to do this was given in 1820, in what is known as the Dedham case, or, more exactly, Baker and another *vs.* Fales. The rule laid down was this: "Where a majority of the members of a congregational church separate from the majority of the parish, the members who remain, although a minority, constitute the church in said parish, and retain the rights and property belonging thereto." The Court

drew a broad distinction between the church in its civil and its ecclesiastical position: "That any number of the members of a church, who disagree with their brethren, or with the minister, or with the parish, may withdraw from fellowship with them and act as a church in a religious point of view, having the ordinances administered and other religious offices performed; it is not necessary to deny, indeed, this would be a question proper for an ecclesiastical council to settle, if any should dispute their claim. But as to all civil purposes, the secession of a whole church from the parish would be an extinction of the church; and it is competent to the members of the parish to institute a new church, or to ingraft one upon the old stock if any of it should remain; and this new church would succeed to all the rights of the old in relation to the parish." It was not denied that there could be a church without a parish "in an ecclesiastical sense." There was nothing to be done under this construction of law but to give up the property. This was done and a receipt was taken on the 28th of December, 1831, for "the church fund and poor's fund, belonging to said church, amounting, in money and securities for money, to the sum of four thousand one hundred and fifty-four dollars and three cents; also, the communion service of said church, consisting of four silver tankards, seven silver cups, one silver spoon, six britania dishes, two napkins, one table-cloth and basin, four books of church records, and sundry files of papers, and a trunk and box containing the same; also, the library of books, with the shelves for the same, and nine dollars and ninety-nine cents for the same." The church fund was originally constituted by the gift of fifty pounds by a member of the church, and largely increased by contributions of the church members at the Lord's Supper. "A part of the church plate was given to the church, and the rest was purchased with its own funds." The baptismal basin was the gift of the Rev. William Brattle, "to the church of Christ in Cambridge, my dearly beloved flock."

Those were trying days for the men who had left the parish, but their faith was strong. For a time they used private plate at the communion services. Then the junior pastor came into the possession of the "small book" of Thomas Shepard, and by its publication a communion service was obtained.

In September, 1831, the senior pastor found that his age and increasing debility prevented him from performing the duties of his office and he asked release. The church consented to his request. He preached his farewell sermon October 2, 1831, from the text: "For now we live, if ye stand fast in the Lord." He bore witness to the steadfastness of the people in the time of their trial and to the goodness of God. "Let this house which we have built for the honor of his name be at once a monument of our gratitude and a temple for his praise." The

impression was unspeakably touching when, after his sermon, he gave out the seventy-first Psalm :

"God of my childhood and my youth,
The guide of all my days,
I have declared thy heavenly truth,
And told thy wondrous ways.

"Wilt thou forsake my hoary hairs,
And leave my fainting heart?
Who shall sustain my sinking years,
If God, my strength, depart?"

But Dr. Holmes was still to live among his old friends, and where his presence and counsel would be at the service of the church and the town. He preached a double sermon in February, 1836, on the two hundredth anniversary of the founding of the church. He preached his last sermon to his people on the 22d of February, 1837. The subject was : "The vanity of life a reason for seeking a portion in heaven." An illness of a few weeks brought his long and useful life to a close. A severe paralytic shock rendered him almost helpless. But the end was in peace and charity. He said that he wished his injuries written in sand. He died on Sunday morning, June 4, 1837, in the seventy-fourth year of his age. The church-bells were ringing as he passed away; they were afterwards tolled in tribute to his worth, and in witness to the respect of the community. His first wife was the daughter of President Stiles. His second wife, the daughter of Hon. Oliver Wendell, long survived him and received the affectionate homage of all who knew her. The body of Dr. Holmes was at first laid in the ancient burying-place, but was removed to Mount Auburn.

The ministry of Dr. Holmes was, with one exception, the longest which the church has known. He stood at the centre of the parish and the town, and his influence was widely felt. He was a friend to the college of which he was an overseer. He was greatly interested in historical studies and published a "History of Cambridge" in 1800. He printed many sermons, preached on special occasions. His largest work was "The Annals of America from 1492 to 1826." He was actively connected with the Massachusetts Historical Society. He was one of the founders of the Society for Promoting Christian Knowledge, and of the American Education Society, and was a member of the American Academy of Arts and Sciences. He received the degree of Doctor of Divinity from the University of Edinburgh about 1805, and was made Doctor of Laws by Alleghany College in 1822. His life was long and full and helpful in every direction. His old friend, Dr. Jenks, said of him : "That blending of moderation and modesty with firmness and decision of character, where decision and firmness are needed, constitute, if I mistake not, an enviable or rather a desirable distinction. . . . Never in extremes or chargeable with extravagance, his deportment and character

united, in no common degree, the gentleman, the scholar and the Christian." Some who were children in his day recall his kindly manner towards them, and they like to tell how, as he walked the streets with his well-remembered cane, he would pause at a group of children, and, with a pleasant question and a word of counsel, would draw from his capacious pocket a handful of confectionery and distribute it among the listeners, who had learned to expect it. They tell how, a few weeks before his death, he stood before the pulpit and gave a good book to each member of the Sabbath-School as they passed before him. His name is engraven on the tablet in the Shepard Memorial Church, and his initials are on one of the pillars at the door. His name is on the monument in the church lot in the Cambridge Cemetery. But his best memorial is his work. At the installation of his successors in 1835 and in 1867, at the dedication of the meeting-house in 1872, at the 250th anniversary of the foundation of the church, a hymn written by him was sung. With the last two verses we close this sketch of his ministry :

"Here may the church thy cause maintain,
Thy truth with peace and love,
Till her last earth-born live again
With the first-born above.

"O glorious change! From conflict free,
The church,—no danger nigh,—
From militant on earth, shall be
Triumphant in the sky."

For nearly three years after the retirement of Dr. Holmes, Mr. Adams remained the pastor of the church. In February, 1834, he was invited to become the pastor of the Essex Street Church and Society in Boston. He thought it his duty to accept this invitation. With reluctance the church gave its consent, and he was released from his office here, with the approval of a council, on the 14th of March. This is the only instance in the long history of the church in which a minister had left it to assume the care of another church. Mr. Adams was here in a critical time, when his labors were especially needed, and large results attended his work. After a long and fruitful ministry in Boston, Dr. Adams died in 1878. He had published many religious books, which were widely read and which will preserve his name and character when those who knew him and enjoyed his friendship have all passed on.

For thirteen months the church had no pastor. But Dr. Holmes was here, still a father to his people. In October, 1834, a call was extended to Rev. Oliver E. Daggett, but this was declined. A call was extended to Rev. John A. Albro, and this was accepted, and he was installed April 15, 1835. Mr. Albro was born in Newport, Rhode Island, August 13, 1799. He studied for the law and entered upon its practice at Mansfield, Connecticut, and there he united with the First Church. After spending about two years in the law, he entered the Theological Seminary at

Andover, to prepare for the ministry. He graduated in 1827, and was ordained at Middlesex Village, in Chelmsford, Massachusetts. There came a division there as there came here, and in many other places. After about two years there he became the minister of the Calvinistic Congregational Church in Fitchburg, Massachusetts, where he was installed in 1832. Three years later he came to Cambridge, where he was to have a pastorate of thirty years. The population of the town was then about 6,000. The church was still small and its pecuniary ability limited. But the place was attractive and he was qualified to enjoy it and adorn it. His salary at first was \$850 and was to be increased \$50 each year till it was \$1000. He was to have a suitable dwelling-house at a rent not exceeding \$200. If his salary for the second and third years did not cover his expenses he was to have a further grant, not exceeding \$50 per year. Soon after his installation a parsonage was built on Holyoke Street, and in this he resided until his death. The original meeting-house contained sixty-six pews. In 1840 ten pews were added. In 1844 the house was enlarged and twenty more pews were provided. In 1852 there was another enlargement, making room for 130 pews on the floor. There was a small gallery at the south end of the house. At his installation the church had 101 members. In 1852 there were 244 and in 1865 there were nearly 300.

In 1848 Mr. Albro was made a Doctor of Divinity by Bowdoin College and in 1851 Harvard conferred the same honor upon him. In 1852 he visited Europe, through the liberality of his people. In 1860 the twenty-fifth anniversary of his installation was celebrated by the church and society, when abundant witness was borne by his own people, and his neighbors, and by the college, to the esteem in which he was held for his learning and character and fidelity. His labors were not restricted to his parish. He served on the School Committee. He gave the address at the consecration of the Cambridge Cemetery. He was a manager in the Massachusetts Sabbath-School Society, and always enlivened the meetings of the Publication Committee "by his genial and keen criticisms, and made them instructive by his learning."

He was the friend and advocate of the Puritan faith and order in the churches. He was conservative in temper and had no fondness for innovation. His preaching was Scriptural and logical, and helpful to his hearers. He could lead the songs of the church with his voice and direct them by his taste and skill. He excelled in conversation, and it was a rare enjoyment to listen to him as his spirit and wit illumined his words. He had for many years a class of college students with whom he read portions of the Greek Testament, which he expounded with the wealth of his learning and his piety, hearing and asking questions. "Many theologians refer to the principles of interpretation which he gave them as

laying the foundation of their interest and success in Biblical studies."

On the 12th day of March, 1865, the congregation was surprised by a letter from the pastor in which he resigned his office. He had contemplated taking this step at the close of thirty years of service, and the time was at hand. The resignation was accepted with deep emotion and many expressions of affection and gratitude. On the 15th of April, 1865, his pastorate ended. But he remained in the parsonage and was in many ways still the minister of the people, preaching and serving in other offices of religion. He had no desire for another settlement, but he preached in neighboring churches. On the 16th of December, 1866, he preached for the last time. It was at West Roxbury. When near the close of his sermon a pallor overspread his face. He laid his hand on his heart, and then on his head. He finished the service, resumed his seat and became insensible. He was removed to his temporary home at the house of a deacon of the church, where he regained consciousness, and with it his wonted calmness and peace. Quietly, patiently, in faith and hope, he waited till the end came on the 20th. On Monday his venerated form was brought to his old church and a few days later the last ministries of religion were performed in the darkened church. He was laid to rest in the Cambridge Cemetery, as he had desired, the first tenant of the lot belonging to the church—the Shepard lot. An appropriate stone marks his grave, a granite monument bears his name, with the names of all the ministers of the church who have finished their course.

This long narrative has reached its closing sentences. In October, 1865, the minister of the South Church and Parish in Augusta, Me., was invited to become the minister of the First Church in Cambridge. The invitation was necessarily declined. It was renewed in December, 1866, and under changed conditions it was then accepted. Accordingly the Rev. Alexander McKenzie (Harvard 1859, Andover 1861, S.T.D. Amherst 1879) was installed January 24, 1867. In 1872 a new church of stone was opened and dedicated on Garden Street, corner of Mason. The chapel on Mason Street was finished in the following year. The parsonage on Garden Street was built in 1872. Dr. McKenzie is still the minister of the First Church in Cambridge and the Shepard Congregational Society. The Rev. Leonard S. Parker, A.M., is the assistant minister.

It has been most convenient, and according to precedent, to trace to its present estate the history of the church "in an ecclesiastical sense." The church, "as to all civil purposes," to borrow another phrase of the Supreme Court, is best known as the First Parish Church. The names are sufficiently distinct to prevent confusion. We have now to trace the course of the First Parish Church from the time of the separation—on the 12th of July, 1829. Abel

Whitney was chosen deacon and Sylvanus Plympton clerk or scribe of the church. The Rev. William Newell was called to the pastoral office. Mr. Newell was born in Littleton, Mass., February 25, 1804. His school and college career was very brilliant. He entered the Boston Latin School in 1814, and graduated at Harvard College in 1824, the second scholar in his class. Dr. John Pierce wrote in his diary, "The H. oration of Newell, on early prejudices, was finely written and delivered." His subject, as given by his son and biographer, was, "Duties of College Students as Men and as Citizens." In 1825 he was appointed usher in the Latin School. The tendencies of his mind carried him towards the ministry, and he entered the Harvard Divinity School, where he graduated in 1829. He wished to delay his settlement for a year at least, as his health was uncertain. But he was sought by the church in Cambridge, as we have seen, and he was here ordained May 19, 1830. His salary was \$1000 for the first four years, and then \$1200, in equal quarterly payments. "His active connection with the parish was severed March 31, 1868. But his heart never could be separated from his people. In the long interval between his own retirement and the settling of a successor many parochial duties continued to fall to his share." "He came to Cambridge in delicate health, and found himself, without any accumulated stock of experience or any store of addresses, obliged to contribute two sermons a week, and to conduct the ministerial duties of a large parish—a parish, too, somewhat formidable from its connection with the college and the number of retired ministers who had come to settle in the university town; while, on the other hand, a section of his auditors stood on the level of plain, practical life. . . . He succeeded as well as it was possible to succeed in satisfying the natural claims of one class and the other." In 1832 the parish sold to the college the land on which its meeting-house stood, and the house now occupied by the parish church was erected. It was dedicated December 12, 1833. The college had certain reserved rights in the house, and the commencement exercises were held there until 1873. When Mr. Newell was settled there was a partial connection of Church and State, by which every townsmen was required to pay his part toward the support of public worship. Changes in the law were made in 1833 and 1835, and it was declared that no person "shall hereafter be made a member of any parish or religious society without his consent in writing." The whole matter was complicated and made more perplexing by the financial connection between the church and the college.

Mr. Newell came to Cambridge in the year following the division of the church. A protest against his settlement as minister of the parish was presented to the ordaining council, but, like other protests, had no effect. "He met the storm of hostility by absolutely refusing to engage in religious controversy and by ig-

norant enmity." When the twenty-fifth anniversary of Dr. Albro's settlement was celebrated, Dr. Newell wrote a letter, expressing his "respect for your able and faithful pastor, with whom, during the whole period of his ministry, my personal relations, notwithstanding our theological differences, have always been pleasant and friendly." He spoke of "the kindly feeling which I hope will always subsist, not only between your pastor and myself, but also between the societies with which we are connected branches as they are of the same old stock, descended from the same old Congregational family, looking back, amidst their honest differences of opinion, with common pride to a common ancestry." Dr. Albro expressed the comfort he had in knowing that he had lived in so much harmony with his "neighbors of different persuasions."

Mr. Newell received the Doctorate of Divinity from Harvard College in 1853. We may quote again from his filial biographer: "His manners were as courteous, his heart as open and his attentions as constant to the poorest as to the richest member of his congregation. . . . As the years of his ministry passed on, and as age approached, his face seemed to grow constantly more radiant and benignant. Some have felt such a presence on the streets and in the marts of business as a benediction which seemed to leave behind a sweetening and consecrating influence." His successor said of him: "The most marked characteristic of his habit of mind was its complete and childlike simplicity, a sweet, gracious, unstudied naturalness, whose ways were so plain and straight that formal phrases could not fitly follow them." He said there was no need to recall the beauty of the life which for fifty years had been lived in this community by the faithful man and earnest minister.

Dr. Newell's last illness was prolonged and painful, but was borne with wonderful patience and cheerfulness and faith and hope. What seemed to others the valley of shadows was to him the valley of light.

His release came on the 28th of October, 1831, "in the presence of those dearest to him. Conscious almost to the end, his last characteristic farewell was thanks for the happiness which their love had conferred on his life."

The Rev. Francis G. Peabody, Harvard 1869, became the next minister of this church, and was succeeded by the Rev. Edward H. Hall, Harvard 1851. Under his charge the church has remained in continued prosperity.

It has seemed best to trace the history of the First Church and Parish as fully as the limits of this work will allow, inasmuch as it is, for the most part, a history to which all the churches of Cambridge are related. For the greater portion of the time this is the entire ecclesiastical history of the town. As we are now brought into times much nearer to our own, the historical sketches may well be briefer and in more general terms. The wiser plan appears to be to group the

churches of each name and class, instead of presenting them in chronological order. It is proposed, however, to make the order of the groups and the arrangement within each group chronological. In accordance with this principle we continue the account of the Trinitarian Congregational Churches of Cambridge.

In the preparation of these historical sketches constant use has been made of Dr. Paigne's invaluable "History of Cambridge." Other material has been furnished by different churches, and will be used, so far as practicable, in the form in which it was presented.

It does not seem necessary in this account of the churches of Cambridge to continue the history of the churches which have been at different times set off from the First Church, and are now in other towns.

CONGREGATIONAL CHURCHES.—*The First Church in Cambridge* was organized February 1, 1636.

The First Evangelical Congregational Church in Cambridgeport was organized September 20, 1827. Towards the close of the year 1826 the Rev. Dr. Beecher commenced a course of public weekly lectures at Cambridgeport. "It was instituted at the request of a few individuals who had, for some time previous, been connected with the Hanover Street Church in Boston, under the pastoral care of the Rev. Dr. Beecher. . . . They were kindly furnished by the Baptist Society, under the pastoral care of the Rev. Bela Jacobs, with the use of their meeting-house for this purpose." This was at the time when theological controversy was agitating and dividing the churches. It was thought expedient to found a church in Cambridgeport which should maintain and teach the Trinitarian or "Evangelical" doctrines. Meetings were held at the house of Dr. J. P. Chaplin, on Austin Street, where the project was considered and plans were laid for carrying it into effect. There the council met to organize the church—on the same day on which the new meeting-house was dedicated. This house was on Norfolk Street, at the corner of Washington Street. Evening meetings were usually held at Dr. Chaplin's house until September, 1841. A vestry was built after the meeting-house, probably in 1834. The meeting-house was of wood and was several times enlarged. But it was found necessary to provide a more commodious place of worship, and a brick house was erected on Prospect Street, which is still used by the church. The old house was sold, and was used for lectures and other purposes until it was burned, November 7, 1854. The new house was dedicated June 30, 1852. The cost of the house was \$23,184.01. The first pastor of the church was Rev. David Perry, from April 23, 1829, to October 13, 1830. He was followed by Rev. William A. Stearns, from December 14, 1831, to December 14, 1854. This was much the longest pastorate which the church has enjoyed, and it was rich in its usefulness. The first meeting-house was twice enlarged and the new house erected. Dr. Stearns

was a man of learning and wisdom, of prudence and charity, and of a many-sided efficiency. The church was greatly strengthened during his ministry, and he had the esteem of the whole community for his goodness and dignity and ability. He resigned to accept the presidency of Amherst College, which he held for the rest of his life. Mr. Stearns was born in Bedford, Massachusetts, March 17, 1805; graduated at Harvard College in 1827, and at the Andover Seminary in 1831. He died June 8, 1876.

Dr. Stearns was followed by the Rev. Edward W. Gilman, (Yale, 1843) who was pastor from September 9, 1856, to October 22, 1858.

Rev. James O. Murray (Brown University, 1850) was installed May 1, 1861, and served until February 6, 1865. He is now professor in Princeton College, which made him Doctor of Divinity in 1867.

Rev. Kinsley Twining (Yale, 1853) was installed September 12, 1867, and resigned April 28, 1872, to become pastor of the Union Congregational Church in Providence, R. I. Rev. William S. Karr (Amherst, 1851) was pastor from January 15, 1873, to November 22, 1875, when he became professor in Hartford Theological Seminary. Rev. James S. Hoyt (Yale, 1851) was installed September 14, 1876.

He was afterwards pastor of the Congregational Church in Keokuk, Iowa, until his death, in 1890. Rev. David N. Beach (Yale) was installed 1884, and is now pastor of the church. By the last report the church had 600 members.

As a part of the history of the church in Prospect Street, a place should here be given to its work at Stearns' Chapel. A Union Sabbath-School was established in 1852, which after a few years passed into the control of the Congregational Church. In 1863 a chapel was built on Harvard Street, to which the name of Stearns was given. Rev. Edward Abbott (University of the City of New York, 1860) took charge of this mission January 1, 1865. November 21, 1865, a church of fifty-one members was organized as the Stearns Chapel Congregational Church, and Mr. Abbott installed as pastor. Mr. Abbott retired in November, 1869, after efficient service, and Rev. George R. Leavitt (Williams, 1860) was installed May 4, 1870. The chapel, which had been enlarged in 1867, became too small for the growing church which went out and became the Pilgrim Congregational Church. Services were continued in the chapel under the care of Rev. Edward Abbott, and another church, was formed October 16, 1872, as the Chapel Congregational Church, and Rev. John K. Browne (Harvard, 1869) was installed as its pastor. He retired September 16, 1875, and was appointed a missionary of the American Board at Harpoot, Eastern Turkey. Rev. Robert B. Hall (Williams, 1870) was installed December 29, 1875, and after a promising beginning of his work was removed by death November 2, 1876.

Rev. Marvin D. Bisbee became the acting pastor April 1, 1877, and on the 18th of April, 1878, he was

installed as pastor. On account of impaired health he resigned his office and was formally dismissed July 3, 1881. He is now librarian of Dartmouth College. September 4, 1881, Rev. Thomas K. Bickford assumed the duties of acting pastor. March 2, 1883, the church was incorporated as the "Chapel Congregational Church in Cambridgeport." About the same time Mrs. Caroline A. Wood, the widow of Caleb Wood, and a member of the church in Prospect Street, made a very large gift for the erection of a meeting-house, on condition that it should be called the Wood Memorial Church, in memory of her husband. The gift was accepted and a commodious and attractive house was erected on the corner of Austin and Columbia Streets. It was dedicated April 30, 1884, and on the following day Mr. Bickford was installed as pastor. By act of the Legislature February 28, 1884, the name of the church was changed to "Wood Memorial Church in Cambridgeport."

Stearns' Chapel was again at the disposal of the church which had built it, and sustained in good measure the services in it. Religious services, including preaching and a Sunday-school, were resumed, and Rev. Robert E. Ely, from the Union Theological Seminary, was placed in charge of the work which is under the supervision of the church in Prospect Street, by which the mission is chiefly sustained. The affairs of the mission are prospering, and it is thought that another Congregational Church will soon be formed in Stearns' Chapel.

Second Evangelical Congregational Church.—This church was organized March 30, 1842, by persons who were generally "Zealous advocates of the immediate abolition of slavery." They erected a meeting-house at the corner of Austin and Temple Streets, and dedicated it January 3, 1844. The first minister, Rev. Joseph C. Lovejoy (Bowdoin, 1829), was installed January 26, 1843, and he continued in office until May 10, 1853. Rev. Charles Packard (Bowdoin, 1842) was the minister from April 26, 1854, to March 21, 1855. Rev. Charles Jones was the minister from May 25, 1855, to October 16, 1857. Rev. George E. Allen (Brown University, 1850) was installed May 20, 1858, and he resigned July 12, 1861. After a series of discouragements, by advice of a council, the church was disbanded October 3, 1865. Many of the members united with the Pilgrim Church, furnishing more than \$1200 to aid in building the church on Magazine Street. The meeting-house, which was no longer needed by the society, was sold, and was burned September 6, 1865.

The Evangelical Church at East Cambridge was organized September 8, 1842. In 1843 a meeting-house was erected at the northeasterly corner of Second and Thorndike Streets. The first pastor was Rev. Frederick T. Perkins (Yale, 1839), who was ordained January 11, 1843, and resigned May 26, 1851. He was followed by Rev. Joseph L. Bennett (Amherst, 1845), who was installed July 1, 1852, and resigned Febru-

ary 18, 1857. Rev. Richard G. Greene was pastor 1858-60; Rev. William W. Parker 1861-61; Rev. Nathaniel Mighill (Amherst, 1860), 1864-67; Rev. Herman R. Timlow was acting pastor in 1867-70. Then Samuel Bell was installed November 1, 1870, and resigned May 29, 1872. Rev. D. W. Kilburn supplied the pulpit afterwards. In 1876 the meeting-house was presented to the Day Street Church in West Somerville, and was taken down and removed for the use of that church, by which it is now occupied. The East Cambridge Church had become greatly reduced in numbers by the removal of its members and the changes in the population around it, and it was therefore disbanded.

The North Avenue Congregational Church was organized September 23, 1857. It was at first called the Holmes Congregational Church, and was connected with the Holmes Congregational Society, which was formed in North Cambridge in September, 1857. In 1866 the name North Avenue was substituted for Holmes. A chapel was built in 1857, and called the Holmes Chapel. In this worship was maintained until it was too small for the congregation, when it was sold to a new Methodist Society. The Holmes Society bought the meeting-house of the old Cambridge Baptist Church, and moved it bodily to the corner of North Avenue and Roseland Street. It was dedicated by its new owners September 29, 1867. It was afterwards enlarged to meet the wants of the growing congregation, and it is still the home of the church. The church at its formation had forty-three members, some of whom were from the First Church. At the last report there were 512 members.

The first pastor was Rev. William Carruthers (Bowdoin, 1853), who was installed January 2, 1861, and dismissed February 21, 1866. Rev. David O. Mears (Amherst, 1865) was ordained and installed October 2, 1867. After a successful ministry he retired July 1, 1877, to become the pastor of the Piedmont Church, in Worcester. Rev. Charles F. Thwing, (Harvard, 1876, Andover, 1879) was ordained and installed September 25, 1879, and resigned October 29, 1886, to become the pastor of Plymouth Church in Minneapolis. Rev. Walters Alexander, D.D. (Yale, 1858, Andover, 1861), was installed October 28, 1886, and has remained the pastor of the church until his recent resignation of the office.

Pilgrim Congregational Church.—An account of the origin of this church has already been given. The fuller sketch which follows has been prepared by one of the officers of the church and is printed in full.

In 1852 a mission Sabbath-school was established in the lower part of Cambridgeport, which was for some time carried on by the First and Second Congregational, the Methodist and the Baptist Churches, acting together. Within a few years, however, all these churches except the First Congregational relinquished their connection with the work. In 1863 the Stearns Chapel was built on Harvard Street, near

Winsor, primarily for the accommodation of this school. The chapel was soon opened for religious meetings on Sunday and Wednesday evenings, and preaching services were held on Sunday afternoons with a good degree of regularity. The success of these efforts was such that the First Church was led to consider the question of organizing another church.

In the autumn of 1864 Rev. Edward Abbott was invited to "take charge of the Stearns Chapel for one year." He began his work Sunday, January 1, 1865, and on November 21st of the same year a church of fifty-one members was formed. It was called the Stearns Chapel Congregational Church, and Mr. Abbott was installed as its first pastor. Of the fifty-one members, eighteen came by letter from the First Congregational Church, seventeen from the Second Congregational Church (which disbanded at about this time), and four from churches outside of Cambridge; while twelve made their first public confession of faith.

The growth of the church was rapid. In December, 1867, it became necessary to enlarge the chapel. Mr. Abbott resigned the pastorate in November, 1869, and on the 4th of the following May Rev. George R. Leavitt was installed as his successor. It had now become evident that the church ought to leave the mission chapel, and build a larger meeting-house. A majority of the attendants at the Stearns Chapel lived on the southerly side of Main Street, in a part of the city where there was no Congregational Church. It was consequently decided to build in that section, and a lot was bought at the corner of Magazine and Cottage Streets, in April, 1870. The corner-stone of the new house was laid May 13, 1871, and the building was dedicated January 4, 1872. The cost of the lot and the building was nearly forty thousand dollars.

Early in 1871 the name of the organization was changed to The Pilgrim Congregational Church, and a petition was laid before the Legislature for a special act of incorporation, giving the church the right to hold property and do all its own business, without a parish or society. At that time such a form of church life was almost unknown, and was impossible without special legislative enactment. The petition was granted, however, and The Pilgrim Church became a legal corporation. February 22, 1885, Mr. Leavitt tendered his resignation, in consequence of a call to Cleveland, Ohio, and on the 10th of March he was formally dismissed by an ecclesiastical council. Soon afterward a call was extended to Rev. George A. Tewksbury, of Plymouth, Mass., and on the 7th of May he was installed as the third pastor of Pilgrim Church. He held this office about four years, and was dismissed March 5, 1889. Rev. Charles Olmstead, formerly of Oswego Falls, N. Y., succeeded Mr. Tewksbury, being installed July 9, 1889.

At the outset the church adopted the plan of free

sittings and voluntary offerings. None of the pews are assigned to individuals or families, but all are strictly free. The expenses of the church are met entirely by the free-will offerings of the people, which are gathered by passing boxes throughout the house at each Sunday preaching service. The old custom of having two sermons every Sunday, forenoon and afternoon, has never been abandoned.

The church has received a total of over eleven hundred members, and its present membership is about six hundred and fifty.

Hood Memorial Church.—An account of the formation of this church has been given. It moved from Stearns' Chapel to its new house in 1884. Mr. Bickford retired from the pastorate May 26, 1887, after a ministry which had been of signal advantage to the church. Rev. Isaiah W. Sneath became the acting pastor September 1, 1887, and was finally installed as pastor June 20, 1888. The church had in February, 1890, a membership of 195, with a Sunday-school of 395 members.

UNITARIAN CHURCHES.—*The First Parish Church* was organized February 1, 1636. The account of this church has already been given.

Cambridgeport Parish.—An account has already been given of the organization of this parish. The meeting-house corporation was formed in 1805, the meeting-house dedicated January 1, 1807, the parish organized in 1808, and the church formed July 14, 1809. The first minister, Rev. Thomas Brattle Ganett, was ordained January 19, 1814, and was the pastor till 1834. He died in 1851, at the age of sixty-two.

The second pastor was the Rev. Artemas B. Muzzey (Harvard, 1824), who was installed January 1, 1834, and continued in the office until 1846. Mr. Muzzey is still living in Cambridge. He has been especially interested in historical studies, and as a native of Lexington has appropriately published a book of "Reminiscences and Memorials of Men of the Revolution, and their Families." The third minister was the Rev. John F. W. Ware (Harvard 1838), who was installed November 29, 1846, and retired April 1, 1864. He resigned to take charge of a society in Baltimore, and afterwards was the minister of the Arlington St. Church, in Boston, until his death, in 1881.

Rev. Henry C. Badger was installed January 15, 1865, and he resigned on account of ill health October 1, 1865. He is now connected with the Cartographical Department of the library of Harvard College.

The Rev. George W. Briggs, D.D., was installed April 3, 1867, and is still pastor of the church. He graduated at Brown University in 1825 and at the Harvard Divinity School in 1834. He received his Doctorate of Divinity from Harvard in 1855. The Rev. John Tunis, a graduate of the Harvard Divinity School in 1882, was installed as colleague pastor April 11, 1889.

During Mr. Ware's ministry the society increased

largely, and in 1854 the church was remodeled and new pews took the place of the old ones. After Dr. Briggs' accession to the pastorate of the church the society was so much enlarged that in 1872 it was found necessary again to remodel the church and to increase the number of pews. A new vestry was fitted up in the basement. The first meeting-house was of brick, and stood on the west side of the square bounded by Broadway and Harvard, Columbia and Boardman Streets. This house was so much injured by the wind in 1833 that it was abandoned, and the new house was erected on Austin Street. This is now the home of the church,—the place of worship, and the centre of its religious and philanthropic activities. A Sunday-school was established by the society in 1814.

The Third Congregational Society was incorporated June 16, 1827, and in that year it erected a brick meeting-house at the corner of Thorndike and Third Streets, East Cambridge. The church was organized March 3, 1828. The first pastor was Rev. Warren Burton (Harvard, 1821). He was installed March 5, 1828 and resigned in 1829, and the Rev. James D. Green (Harvard, 1817) was installed January 6, 1830. He resigned in 1840 and afterward filled various civil offices. He was the first mayor of Cambridge. His successors were Rev. Messrs. Henry Lambert, George G. Ingersoll, Frederick W. Holland, Frederick N. Knapp, William T. Clarke, Henry C. Badger, Rufus P. Stebbins, Stephen G. Bulfinch and Samuel W. McDaniel. The latter resigned in 1874. The changes in that part of Cambridge made it impracticable to continue the services in the church. In 1887 the Cambridgeport Parish and Church in Austin Street received the fund of the society and became responsible for its custody and use. In connection with this arrangement the society in Austin Street, by an act of the Legislature, took the name of the Third Congregational Society in Cambridge. The house in East Cambridge was sold in 1886, with the organ and bell, and has since been used by the Church of the Ascension (Episcopal).

The Lee Street Society was organized in 1846. Most of the original members, with the first pastor, had been connected with the Cambridgeport Parish. The church was organized April 9, 1847. The first meeting-house was built on Lee Street and dedicated March 25, 1847, and burned May 20, 1855. Another house was erected on the same lot and dedicated January 23, 1856.

Rev. Artemas B. Muzzey was the pastor from September 7, 1846, till February 20, 1854, when he resigned. He was followed by Rev. Henry R. Harrington (Harvard, 1834), from February 11, 1855, to April 1, 1865. He was followed by Rev. Abram W. Stevens, who was installed November 26, 1865 and retired November 1, 1870. Rev. John P. Bland, of the Harvard Divinity School (1871), was ordained September 6, 1871. But the Lee Street Society had become

reduced in strength by the death or removal of most of its original members, and it was at length thought best to accept a cordial invitation to return to the church and society in Austin Street. "The result was accomplished satisfactorily to all concerned and the union was consummated without a dissenting voice."

The church on Lee Street was bought by the city, and is now temporarily used by the Latin School.

The Allen Street Congregational Society (Unitarian) was organized October 8, 1851, in North Cambridge. Several of the members resided over the line, in Somerville. A meeting-house was built at the corner of Allen and Orchard Streets, on land given for that purpose by Mr. Walter M. Allen. The house was finished in February, 1853, and was destroyed by fire March 19, 1865. Another house, erected on the same site, was completed in December, 1865, and was afterwards enlarged. In 1869 it was found expedient for the society to unite with the Universalist denomination, and its latest history will be found in connection with the Universalist Churches.

University Church.—An account has already been given of the organization of a church in connection with Harvard College in 1814. That was nearly fifteen years before the separation of the First Church from the parish, and the new church was formed with the approval and assistance of the old church and its minister. But the new church became allied with the Unitarian movement and its ministers were from that branch of the church. Services were held in the new College Chapel in University Hall and the president with the Faculty of the Theological School, officiate. In 1858 Appleton Chapel was completed, and the services of the College Church have since been held there. The pastors and preachers, in addition to President Kirkland, have been Rev. Henry Ware, D.D. (Harvard, 1785), from 1814 to 1840; Rev. Henry Ware, D.D., Jr. (Harvard, 1812), from 1840 to 1842; Rev. Convers Francis, D.D. (Harvard, 1815), from 1842 to 1855; Rev. Frederic D. Huntington, D.D. (Amherst, 1842), from 1855 to 1860; Rev. Andrew P. Peabody, D.D. (Harvard, 1826), from 1860 to 1881. Since that time the services of the University Church have been discontinued. After Dr. Peabody's resignation the chapel pulpit was supplied by different ministers who were invited by the college authorities. In 1886 Rev. Francis G. Peabody (Harvard, 1869), was appointed Plummer Professor of Christian Morals, and a board of five preachers was appointed to administer with him the religious affairs of the college. The five preachers were Rev. Edward Everett Hale, D.D., Rev. Phillips Brooks, D.D., Rev. Alexander McKenzie, D.D., Rev. Richard Montague, Rev. George A. Gordon. The preachers are appointed annually. Rev. Theodore C. Williams, Rev. William Lawrence, Rev. Lyman Abbott, D.D., Rev. Brooke Herford, D.D., and Rev. Henry Van Dyke, D.D., have been added to the board, from which some of the original

members have retired. The Plummer professor and the preachers conduct the service of morning prayer, and a Sunday evening service in which they are assisted by other clergymen.

PROTESTANT EPISCOPAL CHURCHES. — *Christ Church*.—The introduction of the Episcopal Church into Cambridge has been mentioned already in its chronological place. A fuller account can be given here, compiled, for the most part, from the narrative written by Rev. Dr. Hoppin for the "History of the American Episcopal Church." "Several worthy gentlemen of the town of Cambridge," members of the Church of England, petitioned the Society for the Propagation of the Gospel in Foreign Parts to grant them a missionary who should officiate for them and for others in neighboring towns, and for such college students as were in the English Church. They named the Rev. East Apthorp, a Fellow of Jesus College, Cambridge, England, as a suitable man for this service. Mr. Apthorp was appointed in 1759. Arrangements were made for building a church. The original subscription for this purpose is dated at Boston, April 25, 1759. The building committee was composed of well-known men: Henry Vassal, Joseph Lee, John Vassal, Ralph Inman, Thomas Oliver, David Phips. They employed "a masterly architect," Mr. Peter Harrison, of Newport, R. I." "Christ Church, built from his designs, at a cost, not including the land, of about £1300 sterling, seems to have been always regarded as an edifice of superior elegance." Mr. Apthorp spoke of it as "adding to the few specimens we have of excellence in the fine arts." Archdeacon Barnaby, in his "Travels," published in 1760, says of the house and the minister, "The building is elegant, and the minister of it, the Rev. Mr. Apthorp, is a very amiable young man of shining parts, good learning, and pure and engaging manners." The establishment of the Church of England in this colony was met with resistance. Mr. Apthorp, published in 1763, "Considerations on the Institution and Conduct of the Society for the Propagation of the Gospel." The Rev. Jonathan Mayhew replied, the Archbishop of Canterbury replied to him, and Dr. Mayhew and Mr. Apthorp continued the controversy. Upon his settlement here, Mr. Apthorp "built a spacious and costly mansion, the unwonted splendor of which caused many remarks." Dr. Mayhew wrote: "Since the mission was established in Cambridge, and a very sumptuous dwelling house (for this country) erected there, that town hath been often talked of by Episcopalians, as well as others, as the proposed place of residence for a bishop." Dr. Hoppin writes: "No doubt Mr. Apthorp's situation in Cambridge was rendered uncomfortable by this controversy, and he the more readily embraced the opportunity of preferment in England." He received in 1765 an appointment from Archbishop Secker, and returned to England, where "he died at the advanced age of eighty-four, and was buried with great honor in the chapel of Jesus College, Cam-

bridge." His death occurred on the 16th of April, 1816.

The church was erected on Garden Street, on land adjoining the old burying-ground. "A piece of land one hundred feet square was bought of Mr. James Reed for £16 2s. 1½d., lawful money." "This, with the same quantity bought of the Proprietors of the common and undivided lands of the Town of Cambridge and taken in from the commons, formed the church lot. The price paid to the Proprietor was £13 6s. 8d., lawful money, the church also paying for the removal of the Pounds." The church was opened for divine service October 15, 1761. After Mr. Apthorp's retirement the Rev. Mr. Griffith officiated from December, 1764, to May, 1765. In June, 1767, the Rev. Winwood Serjeant became the missionary for the church, and he remained in this office until the breaking out of the War of the Revolution. Dr. Caner writes to the society, June 2, 1775: "Mr. Serjeant of Cambridge, has been obliged, with his family, to fly for the safety of their lives, nor can I learn where he is concealed. His fine church is turned into barracks by the rebels, and a beautiful organ that was in it broke to pieces." Another writes in 1778: "Mr. Serjeant's parish at Cambridge is wholly broken up. The elegant houses of these gentlemen who once belonged to it are now occupied by the rebels." Mr. Serjeant died at Bath, England, September 20, 1780.

While the American Army was in Cambridge it is probable that service was occasionally performed in the church. There is a record of a service held on Sunday, the last day of 1775, "at the request of Mrs. Washington. There were present the General and lady, Mrs. Gates, Mr. Custis and a number of others." But the house "was left for many years in a melancholy and desecrated condition, the doors shattered and all the windows broken out, exposed to rain and storms, and every sort of depredation; its beauty gone, its sanctuary defiled, the wind howling through its deserted aisles and about its stained and decaying walls; the whole building being a disgrace instead of an ornament to the town." No effort appears to have been made for the renewal of divine worship till the beginning of the year 1790. The edifice was then repaired, and on the 14th of July was reopened for service, and Rev. Dr. Parker, rector of Trinity Church, Boston, preached from Ephesians ii. 19-22. "The Rev. Joseph Warren had been 'put into Deacon's orders' by Bishop Seabury, for Christ Church, and officiated till Easter, 1791. The Rev. Dr. Walter and the Rev. William Montague, as assistant, then served conjointly for a time. Readers were employed, among them Theodore Debar, afterward Bishop of South Carolina, and Jonathan Mayhew Wainwright, afterward Provisional Bishop of New York." In 1826 the building was repaired and reopened July 30, 1826, "a sermon being preached by the Rev. George Otis, A. M., one

of the faculty of Harvard College. Of those who have in later days served this ancient parish as rectors, two are now bishops of the church, the Right Rev. Drs. Vail and M. A. De Wolfe Howe. Of those who have temporarily served in this congregation, the Rev. Dr. John Williams is now Bishop of Connecticut, and the Rev. Horatio Southgate was the Missionary Bishop in Turkey." Mr. Otis was chosen rector, and declined the office on account of his college engagements, but "he continued to officiate for the church, and was virtually its minister, till his lamented and untimely death, at the age of thirty-two, February 25, 1828." Rev. Thomas W. Coit, D.D., was rector from Easter, 1829, to Easter, 1835; Dr. Howe for a few months in 1836 and 1837; Dr. Vail from Easter, 1837, to Easter, 1839. The Rev. Nicholas Hoppin became the rector in November, 1839. He was a graduate of Brown University in 1831. The congregation increased under his rectorship, and in 1857 the church edifice was enlarged by an addition of twenty-three feet to its length. Changes were also made in the interior. A chime of thirteen bells was procured by subscription and placed in the belfry of the church, where they were rung for the first time on Easter morning, 1860. After a successful ministry of thirty-four years, much the longest which the church has known, Dr. Hoppin resigned, April 20, 1874. He continued to reside in Cambridge, where he was held in great respect.

The next rector of Christ Church was the Rev. William Chauncy Langdon, D.D., who, after a few years of faithful service, resigned the parish, and was succeeded by the present rector, Rev. James F. Spalding, D.D.

St. Peter's Church,¹ Main Street, Cambridgeport.—This parish was organized October 27, 1842. A lot of land on Magazine Street, near Perry, was given as a site for the church, but this location being considered entirely out of town, it was exchanged for a lot on Prospect Street, near the corner of Harvard, on which a church was at once built. The parish was admitted into union with the Diocese at the annual meeting of the convention in 1843.

The movement for a new church building began in 1864, and the foundation of the present church, corner of Main and Vernon Streets, was laid in that year. The work proceeded slowly; in September, 1866, worship was begun in the Sunday-school room, and the church was opened for service on the Sunday after Christmas, 1867; but owing to the fact that it was not fully paid for, its consecration could not take place until October 2, 1873, when that ceremony was performed by Right Rev. B. H. Paddock, it being his first public official act after his consecration as Bishop of the Diocese.

In the forty-seven years of its history the parish has been in charge of nine different clergymen, Rev. Edward M. Gushee (Brown University, 1858)

was rector from Easter, 1875; but at the present time (February, 1890) the rectorship is vacant.

St. Philip's Church,² Allston Street.—This church was built by Rev. Edward M. Gushee while he was rector of St. Peter's Church, chiefly at his own expense. The formal benediction of the foundation took place on Sunday, November 28, 1886, and the church was opened for service on Sunday, June 12, 1887. Mr. Gushee continued to serve both churches until Easter, 1888, when he resigned the rectorship of St. Peter's and devoted himself entirely to St. Philip's, of which he still remains in charge. In the summer of 1888 the church was enlarged by lengthening both chancel and nave and the addition of a transept. The congregation is not represented in the meetings of the Diocesan Convention, not having been admitted into union with the Diocese.

The Church of the Ascension,³ East Cambridge, and *St. Bartholomew's*, Cambridgeport, are canonically called "Missions," having no parochial organization and no representation in the Diocesan Convention, but they are not dependent on any parish.

St. Bartholomew's has been in existence about two years and is now under the care of Rev. David G. Haskins, D.D.

The first service for the Mission of the Ascension was held on Whit-Sunday, 1875, by Rev. Wm. Warland in the present church, which was then owned by the Third Congregational Society.

In May, 1886, the building, with the organ and bell, was bought for the Church of the Ascension. There is no clergyman in regular charge at the present time.

St. James' Parish,³ Cambridge.—The circumstances leading to the organization of this parish are of more than ordinary interest, as its growth has been one of the noticeable features of the religious life of the city. In 1860 the Rev. Frederic D. Huntington, D.D., Plummer Professor of Christian Morals in Harvard University, and previously a Unitarian, had been ordained to the ministry of the Protestant Episcopal Church. Four years later he resigned his office in the university. His organization and rectorship of Emmanuel Church, Boston, followed this step. Another result was the organization of the "Church Union," a fervent society of young churchmen of Boston and vicinity, dedicated to aggressive effort in the line of church extension. Living at this juncture in Cambridge, and connected with the mother parish of Christ Church, was the Rev. Andrew Crosswell, a retired Episcopal clergyman in impaired health. Stimulated by the zeal and activity around him, he looked about for a suitable place at which himself to try a mission work, and pitched upon North Cambridge, then an almost outlying and detached precinct of the city, beginning a mile or more above the college buildings at Harvard Square. There he hired a hall, and, with the co-operation of Samuel Batchelder

¹ Communicated.

³ Communicated.

and George Dexter, two devoted laymen, honored Cambridge names, the first service was held on the evening of Christmas Day, 1864, the rector of Emmanuel Church, Boston, now Bishop of Central New York, preaching the sermon. The hall was Atwill's, on the corner of North Avenue and Russell Street. Here the mission continued under Mr. Croswell's ministry until its growth led to its removal to the abandoned bank building on the avenue near Porter's Station, which was fitted up for a chapel and occupied as such until 1871. Meantime a parish of the Episcopal Church had been organized under the legal title of the Free Church of St. James, on the 18th of June, 1866, with the Rev. Andrew Croswell as rector, which position he filled till the building of the little church on Beech Street, the gift of a Cambridge lady deeply interested in the mission, and erected on land secured by Mr. Croswell with the aid of other friends. The corner-stone of this church was laid June 30, 1871, and the building was consecrated December 21st following. Mr. Croswell's health obliging him about this time to retire from the rectorship, he was succeeded by the Rev. W. H. Fultz, and he in turn, in 1873, by the Rev. T. S. Tyng, a grandson of the Rev. Dr. Stephen H. Tyng, of New York. Fresh from the Episcopal Theological School in Cambridge, Mr. Tyng brought to this his first rectorship great ardor and indefatigable industry, and during the five years of his ministry the parish, though still small and feeble and struggling, made steady gains. The planting of St. John's Church, Arlington and the building of St. James' Chapel, West Somerville, were part of the visible fruits of Mr. Tyng's energetic work. In 1878 Mr. Tyng resigned, having offered himself as a missionary to Japan, and was succeeded by the Rev. Edward Abbott, formerly a Congregationalist minister, and a resident of Cambridge since 1865 (founder and first pastor of what is now the Pilgrim Congregational Church), who had lately been confirmed in the Episcopal Church, and was about becoming a candidate for its ministry. Mr. Abbott virtually took charge of the parish in September, 1878, and is now (1890) still its rector. The growth of the parish in the past twelve years has been vigorous and marked. The purchase of land in the rear of the Beech Street Church and the erection thereon of a Parish House, and later the purchase of the slightly and historic Davenport estate, on the corner of the avenue and Beech Street, and the completion thereon, in 1889, of a large, new and beautiful stone church, are the two most notable outward signs of their progress. Of this church Bishop Huntington laid the corner-stone in August, 1888. The new St. James' Church is considerably the largest Episcopal Church in the city, and in many respects one of the most impressive and attractive of all its religious edifices, having a capacity of nearly, if not quite, 800 persons, and possessing one of the most spacious and

beautiful chancels in the State. This feature of the building is a memorial to the late James Greenleaf, of Cambridge, with whom the late Rev. Andrew Croswell, first rector of the parish, was connected by marriage. Through all these years the parish has been deeply interested and earnestly active in all good works, especially in behalf of missions at home and abroad, and has been a liberal giver according to its means. A flourishing Sunday-school, a numerous Ladies' Missionary Society, a Men's Benefit Society, a Young Men's Guild, a Young People's Missionary Society and a temperance society are among its activities. Its present number of communicants is about 250.

The Episcopal Theological School.—"This institution was incorporated in 1867. It had long been felt that a theological seminary was needed to provide a ministry for the church in New England, and especially when Cambridge offered so excellent an opportunity to recruit and prepare candidates." "Several attempts to establish the seminary had been made, but had not been successful. The Rev. J. H. Hopkins, later Bishop of Vermont, for nearly two years taught several young men in a house which he occupied in Cambridge. But as he was elected to the episcopate, and expectations in regard to finances were not realized, the matter was given up."

But in 1867 Benjamin T. Reed, of Boston, revived the scheme and conveyed to trustees selected by himself, the sum of \$100,000, "accompanied by an inventory of conditions." The title of the property is in the hands of five lay trustees who fill their own vacancies. There is also a Board of Visitors consisting of the bishop of the Diocese, with three clergymen and three laymen. In regard to the instruction: "The aim has been to be independent of all schools of thought or parties, and to make the teaching as comprehensive as the church itself, and as impartial towards all loyal members thereof."

In 1869, Mr. R. M. Mason built St. John's Memorial Chapel "for the free accommodation of officers and students of the school and of Harvard College, and of the public on such terms as the trustees may fix." In 1873 Mr. Amos A. Lawrence built a dormitory, which was completed in 1880. In 1874 Mr. Reed gave the library and class-room building, and at his death, soon after, bequeathed to the seminary the reversion of his estate. In 1875 Mr. John A. Burnham built the refectory. There have been other gifts of money and land. "The actual donations have amounted to \$426,500." The "property actually on hand is worth \$381,500." "The ultimate reversion of the estate of the founder will render the endowment of the school one of the largest in America." The buildings make a very attractive group on Brattle Street, and the affairs of the school are in a flourishing condition. The Rev. John S. Stone, D.D., was dean of the school until 1876, when he retired. The Rev. George Zabriskie Gray, D.D., was then chosen

dean, and filled the office with great usefulness and acceptance until his death in 1889. The Rev. William Lawrence (Harvard, 1871) is now the dean of the school.

The course of study covers three years, with provision for post-graduate studies. The catalogue of the school for 1889-90 gave 43 students. About 200 students have been connected with the school.

BAPTIST CHURCHES.—*The First Baptist Church.*¹—The First Baptist Church was organized "at the house of Mr. Samuel Hancock," in Cambridgeport, Dec. 17, 1817, seventeen males and twenty-nine females then subscribing to the "Articles of Faith and a Covenant." Measures had been taken already to erect a house of worship. February 10, 1818, William Brown and Levi Farwell were chosen deacons, both of whom acted in that capacity for twenty-six years. February 25, 1818, the church was publicly recognized in its own house of worship, situated on the corner of Magazine and River Streets. The house was built of wood and was three times enlarged to meet the wants of the increasing congregation. It was burned January 22, 1866. December 25, 1867, on the 50th anniversary of the organization of the church, a new and elegant structure of brick, costing \$90,000, was dedicated. This house was also burned to the ground February 3, 1881, but a new and still finer building was erected and dedicated, free of debt, October 15, 1882.

The first pastor of the church was Bela Jacobs, formerly of Pawtuxet, R. I., who filled the office from 1818 to 1833. The time of his ministry was one of great prosperity, and though the church was, during this period, the mother of three other churches, she was compelled to enlarge her own facilities to accommodate the increasing congregation. A short and uneventful pastorate of two years succeeded, during which Stephen Lovell, of New Bedford, was the incumbent of the office. This was followed by the call of Joseph W. Parker, a student in Newton Theological Institution, who was ordained and installed as pastor Dec. 11, 1836. This pastorate continued seventeen years, and was one of great prosperity to the church. The congregation greatly increased, though eighty-three members of the church with their families were dismissed to form the Old Cambridge Baptist Church. March 25, 1855, Sumner R. Mason, of Lockport, N. Y., was installed, whose labors were greatly blessed through sixteen years. August 26, 1871, Dr. Mason was killed in the terrible railroad disaster at Revere. During this period the Broadway Baptist Church went forth from the First Church. Jan. 1, 1873, H. K. Pervear, of Worcester, became pastor and continued in the office for seven years. Large additions were made to the church, the net increase being from 423 to 538. Sept. 1, 1879, W. T. Chase, of Lewiston, Me., entered upon the duties of

the pastorate and remained with the church until 1884, the church numbering at the close of his pastorate 656. He was followed by the present incumbent, James McWhinnie, of Portland, Me., May 18, 1884.

The "Inman Square Mission" is under the care of this church. In 1887 a commodious chapel was provided for the use of the mission. A flourishing Sunday-school and regular Sunday and weekly services are held there. Among the deacons of the church Josiah W. Cook has held the office for forty-six years. Deacon Joseph A. Holmes has been clerk of the church for more than forty-five years.

The Second Baptist Church.—In 1824 a Sabbath-school was established in East Cambridge by members of Baptist Churches in Boston, who subsequently sustained preaching on one evening of the week in a room of the Putnam School-house. In 1827 a meeting-house was built on Cambridge Street, at the corner of Fourth. This house was burned April 14, 1837. A house of brick was erected on the same site, and dedicated January 11, 1838. A church was organized September 3, 1827. The first pastor was Rev. John E. Weston, who was ordained October 10, 1827, and resigned April 4, 1831. His successor was Rev. Jonathan Aldrich, (Brown, 1826), from June 3, 1833, to June 19, 1835. Rev. Bela Jacobs was installed August 23, 1835, and served until May 22, 1836, when his sudden death ended his useful and honored life. His successors have been Rev. Nathaniel Hervey, 1836 to 1839; Rev. William Leverett, 1840 to 1849; Rev. Amos F. Spalding, 1852 to 1856; Rev. Hiram K. Pervear, 1858 to 1865; Rev. Frank R. Morse, 1865 to 1867; Rev. George H. Miner, 1868 to 1872; Rev. Hugh C. Townley, 1873 to 1875; Rev. George W. Holman, Rev. H. R. Greene, Rev. N. M. Weeks and Rev. Burton Crankshaw, who is now the pastor. Mr. Crankshaw came to this country from England in 1872. He graduated at the Newton Theological Seminary in 1889. Under his ministry the church is pursuing its work with renewed energy and hope.

*The Old Cambridge Baptist Church*² was organized August 20, 1844, with a membership of nearly ninety persons, almost all of whom had formerly belonged to the First Baptist Church in Cambridgeport. Its first house of worship was on land bought from Harvard College, at the corner of Kirkland Street and Holmes Place. Services of dedication and of recognition of the church and installation of the first pastor, Rev. E. G. Robinson, D.D., LL.D., in after-years president of Brown University, were held October 23, 1845. Just twenty-one years later, October 23, 1866, the building was sold, and after removal to the corner of North Avenue and Roseland Street, where it now stands, became the church-house of the North Avenue Congregational Society. The land was resold to Harvard College, and what was perhaps the most desirable

¹ Communicated.

² Communicated.

place in Cambridge for a church, had not its limits then been so small, became by enlargement a fine site for the attractive Hemenway Gymnasium of the University. With the proceeds of the sale of house and land, and with what Dr. Paige, in his "History of Cambridge," calls "contributions on a magnificent scale," provision was made for the present place of worship, between Harvard and Main Streets, near Quincy Square, the dedication of which took place September 29, 1870.

In the Civil War the church had its doers of patriotic service at home and its martyrs in the field.

The most striking recent event in this summary of the church's external history was the fire on Sunday, January 20, 1889, by which the interior of the chapel was destroyed and the main building damaged. After an interval of nine months, during which the hospitalities of the University and of the First Parish were enjoyed (those of the Shepard Congregational Society being proffered with equal kindness), the house was reopened October 27, 1889.

At the date of writing, February, 1890, the church has been without a minister for nearly a year and a half, the pastorate of the Rev. Franklin Johnson, D.D., which began with the year 1884, having terminated in September, 1888. The church at present numbers some 450 members.

With its history of only forty-five years it seems almost a new-comer among the venerable institutions of this ancient home of piety and learning; yet the communion to which it belongs had here a notable representative of its genius and tendencies at a very early period of the history of Cambridge, in the person of the first president of the college, whom it regards with just fondness as a spiritual ancestor.

The pastors of this church have been Rev. Ezekiel G. Robinson, D.D. (Brown University, 1838), from October 23, 1845, to September 13, 1846.

Rev. Benjamin L. Lane, from December 30, 1846, to March 8, 1849.

Rev. John Pryor, D.D., from March 25, 1850, to July 26, 1861.

Rev. Cortland W. Anable, D.D., from June 21, 1863, to October 27, 1871.

Rev. Franklin Johnson, D.D., from December 31, 1873, to September, 1888.

The *North Avenue Baptist Church*¹ had its origin in a Mission Sunday school. The first session was held on the last Sunday of September, 1846.

In the territory now known as the Fifth Ward of the city there was then no religious service held and no religious society existing. At the first gathering there were present forty-five persons. Permission to use a room in the Winthrop School-house was obtained from the city government, through the Hon. James D. Green, first mayor of the city. The history of this religious interest is coeval with the corporate

life of the city. The privilege of occupying a room in the school-house was suddenly withdrawn on the 18th of July, 1852. This withdrawal left the young interest in straits, but the apparent calamity was only a blessing in disguise. It threw faithful Christian workers back on God and their own resources. A lot of land on North Avenue, near the corner of Russell Street, was at once leased from the city, plans for a small chapel were secured, the funds for its immediate erection subscribed, and on the 31st day of October, of the same year, the little company entered their new abode. The city government kindly permitted the school to occupy its old quarters during the erection of the chapel.

This chapel was named "Our Sabbath Home," by the first superintendent, Mr. E. R. Prescott. The prime movers in this enterprise were chiefly members of the West Cambridge (now Arlington) and Old Cambridge Baptist Churches.

As early as February, 1848, the school was admitted into the "Boston Baptist Sabbath School Teachers' Convention." During the winter of 1852-53 religious services were held weekly, on Thursday evenings, in the chapel. In May, 1853, regular Sabbath services were begun. Rev. A. M. Averill, of the Newton Theological Institution became the "permanent supply." In this work of maintaining the preaching of the Gospel, Christian people of other faiths generously participated.

An organization known as the North Cambridge Evangelical Association was formed, and for a short time controlled the business affairs of the new enterprise. It was soon deemed advisable, however, to organize a regular Baptist Church, as a large majority of those interested were already members of that denomination. Accordingly, on the 22d day of March, 1854, a company of thirty men and women formed themselves into such a body, adopting articles of faith which, "for substance of doctrine," were in accord with the tenets and usages of the Baptist denomination. Public recognition services were held on the 6th of April, following. Mr. Averill became the regular pastor of the young church, and under his administration it greatly prospered. In the meantime there had been formed the "North Cambridge Baptist Society." This body was composed of prominent members of the church and congregation. Under the existing laws, a church, as such, could not legally hold property. The aid of Dr. J. R. Morse, a well-known physician, justice of the peace, and afterward deacon of the North Avenue Congregational Church, was invoked. The forms of law were duly observed and the society commissioned for its important work. Some of the leading members of that day are still foremost in activity and fidelity. Mr. Henry R. Glover, the first chairman, still magnifies that office, having been elected to it each successive year since. Mr. Warren Sanger, the first clerk, filled that office for twenty-one consecutive years; is still a member

¹Communitated.

of the society and retains an unabated interest in its welfare. The society has been called upon during its brief history to build three houses of worship. In all three cases, the chairman of the Building Committee has been Mr. C. W. Kingsley,—a fact which needs no comment. The organization of this society was demanded by the growth of Sunday-school and church. The question of location was long and anxiously discussed, and at last settled by the generous gift from Mr. Henry Potter of a lot of land upon which the present edifice in part stands. Of many sites considered this has proven the most eligible, and the older members of the church and society still keep the donor's "memory green."

During 1854 the first meeting-house was built, and dedicated to the worship of God in February, 1855. The chapel was moved across "The Avenue" and attached to the rear of the church, affording ample facilities for work, as was supposed, for many years to come. In less than ten years, however, the Sunday-school had outgrown its surroundings, and in the summer of 1865 the chapel was enlarged, and beautified, and on the nineteenth anniversary reopened with appropriate services. In the year 1884 the Sunday-school and church were once more straitened for room. The question of enlargement could be deferred no longer. In April, 1885, the work of removing the chapel, enlarging and remodeling the old meeting-house, was begun. In November the new and commodious chapel was opened for divine service, and on the 18th of May, 1886, the entire edifice was rededicated to the worship of God. The whole cost of the enlargement and renovation was fifty-four thousand dollars.

The spacious lot of land on the northerly side of the church, containing nine thousand square feet, was the gift of Mr. Henry R. Glover.

The original chapel was given to the First Baptist Church, and is now known as the Inman Square Baptist Mission Sunday-school. The church during its life of thirty-six years has had four pastors: Rev. A. M. Averill (Newton Theo. Inst.), Rev. Joseph A. Goodham, (D. C. 1848), Rev. Joseph Colver Wightman, (B. W. 1852,) Rev. Wm. S. Apsey (Madison Univ., 1861). The last-named became pastor in October, 1868, and is the present incumbent. From the first the work of the Sunday-school has been a prominent feature. The church was the child of the school. The progress of the school has been solid and uninterrupted. It looks now (1890) as if the stakes would soon have to be strengthened, and the cords lengthened of this promising department of Christian endeavor.

*The Broadway Baptist Church*¹.—A Sabbath-school, consisting of twenty-eight scholars and fifteen teachers, was opened December 16, 1860, in a room at the corner of Harvard and Clark Streets, under the patronage of the First Baptist Church. In 1861 a

commodious chapel was erected for the school and for religious meetings, on the southerly side of Harvard Street, near Pine Street. The school held its first meeting in this chapel January 12, 1862. It was dedicated as a house of worship February 9, 1862.

It was deemed advisable to open the chapel for regular public worship on the Sabbath. Services were commenced on the first Sabbath in March, 1863, the committee having secured the services of Rev. William Howe (Waterville College, 1833), founder and pastor of Union Church, Boston, (now Union Temple).

The attendance so increased that within the year the chapel was enlarged. Subsequently it was sold and removed to the corner of Harvard and Essex Streets.

This Christian enterprise became so successful that it was deemed advisable to constitute a gospel church. Accordingly, on May 9, 1865, a church, consisting of fifty members, was organized and Rev. William Howe chosen pastor. The public services of recognition of pastor and church were held in the First Baptist Church June 25, 1865.

Enlarged accommodations being required, measures were taken to secure a suitable house of worship, which resulted in the purchase of a lot on Broadway, corner of Boardman Street, and the erection of an edifice sixty-eight feet by sixty-four, which was dedicated November 22, 1866, with appropriate religious services; sermon by the pastor.

Rev. Wm. Howe continued his pastorate until ill health and advancing age compelled him to resign in July, 1870. He received the degree of D.D. from Colby University July, 1885. Dr. Howe continues to reside in Cambridge, without pastoral charge.

October 25, 1870, Rev. Henry Hinckley, H. U., received a unanimous call to the pastorate and was installed December 13th following. After serving the church very acceptably eight years, he resigned October, 1878, to accept a call from the church in East Lynu, Mass.

In February, 1879, Rev. A. C. Williams, from New Jersey, was called to the pastorate as successor to Mr. Hinckley. Mr. Williams resigned in May, 1882, and removed to Hinsdale, N. H., where he died suddenly July 12, 1883.

A call was extended, September 22, 1882, to Rev. E. K. Chandler (Madison University); former pastorates: Rockford, Ill., Saco, Me. Mr. Chandler entered upon his duties as pastor November 1. After a successful pastorate of seven years, he resigned September 15, 1889, to accept a call from the church in Warren, R. I. He received the degree D.D. in 1884.

June 26, 1889, the church edifice was damaged by fire, which made it necessary to make quite extensive repairs. It was accordingly enlarged and remodeled at an expense of about \$17,000.

¹ Communicated.

January 17, 1890, Rev. Asa E. Reynolds (M. U.) former pastorates: Natick, Mass., Wallingford, Conn.—received the unanimous call to the church to become its pastor. He entered upon his work March 2d, and was publicly recognized March 20, 1890, when the church edifice was rededicated and opened for public services.

*Charles River Baptist Church.*¹—The Charles River Baptist Church had its origin in a Sunday-school, which was begun by members of the First Baptist Church, 1870, in the upper rooms of a dwelling-house, No. 8 Magazine Court. The first session was held April 3d, with an attendance of twenty-four children. Meetings for prayer and teaching the children continued to be held in this place until October 30, 1870, when a new chapel, which had been erected during the summer at an expense of about \$8500, on the corner of Magazine Street and Putnam Avenue, was occupied. This was of wood, Gothic in style, seventy feet long and thirty-three feet wide, with an addition in the rear for the infant class of the Sunday-school capable of seating about seventy-five persons. The main room had seats for about 300. This chapel was dedicated November 29, 1870.

The school at this time numbered 180 teachers and scholars. Regular preaching services were begun in July, 1874, and continued under the charge of Rev. J. P. Thoms, and subsequently Rev. G. T. Raymond, to the time of the formation of the church—1876. The congregation at this time averaged about 120 in attendance.

In June, 1873, an incorporated association had been formed, called the Charles River Baptist Chapel Association, which held the property under a trust deed, meeting quarterly. This association, acting conjointly with a committee chosen each year by the First Baptist Church, sustained and continued the religious interest. April 10, 1876, a meeting was held to consider the matter of church organization. The outcome of this meeting and another held April 25th was the formation of the present church, adopting the old incorporated name, with the change of "chapel" to "church." Soon after the Articles of Faith, the covenant and constitution and by-laws were adopted and signed by forty persons, all presenting letters of dismission from some Baptist Church. The council, composed of delegates from neighboring Baptist Churches, convened June 8, 1876, and public recognition services were held the same evening. Moderator, Rev. H. K. Pervear; clerk, Rev. Henry Hinckley. Rev. D. C. Eddy, D.D., preached the sermon. The church was received into the Boston North Baptist Association in September, 1876.

October 5, 1876, a reorganization of the church was made for the purpose of forming the present corporation, with some changes in the by-laws. The purpose of the corporation, as set forth, is "to maintain

the public worship of God, to support evangelical preaching, and to observe the ordinances appointed by Christ, according to the usages of the Baptist denomination." In 1878 the church asked for and received a release of the trust-deed from the First Baptist Church to enable a title deed to be made for them. Thus the new church became the owners of the land, building and personal property at a nominal cost to them of \$3000.

June 16, 1889, the corner-stone of the present house of worship was laid, and during the summer and the early part of the following year the edifice was erected. The building is a handsome brick structure, with brown-stone trimmings, located on the original lot, the old chapel being removed to the rear for vestry purposes. The style is Romanesque. The auditorium contains a number of memorial windows; seating capacity, about 550. The present membership of the church is 220.

The following have been the pastors of the church: Rev. F. B. Dickinson, from 1876 to 1878; Rev. C. H. Rowe, from 1878 to 1881; Rev. G. E. Horr, from 1882 to 1883; Rev. W. C. Richmond, the present pastor, settled 1884.

UNION BAPTIST CHURCHES.—The meeting-house of the Union Baptist Church, upon Main Street, was erected in 1882. The pastor of the church is Rev. Jesse Harrell. The society is flourishing under his charge.

UNIVERSALIST CHURCHES.—*The First Universalist Society in Cambridge* was incorporated February 9, 1822. For some years there had been occasional religious services conducted by Rev. Hosea Ballou and others in a school-house on Franklin Street. The society erected a meeting-house at the junction of Main and Front Streets, and this was dedicated December 18, 1822. A church was organized June 19, 1827. The first pastor was Rev. Thomas Whittemore, who was born in Boston January 1, 1800. He served the church from April, 1822, until May, 1831. He was prominent in his denomination and an active citizen after his retirement from the pastorate of this church. He died March 21, 1861. His successor was Rev. Samuel P. Skinner, who began to preach for the church in 1831. In 1832 he removed to Baltimore. He died in 1858. He was followed by Rev. Lucius R. Paige, who was born in Hardwick March 8, 1802. He began to preach in 1823, entered upon his ministry here in 1832, was installed July 8, 1832, and resigned July 1, 1839. He received the degree of A.M. from Harvard College in 1850, and of D.D. from Tufts College in 1861. He preached for nearly thirty years after his retirement from the pastorate. Dr. Paige has continued to reside in Cambridge, where he is held in the highest esteem. He has served as town clerk and city clerk, as treasurer of the Cambridgeport Savings Bank, and cashier and president of the Cambridge Bank. He has published various religious books, and also a history of his native town.

¹ Communicated.

He has also published a "History of Cambridge," which is invaluable to any who would know the long story of the origin and growth of the town, and especially to any one who has occasion to write concerning it. Dr. Paige is an active and honored member of the Massachusetts Historical Society.

Rev. Lemuel Willis was the next minister, from 1842 to 1845. Rev. Luther J. Fletcher was installed in 1846, and he resigned in 1848. Rev. Edwin A. Eaton was the minister from 1849-52. Rev. Charles A. Skinner was installed in 1853 and he resigned in 1867. Rev. Benjamin F. Bowles was installed in 1868, and resigned in 1873. Rev. Oscar F. Safford was installed in 1874, and he served until 1885. The present pastor is Rev. Alphonso E. White (Dartmouth College, 1865), who was installed October 13, 1886. In 1889 the meeting-house was moved from the conspicuous place it had occupied—in order that Front Street might be widened to make a proper approach to the Harvard bridge—and was placed on Inman Street, where it has been greatly improved and furnishes a convenient and attractive place of worship.

The Second Universalist Society was incorporated February 11, 1823. For a time meetings were held in a school-house on Third Street, East Cambridge, and afterwards in the meeting-house of the Unitarian Society. In 1834 a hall was hired for the services, and in 1843 this was purchased and enlarged and converted into a meeting-house. In 1865 this was sold and a house was built on Otis Street. This was dedicated September 26, 1866. Rev. Henry Bacon was the first settled pastor; he began in 1834 and resigned in 1838. He was followed by Rev. Elbridge G. Brooks, 1838 to 1845; Rev. William R. G. Mellen, 1845 to 1848; Rev. Massena Goodrich, 1849 to 1852; Rev. Henry A. Eaton, 1855 to 1857; Rev. Henry W. Rugg, 1858 to 1861; Rev. S. L. Roripaugh, January, 1862, to the end of the year; Rev. James F. Powers, 1863 to 1866; Rev. Henry I. Cushman, 1867 to 1868; Rev. Frank Maguire, 1868 to 1871; Rev. Sumner Ellis, from 1872 to 1874. Rev. Henry I. Cushman was "stated supply" from November 11, 1874, and Rev. William A. Start from September 4, 1875. Rev. William F. Potter supplied the pulpit from 1879 to 1881. Rev. Clarence E. Rice was the pastor from 1883 to 1887. Rev. Isaac P. Coddington, a graduate of the Theological School in Canton, N. Y., became the pastor in 1889, and now fills that office with success.

The Third Universalist Society was the successor of the Allen Street Congregational Society (Unitarian), an account of which has been given in connection with the Unitarian churches. This society assumed its new name and new relations in 1874. The first minister of the new Universalist parish and church was Rev. James Thurston, who was installed in 1853 and resigned in 1854. Rev. Caleb D. Bradlee followed, 1854 to 1857. Rev. John M. Marston was installed 1858, and resigned in 1862. Rev. Frederick W. Holland served for two years, when Mr. Marston

resumed the pastorate. He resigned in 1867. Mr. Charles E. Fay preached stately for the church for about a year, when he was appointed a professor in Tufts College. Rev. William A. Start was installed April 10, 1870. Under his ministry the society increased and the church building was enlarged. He resigned in 1874. Rev. Isaac M. Atwood became the pastor in 1874, and remained until 1879. During his pastorate a new brick church was erected in a prominent place on North Avenue. Mr. Atwood was made the president of the Theological Department of the St. Lawrence University, Canton, N. Y. Rev. Charles W. Biddle, D.D., of Lynn, was called to the pastoral office, and entered upon his duties December 1, 1879. Under his care the society is enjoying an enlarged prosperity.

METHODIST EPISCOPAL CHURCHES.—*The First Methodist Episcopal Society* was formed in East Cambridge in 1813. Before that those who were connected with this denomination attended church in Boston or Charlestown. The first meetings were in private houses. The first "Class" was formed in 1818. The first Methodist sermon in Cambridge, it is believed, was preached in the house of William Granville, by Rev. Enoch Mudge. Worship was sustained for a time in a school-house. In 1823 a small chapel was built. The first stated preacher at Lechmere Point was Rev. Leonard Frost, in 1823. In 1825 a brick house of worship was dedicated, at the corner of Cambridge and Third Streets. After about forty-five years this house was demolished and a larger house was erected on the site. This was of brick, and was dedicated December 12, 1872. The church has had a very active and useful career. Its history has been written by the Rev. Albert Gould and was published in the *Cambridge Daily*, March 11, 1889.

The ministers since the close of Dr. Paige's list are as follows: Rev. George W. Mansfield, retired in 1878; Rev. George Whitaker, D.D., served 1879-81; Rev. John N. Short, 1882-84; Rev. Samuel L. Gracey, 1885-86; Rev. Albert Gould, 1886-89; Rev. S. E. Breen, 1889-90; Rev. C. H. Hannaford is now the minister in charge.

Harvard Street Church.—In 1831 a "Class" of six members was formed, according to the usage of the Methodist Church. At first it met in or near Harvard Square, but was removed to Cambridgeport. From this "Class" has grown the Harvard Street Church. Meetings for public worship were held in "Fisk Block," on Main Street, and afterwards in the Town House. In 1842 a meeting-house was built on Harvard Street at a cost of about \$6,000. This was enlarged in 1851, and burned in 1857. Another house was built on the same site, at an expense of \$17,000, dedicated October 13, 1858, and burned March 15, 1861. The present brick meeting-house was dedicated November 19, 1862. During Dr. Chadbourn's pastorate, 1882-81, the house was thoroughly renovated, and was enlarged by an addition on the west

side for a ladies' parlor. In March, 1890, the membership of the church was 375. The average attendance at the Sabbath-school was about 360. The Young People's Society numbered ninety. The congregations are large and the work of the church is pursued with efficiency and success. A lady is employed as a parish missionary and her work is of great value. All the affairs of the church are reported as in excellent condition.

The church appears in the minutes for the first time in 1841, when the first appointment was made. The ministers who have followed those given in Paige's History are as follows: Rev. W. E. Huntington, 1877-79; Rev. Joseph Cummings, D.D. (W. U., 1840), 1880-81; Rev. G. S. Chadbourn, D.D. (W. U., 1858), 1882-84; Rev. W. H. Thomas, D.D., 1885-87; Rev. C. S. Rogers, D.D. (W. U., 1858), 1888.

The Methodist Episcopal Church in Old Cambridge was organized June 3, 1868. A chapel formerly owned and used by the Holmes Congregational Society had been purchased and removed to a lot on North Avenue, opposite the Common. This was rededicated on the day the new society was formed. It has been used since that time by the Methodist Church.

The ministers of this church have been Rev. Abraham D. Merrill and Rev. James Mudge, 1868-69; Rev. Samuel Jackson, 1870-71; Rev. Phny Wood, 1872; Rev. James Lansing, 1873; Rev. Mr. Beiler, 1873; Rev. David K. Merrill, 1874-75; Rev. Charles Young, 1876 to 1878; Rev. Alexander Dight, 1878 to 1881; Rev. Austin H. Herrick, 1881 to 1882; Rev. J. W. Barter, 1882 to 1885; Rev. W. H. Marble, 1885 to 1888. Rev. George H. Cheney assumed the charge of the church in 1888 and remains in the pastoral office.

*Grace Methodist Episcopal Church.*¹—This church originated in a Sunday-school which began its work in Williams Hall, April 17, 1870, in connection with the Cambridge Temperance Reform Association, the first officers being J. A. Smith, superintendent; A. P. Rollins, assistant superintendent; S. C. Knights, secretary; G. C. W. Fuller, treasurer, and D. B. Harvey, librarian.

Representatives of the Methodist, Baptist and Congregationalist Churches were associated in the work, which was so prosperous that within two months of its organization eighty-seven members, with an average attendance of seventy-five, were reported.

The sessions were held in the morning till October, when they were changed to the afternoon, upon which change nearly all who were in any way connected with the Baptist and Congregationalist Churches—about two-thirds of the school—withdraw.

Notwithstanding this, the secretary reported a membership January 1, 1871, of ninety-three and a library of 275 volumes.

The feeling becoming very strong that there ought to be a church organized in connection with this school, and as preliminary to that, a lot of land on Cottage Street was secured for a chapel.

As nearly all the workers were now Methodists, it was decided at a meeting at the house of A. P. Rollins, in March, 1871, to organize a church to be known as the Cottage Street Methodist Episcopal Church of Cambridgeport. This was done at a meeting at the house of W. J. A. Sullivan, April 5, 1871, when seventeen persons, principally members of Harvard Street Methodist Episcopal Church were so organized by Rev. David Sherman, D.D., presiding elder.

The Sunday services were held in Williams' Hall till Oct. 15, 1871, when they were transferred to Odd Fellows' Hall, where they were continued till the chapel was dedicated in June 19, 1872, with a debt upon it of \$4000. This soon became too small for the people.

In 1882 a church site on the corner of Magazine and Perry Streets was purchased for \$5500, and on the 16th of November, 1886, the corner-stone of the church was laid, and on June 19, 1887, the week of dedicatory services began.

In August, 1872, the trustees organized under articles of incorporation as the "Trustees of the Cottage Street Methodist Episcopal Church of Cambridgeport."

The pastors of this church have been chronologically as follows:

Rev. David Patten, D.D., Rev. Luman Boyden, Rev. Isaac Row (afterwards missionary to India), Rev. W. L. Lockwood, Rev. Jarvis A. Ames, Rev. J. W. Barker, Rev. Duncan McGregor, Rev. Alfred Noon, Rev. J. W. Higgins, Rev. N. B. Fisk, Rev. Albert Gould, Rev. S. E. Breen, who is now the minister of the church.

St. Paul's African Methodist Episcopal Church is at the corner of Portland and Hastings Streets. The organization of the church was made in 1873. It was reorganized in 1878.

The Rush African Methodist Episcopal Church for several years worshiped in a hall on Main Street. In 1888 a convenient house was erected on School Street. The present minister is Rev. G. L. Blackwell.

Another Methodist society, in 1890, began services in a hall on lower Main Street, under the care of Rev. Mr. Brackett.

THE REFORMED EPISCOPAL CHURCH, under the name of St. Luke's, was organized a few years since in Cambridgeport, and has since maintained religious services. It has no church building as yet, but is doing its work quietly and steadily for the public good. The present pastor is the Rev. C. H. Tucker.

ROMAN CATHOLIC CHURCHES.—*The Parish of St. Peter's Church* was formed in January, 1849, by Rev. Manasses P. Dougherty. His pastorate was long and

¹ Communicated.

fruitful, and he was highly esteemed within his parish and beyond its bounds. St. Peter's Church, on Concord Avenue, was consecrated in 1849. Rev. Mr. Dougherty died in July, 1877. He was succeeded by Rev. J. E. O'Brien, who died in July, 1888. He was followed by Rev. John Flatley, who is now in charge of the parish, assisted by Fathers Broderick and Doody.

*St. Mary's Church.*¹—"The parish of St. Mary's Church was organized, in 1866, by Rev. Manasses P. Dougherty, who performed the duties of pastor in connection with his charge of St. Peter's Church until May, 1867, when he was succeeded by Rev. Thomas Scully, who had previously served" as chaplain of the Ninth Regiment of Massachusetts Volunteers. The spacious brick church of the parish is on Norfolk Street, at the corner of Harvard Street. The sketch which follows has been prepared for this work and begins with the erection of the church.

The site was first occupied by the Cambridge Town Hall, which was destroyed by fire. It was purchased by Catholic citizens for the purpose of building a church. June 7, 1866, work was begun on the foundation, and on Sunday, July 15, 1866, the cornerstone was laid with impressive ceremonies of the Catholic ritual by Right Rev. John J. Williams, assisted by Revs. M. P. Dougherty, J. Donahue, J. Scully and other priests. The sermon was preached by Father Hitzelberger, S. J., and there were present about 4000 people. In May, 1867, the Bishop of the Diocese appointed Rev. Thomas Scully to this new parish, formed from the East Cambridge and Cambridge Parishes, and commonly called Cambridgeport. The new church was unfinished and just roofed. Sunday, June 9, 1867, the pastor of this new mission took formal charge. On Sunday, March 8, 1868, the church was formally dedicated by Bishop Williams. The preacher was Rev. G. F. Haskins, of Boston. The architect was Mr. James Murphy, of Providence, R. I.

Two valuable estates adjoining the church, known as the Luke and Howe estates, were, within a short time, purchased by the parish. The Luke house became the pastoral residence and a convent school for girls was erected on the Howe estate, and given in charge to the sisters of the congregation of Notre Dame, whose Mother House is in Montreal, P. Q. In 1875 a building sixty-five feet square, three stories high, was erected on land close to the church, and in September, of same year, opened as a parochial school for boys. In 1876 the sisters of the congregation were recalled to Montreal and the sisters of Notre Dame took charge of the girls' school with twelve classes. In the spring of 1876 the Dodge estate, on Essex Street, adjoining the church property, was purchased and became the residence of the sisters of Notre Dame.

In 1884 the Fiske estate, corner of Harvard and Norfolk Streets, was purchased by the parish, which erected on it Aquinas Hall, which is used for parish meetings, exhibitions, lectures, school, class exercises, etc. The Cheney land and building adjoining the convent school were purchased the same year. In 1886 Father Scully erected a large gymnasium on his own land, corner of Howard and Prospect Streets, and presented it to the parish. Dr. Sargent, professor in charge of the Hemenway Gymnasium, pronounces it one of the very best equipped in the country. Besides evening classes for young men, there are regular forenoon and afternoon classes for the children of the parish schools, given by a competent master. In 1889 Father Scully purchased about six acres of the Hovey estate on Cambridge Street, and presented the same to an association of Catholic young men, chartered by the State for the purposes of moral, intellectual and physical improvement, and known as the Father Scully Gymnasium (incorporated).

*St. Paul's Catholic Church,*² situated on the corner of Holyoke and Mt. Auburn Streets, was purchased from the Shepard Congregational Society by the Rev. M. P. Dougherty, then pastor of St. Peter's Church, in 1873, and opened by him for public worship the same year. It was organized into a separate and distinct parish in 1875, with the Rev. William Orr, the present incumbent, its first resident pastor. It had, at the time of its organization, a membership—counting young and old—of about 2000 souls; now (1890) its members, at the same rate of computation, amount to about 3500.

Besides the church, the congregation possess a good pastoral residence, and in 1889 purchased the house and land known as the "Gordon McKay estate," adjoining Mt. Auburn, De Wolfe and Arrow Streets, which is intended for a new church and school. The house on the estate has been already remodeled for a convent and temporary school for younger children only. Sisters of St. Joseph were installed therein, and the school opened in the beginning of September, 1889, with an average attendance of 200 children. A new school is now being erected on the lately purchased site, and it is proposed to build on the same premises, at no very distant day, a new church of ecclesiastical architecture and an ornament to Cambridge.

In 1877 the Archbishop appointed an assistant priest to this parish, and in 1889 a second assistant. The present assistants are Rev. John J. Coan and Rev. John J. Ryan, both of whom received their preparatory education in Boston College, and their ecclesiastical education in St. John's Seminary, Brighton, Mass.

The pastor received his preparatory education in St. Charles' College, near Ellicott City, Md., and his

theological education in the Seminary of St. Sulpice, Baltimore.

*St. John's Parish*¹ (Church of the Sacred Heart).—Until 1842 the Catholics of Lechmere Point were of the congregation worshipping in St. Mary's Church on Richmond Street, in Charlestown, but a Sunday-school for the children had been for some years held in the Academy building then at the northwest corner of Otis and Fourth Streets, with Daniel H. Southwick as its superintendent. The first meeting for the purpose of erecting a church was held January 17, 1842, at the Academy building and John W. Loring was the chairman, William Gleeson, secretary. D. W. Southwick, J. W. Loring and William Gleeson were made a committee to wait on the Bishop and ask that a priest be assigned to assist in the erection of a church. Thirty-six hundred dollars was subscribed and the meeting adjourned till January 30th, when it met at Master Rice's School on Third Street, and appointed a committee to purchase a site. On February 6th the committee reported selecting lot on Fourth Street, and on February 20th it was voted to call the building "Saint John's Church." On March 19th the deed of the land passed from Amos Birney to Bishop Fenwick, and on October 9th the building was advanced so far that services were held for the first time in the basement by Rev. John B. Fitzpatrick, afterwards Bishop of Boston, who was the first pastor and organizer of the parish. This church was dedicated September 3, 1843. The parish then comprised all of the towns of Cambridge and Somerville. March 24, 1844, Father Fitzpatrick was made coadjutor Bishop of the Diocese, and April 22d of the same year Rev. Manasses P. Dougherty took charge of the parish. In 1847 Woburn was added to the parish, and continued as a part until about 1858. In 1848 Old Cambridge was set off and Father Dougherty left and took charge of the new parish of Saint Peter. The Rev. George T. Riordan succeeded him in November, 1848, and in December, 1851, he left for the West, when the parish was taken in charge by Rev. Lawrence Carroll, who died in office November 23, 1858. During the illness which preceded Father Carroll's death, and until January 7, 1859, Rev. George F. Haskins was the temporary pastor. On the latter date Rev. Francis X. Branigan was permanently appointed, who resigned at the end of 1860, and died June 25, 1861. Until 1862 the church was in temporary charge of Rev. Joseph Coyle and other priests of Boston. Rev. John W. Donahue was appointed in 1862 and died in charge March 5, 1873. Cambridgeport was set off and made a parish in 1866. In 1870 Somerville was also set off, which reduced the territorial limits to what they now substantially are, comprising all of Ward 3, or East Cambridge, together with that portion of Cambridgeport which lies north of Plymouth Street, between the Boston and Albany

Railroad and Winsor Street. On March 8, 1873, the Rev. John O'Brien was assigned to the parish from Concord, Massachusetts, and he at once set about erecting the new Church of the Sacred Heart at the corner of Sixth and Otis Streets. July 23, 1873, the site was secured; October 4, 1874, the corner stone was laid; November 12, 1876, divine service was first held, and January 28, 1883, the building was dedicated. This is the largest and handsomest Catholic Church in the city, of 75 × 150 feet dimensions, built in the decorated Gothic style, of blue slate with granite trimmings. The nave is 65 feet high and the spire 180. It has seating capacity for 1800, and contains a beautiful and artistic Gothic altar, which was especially modeled and carved by eminent sculptors in London, England, of white Caen stone. It is fifty feet high, and contains four groups or representations from the life of our Saviour sculptured in nearly human size. Father O'Brien is still the pastor in charge of the parish, assisted by three curates. The parish has 7000 souls.

The old Church of St. John, on Fourth Street, has been abandoned for church services, the congregation being removed to the new Church of the Sacred Heart. The old building is, however, still owned and used by the parish for meetings, etc., and the parish still goes by the name of that of St. John.

THE NEW JERUSALEM CHURCH.²—In 1816 several young men in Harvard College became interested in the interpretation of the Bible contained in the works of Emanuel Swedenborg. The view of God as threefold in essential Divinity, Divine Humanity and Providential Grace, seemed to them more in accord with Scripture and reason than either the tri-personal or the humanitarian views then prevalent. To this were added the convictions that the Divine Word contained a spiritual as well as a historical meaning, that the judgment was the end of the first period of Christianity rather than a cosmical convulsion, that there is a spiritual world related to the material world as the soul to the body, and that the promised Second Advent is to be understood of the Lord as the spirit of Truth and of the opening of the Word to men.

These persons, including Thomas Worcester, Theophilus Parsons, John H. Wilkins, Sampson Reed and others, joined with others in Boston in forming a society of the New Church in 1818, which then had twelve members and had, in 1888, 624 members. Several societies had been formed from it, in Roxbury, Dorchester, Brookline, Newton and Waltham, but no movement was made in Cambridge in a direct way till 1888, when services were held in a hall in Harvard Square, by Rev. James Reed, pastor of the Boston Society. These services had continued to be held Sunday afternoons for some months when it was decided by the managers of the Theological School of

² Commemorated.

the New Church to remove it to Cambridge from its temporary quarters in Boston. The estate at the corner of Quincy and Kirkland Streets was purchased, a chapel for temporary use was provided in the house standing upon the property and formerly the residence of President Sparks, and the services were transferred thither.

The officers of the school are as follows: *Corporation*: Wm. Albert Mason, judge of Superior Court of Massachusetts, president; Henry F. May, A.M., clerk; E. A. Whiston, M.D., treasurer, and fourteen directors. *Faculty*: Rev. John Worcester, president and Professor of Theology; Rev. S. F. Dike, D.D., Professor of Ecclesiastical History; Rev. T. O. Paine, LL.D., and Rev. J. E. Warren, Professors of Bible Languages; Rev. T. F. Wright, A.M., Professor of Homiletics and Pastoral Care.

Mr. Wright (Harvard College, class of 1866) is the only member of the faculty in residence, as the school is small, having but seven students in attendance. He conducts service in the chapel on Sunday morning and afternoon, and has a congregation of about 100 persons. A fund for building a chapel has been opened.

No formal society has yet been instituted, but the affairs are in the hands of a committee consisting of Charles Harris, Thaddeus W. Harris, Charles H. Taft, Clarence H. Blake and Charles R. Shaw. A Sunday-school is held after morning service. A lending library of New Church books is in use, and a museum of Bible objects is in process of collection.

CAMBRIDGE YOUNG MEN'S CHRISTIAN ASSOCIATION.¹—The Cambridge Young Men's Christian Association was organized Sept. 6, 1883, with eighty-four charter members. The object of the organization was to create a society of men, so organized as to seek in its work the development of young men morally, physically, intellectually and socially. The membership was opened to all men of good moral character, the voting and office-holding power being confined to the active membership, the conditions of this active membership being that all men so enrolled should be members of some evangelical church.

Ever since its organization the association has proved itself to be a valuable addition to the benevolent societies of the city. Its work has been of inestimable value as an economic safeguard to the young men of Cambridge.

At the end of its first year the public-spirited business men, recognizing the value of the work, pledged money sufficient to purchase the beautiful and well-located building at Central Square; \$50,000 has been expended on the property.

The following gentlemen have filled the important offices of the association: Presidents, Warren Sauger, E. D. Leavitt, O. H. Durrell; General Secretaries, L. W. Messer, W. A. Magee and A. H. Whirford.

The present membership is 600. A junior department of 225 members and a woman's auxiliary of 700 gives a total membership of 1525 in all branches of work.

The association is a public institution. The building, open every day in the year, welcomes young men to helpful influences. The work has proved itself of peculiar value as an auxiliary to the churches of the city.

THE EAST END MISSION has been incorporated by the State, and is now conducting a Union Sunday-school in the Lower Port. It is proposed to purchase or erect a building in that part of the city, where religious services may be held, and a general work maintained by means of a reading-room, a library and other social appointments. The work will, in many respects, resemble that of the Social Union in Old Cambridge.

CHAPTER IV.

CAMBRIDGE—(Continued).

HARVARD UNIVERSITY.²

BY WILLIAM R. THAYER.

I. CORPORATE AND MATERIAL GROWTH.

ON Thursday, September 8, 1636, the General Court first assembled which, in the course of its proceedings on October 28th, passed the following resolution:—"The court agree to give Four Hundred Pounds toward a *School* or *College*, whereof Two Hundred Pounds shall be paid the next year, and Two Hundred Pounds when the work is finished, and the next Court to appoint where and what building." The next year it appointed twelve of the most eminent men in the Colony "to take order for a college at Newtown;" among these are the names of Winthrop, the Governor; Shepard, Cotton and Wilson, among the clergy; and Stoughton and Dudley, among the laymen. The name of Newtown was soon changed to Cambridge, as a mark of affection for the English town at whose university many of the colonists had been educated. This was the official beginning of the College, but little had yet been done when, in 1638, the Reverend John Harvard, a young dissenting minister, who having taken his degree at Emanuel College, Cambridge, in 1637, came to the Colony and settled at Charlestown,³ died, and

² In compiling this sketch I have been under great obligation to Quincy's *History of Harvard University*, 2 vols., 1810; to *The Harvard Book*, 2 vols., 1874; to *College Words and Customs*, 1850; and to a valuable series of articles by the late Prof. Jacquinot in the *Revue internationale de l'Enseignement*, Paris, 1881-81.

³ In 1828 a monument was erected by the alumni over John Harvard's grave at Charlestown. In 1883 a bronze statue, by French, was given to the College by S. J. Bridge, and erected in the Delta, west of Memorial Hall.

¹ Communicated.

bequeathed one-half of his property and his entire library to the School at Newtown. His estate amounted to £779 17s. 2d., of which the College received nearly £400; his library contained 260 volumes, chiefly theological and classical. Out of gratitude for this munificence, the Court, in March, 1639, bestowed Harvard's name on the seminary. The example of the young founder stirred the generosity of the colonists; the magistrates gave to the library books to the value of £200; individual gifts of £20 or £30 followed; and persons of smaller means, but of equal public spirit, contributed according to their substance. "We read," says Peirce, "of a number of sheep bequeathed by one man, of a quantity of cotton worth nine shillings presented by another, of a pewter flagon worth ten shillings by a third, of a fruit-dish, a sugar-spoon, a silver-tipt jug, one great salt, and one small trencher-salt by others; and of presents or legacies, amounting severally to five shillings, one pound, two pounds, etc."¹

The choice of Cambridge as the site of the College has had a deep effect upon its character. In early times, when access to Boston could be had only through Charlestown and thence by ferry, or by a roundabout way through Roxbury, the isolation of the College was almost complete: in our own day, when Boston can be reached in twenty minutes from Harvard Square, the College has the advantage of being near a large city, while at the same time Cambridge has retained many of the desirable features of a university town.

The first building devoted to the uses of the "School" was put up by Nathaniel Eaton in 1637, somewhere near the present site of Wadsworth House. Eaton enclosed about an acre of land with a high paling, set out thirty apple-trees, and, according to Governor Winthrop, had "many scholars, the sons of gentlemen and others of best note in the country." Nathaniel Briscoe, "a gentleman born," assisted Eaton as usher; but the "School" did not long thrive. Briscoe complained of having received "two hundred stripes about the head," the scholars complained of bad food and harsh treatment, and in September, 1639, Eaton was dismissed and fined by the General Court. Mr. Samuel Shepard was next designated to superintend the building and funds, which he did until the arrival in the Colony of the Rev. Henry Dunster, a man whose reputation for learning had preceded him, and who was immediately offered the position of President of Harvard College. With Dunster's appointment, in 1640, the unbroken history of Harvard begins. The following early description of the institution is from a work published in London in 1643: "The edifice is very fair and comely within and without, having in it a spacious hall, where they daily meet at the Commons, Lectures, Exercises, and a large library with some books to it, the gifts of divers of

our friends; their chambers and studies also fitted for and possessed by the students, and all other rooms of office necessary and convenient; and by the side of the College a fair Grammar School for the training up of young scholars and fitting them for academical learning, that still as they are judged ripe they may be received into the College."²

Under Dunster, "a learned, conscionable and industrious man," the College prospered so rapidly, that, in 1642, it held its first Commencement, and that same year (Sept. 8) the General Court passed an "Act Establishing the Overseers of Harvard College." This Act, the first relating to the government of the institution, deserves to be quoted, as showing the theoretical ideal of the Colonists. It runs as follows:

"Whereas, through the good hand of God upon us, there is a College founded in Cambridge, in the County of Middlesex, called HARVARD COLLEGE, for the encouragement whereof this Court has given the sum of four hundred pounds, and also the revenue of the ferry betwixt Charlestown and Boston, and that the well ordering and managing of the said College is of great concernment,—

"It is therefore ordered by this Court and the Authority thereof that the Governor and Deputy-Governor for the time being, and all the magistrates of this jurisdiction, together with the teaching elders of the six next adjoining towns, viz: Cambridge, Watertown, Charlestown, Boston, Roxbury and Dorchester, and the President of the said College for the time being shall, from time to time, have full power and authority to make and establish all such orders, statutes and constitutions as they shall see necessary for the instituting, guiding and furthering of the said College and the several members thereof, from time to time, in piety, morality and learning; as also to dispose, order and manage to the use and behoof of the said College and the members thereof all gifts, legacies, bequests, revenues, lands and donations, as either have been, are or shall be conferred, bestowed, or any ways shall fall or come to the said College.

"And whereas it may come to pass that many of the said magistrates and elders may be absent, or otherwise employed in other weighty affairs, when the said College may need their present help and counsel, it is therefore ordered that the greater number of magistrates and elders which shall be present, with the President, shall have the power of the whole. *Provided*, that if any constitution, order or orders by them made shall be found hurtful unto the said College, or the members thereof, or to the weal public, then, upon appeal of the party or parties grieved unto the company of Overseers first mentioned, they shall repeal the said order or orders, if they shall see cause, at their next meeting, or stand accountable thereof to the next General Court."³

This Act provided amply for the general oversight of the College, allotting that oversight to the State, on the one hand, and to the clergy on the other; but it was soon found necessary to define more exactly the duties and qualifications of its immediate officers. Accordingly, on May 31, 1650, the "Charter of the President and Fellows of Harvard College, under the Seal of the Colony of Massachusetts Bay" was granted. By this Charter the Corporation was established, to consist of "a President, five Fellows, and a Treasurer or Bursar," to be, in name and fact, "one body corporate in law, to all intents and purposes." The Corporation had the power to elect persons to fill va-

² *Harvard Book*, i, 26.

³ The first College-seal, adopted December 27, 1643, consists of a shield with three open books (presumably Bibles), on which is the motto *Veritas*. Soon afterwards the motto was changed to *In Christi Gloria*. About 1691 the motto *Christo et Ecclesie* was adopted.

¹ Quoted by Quincy, i, 12.

cancies in its own body; to appoint or remove officers or servants of the College; and to administer its finances: but in all cases the concurrence of the Overseers was necessary. The General Court further ordered "that all the lands, tenements, or hereditaments, houses, or revenues, within this jurisdiction, to the aforesaid President or College appertaining, not exceeding the value of five hundred pounds per annum, shall from henceforth be freed from civil impositions, taxes, and rates, all goods to the said Corporation, or to any scholars thereof appertaining, shall be exempted from all manner of toll, customs, and excise whatsoever; and that the said President, Fellows, and scholars, together with the servants, and other necessary officers to the said President or College appertaining, not exceeding ten, viz.: three to the President and seven to the College belonging,—shall be exempted from all civil offices, military exercises or services, watchings and wardings; and such of their estates, not exceeding one hundred pounds a man, shall be free from all country taxes or rates whatsoever, and none others."

By an appendix to the College Charter, under date of October 14, 1657, a somewhat larger liberty was allowed to the Corporation in "carrying on the work of the College, as they shall see cause, without dependence upon the consent of the Overseers: *provided always*, that the Corporation shall be responsible unto, and these orders and by-laws shall be alterable by, the Overseers, according to their discretion."

Thus constituted, the Government of the College has existed down to the present day. The Corporation may be regarded as a sort of Senate, which shapes and executes the general policy, and administers the funds of the institution; the Overseers are a representative and consultative body, which approves or rejects the acts of the Corporation, and deals more directly with the affairs of the students. The Corporation still consists of the President and Treasurer *ex officio*, and of five Fellows, and has authority to fill vacancies in its membership; the composition of the Board of Overseers, on the contrary, has changed, and these changes, as we shall see, have marked the liberation of the College, first from clerical, and afterwards from political control.

Under President Dunster the College grew, in spite of difficulties. He urged the Court to provide more generously for the maintenance and repair of the buildings, and suggested that each family in the Colony should contribute annually one shilling for the support of the seminary. An attempt was also made to discourage graduates from returning to England—a very common practice; they ought, it was justly observed, to "improve their parts and abilities in the service of the Colonies." But the intense theological temper of that age was at last excited against Dunster's open opposition to the baptism of infants: he was indicted by the grand jury, convicted by the court, sentenced to a public admonition on Lecture Day, and required to give bonds for good behavior.

Even these stern measures did not appease the wrath of the Pedobaptists, and in October, 1654, he was compelled to resign his office. The venerable President pleaded that the time was unseasonable—that his wife and youngest child were sick and could not be removed without danger—that he had exhausted his means in behoof of the College. The General Court heard his plea and reluctantly allowed him to remain in the President's house until the following March, when he removed to Scituate, and died soon afterwards.

His successor was the Rev. Charles Chauncy, formerly Professor of Greek and Hebrew at Trinity College, Cambridge. Having incurred the charge of heresy through his opposition to certain Anglican forms, he recanted. Coming to the Colony, he declared himself in favor of total immersion in baptism, and of celebrating the Lord's Supper in the evening—doctrines which clashed with Plymouth orthodoxy. But his was a yielding character, and when the Presidency of Harvard was offered to him, he accepted it, on condition of "forbearing to disseminate or publish anything on either of those tenets, and promising not to oppose the received tenets therein." He soon complained that the grant allowed by the General Court for his subsistence was insufficient: "his country pay, in Indian corn," he said, "could not be turned into food and clothing without great loss." He seems not to have got relief, for again, in 1663, he presented a petition, in which he declared that he had been brought into debt, and "that the provision for the President was not suitable, being without land to keep either a horse or a cow upon, or habitation to be dry or warm in; whereas, in English Universities, the President is allowed diet, as well as stipend, and other necessary provisions, according to his wants." The Court, in reply, asserted that "the country have done honorably towards the petitioner, and that his parity with English Colleges is not pertinent." Notwithstanding his personal straits, President Chauncy did not desert his charge, although the College also was suffering at that time from the embarrassments incident on the restoration of the Stuarts in England, which caused the colonists to fear that their liberties would be taken from them. This uncertainty so affected the prosperity of the College, that, since the General Court did not come to its rescue, the outlook was indeed black. But then, as so often since, private liberality supplied the wants due to official neglect. "The loud groans of the sinking College" came to the ears of the good people of Portsmouth, N. H., who pledged themselves to pay "sixty pounds sterling a year for seven years ensuing (May, 1659)." Subscriptions were added from all parts of the Colony, and amounted to more than £2600. In 1672 a new building was begun, but, so slow was the payment of subscriptions, ten years elapsed before the new College could be completed.

On the death of President Chauncy, Leonard Hoar, a

minister and physician and a graduate of Harvard, in the class of 1650, although of English birth, was chosen to succeed him (July, 1672.) He enjoyed a brief popularity, and was then, in 1675, dismissed by the Court "without further hearing." The cause of his dismissal is uncertain: it appears that, "some that made a figure" in Cambridge excited the students against him, and that others, stirred by envy and ambition, encouraged his enemies. The students strove "to make him odious," and four members of the Corporation resigned, among whom was the Rev. Urian Oakes, who, we remark, when importuned to take the presidency, refused, but served with the title of superintendent for four years. Then, being again elected President, he accepted, and died after a brief term in 1681. The post was evidently shunned, because we find that four persons to whom it was offered, declined it within as many years. The Rev. John Rogers served but one year, 1683-84; then, after another interregnum, the Rev. Increase Mather, was, on June 11, 1685, requested "to take special care of the government of the College, and for that end to act as President until a further settlement be made." Mather was one of the most conspicuous men in the Colony, and it was hoped that his name would strengthen the College: but, although he was sincerely interested in its welfare, he was equally interested in the political and religious disputes of the Colony, and he refused to reside in Cambridge, except for a few weeks, during all the sixteen years of his presidency. He was pastor of the North Church in Boston, which, he said, he would not give up for the sake of "forty or fifty children," and so he used to ride to and fro, the charge of shoeing or baiting his horse, or of mending his saddle, being defrayed by the College. He was among the persecutors of the witches at Salem, and when the book of one Calef condemning this persecution reached Cambridge, it was burnt in the College Yard.

In 1692 the English sovereigns, William and Mary, granted a new charter to the Colony, and Mather used his influence to such purpose, that the General Court gave a new charter to the College, whose privileges were considerably increased thereby. Mather at once proceeded to re-organize the Corporation and the affairs of the College in the interests of the Calvinist sect of which he was the leader, not waiting for the charter to receive the royal signature. But, in 1696, the decisive news came that the King had withheld his consent. There was continual difficulty among the President, the Corporation and the Legislature for several years; another charter was drafted, so distasteful to Mather in many particulars, that he proposed to go again to England and apply to the King in person; the religious dissensions already rife throughout the Colony, broke out among the Overseers and officers of the College. The struggle, briefly stated, was between the old Presbyterians and Congregationalists on one side, and those who were both more liberal in their own views, and tolerant of the views of other sects. At last,

in 1701, Mather was dismissed from the Presidency, on the ground that he had persistently refused to live at Cambridge. The Rev. Samuel Willard, who had previously been appointed Vice-President, served in that capacity until his death, in 1707. He was "quiet, retiring, phlegmatic and unpretending;" well-fitted, therefore, to allay the angry passions which Mather's excitable and restless character and domineering manner had only exasperated. Thomas and William Brattle, who had been among Mather's strongest opponents, were reinstated in the Corporation, which was thenceforward composed of liberals, whereas the old orthodox party had the majority in the Board of Overseers. The charter of 1650 was revived in 1707, largely through the efforts of Governor Dudley, who, says Quincy, "of all the statesmen who have been instrumental in promoting the interests of Harvard College, was most influential in giving its constitution a permanent character."

This period, dating from 1692, marks the end of the first epoch in the history of the Massachusetts Colony, and likewise in that of the College. In the government established by the Puritans, "neither subscription to creed," says Quincy, "nor articles of belief was required, nor were they necessary. The principle that none should be a freeman of the State who was not a member of the church, sufficiently secured the supremacy of the religious opinions of the predominant party. The inquisitorial power was vested in the church and its officers." But the charter of William and Mary converted the Colony into a province, and, what was all important, it "made property, instead of church membership, the qualification for the enjoyment of civil rights." In the course of seventy years Puritanism had become diversified into sectarian shades more or less intense; then, too, immigrants belonging to the Anglican Church were coming over in greater numbers: so that, at the end of the seventeenth century, New England no longer wore its original uniform aspect of Puritanism. The party which held the old Calvinist doctrines undiluted were quick to see that the royal charter which replaced theological qualifications by those of property undermined the theocratic Constitution of the State; and, although they were not able to prevent this revolution in politics, they were for a long time successful in resisting a similar change in the government of the College. It was with this purpose that Increase Mather and his son Cotton strove and intrigued, and fomented sectarian animosity; it was for this purpose that they attempted to insert a religious test in the charter of the College; and it was owing to their chagrin and alarm felt by the Calvinist sect at their failure, that Yale College was founded (1700), to be a true "school of the prophets," where the brimstone doctrines of Calvin should not be quenched by waters of liberalism. At Yale a religious test was exacted so vigorously, that it closed the doors of that institution to all but simon-pure Calvinists. At Harvard, as I have said, the Cor-

poration was thenceforth composed of those whom we may call, for lack of a better word, liberals, while the majority in the Board of Overseers was Calvinist: the struggle between them was long, and often very bitter, and produced a deadlock, so that one party could not push the College forward, nor the other drag it back. Through the decisive action of Governor Dudley, the Legislature passed, in 1707, that vote which re-established the College charter of 1650; and although, in so doing, Dudley plainly overstepped his powers, it cannot be denied but that he greatly benefited the College. The re-invalidated charter never received the royal sanction, why, we are not told; nor was it objected to by the Crown; and it has remained in force, with some changes in the clauses relating to the qualifications of Overseers, down to the present day.

We may pause here for a moment to survey the material growth of the College during its first seventy years. From the Colony it had received in grants sums amounting to about £650 sterling, and £3720 in currency. It enjoyed also exemption from taxation on property to the amount of £500, and the earnings of the ferry between Charlestown and Boston. In 1657 it received a grant of 500 acres of land; in 1653, 2000 acres, and in 1682, "Merriconeag, in Casco Bay, with 1000 acres adjoining," but the last two grants were never obtained. During the same period the donations from private sources amounted to £9302 2s. 11½d. sterling, and £6748 19s. 6d. in currency. To these sums must be added several thousand volumes of books. The gifts came not only from the Colonists and from benefactors in England, but also from other lands. It is pleasant to record, for instance, that in 1658 the inhabitants of a certain place, supposed to be Eleutheria, Bahama Islands, "out of their poverty," gave £124 sterling; and in 1642 some gentlemen of Amsterdam gave £49 "and something more toward furnishing of a printing-press with letters." This printing-press, the first that was operated in what is now the United States, was brought from England in 1638 by Joseph Glover. Glover died on the passage, but his widow settled in Cambridge, where the press was set up and worked by Stephen Daye. President Dunster married Mrs. Glover, and had charge of the press, which was run in the President's house until 1655. The first publication was "The Freeman's Oath," followed by an almanac, a Psalm-Book, a Catechism, and the "Liberties and Laws of the Colony." In 1658 was printed John Eliot's Indian translation of the Bible.

Among the other noteworthy bequests were that of Edward Hopkins, of £500 (1657); that of William Pennoyer, of £680 (1670); and that of Sir Matthew Holworthy, of £1000 (1681).

The first school building was erected, as has been stated, by Eaton in 1637. President Dunster built a dwelling for himself, which was known as the President's House. In 1682 a new hall—the first Harvard Hall—was dedicated, the cost of which was met by

public subscriptions. Finally, in 1699, Governor Stoughton built at his own expense (£1000) a hall, which bore his name, and which stood near the present site of the University.

Thus it will be seen that even in the early life of the College it owed more to private benefactors than to the liberality of the State—a sure proof that its importance was recognized by the community, and an omen that by-and-by it would grow so strong that it could dispense with all official support whatsoever. But while its prosperity at the end of the seventeenth century was far greater than Winthrop or Dunster could have foreseen, the College was still hampered in its means, as the following extract will show: "At a meeting of the Corporation, April 8, 1695, *Voted*, That six leather chairs be forthwith provided for the use of the Library, and six more before the Commencement, in case the treasury will allow of it."

In 1707, on the death of Willard, the Rev. John Leverett was elected President. He had the backing of Governor Dudley, upon whom the Mathers, rankling at the defeat of their faction, heaped scandalous accusations. According to them, he was guilty of covetousness, lying, hypocrisy, treachery, bribery, Sabbath-breaking, robbery and murder; and they expressed "sad fears concerning his soul," and besought that "in the methods of piety he would reconcile himself to Heaven, and secure his happiness in this world and the world to come." The Governor, however, refused to purchase eternal salvation by humiliating himself before the Mathers, and these able but repulsive fanatics failed to get control of the College, but did not cease to foment discord.

Leverett was an energetic administrator, seconded by Thomas Brattle, the Treasurer, and by William Brattle, Ebenezer Pemberton and Henry Flynt, his coadjutors in the Corporation. The financial condition of the College was improved, but the quarrels between the Fellows and the Overseers did not cease. In 1718 the President refused to confer the second degree on a graduate named Pierpont, on the ground that he had contemned, reproached and insulted the government of the College, and particularly the tutors, for their management in the admission of scholars. Pierpont threatened to prosecute Sever, the tutor who had brought forward the charge, in the civil court. It was suspected that Pierpont had been instigated by ex-Governor Dudley and his son; the Fellows, in alarm, requested the Overseers "to take the first opportunity to discourse" with the supposed instigators. The Overseers did nothing; whereupon the Fellows appealed to Governor Shute, Dudley's successor, to summon the Overseers to a meeting. The meeting was largely attended; both Pierpont and Sever were heard—the former, according to Leverett, speaking with "confusion, impertinence and impudence," and the latter "with plainness, modesty and honesty." The Overseers secretly supported Pierpont, and Shute supported the Overseers, so that the Corporation was

left in a position "which threatened the dissolution of the College." Happily, the courts of law quashed Pierpont's case against Sever, and thus was prevented the resignation of the President and Fellows—the consummation aimed at by the Overseers in seconding the contumacious Pierpont.

The enemies of Leverett and the Corporation did not rest. At a meeting called "to petition the General Court to enlarge the building (Massachusetts Hall) they were then erecting for the College from fifty to one hundred feet," Judge Sewall rose and said: "I desire to be informed how the worship of God is carried on in the Hall, and to ask Mr. President whether there has not been some intermission of the exposition of the Scriptures of late." President Leverett replied that the question was out of order, and interrupted the special business of the meeting. The Governor supported this ruling, and the petition was passed; but the action of Sewall illustrates the persistence of the malcontents. The swift changes in politics caused the union of men who had previously been opposed. Thus Dudley, who had been, while Governor, on the side of the Corporation, joined the other faction after he was superseded by Shute. Sewall, too, was now fighting with the Calvinists, although he had formerly been quite other than friendly to the Matthers, who led the Calvinists. In his diary, for instance, under date of October 20, 1701, there is the following amusing entry: "Mr. Cotton Mather came to Mr. Wilkins' shop, and there talked very sharply against me, as if I had used his father worse than a negro. He spake so loud that the people in the street might hear him. *Mem.* On the 9th of October I sent Mr. Increase Mather a haunch of very good venison. I hope in that I did not treat him worse than a negro."

But we cannot follow the quarrels of the sectarians, nor do more than indicate wherein they affected the fortunes of the College. The next occasion on which the conflict broke out was at the endowment of a professorship of divinity by Thomas Hollis, a London merchant. Hollis is, after John Harvard, the man among the early benefactors of the College who most deserves its gratitude. Of a wise and generous character, his liberal and Christian behavior seems all the more admirable when contrasted with the narrow and bigoted sectarianism of the colonists upon whom he bestowed his gifts. He wrote to Dr. Colman, a member of the Corporation, on January 25, 1721: "After forty years' diligent application to mercantile business, my God, whom I serve, has mercifully succeeded my endeavor; and, with my increase, inclined my heart to a proportional distribution. I have credited the promise: *He that giveth to the poor, loveth to the Lord*, and have found it verified in this life." In his own faith he was a Baptist, but in founding a professorship he was guided by no sectarian motives. All that he asked was that no one should be rejected on account of

Baptist or other principles, save that the incumbent should subscribe to the belief "that the Scriptures of the Old and New Testaments are the only perfect rule of faith and manners." "I love them," he wrote to Colman (August 1, 1720), "that show by their works that they love Jesus Christ. While I bear with others who are sincere in their more confined charity, I would that they would bear with me in my more enlarged. We search after truth. We see but in part. Happy the man who reduces his notions in a constant train of practice. Charity is the grace which now adorns and prepares for glory. May it always abide in your breast and mine, and grow more and more." On February 14, 1721, he executed the instrument of endowment. Leverett and the Corporation accepted it, but the Calvinist majority in the Overseers were at first inclined to refuse the gift as being likely to encourage unorthodox doctrines; then, having accepted it, they proceeded, by action which, to speak mildly, was deceitful, to contravene the terms of Hollis's foundation. The Rev. Edward Wigglesworth was chosen to fill the new chair (1721), but he was subjected to a theological test, in which he "declared his assent: 1. To Dr. Ames' *Medulla Theologiae*. 2. To the Confession of Faith contained in the Assembly's Catechism. 3. To the doctrinal Articles of the Church of England. More particularly: 1. To the doctrine of the Holy Trinity. 2. To the doctrine of the eternal Godhead of the blessed Saviour. 3. To the doctrine of Predestination. 4. To the doctrine of special efficacious grace. 5. To the divine right of infant baptism." Several years elapsed during which negotiations were carried on between Hollis and the College, but it does not appear that he was treated candidly, nor that, to the day of his death, "the construction which substituted, in place of the simple declaration required by him, an examination and declaration of faith in all the high points of New England Calvinism," was ever communicated to him.¹

Simultaneous with this controversy, there broke out another of equal violence to trouble the stormy administration of Leverett. On June 23, 1721, the Overseers received a memorial from Nicholas Sever and William Welsted, two College tutors, claiming their right to seats in the Corporation. They based their claim on the fact that, being engaged in instruction, and receiving a stipend, they were Fellows of the College, and that the charter of 1650 designated the President, Treasurer and Fellows to be members of the Corporation. Their pretension, it will be seen, hung on the ambiguous meaning of the word *Fellow*. In 1650, when the Charter was granted, there were no Fellows in the sense in which that word is used at English Universities, which was the sense that Sever and Welsted attached to it; and for a long time after that date it was not applied to any instructor who was

¹ Quincy, i., 263.

not also a member of the Corporation. The majority of the five Fellows were non-residents, for it could not be expected, as Quincy remarks, that these officers, whose duties involved only an occasional superintendence of the affairs of the College, would agree to live in Cambridge, without salary, when the institution was still too small to require their daily presence. About the beginning of the 18th century the habit grew of calling tutors Fellows; but in order to distinguish them, the expression "of the House" was added; while the others were known as "Fellows of the College or Corporation." This distinction was clearly enough observed, for, in April, 1714, we find the record that Holyoke was chosen "a Fellow of the Corporation," and Robie "a Fellow of the House." Three years later the Corporation passed a vote "that no Tutor, or Fellow of the House, now or henceforth to be chosen, shall hold a fellowship with a salary for more than three years, except continued by a new election." Experience had shown that it was unwise to make unlimited appointments.

The Overseers heard the petition of Sever and Welstead, which seems to have been inspired not so much by the desire to have a mootpoint settled as to oust Colman, Appleton and Wadsworth from the Corporation and to embarrass President Leverett. A committee was appointed, consisting chiefly of malcontents. Meanwhile the Overseers petitioned the General Court to make a "convenient addition to the Corporation, and therein to have regard to the resident Fellows, or Tutors, that they may be of that number." But the malcontents, perceiving that their petition, if granted, would merely introduce their partisans into the Corporation, without removing from it the members at whom the intrigue was aimed, resolved that an increase of number was undesirable, and that "it was the intent of the College Charter that the Tutors, or such as have the instruction and government of the students, should be Fellows and Members of the Corporation, provided they exceed not five in number; and that none of said Fellows be Overseers." Evidently, our pious ancestors lacked not the wisdom of the serpent on this occasion; under this seemingly innocent resolution they hid a scheme for revolutionizing the government of the College. Their report was actually accepted by the House of Representatives and by the Council; the Governor, however, refused to consent to it unless Wadsworth, Colman and Appleton should remain in the Corporation. Then it appeared, both from the action of the Legislature and from that of the Overseers, that their intent had been to get rid of those three obnoxious members. Sever and Welstead presented two other memorials; but the matter was finally disposed of (August 23, 1723) by the refusal of the Council, which now stood by Governor Shute and the Corporation, to concur in the policy of the House of Representatives, which still sided with the Overseers.

The firmness displayed throughout the struggle

by the President and three Fellows, acting solely from a sense of duty in the interests of the College, is worthy of admiration. When we remember, moreover, that the President depended upon the Legislature for the annual grant of his salary, we shall appreciate his courage the more justly. He was frequently obliged to petition that his salary should be more promptly paid, and his petitions were so often disregarded that he feared the Representatives intended "to starve him out of the service." "If such be their mind," he added, "it is but letting me know, and I will not put the House to exercise that cruelty." He died in May, 1724, after an arduous and honorable administration, leaving debts to the amount of £2000 to attest his devotion to the College and the meanness of the State, which was in honor bound to provide for his decent subsistence. His term was one of the most critical in the history of the College. As we have seen, he held office just at the time when the colony was breaking asunder the original Puritanical limits; when the effects of the change in the political constitution were beginning to appear; when a considerable part of the population no longer belonged to the Calvinist Church; when a rival college had sprung up at New Haven. Himself of a liberal cast, he struggled to stamp a more liberal policy upon Harvard, and to thwart the efforts of the more bigoted majority to regain complete control of the College and to subvert its charter. That he succeeded was due in part to the co-operation of the Governors, Dudley and Shute, but chiefly to his own wisdom and firmness and to the support of his colleagues in the Corporation.

The Corporation elected the Rev. Joseph Sewall to succeed Leverett. There were many aspirants, including the irrepressible Cotton Mather, who records in his diary: "I always foretold these two things of the Corporation; first, that, if it were possible for them to steer clear of me, they will do so; secondly, that, if it were possible for them to act foolishly, they will do so. The perpetual envy with which my essays to serve the kingdom of God are treated among them, and the dread that Satan has of my beating up his quarters at the College, led me into the former sentiment; the marvellous indiscretion with which the affairs of the College are managed, led me into the latter." Sewall declined, and the Rev. Benjamin Colman was chosen; but his experience as Fellow had warned him what harsh treatment he might receive from the Legislature, and he, too, would not take the Presidency. In June, 1725, the Rev. Benjamin Wadsworth was elected, and he consented to serve. Thus, thrice within a year Cotton Mather was painfully reminded that Satan ruled the decisions of the Harvard Corporation. The Legislature, to relieve Wadsworth of justifiable apprehension, pledged itself to pay his salary promptly, and further appropriated £1000 for the erection of a suitable dwelling for the President. This house, still called after Wadsworth, its first occupant, was not completed un-

til 1727, when the College had paid £800 beyond the State appropriation. A portion of the President's salary was derived from the rents of Massachusetts Hall (built, as stated above, in 1720), but the payment of the remainder, for which he had to look to the Legislature, was, in spite of promises, precarious.

Wadsworth was a man of "firmness, gentleness, and good judgment"—qualities which were soon put to the test by a new religious discussion which spread consternation throughout the orthodox in all parts of the Colony, and centred at the College. This time the dispute was no longer between factions of Calvinists, nor between Calvinists and Baptists, but between the orthodox and the Anglicans. As early as 1682, Edward Randolph had suggested that the doctrines of the Church of England might be propagated in the Colony by means of funds sent from the mother country; and he even went so far as to propose, in a letter to Sancroft, Archbishop of Canterbury, "that able ministers might be appointed to perform the offices of the Church with us, and that for their maintenance a part of the money sent over hither and pretended to be expended amongst the Indians should be ordered to go towards that charge." That fund for converting the Indians had been begun soon after the founding of Harvard; a school for Indians had been built in Cambridge; some of the natives had been taught in it; but, on the whole, the effort had failed. A few Indians had entered the College, but only one, Caleb Cheeshahteumuck, had taken the Bachelor's degree, in 1665. The others proved themselves either incapable of attaining the required standard in studies, or they fell sick and died of consumption. This was the case with Larnel a member of the Junior Class in 1714, who died at about the age of twenty, "an acute grammarian, an extraordinary Latin poet, and a good Greek one." Eliot's translation of the Bible and his mission to the Indians seem to have been the chief fruits of this endeavor to Christianize them. That Randolph should propose to pervert this fund from the intent of its contributors, and apply it to strengthen Episcopalianism in New England, might surprise us, had we not already had glimpses of the power of sectarianism to blind the honor and dull the conscience of those who were its victims. We have no evidence that Sancroft or his successor connived at this scheme; but other moneys were subscribed in England, and missionaries were sent over to the Colony, and the tenets of the Established Church were diligently spread. When King's Chapel was dedicated in Boston, the orthodox took alarm; but the membership of the Anglican Church increased, and the orthodox felt again their old dread of being persecuted by the Church which had the British Crown and State behind it. The crisis came in 1727, when the Rev. Dr. Cutler, a graduate of Harvard, in 1701, then minister of the church at Stratford, Conn. (1709), and Rector

of Yale College (1719), and then a convert to Episcopalianism, presented a memorial to the Lieutenant-Governor "that he might be notified to be present at the meetings of the Overseers." He claimed that as a minister of Boston he was *ex officio*, according to the Charter of 1650, entitled to a seat in the Board. The Rev. Mr. Myles, rector of King's Chapel, presented a similar petition. The Overseers declared that Cutler and Myles had no such right. The petitioners, nevertheless, persisted: they affirmed that the orthodoxy of their church was questioned by no sound Protestant; that its members bore an equal proportion in all public charges in support of the College; that its ministers were "equally with any others qualified and disposed to promote the interests of religion, good literature, and of good manners;" that they were "teaching elders" in the sense intended by the Charter. To this the Overseers replied that the question concerning the definition of a "teaching elder" could be decided only by referring to the meaning of that term in 1650, when the Charter was granted; that then it plainly applied only to the ministers of the Congregational churches, because there were no adherents of other denominations in the Colony; that the term had never been known in the Anglican Church; and that, therefore, since it belonged only to Congregational ministers, they alone had the *ex officio* right to be Overseers. The memorial was accordingly rejected, and the Council and the Lieutenant-Governor concurred in the vote.

On the accession of George II, in 1727, the corporation sent an address of congratulation for Mr. Hollis to present to the sovereign. The address had been prepared four years before, on the discovery of a conspiracy against George I, and was now merely retouched to suit the occasion. Mr. Hollis saw that its provincial style would hardly be acceptable at court, and he recommended that it be revised. "Your compliments," he wrote, "are fifty if not one hundred years too ancient for our present polite style of court;" [yours is] "a Bible address, says one; a concordance address, says another; though I think it an honest-meaning Christian address. What have courts to do to study Old Testament phrases and prophecies? It is well if they read the Common Prayer-Book and Psalter carefully." It does not appear that the Corporation, after learning this frank advice, sent any congratulation to the King.

During Wadsworth's term the discipline of the College seems to have given a part, at least, of the Overseers grounds for finding fault. But, as the common device of the malcontents was to circulate reports that the worship of God was scandalously neglected in the Hall, we may doubt whether there was unusual laxity at this period. A Committee of visitation was appointed, however, and, after investigating, it proposed a revision and more stringent enforcement of the laws, to which I shall refer later. The recognition of the College Faculty was formally

made in 1725, although as early as December 14, 1708, its existence in fact is attested by the record that a student had been expelled by "*the President and resident Fellows*, with the advice and consent of the non-resident Fellows of this House." In the course of time, experience must have made it necessary that the President and Tutors (or resident Fellows, as they had come to call themselves) should decide matters of daily discipline and government, without consulting the Overseers, who met only occasionally; thus the Faculty came to be recognized as a distinct body, whose records date from September, 1725. Two other events of Wadsworth's administration deserve notice. Longloissorie, a Frenchman, instructor in the French language, was charged with disseminating doctrines "not consistent with the safety of the College." He asserted, the charge ran, that he saw visions, and that revelations were made to him, such as the "unlawfulness of magistracy among Christians, and consequently of any temporal punishments for evil-doers from man; [and] that punishment from God in the future state would be sure not to be eternal, nor any other, nor perhaps, more, even for a time, than what wicked men now suffer in this world, by being abandoned to the outrage of their own and others' passions." "These extraordinary things *Monsieur* did not broach all at once," but as soon as the authorities heard of them, they dismissed him and forbade all students from attending his lectures (1735).

The second incident illustrates how often at that epoch the relations between the Corporation and Overseers were strained. In June, 1736, a student named Hartshorn applied for the Master's degree. He had never received the Bachelor's, and the Corporation deemed him unqualified. Thereupon the Overseers voted him his degree, although the College law declared that "no academic degree shall be given but by the Corporation with the consent of the Overseers." At Commencement three of the Corporation rose and opposed Hartshorn's being graduated, and the President pronounced it to be illegal. Thereupon the Governor rose and declared that Hartshorn was entitled to the degree; there was a long debate, and then the Governor quitted the assembly. The Corporation won this time, but the next year they came to terms with the Overseers, and granted the degree.

In 1727, Thomas Hollis endowed a second professorship, that of Mathematics and Natural Philosophy, and his benefactions to the College ceased only with his death, after which his nephews and descendants continued their patronage for more than fifty years. No other family has furnished so many members to whom the College is indebted, as the Hollis family; and their assistance came at a time when it was relatively far more precious than much larger bequests later.

In spite of the untoward conditions the College grew steadily during the terms of Leverett and Wadsworth. In the thirty years, 1707-36, there were 719

Bachelors graduated, an average of nearly 24 to a class; the smallest class, that of 1713, numbered 5; the largest, that of 1725, numbered 45. The average under Leverett (1707-24) was 20; under Wadsworth it was nearly 34. In 1732 the estate of the College produced an income of £728 7s. (not including the income on property bequeathed for special purposes), an increase of about £100 per annum during the previous decade. President Wadsworth died in March, 1737.

Two months later the Rev. Edward Holyoke was elected to the Presidency, in which he served longer—thirty-two years—than any of his predecessors or successors. He had been minister at Marblehead, but had served in the Corporation. The Corporation and Overseers before voting joined in prayer, in order to be guided aright. Their choice first fell on the Rev. William Cooper, who immediately declined. Then they elected Holyoke unanimously, an event hitherto unprecedented. Moreover, although they deemed it necessary to catechise a candidate for the professorship of Mathematics as to his orthodoxy, they subjected the President-elect to no such test. The General Court granted him a salary of £200, in addition to the rents of Massachusetts Hall, and soothed the parish of Marblehead by a grant of £140 to his successor there. Holyoke was inaugurated Sept. 28, 1737. The ceremonies on that occasion are thus described by Quincy: "The Governor, Overseers and Corporation met in the library. At the hour appointed the Governor led the President from the library down to the Hall, preceded by the Librarian, carrying the books, charter, laws and College seal, and by the Butler, bearing the Keys; and followed by the Overseers, Corporation, students and attending gentlemen. After prayer by Dr. Sewall, a speech in Latin was made by the Governor, in the course of which he delivered to the President the charter, keys, etc. The President replied in Latin. A congratulatory oration, by Mr. Barnard, Master of Arts, succeeded, and the ceremonies were concluded by singing a part of the seventy-eighth Psalm, and a prayer by the Rev. Thomas Prince. After which there was a dinner in the Hall, and in the evening the Colleges were brilliantly illuminated."¹

One of Holyoke's first duties was to preside at the removal of Isaac Greenwood, Hollis Professor of Mathematics. He had been graduated in the class of 1721, had gone to London and preached there with some success; had become acquainted with Mr. Hollis, and persuaded him to found immediately a Professorship of Mathematics, instead of leaving a bequest for that purpose, as had been his intention. Hollis was at first pleased with Greenwood, and inclined to recommend him to the new chair. But even before Greenwood quitted England, Hollis's doubts were excited. Greenwood had left his lodgings with-

¹ Quincy, II, 11.

out paying his bill, had run into other debts, had spent in a short time £300 in conviviality, and, among other extravagances, had bought "three pair of pearl-colored silk stockings." Hollis communicated his doubts to the Corporation, sounded them to know whether a friend of his, a Baptist, would be accepted; but, finding sectarian prejudice still high—(although, as he asked, what had the dispute of Baptism to do with teaching mathematics?)—he consented to Greenwood's appointment. The latter was a man of keen intellect, but habitually intemperate, and after frequent relapses, admonitions from the Corporation, promises to reform, and renewed backsliding, he was removed in 1738. Three years later similar charges were preferred against Nathan Prince, Tutor and member of the Corporation. The Overseers began proceedings for his dismissal, although they therein overstepped their legal prerogatives, "their jurisdiction being appellate and not original;" but the Corporation waived the technical legality and concurred in the examination of Prince. Among the charges proved against him were, "speaking with contempt of the President and Tutors as to learning;" "charging the President with making false records with design;" calling one Tutor a "puppy," another a "liar;" "accustoming himself to rude and ridiculous gestures;" "speaking out in time of public worship so as to excite laughter;" "negligence of his pupils;" and "intemperance in strong drink." On Feb. 18, 1741-42, it was voted to remove him, and although he appealed to the General Court, he was not reinstated. These unpleasant experiences led to two permanent results: the custom of appointing Tutors for only three years, instead of without limit, became fixed; and the custom of admitting, almost as a matter of course, the two Senior Tutors to membership in the Corporation was dropped.

Another wave of religious excitement swept at this time over the Colony, and broke upon the College. As early as 1736, Jonathan Edwards, pastor of the church at Northampton, had begun to inflame the imagination, not only of his parishioners, but of all New England, by his vivid presentation of Calvin's doctrines. In intellectual ability he surpassed any theologian who had yet been born in this country; and his intense, but narrow mind, seizing hold of the Calvinistic doctrines of original sin, predestination and similar articles of the brimstone creed, infused into them his own fire and made them terribly lifelike to his hearers. Let it suffice to quote his description of hell, as illustrative of the vehemence and vividness of his imagination: "The world," he says, "will be probably converted into a great lake or liquid globe of fire; a vast ocean of fire, in which the wicked shall be overwhelmed, which will always be in tempest, in which they shall be tossed to and fro, having no rest day or night: vast waves or billows of fire continually rolling over their heads." "They shall eternally be full of the most quick and

lively sense to feel the torment . . . not for one minute, nor for one day, nor for one year, nor for one age, nor for two ages, nor for a hundred ages, nor for ten thousand or millions of ages, one after another, but for ever and ever, without any end at all, and never, never be delivered." By such language as this, Edwards frightened New Englanders into that state of panic terror which was supposed to be equivalent to Christlike devoutness and charity; and religion was in this condition when, in Sept., 1740, George Whitefield, an English itinerant preacher, began his remarkable "revivals" in New England.

He preached to the College students in the First Church at Cambridge, and was courteously received by President Holyoke. He was shocked at the lack of true godliness in the institution, declaring Harvard to be almost as corrupt as the English Universities. "Tutors," he wrote, "neglect to pray with, and examine the hearts of, their pupils. Discipline is at too low an ebb. Bad books are become fashionable amongst them. Tillotson and Clarke are read instead of Shepard and Stoddard, and such like evangelical writers." Whitefield's denunciations and eloquence "wrought wonderfully" upon the hearts of many of the students. The visiting committee of the Overseers reported, in June, 1741, "that they find of late extraordinary and happy impressions of a religious nature have been made, . . . by which means the College is in better order than usual." Tutor Flynt, who estimated Whitefield very justly as a "zealous man," "but over censorious, over rash, and over confident," says that at their revival meetings some of the students "told of their visions, some of their convictions, some of their assurances, some of their consolations. One pretended to see the Devil in the shape of a bear coming to his bedside. Others burst into a laugh when telling of the day of judgment; another did so in prayer, which they imputed to the Devil's temptation; some were under great terrors; some had a succession of clouds and comforts; some spoke of prayer and amendment of life as a poor foundation of trust, advising to look only to the merits and righteousness of Christ; some talked about the free grace of God in election, and of the decrees. . . . Many, if not all, mean well. Some have extravagancies and errors of a weak and warm imagination."

The enthusiasm, or frenzy, could not last long; within two years the reaction came; but before this the College authorities deemed it their duty to reply to the aspersions cast by Whitefield on "the school of the prophets." President Holyoke declared in a sermon that never within his memory, extending back nearly five and thirty years, had the condition of Harvard been so favorable as then. In December, 1744, "the President, Professors, Tutors and Hebrew Instructor" published a pamphlet containing testimony "against the Rev. George Whitefield and his Conduct;" and when Whitefield replied, Dr. Wigglesworth (April, 1745) answered him in an open letter.

It is our duty, he said, to examine our own heart, but it is not so clear that we ought to examine the hearts of others. Christ has said, "I am he who searches the reins and hearts;" "would you have Tutors invade His prerogative? or would you introduce the Popish practice of auricular confession?" Holyoké closed the controversy in an appendix to Wigglesworth's Letter, telling Whitfield that "whatever good was done, hath been prodigiously overbalanced by the evil; and the furious zeal with which you had so fired the passions of the people hath, in many places, burnt up the very vitals of religion; and a censorious, unpeaceable, uncharitable disposition hath, in multitudes, usurped the place of a godly jealousy."

Jonathan Edwards, too, zealot that he was, had early perceived the excesses caused by the revival, and while he endeavored "to deaden and direct the flame he had assisted to kindle," his own vehement and terrible doctrines were attacked by two liberal clergymen of Boston, Charles Chauncy and Jonathan Mayhew, who deserve to be gratefully remembered not only for their more humane and charitable tenets, but also for the courage with which they announced them. In the history of Harvard this religious controversy is important, because the Government of the College then squarely took its place on the liberal side, and at no time was there more danger lest it should relapse into the control of the more bigoted sectarians. As a result, the latter concentrated their hopes on Yale College, and strove to make it the vessel of undefiled Calvinism. And whilst these dissensions perturbed the orthodox, the Society for Propagating the doctrines of the Church of England renewed its efforts, and made many converts. It opened a Church in Cambridge, where students who were Anglicans might worship, and it proposed that a bishop should be sent over from England to take charge of the growing parishes. These indications of growth, although they must have been distasteful to the orthodox, no longer filled them with consternation; and we may say that, about the year 1760, the various sects in Boston and its neighborhood were so well established, that no one could openly persecute all the others, and that they had begun to live together in tolerance. The College, which drew its scholars from all quarters and classes, was naturally disposed to mitigate its prejudices; but for a long time to come, the dominant influence was Presbyterian, and Presbyterian of a type which would now be called extreme.

During the French War (1756-63) the number of students fell off a little, but in 1765 the graduating class had fifty-four members. On the accession of George III (1760), Governor Bernard suggested that it would be fitting for the College to congratulate the new monarch. Accordingly six prizes of a guinea each were offered for the best oration, poem, elegy on the late King and ode in Latin, and for an English poem and ode. Graduates and undergraduates com-

peted, and a volume containing thirty-one pieces and entitled *Pictas et Gratulatio Collegii Cambriensis apud Norwiche* was sent to England to be presented to the King. To this work Governor Bernard himself contributed five effusions, and President Holyoké an ode said to be "truly Horatian." So far as we can learn, George III took no notice of this, the last address the English sovereign ever received from the Corporation and students of Harvard as his subjects. In 1762 a petition reached the Legislature to grant a charter to a college to be founded in Hampshire County. The petitioners belonged to the strict orthodox sect, which regarded Harvard as too liberal. The petition passed the Legislature, and Governor Bernard had signed a bill for the incorporation of the new institution, when the Harvard Overseers in alarm drew up a long list of objections. They pointed out that there was no need of another college; that it would injure Harvard, to whose support the Colony had been pledged for nearly 130 years; that it was desirable to maintain a high standard of learning, and that this would be impossible were another institution permitted to confer degrees, because were the means now devoted to one divided between two, the standard of both would be lowered; that jealousies and dissensions prejudicial to the peace and education of the Colony would be fomented. The Governor declared that he would do nothing harmful to the interests of Harvard, but that he would refer the matter to the British ministry. To them, therefore, a strong remonstrance was sent, with the effect of defeating the grant of a charter.

Almost immediately afterwards a calamity at Harvard "turned the current of sympathy and patronage into its ancient channel." Early in 1764 small-pox broke out in Boston, and the Legislature, removing to Cambridge, held its sessions in Harvard Hall, where the Governor and Council occupied the library and the Representatives the apartment below. On the night of January 24 the Hall was burned. The following account of the "most ruinous loss the College ever met with since its foundation" is from the *Massachusetts Gazette* of Thursday, February 2, 1764: "In the middle of a very tempestuous night, a severe cold storm of snow, we were awakened by the alarm of fire. Harvard Hall, the only one of our ancient buildings which still remained, and the repository of our most valuable treasures, the public library and philosophical apparatus, was seen in flames. As it was a time of vacation, in which the students were all dispersed, not a single person was left in any of the Colleges, except two or three in that part of Massachusetts most distant from Harvard, where the fire could not be perceived till the whole surrounding air began to be illuminated by it. When it was discovered from the town it had risen to a degree of violence that defied all opposition. It is conjectured to have begun in a beam under the hearth in the library, where a fire had been kept for the use of the General Court,

now residing and sitting here by reason of the small-pox in Boston; from thence it burst out into the Library. The books easily submitted to the fury of the flames, which, with a rapid and irresistible progress, made its way to the Apparatus Chamber and spread through the whole building. In a very short time this venerable monument of the piety of our ancestors was turned into a heap of ruins. The other Colleges, Stoughton Hall and Massachusetts Hall were in the utmost hazard of sharing the same fate. The wind driving the flaming cinders directly upon their roofs, they blazed out several times in different places; nor could they have been saved by all the help the town could afford had it not been for the assistance of the gentlemen of the General Court, among whom his Excellency the Governor was very active; who, notwithstanding the extreme rigor of the season, exerted themselves in supplying the town engine with water, which they were obliged to fetch at last from a distance, two of the College pumps being then rendered useless. Even the new and beautiful Hollis Hall—though it was on the windward side—hardly escaped. It stood so near to Harvard that the flames actually seized it, and if they had not been immediately suppressed must have carried it."

The Legislature, at the instigation of Governor Bernard, resolved to rebuild Harvard Hall at the expense of £2000, granted £100 for a fire-engine for the College and indemnified students whose books and furniture had been destroyed. Donations of money, books and apparatus flowed in from all parts of the American Colonies, and from the mother country. From the list of gifts I quote two among many items: From John Greenwood, Great Britain, "two curious Egyptian mummies for the museum;" from the Hon. John Hancock, Esq., "a set of the most elegant carpets to cover the floors of the Library, the Apparatus and the Philosophy Chambers; he also covered the walls of the latter with a rich paper." The losses were, indeed, more than made good. A finer Hall rose on the ruins of old Harvard, and was completed in June, 1766, having cost \$23,000; and its equipment was better than the old; but the loss which we to-day most regret, and which could not be repaired, was the destruction of John Harvard's books, whereby all personal relations, so to speak, between the founder and posterity, were swept away.

During President Holyoke's term two other buildings were added to the College. In 1741 Mrs. Holden, widow of Samuel Holden, late Governor of the Bank of England, gave £400 to build a chapel, which was erected in 1744. In 1762 the Legislature, taking into consideration the large number of students who could not be lodged in the then existing buildings, appropriated £2000 "towards building a new College at Cambridge, of the dimensions of Massachusetts Hall." This edifice was dedicated in January, 1764, just before the burning of Harvard, and was fitly named Hollis, after that family to which the College owed so much.

In 1765, by the will of Thomas Hancock, the College received a legacy of £1000 sterling, to found a professorship of Hebrew and other Oriental Languages, the first chair founded by an American. Other gifts enriched the institution and helped to make its work, under Holyoke's direction, more efficient. Of measures adopted to raise the standard of scholarship, and to improve the discipline of the students, I shall speak later.

Holyoke died in June, 1769. John Winthrop, Hollis Professor of Mathematics, and a man of unusual scientific attainments, was offered the Presidency; but he declined, as did two other members of the Corporation. Then the Rev. Samuel Locke, pastor at Sherburne, was chosen, and he accepted. He seems to have had little force and he left no impression on the development of the College. One of his contemporaries describes him as being "of an excellent spirit, and generous catholic sentiments; a friend to liberty; his greatest defect, a want of knowledge of the world, having lived in retirement, and perhaps not a general acquaintance with books." That he was a "friend to liberty," was probably one of the chief reasons for electing him; because by that time patriotic enthusiasm had already kindled the students and governors at Harvard. In 1768, the members of the Senior Class signified their hatred of British taxation, by unanimously voting "to take their degrees in the manufactures of this country;" and they appeared at commencement clad in "untaxed," home-manufactured garments. In 1778 Lieutenant-Governor Hutchinson prorogued the General Court to meet at Harvard College on March 15th. It accordingly met, but when a second session was called in the month of May, the Corporation remonstrated that "Harvard College had been instituted for the sole purpose of the education of youth," and that it regarded this precedent with deep concern. But when a formal application was made for the use of the Halls on election day, it was granted, and when Hutchinson was appointed Governor (March, 1771) the Corporation presented him with a complimentary address, and gave him a flattering reception at the College. Nevertheless, sentiment at Harvard was largely with the popular cause, and for the first time the Triennial Catalogue was printed with the students' names arranged alphabetically, instead of according to the rank of their families, as had theretofore been the custom. This is but one indication of the prevailing republican feelings. In 1773, John Hancock was chosen Treasurer—an unfortunate choice, as was afterwards shown; but his popularity was so great that but little thought was given to his qualifications as a financier. Two years previous the Corporation, to show its admiration for him, had invited him to a public dinner in the Hall, "to sit with the Governors of the College,"—an honor conferred on no other private person, and all the more significant then because his avowed patriotism had made him obnoxious

to Governor Hutchinson and the Royalists. One other event, during Locke's brief term, may be mentioned. In November, 1773, the Corporation, in order to perpetuate the memory of the benefactors of the College, resolved "to enter fairly in a book" their names and gifts; "to write their names in letters of gold, and place them over the windows and on the walls of the Chapel;" to commemorate them by an oration at each Commencement; and to place on a tablet over the Hall door, the following distich from Martial:—

*"Sint Mecenate, non deerunt, Flacce, Marones;
Vergiliunque tibi vel tua rura dabunt."*

Only the first and third of these proposals were carried out.

In December, 1773, President Locke resigned, and after the usual attempt to induce unwilling persons to succeed him, the Rev. Samuel Langdon, of Portsmouth, was elected at a meeting "holden at Colonel Hancock's house," on July 18, 1774. From the outset he was greatly harassed, owing to the political disturbances, which interfered with the resources of the College. In 1772 the Legislature had tried to make up the deficiencies by granting a lottery for the benefit of the College, but this was so uncertain a means that the Corporation were obliged themselves to take the tickets which remained unsold. The presence of the Legislature had interfered with the usual work; now came the time when soldiers were quartered in the Halls. In April, 1775, the Massachusetts Militia was concentrated at Cambridge, and the College Government removed the library and apparatus to Andover. The Corporation were forced to meet at Fowle's Tavern, in Watertown, where they voted that, a public Commencement being impracticable, degrees should be conferred by a general diploma. A little later they ordered the removal of the College to Concord, where, it had been ascertained, one hundred and twenty-five students could be boarded. The exile lasted till June, 1776. Before that time the British troops had evacuated Boston (March 17th); and the Corporation and Overseers expressed their gratitude to General Washington "for his eminent services in the cause of his country and to this society," and they conferred upon him the degree of Doctor of Laws. In a memorial to the Legislature, the injury done to the College by the occupation of the soldiers, and by the loss of rents, including the income of the Charlestown ferry, was set forth. Indemnification for damages was finally made; among the items we find lead taken from the roof of Harvard Hall,—presumably for bullets,—brass knobs, and tacks.

The College was now fully committed to the patriotic cause. The Overseers examined the governors and instructors as to their political principles, and the few students who cherished Tory hopes took care to conceal them. Nevertheless, when General Heath, in the autumn of 1777, requested the use of the Col-

lege buildings for quartering the troops surrendered by Burgoyne, the Corporation objected. But the students were dismissed from December, 1777, till the following February, after which there were no further interruptions in the College course while the Revolution lasted, although there was no public Commencement.

Internal affairs during this period of national excitement require but little mention. The Overseers clashed with the Corporation in the appointment of a steward, and, after considerable dispute, the former came to the conclusion that they had no jurisdiction in this appointment. More important was the resignation of President Langdon, in the summer of 1780. The students met and passed resolutions charging him with "impiety, heterodoxy, unfitness for the office of preacher of the Christian religion, and still more for that of President." A committee of twelve students then waited upon him with these resolutions. He seems to have been taken without warning and without having had previous intimations that he was unpopular. But he determined at once to resign. After morning prayers, two days later, he gave notice of his determination, adding that, as he "would be thrown destitute on the world," "resolutions of a favorable character might be of service to him." The students passed these as readily as they had passed the first. So far as can be learned, the undergraduates were, in this proceeding, only the instruments of Langdon's enemies, who did not dare, or care, to attack him openly. The most that was hinted against him was that he had not filled his position with so much vigor as his predecessors before the war; but, considering the difficulties he had met and his subsequent career in the New Hampshire Convention, this charge lacks verisimilitude.

Apart from his being the President of the College at the Revolutionary crisis, Langdon will be remembered as the President during whose term the Constitution of the Commonwealth of Massachusetts was framed (1780). That Constitution confirmed to the President and Fellows of Harvard College the enjoyment of "all the powers, authorities, rights, privileges, immunities and franchises which they now have, or are entitled to have, hold, use, exercise and enjoy;" and it contained the following article: "WHEREAS, by an Act of the General Court of the Colony of Massachusetts Bay, passed in the year 1642, the Governor and Deputy-Governor for the time being, and all the magistrates of that jurisdiction, were, with the President and a number of the clergy in the said Act described, constituted the Overseers of Harvard College; and it being necessary, in this new Constitution of Government, to ascertain who shall be deemed successors to the said Governor, Deputy-Governor and magistrates,—It is declared that the Governor, Lieutenant-Governor, Council and Senate of this Commonwealth are and shall be deemed their successors, who, with the Pres-

ident of Harvard College for the time being, together with the ministers of the Congregational churches in the towns of Cambridge, Watertown, Charlestown, Boston, Roxbury and Dorchester, mentioned in the said Act, shall be, and hereby are, vested with all the powers and authority belonging or in any way appertaining to the Overseers of Harvard College. *Provided*, that nothing herein shall be construed to prevent the Legislature of this Commonwealth from making such alterations in the government of the said University as shall be conducive to its advantage and the interests of the republic of letters, in as full a manner as might have been done by the Legislature of the late Province of Massachusetts Bay."

The Constitution speaks indifferently of the "College" and "the University," this being perhaps the first instance when the latter term was officially used. It declares, further, that no person holding the office of President, professor or instructor of Harvard College shall, at the same time, have a seat in the Senate or House of Representatives. Thus we see that, while the State kept its *ex officio* control over the government of the College, it prohibited officers of the College from taking part in the government of the State.

Despite the troubles and interruptions incident to the war, the College was fairly-well attended. The classes at graduation averaged 34 members, that of 1776 being the largest (43), and that of 1779 being the smallest (26). But the revenues suffered greatly, not only from stoppage of payment in some cases, but from the depreciation of currency. In 1778 exchange on France stood at 300 per cent.; in March, 1779, at 400 per cent., and the next year one ream of paper cost £150, and a quill cost \$1.50 in provincial money. In November, 1780, the price of the Corporation dinner was \$52.61 per person; but by that time the currency was almost worthless.¹

At this turning-point in the history of Harvard—for the College, after the Revolution, soon ceased to look to the Commonwealth for regular grants of money—we may fitly pass in review the dealing of the Legislature with the College. Our general verdict must be that, after the first vote of the General Court, in 1636, to appropriate £400 to a school at Newtown, the Colony never gave Harvard the financial support which it deserved. The grants were irregular,—often made only after repeated entreaties, and seldom paid promptly. The Legislature erected, besides the original Hall, Massachusetts, Hollis and new Harvard Halls, and contributed £1000 out of £1800 towards Wadsworth House. It allowed the College the income of the Charlestown Ferry, which, in 1639, amounted to £50, but which in some years was less than the expenses. President Dunster's annual stipend probably did not exceed £100, paid in rates; Chauncy received the same; Hoar had £150 *per annum*; Oakes

had £100 from the Colonial Treasury, and £50 in "country pay," corn, wheat, etc.; the grant to Mather was at first £100, then only £50; Vice-President Willard received from £50 to £50; Leverett's salary was fixed at £150, subsequently increased by £30, £40, and once by £50; but the average was about £180; Wadsworth was assigned a grant of £400, £360 of which to be paid by the General Court, and £40 to be derived from the rents of Massachusetts Hall; the grants to Holyoke averaged £250, *plus* the aforesaid rents. About the middle of the 18th century the Legislature began to eke out the salaries of the professors by grants; the Professor of Divinity received £100, of Mathematics, £80, and of Hebrew, £20. Quincy estimates that the total amount granted annually during Holyoke's term never exceeded £450, and often fell far short of that figure. Many of the lands granted to the College from time to time, although they aggregated several thousand acres, were never secured, owing to some flaw in the claim, or were in remote places where they produced but little.

The revenues of the College, apart from the above-mentioned subsidies, increased very slowly. In 1654, the income applicable to general purposes was only £27, of which £15 was set aside for scholarships. The receipts from all sources from 1654 to 1668, were £2,618. In 1682 the property of Harvard was valued at £2141; in 1693 the income was £318. Under the prudent management of Thomas Brattle, who was Treasurer for twenty years (till 1713), the estate of the College was increased in value to £2952; in 1746 this had risen to £11,150, producing yearly, at six per cent., £669. Owing to the depreciation of the currency the entire stock of the College in 1770 was estimated at only £12,923, of which £6,188 was specifically appropriated; the income in that year amounted to £1513, the expenses to £1251. In 1776 the resources were valued at £16,444. Thus we see that even during the period when Harvard had every reason to look to the State for generous nurture and encouragement, the support from private benefactors exceeded many times that bestowed by the State with a niggardly and begrudging hand. This fact, so discreditable to the Legislature, furnishes, nevertheless, the best proof that the institution had taken deep roots in the respect of the community; and that, in spite of political and theological controversies, which sometimes interrupted and sometimes dried up the stream of official bounty, there were always high-minded men and women who recognized the preciousness of the higher learning, and who gave liberally to help its dissemination. The University, like the circle of authors or painters, which depends upon the favor of a prince or a parliament, may flourish for a time; to be permanent, however, it must have no patron but the public, which has no party or personal interests to serve, and only desires the untrammelled propagation of the best knowledge and the highest culture.

In December, 1781, the Rev. Joseph Willard was

¹ See Elliot's "History of Harvard College," pp. 87, 88.

elected to succeed President Langdon. He was embarrassed from the outset by the financial status of the College. In 1773 John Hancock had been chosen Treasurer. At that time he was the most popular and influential man in Massachusetts. Having inherited, from his uncle, a few years before, the largest fortune that had been amassed up to that time in New England, he had given to the College about £550 for books, and the "elegant carpets" and wall-paper before referred to. He was, moreover, the leader of the patriotic party, generally popular, except with the Royalists, and very ambitious. No doubt the Corporation believed that they would do well in entrusting the funds of the College to a man at once so rich and so conspicuous; but they soon learned that brilliancy in politics is not always accompanied by punctuality and wisdom in money matters. More than a year elapsed, but Hancock made no settlement of his accounts, and the Corporation would gladly have asked him to resign had they not been afraid of incensing him. President Langdon sent him a letter urging a statement; then a second letter, yet no answer came. To a third request, Hancock replied that he was "busily engaged," but would "soon appoint a day to attend to business." The Corporation met, but the Treasurer did not appear. Then they sent a formal communication to him, stating their "unhappiness at being disappointed as to the promised settlement; they knew his patriotic exertions in his country's cause, and were willing to allow much for this plea of delay; but it was their duty to be solicitous for the seminary; they were accountable to the Overseers and the world." They requested further that the papers of the College might be left with them during his absence; "otherwise all will be in confusion." Hancock was soon to go to Philadelphia to attend the Congress. A messenger was accordingly despatched to Concord, where he was, to ask him to deliver "the moneys, bonds and other papers belonging to the College treasury." By this messenger the following answer was returned: "Mr. Hancock presents his compliments to the Rev. President and the other gentlemen who were present yesterday at the meeting, and acquaints them that he has at heart the interest of the College as much as any one, and will pursue it. He is much surprised and astonished at the contents of the President's letter, as well as at the doings of the gentlemen present, which he very seriously resents; and however great the gentlemen may think the burden upon his mind may be, Mr. Hancock is not disposed to look upon it in that light, nor shall the College suffer any detriment in his absence, as he has already determined those matters; but if the gentlemen choose to make a public choice of a gentleman to the displacing him, they will please to act their pleasure. Mr. Hancock writes in great hurry, being much engaged, but shall write very particularly, or be at Cambridge in person as soon as the Congress rises. He leaves all his matters in the hands of a

gentleman of approved integrity, during his absence, which he is not disposed to alter, and peradventure his absence may not be longer than a voyage to Machias." The Corporation evidently got small comfort from this reply. Another year passed; still they did not dare to remove the obstinate Treasurer, who persistently neglected his duties. They took measures to collect their rents and the earnings of the Ferry, but went no further.

In 1776, Hancock being then in Philadelphia, the President wrote him a very humble letter setting forth the embarrassed condition of the College; he remained silent. To a second entreaty he replied that he had just sent a messenger "in a light wagon, with orders to bring all his books and papers across the country to Philadelphia from Boston," in order that he might arrange them. So the personal property of Harvard was transferred to the Quaker City, where it remained till the following year, when the Corporation, having received no account, and being alarmed for the safety of the securities, despatched Tutor Hall to bring them back. But Hancock, although he let them go, would neither settle nor resign. Another communication, covering twenty-eight quarto pages, did not move him, if, indeed, he ever read it. At last, after much hesitation, with the concurrence of the Overseers, they elected (July 14, 1777), Ebenezer Storer, to supersede in the Treasurership, "the Honorable John Hancock, whose employment in the American Congress unavoidably prevents his attending to the business of that office."

Hancock regarded this action as a personal insult, and never forgave it, but during the remainder of his life he continued to wreak his resentment on the College, by the same spiteful and embarrassing methods. The Corporation made more than one effort to conciliate him, requesting, for example, that he would permit his portrait to be painted at their expense "and placed in the philosophy chamber, by that of his honorable uncle." In 1779 it was voted to put in suit the bond which he had filed on his appointment as Treasurer, but this vote was reconsidered. The following year he was elected Governor of Massachusetts, a position he filled continuously till 1785, and the Corporation sang another tune in a complimentary address in which they expressed "their happiness that a gentleman is placed at the head of the General Court and of the Overseers, who has given such substantial evidence of his love of letters and affection to the College, by the generous and repeated benefactions with which he hath endowed it." Blandishments, however, were as futile as threats: Hancock knew his power, and gratified his vindictive spirit by using it. In 1783 the Overseers determined to force an issue; but at their very next meeting Hancock presided, and they quailed before him. Then, as if to tantalize them further, he promised to bring in a statement; but when the time came he postponed it. Finally, on February 10, 1785, Treasurer

Storer was able to report that Governor Hancock had made a final settlement of his accounts, by which it appeared that he still owed the College £1054. This balance he delayed to pay; nor could the College, whether by entreaty or threatening to resort to law, get it from him. He died in October, 1793, and two years later his heirs made a payment of nine years' interest. The principal was paid six or seven years afterwards, but without compound interest, "whereby the College loses upwards of \$526." The motives of this disgraceful conduct seem not hard to explain. Hancock was doubtless flattered by his election to the Treasurership; but he had no experience as a financier, and was soon drawn into the more exciting political life in which he shone, but which caused him to neglect his duties as Treasurer. When his neglect became apparent, through the respectful intimations of the Corporation, his vanity was piqued, and thenceforth, feeling secure of his public position, he determined to punish them by systematic harassing and delays. That he needed the College funds, or diverted them temporarily to his own use, was never charged, for his private fortune was so great (£70,000) that he could have settled his account in full at any time that he had chosen. But to ambitious men of a certain calibre, all the glory and honor they derive from success in work for which they are fitted do not atone for the pangs their pride suffers when they have been found negligent or incompetent in work undertaken by them without proper qualification.

While this unseemly and annoying conflict was in progress, the College was engaged in a financial struggle with the Legislature. Harvard had loyally converted its funds into currency early in the Revolution, but before the War closed the currency had depreciated so far that it required seventy-five dollars in paper to purchase one dollar in gold. In 1777 the fees for tuition were increased in order to make good the diminishing salaries of the instructors; and in 1780 the Legislature was petitioned to supply by grants the constantly growing deficit. Then followed a memorial asking the General Court to pledge itself to pay to the President a permanent and adequate salary; but the Court refused, preferring to keep that officer dependent upon it, for irregular and uneven grants. It appropriated £300 for the first year of President Willard's term. The Corporation then endeavored to equalize the salaries of professors, by assessments on the students; and the rents of Massachusetts Hall were doubled (to £120) for the benefit of the President. The Legislature continuing stingy, another petition was presented, which brought from it (July, 1783) grants of £156 for the President, and of about £100 each for the Professors of Divinity, Mathematics and Oriental Languages, but these grants were no longer "gratuitous," but "on account of services done, and to be done, by (the grantee) to be accountable for the same," an intimation which the

beneficiaries regarded as ominous.¹ The position of the President and Professors became precarious, so that the Corporation authorized the Treasurer to lend them money at interest, until the Legislature should fulfil its pledges. But this the Legislature never did; its last subsidy to the President and Professors was on May 31, 1786, when it appropriated £480 for the former, and upwards of £240 to each of the latter. These sums enabled them to settle their indebtedness to the Treasurer, but left no provision for the future. The next year the Treasurer reported that during the past decade the College had suffered a clear loss of £13,702 6s. 2d. But the Court gave no relief, and in February, 1791, voted that it was inexpedient to make any grants to College officers. A final effort was made in the following January to bring the Court to terms; it was shown that more than £3000 had been loaned to the President and Professors, and it was prayed that the College be reimbursed; this last appeal, however, was treated like its predecessors, and thenceforth the Corporation assumed the responsibility of providing in full the officers' salaries. The notes due for advances were canceled. Happily, through the skillful management of Storer, the Treasurer, and of James Bowdoin and John Lowell, the financial resources of the College had gradually been augmented. The investments, made in uncertain times, proved lucrative, and in 1793 the Treasurer's report stated that the personal estate amounted to \$182,000, of which about \$82,000 were appropriated for special purposes. That was the first year in which the English system of reckoning was dropped, and the American adopted. We have now arrived at a period, therefore, when the College had to depend upon itself, but when the State, while refusing monetary support, still arrogated the right of supervisory control. But, as this was the first step toward the ultimate emancipation of Harvard from all political control, we see now that the gain far exceeded the sacrifices which it temporarily demanded.

The administration of Willard coincided with other changes which proved beneficial to the development of the College. The standard of scholarship was raised; the Medical School was founded on very humble beginnings; four professorships (E. Hersey, Alford, A. Hersey and Erving) were added to the foundations; the system of discipline was remodeled. The graduating classes between 1781 and 1804, inclusive, averaged forty, that of 1804 having sixty-one members, the largest number up to that time. In October, 1790, the College was honored by a visit from President Washington, who, in reply to an address from the Corporation, complimented the prosperous condition of the "literary republic," and hoped that

¹At this time the College lost the revenue from the Charlestown Ferry, by the building of the Charles River Bridge (1785). The Legislature required the grantees of the bridge to pay the College an annuity until 1826.

"the muses might long enjoy a tranquil residence within the walls of this University."

President Willard died in September, 1801, and nearly two years elapsed before his successor, the Rev. Samuel Webber, Hollis Professor of Mathematics, was elected. In the interim the office had been offered to Fisher Ames, the first layman, so far as I have learned, who was elected to the Presidency of Harvard,¹—but he declined. Mr. Webber came into office just at the outbreak of a new religious controversy, the echoes of which were heard far down the present century. It is the inherent nature of sects to become diversified; some members clinging rigidly to the letter of their creed and to tradition, while others move on to larger interpretations. Midway between these factions oscillate the moderates, who hold some of the views of each but do not approve of the extremes of either. Presbyterianism in New England was, at the beginning of the nineteenth century, on the verge of a new disintegration; the members of the advanced party, carrying freedom of inquiry to its logical conclusion, were beginning to be known as Unitarians, whom the conservatives looked upon with abhorrence as no better than skeptics or atheists. The line of demarcation was clearly defined in the controversy over the election of a successor to the chair of Divinity, which was left vacant by the death of Dr. Tappan in 1804. The corporation elected the Rev. Henry Ware, of Hingham, whose views were then deemed radical. He was stoutly resisted. The orthodox declared that "soundness and orthodoxy" were the requisites demanded by Hollis of the candidates to this professorship; that "soundness and orthodoxy" were to be found among Calvinists only; and that the candidate should submit to an examination of faith. Dr. Ware's supporters replied that such an examination "was a barbarous relic of inquisitorial power, alien alike from the genius of our government and the spirit of our people; that the College had been dedicated to Christ and not to Calvin—to Christianity and not to sectarianism; that Hollis, though agreeing with Calvinists in some points, was notoriously not a Calvinist; and that, by his statutes, he prescribed the Scriptures of the Old and New Testament as the rule of his Professor's faith, and not the Assembly's Catechism." At last Dr. Ware's election was concurred in by the Overseers (May, 1805), but it caused so great annoyance to the orthodox, that Dr. Pearson, Hancock Professor of Hebrew, resigned (March, 1806), giving as his reason that "events during the past year having so deeply affected his mind, beclouded the prospect, spread such a gloom over the University, and compelled him to take such a view of its internal state and external relations, of its radical and constitutional maladies, as to exclude the hope of rendering any essential service to the interests of

religion by continuing his relation to it." His resignation was accepted by the Overseers who stated that "they are not apprehensive the University is in so unfortunate a state as he has represented."

In 1780 the original Stoughton Hall, which was situated at right angles to Massachusetts and Harvard, near the present site of the University, had to be demolished on account of its decay; but, with the increased number of students another dormitory was needed. This, the present Stoughton, was erected in 1805 at the expense of the college. The corporation then petitioned the Legislature for assistance to repair Massachusetts and other buildings, and, in 1806, permission was granted to them to raise \$30,000 by lottery. From the proceeds of this lottery (\$29,000) a new hall was built, at the cost of \$24,000, and, on its completion in 1813, it was called after Sir Matthew Holworthy, to whom the college was indebted for the largest single benefaction it had received in the seventeenth century (£1000 sterling). In 1806, John Quincy Adams was appointed first Boylston Professor of Rhetoric and Oratory.

Signs of a more liberal spirit in religion were now rapidly multiplying in New England, and its effect was soon felt at Harvard. The election of James Bowdoin to the Corporation in 1792 may now be looked upon as an entering wedge, for he was the first lay Fellow (excepting previous Treasurers, Professors or Tutors) ever admitted to that body. Experience in his case suggested that a modification of the membership of the Board of Overseers would be desirable. The limitation of the original charter to the ministers and magistrates of Cambridge and five neighboring towns deprived the College of the services of suitable men; while the admission of the State Senate, by the Constitution of 1780, created a considerable number of Overseers whose knowledge of and interest in the College were slight or perfunctory, whose term was brief and uncertain, and whose time was fully occupied with politics and legislation. In March, 1810, therefore, an amendment was passed to the following effect: "The Governor, Lieutenant-Governor, Council, the President of the Senate, and Speaker of the House of Representatives, and the President of the College, for the time being, with fifteen ministers of Congregational Churches, and fifteen laymen, all inhabitants within the State, to be elected as provided in the act," were constituted "the Board of Overseers of Harvard College." The fifteen laymen were to be elected by the rest of the Board, which thus perpetuated itself. The Legislature carefully respected the ancient privileges of the College, by providing that this act should not take effect until it had been accepted by the Corporation and Overseers, which they did. In July, 1810, President Webber died, and was succeeded by the Rev. John Thornton Kirkland, pastor of the new South Church in Boston.

Political partisanship then ran high, and, in 1812, the Senate complained that it had been deprived by

¹ President Leverett had fitted for the ministry, but had had no parish.

the recent act of some of its privileges, and a bill to repeal it was introduced. The Corporation testified that the College had been benefited by the change, but the act was repealed and the previous one restored. The Corporation insisted that since the act of 1810 had become valid only by their consent and that of the Overseers, it could not be annulled without their approval. The Overseers waived all opinion as to the act of 1812 until the Supreme Court should pass upon it. They organized according to the act of 1810, and another Board organized according to the Constitution of 1780; the latter body, however, exercised the functions of *de facto* Overseers until February, 1814, when, a change of parties in the control of the State Government having taken place, the act of 1810 was restored, and approved, and it remained in vigor for nearly forty years.

The Presidency of Kirkland witnessed the expansion of Harvard from a College into a University, by the creation of several departments, or schools, in addition to the Academic department. Of these—the Medical School, the Divinity School, and the Law School—some account will be given later. Five professorships were founded, or for the first time filled, during Kirkland's term. The College received its last subsidy from the State, which, in 1814, appropriated a bank tax amounting to \$10,000 annually for ten years "for the encouragement of literature, piety, morality, and the useful arts and sciences," with the restriction that a fourth part of this annual sum should go "towards the partial or total reduction of the tuition fees of such students, not exceeding one-half the whole number of any class, who may apply therefor, according to the judgment of the Corporation." Of the unencumbered moneys, upwards of \$21,400 were devoted to the building of the Medical School. In 1815 University Hall was completed at an expense of \$65,000, partly paid from the unappropriated funds of the College, and partly from the bank tax. An act of February 12, 1814, increased the value of property exempt from taxation which the College might hold in Massachusetts, to the value of \$12,000 *per annum*, in addition to what it was then authorized to hold.

In 1820 an effort was made towards the further liberalizing of the membership of the Board of Overseers, by declaring eligible to election the ministers of any Christian Church, irrespective of denomination. The Corporation and Overseers approved this reform, and a committee of delegates of the people of the Commonwealth, assembled to propose amendments to the Constitution, presented through its chairman, Daniel Webster, a favorable report. But when this amendment was submitted to a popular vote, the people of Massachusetts defeated it by 21,123 votes in the negative, to 8020 in the affirmative. All clergymen who did not belong to Congregational Churches still remained, therefore, under the ban.

Kirkland's administration was early successful, in part owing to his energy and wisdom, and in part owing to the remarkable body of men who, as members of the Corporation, assisted him with their counsel and support.¹ Previously to this time "the duties of President," says Quincy, "were limited to performing devotional services morning and evening in the chapel; expounding some portion of Scripture, or delivering some religious discourse, 'at least once a month;' presiding at meetings of the Corporation and Immediate Government [College Faculty]; acting as recording officer of each of these bodies; and executing such duties as were specifically assigned to him, usually as chairman of a committee. The general superintendence of the seminary, the distribution of its studies, the appointment of Tutors in case of any sudden vacancy, and in short all the executive powers relative to discipline and instruction, when not exercised by the Corporation itself, were carried into effect by the President, Professors and Tutors, constituting a board denominated 'the Immediate Government.' In this board the President always stood in the relation of *primus inter pares*, without other authority than that of a double vote, in case of an equivote." In 1811 and 1812 the Corporation granted to the President larger powers; authorizing him "from time to time to make such regulations respecting the instruction and the government of the students as he shall think reasonable and expedient, which regulations shall have the force of laws till the same be disallowed by the Corporation and Overseers;" but he could not alter any punishment or mode of inflicting the same. Dr. Kirkland used this enlarged authority very sparingly, and, so far as the records show, he never exercised it without consulting the Faculty; but, during the latter part of his administration he was embarrassed by discontent which manifested itself both inside and outside of the Faculty, and sprang from various causes.

In the first place, the old quarrel concerning who was eligible to be a Fellow was revived. In 1806, on the resignation of Professor Pearson and the election of Chief Justice Parsons to the Corporation, that body contained, for the first time in its history, no member of the Faculty; and as successive vacancies were filled by non-resident Fellows, the Faculty began to surmise that a precedent had been established against the election of any of their number in the future. In 1823 they protested against the disposition "to degrade them to the rank of ministerial officers, and to subject them to the discretionary government of an individual," and they attributed the unsatisfactory condition which they thought existed in the College to the fact that they had no representative in the Corporation. Learning the details of the con-

¹ From among the Fellows at this time (1810-20), I would mention Theophilus Parsons, John Lowell, John Phillips, Christopher Gore, William Prescott, Harrison Gray Otis, Joseph Story, Nathaniel Bowditch, William Ellery Channing and Charles Lowell.

troverſy which had raged concerning Fellows a hundred years before, they "came to the concluſion that reſidence was originally a qualification for fellowſhip, and that, conformably to the Charter, the Corporation ought to conſiſt of *Fellows*—that is, of reſident officers of the College." The death of the Hon. John Phillips (1823) gave them the opportunity they deſired, and they preſented a memorial to the Corporation, ſetting forth their claims. This thruſt a dilemma upon the Corporation; if it elected a member of the Faculty, the memorialiſts would infer that their claim was recognized as juſt, and the non-reſident Fellows would thereby ſeem to have no legal right to their office; but if, on the other hand, a non-reſident were choſen to ſucceed Phillips, the memorialiſts would urge that the policy of excluding the Faculty from representation was to be perſiſted in. The Corporation laid their difficulties before the petitioners, who immediately addreſſed the Overſeers. The latter, after deliberation, reſolved, that it did not appear that the reſident inſtructors had any excluſive right to be choſen members of the Corporation; that non-reſident Fellows did not therefor forfeit their offices; and that it was not expedient to expreſs any opinion on the ſubject of future elections. The Hon. Charles Jackson, a non-reſident, was ſoon afterwards nominated, and, ſome explanations having paſſed between the Corporation and Overſeers, he was confirmed. Thus was finally ſettled a diſpute that had been ſettled in the ſame way a century before.

About this time alſo the impreſſion ſpread that the "diſcipline, inſtruction and morals" of the College needed correction. The Overſeers accordingly appointed a committee of ſeven, of which Joſeph Story was chairman, to investigate. In May, 1824, they recommended various changes, the principal being that the Preſident ſhould be accorded larger authority and ſhould be relieved, as far as poſſible, from merely miniſterial duties; that Profeſſors and Tutors ſhould be divided into ſeparate departments, each department to have at its head a Profeſſor who ſhould ſuperintend its ſtudies and inſtructors, "with the privilege of recommending its inſtructors to the Corporation for appointment;" that a board of three perſons, preſided over by a Profeſſor, ſhould look after the diſcipline of each College Hall, a ſimilar board to ſuperintend ſtudents who lodged outside of the College, but no extreme puniſhment to be inflicted without the Preſident's cognizance and approval; that there be two claſſes of ſtudies— thoſe neceſſary for a degree and thoſe which ſtudents might elect; that each claſs of ſtudents ſhould be ſubdivided into ſections for recitations, which ſhould be "more ſearching than at preſent;" that ſtudents ſhould take notes at lectures, and paſs an annual examination; that ſtudents ſhould be admitted who did not wiſh a degree, but did wiſh "to purſue particular ſtudies to qualify them for ſcientific and mechanical employment and the active buſineſs of life;" that

ſines ſhould be aboliſhed, and records of conduct kept and ſent quarterly to ſtudents' parents; that ſome officer ſhould "viſit, every evening, the room of every ſtudent;" that no ſtudent under ſixteen years of age ſhould be admitted; that the expenſe of education ſhould be reduced; and that the viſitatorial authority of the Overſeers ſhould be more efficient, the Preſident and Profeſſors to report to them at a meeting every winter. This recommendation met with ſtrong oppoſition, led by the Rev. Andrews Norton; but at laſt (June 10, 1825) the Corporation paſſed a new code of laws, in which the "Immediate Government" was authorized to call itſelf the "Faculty of the University," with power to act by committees; the Preſident was relieved of his miniſterial duties, was charged with executing the meaſures of the Faculty, but was not granted viſitatorial power nor independent negative; departments were created; ſtudents were claſſified according to proficiency; the ſalaries of Preſident and Profeſſors were made to depend, in a meaſure, on the number of ſtudents; perſons not candidates for a degree were admitted to ſpecial ſtudy; examinations were made more frequent and vigorous; ſines were aboliſhed and a ſcheme of puniſhment—the various penalties of which were caution, warning, ſolemn admonition, official notice to parents, ruſtication and expulſion—were adopted.

A third difficulty aroſe during this decade from the ſtate of the College finances. The inſtitution had expanded rapidly, but in ſo doing its expenditures had exceeded its revenues. More power had been allowed to Preſident Kirkland in the diſpoſal of the income, and he had favored the paſſage of a law by which a Tutor, after ſix years of ſatisfactory ſervice, ſhould be promoted to a profeſſorſhip, with an increaſed ſalary. The price of tuition was raiſed, one quarter, to fifty-five dollars *per annum*, and leſt this ſhould diminiſh the number of ſtudents the Corporation undertook to "aſſiſt meritorious ſtudents when unable to pay the additional tuition." Profeſſors' ſalaries were alſo augmented. The grant from the Legislature of \$10,000 for ten years ſerved, while it laſted, to maintain this more expenſive ſyſtem, although a large part of the grant was devoted, as has been ſaid, to the erection of the Medical School and to other purpoſes. When this grant ceaſed, the number of ſtudents fell off. Already clamors for retrenchment had been heard, but the Corporation hoped that the Legislature would continue its ſubſidies. When, however, it became evident (in 1824) that the Legislature would do no more, economy had to be rigidly practiced. The Treasuſer's report for the year ending June 30, 1825, ſhewed an exceſs of expenſes over income of more than \$4000, while there were but about 200 ſtudents, as compared with upwards of 300 in 1824. A committee of the Corporation made a thorough examination of the Treasuſer's books for the paſt ſeventeen years, and found no evidence of miſuſe; they then propoſed meaſures for retrench-

ment, such as the union of professorships and the imposition of more work on instructors. The President was asked to discharge his secretary, whose duties were transferred to the steward. Beneficiary aid to students from the unappropriated funds of the College was cut off, and the interest on appropriated funds was reduced from six to five and one-half *per cent.* The Treasurer was required to submit every month to the Overseers a statement of his expenditures, and he was authorized to make no payments without the sanction of that Board. By these reforms the annual deficit of the College was wiped out, and "a foundation was laid for a prosperous state of its finances" (1828).

The students objected to the ordinance, referred to above, by which they were classified in sections according to proficiency, and their discontent was the cause of so frequent disorders, that the President advised that the obnoxious law be rescinded; and this was done (1827) in all departments except that of Modern Languages. Shortly afterward President Kirkland, who had previously suffered a stroke of paralysis, presented his resignation. He went out of office with the personal good-will even of those who had most strenuously opposed some of his innovations. Looking back upon his administration after more than sixty years, we can give it the praise it merits. Kirkland was the first President to show, by his acts, that he recognized the distinction between a college and a university; he showed that he believed that Harvard should and could fulfil the duties of a university; and he devoted all his energy towards her expansion. He was instrumental in the erection of Holworthy, the original Medical School, University and Divinity Hall; and he saw the addition of five professorships (Eliot, Rumford, Royall, Smith and Dane) to the endowed foundations of the College.

His successor, Josiah Quincy (1829-45), pursued, in general, the expansive policy already laid down. The number of students increased steadily, the average of the graduating class being fifty-six, besides the members of the schools. The finances were correspondingly prosperous. In August, 1840, the capital of the University was estimated at \$646,235.17, of which, however, only \$156,000 could be applied to the unreserved use of the College. In 1832 a Law School building was completed at the expense of Nathan Dane; and in 1833 the Library built from a legacy of Christopher Gore, at a cost of \$73,000, was dedicated. In the latter year also William Cranch Bond transferred his whole apparatus to Cambridge, was appointed Astronomical Observer to the University, and was installed in suitable buildings, for which a foundation was laid by subscription. The religious tendency at this time was towards liberalism. Unitarian doctrines of what now seems a mild type had spread throughout Massachusetts and were supposed to have their nursery at Harvard; but so conservative and timorous was the majority at the College that when

Ralph Waldo Emerson delivered an address before the Divinity students (July 15, 1838), the College authorities and the public were alarmed at the boldness of his ideas, which some did not hesitate to say were subversive of religion and morals. Even the Rev. Henry Ware, Jr., felt obliged to declare that the prevalence of some of Emerson's statements "would tend to overthrow the authority and influence of Christianity."¹ In 1834 the Legislature passed an act entitling clergymen of any denomination to stand as candidates for Overseers, but this did not go into operation until 1843.

The most important academic event during Quincy's term was the celebration, on the 8th of September, 1836, of the two hundredth anniversary of the founding of Harvard. A pavilion of white canvas was erected in the College grounds, near the present site of the Library, covering nearly 18,000 square feet, being 150 feet long and 120 feet broad; and supported in the centre by a pillar 65 feet high, and on the sides by 44 shorter pillars. Evergreens and flowers decorated the pillars; blue and white streamers "radiated from the centre to the sides of the tent," which were erected on sloping ground, so that "the tables rose one above another in the form of an amphitheatre." The entrances to the College Halls were also decorated, and arches, bearing the names of Harvard, Dunster and Chauncy, were erected over the three principal entrances to the grounds. On the morning of the celebration a white banner, on which was emblazoned the device of the first College seal, was raised over the pavilion. A vast concourse of graduates and sight-seers thronged the town. At ten o'clock a procession was formed in front of the University, under the chief marshalship of Robert C. Winthrop; Samuel Emery, of the Class of 1774, headed the line of graduates, the oldest living graduate, Judge Wingate (Class of 1759), being unable to attend. The procession marched to the Congregational Church, where Dr. Ripley "offered a solemn and fervent prayer;" then was sung "Fair Harvard," an ode written for the occasion by the Rev. Samuel T. Gilman (class of 1819); after which "President Quincy commanded, during two hours, the attention of the audience." The services over, the procession moved to the pavilion, where 1500 persons partook of dinner. Edward Everett, the President of the day in the absence of H. G. Otis, began the speech-making, and was followed by ex-Pres. Kirkland, Dr. Palfrey, Justice Story, Dr. J. C. Warren, Chief Justice Shaw, Governor Levi Lincoln, Daniel Webster, Leverett Saltonstall, Josiah Quincy, Jr., Robert C. Winthrop and other distinguished speakers, until eight o'clock in the evening, when the assembly was "adjourned to meet at this place on the 8th of September, 1936." The yard and buildings were then "brilliantly illuminated by the students, at the expense of the Corporation.

¹ J. E. Cabot's "Memor. of Emerson," p. 342.

The name of each of the College halls appeared in letters of light, together with the dates of their erection, and appropriate mottoes."

During Quincy's term the old Congregational Church, which stood near where Dane Hall now stands, was taken down (1833); the land belonging to it was added to the College enclosure, and the new church (now the First Unitarian) was erected. Four professorships were founded by private benefactors in the University, viz.: Natural History (Fisher), History (McLean), Eloquence (Parkman), Astronomy and Mathematics (Parkman). A fund was also subscribed for the purchase of books for the new Library. President Quincy resigned in August, 1845, leaving behind him the reputation of having been "the Great Organizer of the University." He was succeeded by the Hon. Edward Everett, whose varied achievements in politics and literature had qualified him, it was thought, to direct the rapidly expanding University. But after three years of service he resigned, having found that the innumerable petty duties which were then thrust upon the President, from the oversight of "the spots on the carpet in a pew of the Chapel to the reception of the King's son on an occasion of ceremony," were "more than his flesh and blood could stand." Yet, during his brief term, he furthered the interests of Harvard. College House (1846), the Observatory (1846) and the Lawrence Scientific School (1848) were added during his administration, and one professorship, that of Anatomy (Parkman), was founded. The resources of Harvard were still quite inadequate to its needs, and in 1849 the State was petitioned for an appropriation; but to no purpose. The annual income from funds applicable to the College was but \$26,633, whereas the expenses amounted to more than \$40,000, so that the deficiency had to be made up from the tuition fee of the students, which was then (1848) \$75.¹ Some persons interested in the College objected strongly to the efforts to convert it into a University—this title had been formally adopted by Pres. Everett—declaring that the real purpose of the institution should be to furnish a solid literary education, and not to provide mere smatterings in many departments. One critic condemned the rage for extravagance in buildings; the new Library, he said, had cost \$73,000, while the fund for supplying it with books was only \$21,000; whence he inferred that the Corporation set a value of seventy-three on stone and mortar and of only twenty-one on books. He protested also against increasing the cost of education, especially since Cambridge was an expensive place to live in.²

At this time the constitution of the Board of Overseers became again the object of much discussion. Many alumni favored the complete separation of the College from the State, and proposed a new system of

election, whereby the Overseers should be a representative instead of an *ex officio* body. The full Board numbered eighty-three members—far too many for the speedy and efficient transaction of business. In 1850 a Committee of the Legislature investigated the College, and reported that it failed "to answer the just expectations of the people of the State," owing to the fact that its organization and instruction were adapted to the conditions of a quarter of a century before. The next year an act was passed remodeling the Board of Overseers, which was to consist of "the Governor, Lieutenant-Governor, President of the Senate, and Speaker of the House of Representatives of the Commonwealth, the Secretary of the Board of Education, and the President and Treasurer of Harvard College, for the time being, together with thirty other persons." Those thirty other persons were to be elected by the General Court, none of whose members was eligible; they were to be divided into three classes of ten each, the first class to go out of office on the day of the next annual meeting of the General Court, "and so on in rotation, to be determined by lot." After the Board should be wholly renewed in this manner, it was to be divided into six classes of five each, each class to serve six years from the date of its election. No person was eligible for re-election for more than one term immediately succeeding that for which he was first elected. This was a great step in advance; the number of Overseers was reduced within reasonable limits, and the number of its *ex officio* members was now only five (not counting the President and Treasurer). But the pernicious influence of politics was still felt in the election of the Overseers by the Legislature. Party intrigues and preferences, which should have no weight in an institution consecrated to Truth,—which has never been the chief concern of politicians,—often determined the success or defeat of candidates, who were nominated in party caucuses at the State House. A bill was therefore introduced in the Senate in 1854, to take the election out of the Legislature and to entrust it to the alumni of the College, but this bill was not enacted. Earlier than this, in 1851, the State politicians thought to improve matters by tampering with the organization of the Corporation. They proposed to increase that Board to fifteen members, to be elected by the Legislature, in three classes of five each, one class to go out every two years. Fortunately, this proposal, which would not only have introduced politics into the Corporation, but also have made that body unstable and transitory, was not adopted. The scheme of 1854, by which State interference was to be abolished, depended on the raising of a fund of \$200,000, the income from which, in sums of \$100, was to be devoted to the assistance of one hundred worthy students.

The internal affairs of the College progressed but slowly during the decade 1850–60. Jared Sparks, the historian, was President from 1849 to 1853, and was

¹ See S. A. Eliot's Sketch of Harvard College, p. 116.

² See article by Francis Bowen in the *North American Review*, Jan., 1850.

followed by the Rev. James Walker (1853-60). The Elective System, of which an account will be found elsewhere, was not encouraged; but the efforts to improve discipline and to check hazing were vigorous, and the standard of learning was perceptibly raised. Three professorships were endowed, one of Astronomy (Phillips, 1849); one of Christian Morals (Plummer, 1855), and one of Clinic (Jackson, 1859). Appleton Chapel was erected in 1858, and the (Old) Gymnasium in 1860. Mr. Everett was the last President to live in Wadsworth House; President Sparks dwelt at the corner of Quincy and Kirkland Streets, and President Walker at No. 25 Quincy Street. In 1860 a fund given by Peter C. Brooks in 1846 had accumulated sufficiently to pay for the erection of a new residence for the President. Doubtless the most important addition to the University during this period was due to the energy and genius of Professor Louis Agassiz, by whom valuable collections in natural history had been patiently made, and through whose enthusiasm money was raised for the erection of the first division of the Museum of Comparative Zoölogy in 1859.

Professor Cornelius Conway Felton, eminent as a Greek scholar, was elected President in 1860, upon the resignation of Walker, and served until his death, in 1862, being succeeded by the Rev. Thomas Hill. This was a gloomy crisis in the history of the nation, and Harvard did not escape from its effects. The cost of living was considerably increased owing to the Civil War; nevertheless, the number of students did not diminish to the degree that might have been expected. The number of Seniors upon whom degrees were conferred between 1850 and 1859, average 82. The class of 1860 graduated 110—the largest up to that date; 1861, 81; 1862, 97; 1863, 120; 1864, 99; 1865, 84. President Hill's administration is memorable on two accounts: he initiated changes in the methods of instruction with a view to convert the College into a University, and he witnessed the final severing of the College from all interference by the State. On April 26, 1865, the Legislature passed a bill providing for the election of Overseers by "such persons as have received from the College a degree of Bachelor of Arts, or Master of Arts, or any honorary degree." The voting was fixed between the hours of ten A. M. and four P. M. at Cambridge, on Commencement Day; no member of the Corporation, or officer of government and instruction was eligible as an Overseer, or was entitled to vote; and Bachelors of Arts were not allowed to vote until the fifth Commencement after their graduation. The Board of Overseers, as thus constituted, consists of thirty members, divided into six classes of five members each, every class serving six years. In case of a vacancy, the remaining Overseers can supply it by vote, the person thus elected being "deemed to be a member of and to go out of office with the class to which his predecessor belongs." Among the other noteworthy events of President Hill's term were the

building of Gray's Hall (1863), and the introduction of a series of University Lectures (1863) by specialists. These courses, rather popular in their nature, were open to all members of the University, and to the public on the payment of five dollar. The Academic Council, composed of the Professors and Assistant Professors in the various Faculties, was founded with a view to suggest the subjects to be lectured upon and to recommend lecturers.

President Hill resigned September 30, 1868; Charles William Eliot (class of 1853), at that time a member of the Board of Overseers, was chosen to succeed him, May 19, 1869. President Eliot's administration, which has now extended over twenty-one years, has been unquestionably the most memorable in the history of the University. Changes more numerous and more radical have been wrought than in any previous period of the same length; and they have affected most deeply not only Harvard itself, but the higher education of the whole country. It is still too soon to pass final judgment on many of these changes, but it is not too soon to state that they mark the transformation of the College into a University. Foremost among them is the unreserved adoption of the Elective System, long and stubbornly opposed; its privileges were handed down from class to class, until at last they reached the Freshmen. As a corollary to this, voluntary attendance at College exercises has been accorded to undergraduates, the experiment being tried first with the Seniors in 1874-75. The Law School has been completely reorganized; its course has been lengthened from two years to three, and its instruction has been made methodical and progressive. A similar improvement has been effected in the Medical School, whose standard was raised above that of any other in the country, and whose course has been fixed at three years, with an extra year for those who care to avail themselves of it. The Divinity School, long on the verge of dissolution, has been resuscitated, and although it cannot yet be said to flourish, this is due to the general temper of the age in religious matters, rather than to the inadequacy of the facilities of the School itself. Attempts have likewise been made to increase the efficiency of the Scientific School, but that institution seems to be inevitably tending towards absorption in the College. The School of Veterinary Medicine, the Bussey Institution, the Arnold Arboretum, the Peabody Museum of American Archaeology, and the transference of the Museum of Comparative Zoölogy to the College, are landmarks in the extension of the University in different directions during the past twenty years.

To this period belongs also another wise reform—the abolition of compulsory attendance at religious services. In 1869 the Faculty ceased to require those students who passed Sunday at home to attend Church, except as their guardians or parents desired; and it reduced the number of services to be attended

by those who remained in Cambridge, from two to one. After much discussion and many petitions, attendance at prayers as well as at Sunday services, was left to the choice of the student. The old system of regulations was completely recast: the Faculty recognized that it had a more useful work to perform than to inspect the frogs and buttons on the student's coats, or to fix the hour for going to bed. The decorum of the undergraduates has improved in proportion as their independence has widened. Hazing has disappeared, and cases of serious disorder have been rare. Cribbing at examination, which a majority of students deemed venial when studies were prescribed, has almost passed away, since studies have been elective.

In 1869 the semi-annual exhibitions, which used to be held when a committee of the Overseers visited the College, were abandoned, since it was found that they no longer served their original purpose of stimulating the ambition of students. In the following year the system of conferring "honors" on students who had passed a successful special examination in some one department—as the Classics, or Mathematics—at the end of their Sophomore or Senior year, was introduced. In 1872 the Academic Council was remodeled, to suggest candidates for the higher degrees, A.M., Ph.D. and S.D., and these degrees acquired a real value from the fact that they represented a specified amount of graduate work. Indeed, the policy of the University has been to abolish the old custom of conferring meaningless degrees. Even those which are purely honorary in their nature (LL.D. and D.D.) have been bestowed more sparingly. The venerable practice of conferring the degree of Doctor of Laws on the Governor for the time being of Massachusetts—a practice which arose when that dignitary was *ex officio* the President of the Board of Overseers—was broken up in 1883, when Benjamin F. Butler was Governor of the Commonwealth, and it is probable that the precedent will never be revived.

The salaries of the teachers was raised in 1869—that of professors being fixed at \$4000, that of assistant professors at \$2500, and that of instructors at \$1000; but these figures represent the maximum, and not the average sums received in the respective grades. In the current year (1890) another small increase has been made; but the smallness of the teachers' stipends, when compared with the income which successful doctors, lawyers and clergymen receive for intellectual work of relatively the same quality, indicates that public sentiment still holds educators dangerously cheap. Fine dormitories, spacious halls, vast museums and costly apparatus do not make a university; men, and only men of strong intellect, of wisdom and spirituality, can make a university; and they can be secured only by paying them an adequate compensation. Until society recognizes that the ideal educator is really beyond all price, it will go on suffering from evils and losses

which a proper education might prevent. To lighten the work of the Harvard professors, the Corporation have granted them a leave of absence for one year out of every seven. Further, a subscription has recently been opened to a fund to provide a pension for those professors who, after a long service, are incapacitated from either age or feebleness. In 1872 the experiment of conducting "University Lectures" was found to be unsuccessful; but it was still maintained with good results in the Law School till 1874. Summer courses in Chemistry and Botany were offered to teachers and other students (1874), and they have constantly grown in usefulness, so that similar courses in other departments have been added. In 1875 spring examinations for the University were held in Cincinnati, and this scheme, too, proved so beneficial that it has been extended to several other distant cities, and to some of the preparatory schools. In that same year Evening Readings, open alike to the public and students, were introduced; and they were repeated from year to year. Latterly, more formal lectures, College Conferences, etc., have partly superseded them.

The method of instruction is now by lectures and not by recitations in all those courses where lectures can be given to greater advantage. The marking system—a survival from the old seminary days, when marks were sent home regularly every quarter—has been overhauled and reduced to the least obnoxious condition. Formerly, the maximum mark for any recitation was eight; the students were ranked for the year on a scale of 100, but, though the scale was the same, no two instructors agreed in their use of it. Some were "hard" and some were "soft" markers; some frankly admitted that it was impossible to get within five or ten per cent. of absolute exactness; others were so delicately constituted that they could distinguish between fractions of one per cent. One instructor was popularly supposed to possess a marking "machine;" another sometimes assigned marks *less than zero*. These anomalies were long recognized before a simple and more rational scheme was adopted, in 1886. "In each of their courses students are now divided into five groups, called A, B, C, D and E; E being composed of those who have not passed. To graduate, a student must have passed in all his courses, and have stood above the group D in at least one-fourth of his college work; and for the various grades of the degree, honors, honorable mention, etc., similar regulations are made in terms of A, B, C, etc., instead of in per cents. as formerly."¹ The increase in the number of instructors in the various departments has also brought about what was first proposed in President Kirkland's time—the autonomy of each department over its own affairs, subject, of course, to the approval of the governing boards.

Examinations are now held twice a year, at the

¹ W. C. Lane in the Third Report of the Class of 1881

end of January and in June, lasting about twenty days at each period. The examinations, except in courses involving laboratory work, are nearly all written, of three hours' length each. President Eliot, then Tutor in Mathematics, was the first to introduce written examinations, in the course under his charge, in 1854-55. Before that tests were oral. The College calendar was reformed in 1869, previous to which date a long vacation had been assigned to the winter months, chiefly for the benefit of poor students who partly supported themselves by teaching school for a winter term. As re-arranged, the College year extends from the last Thursday in September to the last Wednesday in June, with ten days' recess at Christmas and a week at the beginning of April.

The remarkable expansion of the University during the past twenty years—to which expansion these changes bear witness—has been as great in material and financial concerns, as in policy. In 1869 the resources of Harvard amounted to \$2,257,989.80, and the income to \$270,404.63; in 1889 the capital was \$6,874,046.25, and the income was \$913,824.72. Five large dormitories have been erected, viz.:—Thayer Hall, the gift of Nathaniel Thayer, in 1870; Holyoke, erected by the Corporation, in 1871; Matthews Hall, the gift of Nathan Matthews, and Weld Hall, the gift of William F. Weld, in 1872; and Hastings Hall, the gift of Walter Hastings, in 1889. An addition to the Library, by which its capacity was more than doubled, was completed in 1877. Austin Hall, the new Law School, was built from plans by H. H. Richardson in 1883; the same architect designed Sever Hall (lecture and recitation rooms) in 1880. In 1871 a mansard roof was added to Boylston Hall, the Chemical Laboratory; and College House was enlarged during the same year, when also the lecture-room and laboratory of the Botanic Garden were completed. The Jefferson Physical Laboratory (for which Thomas Jefferson Coolidge was the chief contributor), was finished in 1883; that year the new Medical School in Boston was first occupied. The Museum of Comparative Zoölogy has grown by successive additions, the cost of which has been largely defrayed by Alexander Agassiz, until it now (1890) covers the two sides of the quadrangle originally proposed by Louis Agassiz; and on the third side the Peabody Museum of Archaeology, begun in 1876 and added to in 1889, has almost reached the point of junction. The Bussey Institution (1870), the School of Veterinary Medicine (1883) and the Library of the Divinity School (1886) are further monuments of President Eliot's administration. For athletic purposes several buildings have been erected during this period: the University Boat House (1870), the Hemenway Gymnasium (1879), the Weld Boat House (1890) and the Cary Athletic Building (1890).

One other edifice, Memorial Hall, deserves a more extended notice. In May, 1865, a large number of graduates held a meeting in Boston to discuss plans

for erecting a memorial to those alumni and students of Harvard who lost their lives in behalf of the Union during the Civil War. A Committee of eleven were appointed, consisting of Charles G. Loring, R. W. Emerson, S. G. Ward, Samuel Eliot, Martin Brimmer, H. H. Coolidge, R. W. Hooper, C. E. Norton, T. G. Bradford, H. B. Rogers and James Walker. At another meeting, in July, they presented a report, in which was the following resolution: "*Resolved*, That in the opinion of the graduates of Harvard College, a 'Memorial Hall' constructed in such manner as to indicate in its external and internal arrangements the purpose for which it is chiefly designed; in which statues, busts, portraits, medallions and mural tablets, or other appropriate memorials may be placed, commemorative of the graduates and students of the College who have fallen, and of those who have served in the army and navy during the recent Rebellion, in conjunction with those of the past benefactors and distinguished sons of Harvard now in her keeping,—and with those of her sons who shall hereafter prove themselves worthy of the like honor,—will be the most appropriate, enduring and acceptable commemoration of their heroism and self-sacrifice; and that the construction of such a hall in a manner to render it a suitable theatre or auditorium for the literary festivals of the College or of its filial institutions will add greatly to the beauty, dignity and effect of such memorials and tend to preserve them unimpaired, and with constantly increasing association of interest to future years." At Commencement this resolution was brought before the alumni. After considerable discussion, in which some speakers proposed that a simple monument or obelisk would be more appropriate than a building, the matter was referred to a Committee of Fifty, which, on September 23d, reported in favor of a memorial hall. Messrs. Ware & Van Brunt, architects, were requested to submit plans, which were formally adopted at the following Commencement. It was also voted that the biographies of the Harvard men who served in the war be printed. Subscriptions were immediately solicited and the College conveyed the land known as the Delta for the site of the new edifice. The corner-stone was laid October 6, 1870, with a prayer by the Rev. Phillips Brooks, addresses by the Hon. J. G. Palfrey, the Hon. William Gray, the Hon. E. R. Hoar, a hymn by Dr. O. W. Holmes and a benediction by the Rev. Thomas Hill. The dedication ceremonies took place July 23, 1874. The total sum raised was \$305,887.51. Sanders Theatre, to whose erection was devoted the accumulations from a bequest by Charles Sanders (of the class of 1802), was completed in 1876, in time to be used for the Commencement exercises of that year. The portraits and busts belonging to the College were placed in Memorial Hall, which has since been used by the Dining Association.

Thus has the University augmented its resources during the past twenty years. The gifts have been most generous, but as they have for the most part been designed by their donors for especial purposes, the unrestricted means at the disposal of the Corporation have not increased in proportion with the needs. Two curious bequests may be cited to show how unwise are benefactions subject to restriction. In 1716 the Rev. Daniel Williams left an annuity of £60 for the support of two preachers among the "Indians and Blacks," and in 1790 Mrs. Sarah Winslow gave £1367 in support of a minister and schoolmaster in the town of Tyngsborough: the Treasurer of the College is still paying the income from these donations for the benefit of the nondescript Marshpee Indians and for the schooling of the children of Tyngsborough. The great fire in Boston in 1872 seriously affected the revenue of the College, but the deficit caused thereby was made good by a subscription. The only other untoward event was the burning of the upper part of Hollis Hall in 1876.

It is impossible to specify more particularly the bequests which have enriched Harvard during the past two decades. The income now at the disposal of the College for beneficiary purposes amounts to more than \$45,000 *per annum*—a sum sufficient to warrant the assertion made in the College Catalogue "that good scholars of high character but slender means are very rarely obliged to leave College for want of money." Nor can space be spared to enumerate the various prizes for essays, speaking, reading, etc., which are annually awarded. Mention should be made, however, of a few matters upon which it would be pleasant to enlarge. In 1870–71 the Corporation negotiated with the Trustees of the Massachusetts Institute of Technology for the consolidation of the Institute with the Scientific Department at Harvard—the united institution to be called the Technological School, and to have its seat in the Institute's building in Boston. After several propositions and much deliberation, however, the two bodies could reach no satisfactory agreement, and the project was abandoned. Another scheme which may be realized hereafter—the admission of women to the privileges of the University—has been agitated from time to time during the past twenty years. In 1869 one woman asked to be admitted to the Divinity School, and another to the Scientific School, but the Corporation refused. In 1873, however, at the solicitation of the Woman's Educational Association, they consented to hold entrance and final examinations, and to give certificates to those candidates who passed creditably. The number of women who have availed themselves of this concession has never been large; but in 1880 an association for the Collegiate Education of Women opened in Cambridge an institution, popularly known as the "Annex," where courses are offered similar to those given in the College, and are conducted by Harvard professors and instructors. From this unofficial connection, it is pos-

sible that the co-education of the sexes may ultimately be introduced into the University.

In 1880 an act passed the Legislature amending the College Charter so as to allow persons who are not inhabitants of Massachusetts, but who are otherwise qualified, to be eligible as Overseers. This change was due to the fact that in New York there is a large body of alumni who wished to have a representation on the Board of Overseers. In 1884 an Overseer was elected from Philadelphia. The question of allowing graduates of the Law and Medical Schools to vote for Overseers has recently been discussed, but it has not yet met the approval of the governing boards. In 1889 an amendment was passed modifying the counting of votes. The celebration, in 1886, of the 250th anniversary of the founding of the College, is still too recent to require a detailed notice.

In concluding this portion of this historical sketch it may be well to give a few statistics, from which the remarkable recent expansion of the University can be more clearly seen:

Membership.		
	1869.	1889.
Undergraduates	563	1271
Graduate Scholars	2	..
Resident Graduates	4	93
Divinity School	36	35
Law School	120	254
Scientific School	43	65
School of Mining	9	..
Medical School	306	290
Dental School	16	35
Bussey Institution	2
Veterinary Department	20
Non-resident Graduates	10
	1084	2097
University Courses	13	..
Summer Schools	220

In 1869 the corps of instructors numbered 84; in 1889, 217. The College Library in the former year had 121,000 volumes, and the libraries of the other departments, 63,000 volumes; in 1889 the College Library had 268,551 volumes, and 256,737 pamphlets, and the other departments had 86,868 volumes and 29,041 pamphlets.

THE MEDICAL SCHOOL.—In the year 1780, Drs. Samuel Danforth, Isaac Rand, Thomas Kast, John Warren and some others formed an association called "The Boston Medical Society." On November 3, 1781, this Society voted, "that Dr. John Warren be desired to demonstrate a course of Anatomical Lectures the ensuing Winter." Dr. Warren was the younger brother of Joseph Warren who fell at the battle of Bunker Hill. His course was popular, and led President Willard, and some of the Fellows of Harvard, who had attended his lectures, to discuss the organization of a Medical School to be attached to the College. Dr. Warren drew up a scheme, which was placed before the Corporation September 19, 1782. Twenty-two articles were adopted, among which was one establishing "a Professorship of Anatomy and Surgery; a Professorship of the Theory

and Practice of Physic; and a Professorship of Chemistry and Materia Medica." It was further required that each professor should be a "Master of Arts, or graduated Bachelor or Doctor of Physies; of the Christian Religion and of strict morals." The first professors were Dr. John Warren (Anatomy and Surgery), Dr. Aaron Dexter (Chemistry and Materia Medica) and Dr. Benjamin Waterhouse (Theory and Practice of Medicine). They lectured in Cambridge in 1783; a few medical students, and such Seniors as had obtained their parents' consent, attended. Three years of study, involving attendance on two courses of lectures—which was reduced in some cases, to attendance on one course, the longest being only four months—were required of those who presented themselves as candidates for a degree. Students who were not graduates of the college had to pass a preliminary examination in the Latin Language and in Natural Philosophy. The degree of Bachelor of Medicine was first conferred in 1785; that of M.D. in 1788, upon John Fleet.

The facilities for instruction were of the scantiest: one anatomical specimen; only such clinical cases as were offered by the private patients of the professors; merely elementary chemical apparatus. And yet, thanks to the skill and energy of Dr. Warren and his two coadjutors, the School, despite its barren beginnings, slowly grew. Dr. Waterhouse deserves to be remembered not only for his lectures, but also for establishing a Botanical Garden at Cambridge; for procuring the first collection of minerals, and for introducing the practice of vaccination into this country. The graduates during the first twenty years were few—sometimes only one or two a year. In 1806 Dr. John Collins Warren was appointed Assistant Professor of Anatomy and Surgery, under his father; three years later, Dr. John Gorham was appointed Adjunct Professor of Chemistry and Materia Medica. In the latter year Dr. J. C. Warren opened a room for the study of Practical Anatomy, at No. 49 Marlborough Street, Boston, and in the Autumn of 1810 the first course of lectures to members of the Harvard Medical School was given at that place in Boston. Furthermore, in 1810, Dr. James Jackson was appointed Lecturer on Clinical Medicine; he succeeded to Dr. Waterhouse's professorship in 1812, and gave his students clinical instruction by taking them with him on his visits to the patients at the almshouse.

In 1813 thirteen diplomas were conferred, and the need of a special building was so urgent that a grant therefor was obtained from the Legislature. In 1816 this building—a plain, two-story edifice with an attic—was opened in Mason Street, under the name of the "Massachusetts Medical College." In 1821 the Massachusetts General Hospital was opened in Allen Street, largely through the efforts of the Medical School professors who thus secured ample material for study. In 1815 Dr. J. C. Warren succeeded his father as Professor of Anatomy and Surgery, and Dr. Walter Channing was

appointed Professor of Obstetrics and Medical Jurisprudence. Dr. Warren held his position for thirty-two years, until his resignation, in 1847, holding the highest rank among the New England surgeons of his time, and contributing by his learning and enthusiasm to the steady growth of the School, to which he bequeathed a valuable anatomical collection. In 1831 the Faculty of the Medical School, distinct from that of the College, was organized. Assistant professorships and lectureships had to be added from time to time to meet the increased demands, and in 1847 Dr. George C. Shattuck endowed a chair of Pathological Anatomy. The preceding year, the old building on Mason Street had been sold to the Boston Natural History Society, and a larger building was erected in North Grove Street, on land given for that purpose by Dr. George Parkman. The chemical laboratory, affording room for 138 students, occupied the basement of this new building; the physiological and microscopic laboratories were in the attic, and the other stories were devoted to rooms for lectures and demonstrations.

The standard of the School has been steadily raised. At first, as we have seen, a student was required to attend only one or two courses of a maximum duration of four months during three years. Then, down to 1859, he was expected to attend two winter terms of four months, and to produce a certificate from some physician that he had studied under him during the rest of the required three years. In 1859 the Winter Course was supplemented by a Summer Course. During the next dozen years a better, but still an imperfect curriculum was adopted. The student was "expected to attend 'two courses of lectures,' taking tickets for all the branches, and being, of course, expected to attend daily five, six, or more lectures on as many different subjects, inasmuch as he had paid for them as being all of equal importance to him. In addition to this, he was expected to devote a considerable portion of his time to practical anatomy, if not to other special work in the laboratories of different branches. It was a great feast of many courses to which the student was invited, but they were all set on at once, which was not the best arrangement either for mental appetite or digestion."¹ In 1871, however, a reform was made, the essential provisions of which still obtain. "The whole academic year is now devoted to medical instruction. It is divided into two terms, the first beginning in September and ending in February; the second, after a recess of a week, extending from February to the last part of June. Each of these terms is more than the equivalent of the former winter term. The most essential change of all is that the instruction is made progressive, the students being divided into three classes, taking up the different branches in their natural succession, and passing through the entire

¹ Dr. O. W. Holmes, in *The Harvard Book*, 1, 248.

range of their medical studies in due order, in place of having the whole load of knowledge upset at once upon them. Practical instructions in the various laboratories have been either substituted for, or added to, the didactic lectures, and attendance upon them is expected of the student as much as on the lectures."¹ Since 1877 those candidates for the Medical School who have not already a Bachelor's degree, have been obliged to pass an entrance examination.

The stricter requirements, the more difficult course, and the raising of the tuition fee to \$200, prevented the membership of the School from increasing rapidly. But the value of first-rate training in this profession—which has made greater advances than any other during the past half-century—was gradually recognized, and the slow but healthy growth in membership called for more room and greater facilities. In 1883 a new School building on the Back Bay, near Copley Square, was completed. In 1880 an extra year was added to the regular course, but students were not required to take it. Between 1881 and 1887, 487 degrees were conferred. In 1888 the Elective System was partially introduced, and the experiment proved successful. Summer courses, chiefly clinical in character, were also added, and have been largely attended. In that year the receipts of the School were \$78,791.57, and the expenditures \$68,032.71.

THE LAW SCHOOL.—In 1815 a professorship of Law was endowed by a bequest from Isaac Royall, its incumbent being required to give a course of lectures to the Seniors. In 1817 the University established a Law Department, the only professor being the Hon. Asabel Stearns. In 1829 Nathan Dane endowed another chair, which was filled by the Hon. Joseph Story, and, in 1832, the same benefactor gave a Hall, called by his name, to the University. Previous to the erection of this, the Old Law School, the quarters of the School had been in what is now College House. In 1829–30 there were thirty-two students; thirty years later there were 152. But the instruction was irregular and unsatisfactory, although among the instructors were men of ability. There was neither an entrance nor a final examination. The course, nominally of two years, really permitted the student to acquire no more than he could have acquired in one year's systematic study. This disorderly condition lasted until 1870, when radical reforms were introduced, through the co-operation of the new Dean, Professor C. C. Langdell. Residence during the Academic year was made obligatory; diplomas were conferred on only those candidates who had passed a satisfactory examination; the tuition fee was raised from \$100 to \$150; but no entrance examination was yet required. In 1877 the standard of the School was again raised, by extending the course from two to three years, and in that year en-

trance examinations were established, the candidate being examined in Cæsar, Cicero, Vergil, and in Blackstone's *Commentaries*. Since that time the increase in the number of students who were also graduates of a college has been steady—an indication of the wider recognition of the advantages of a collegiate education as a base for professional success. In 1883 a new building for the Law School was erected after the plans by H. H. Richardson, from a bequest by Edwin Austin. Three years later the alumni of the Law School formed an Association, which has contributed to the prosperity of that department. The students have several law clubs, a mock court, etc., from which they derive much profit, outside of their regular work. The receipts of the School in 1889 were \$45,714.15; the expenses were \$38,851.27. At the present time (1890) there are 254 students. The *Harvard Law Review*, founded in 1887, is published by the School. The instruction consists of the following courses: *First year.*—Contracts (three lectures per week); Property (two); Torts (two); Civil Procedure and Common Law (one); Criminal Law and Procedure (one). *Second year.*—Bills of Exchange and Promissory Notes (two); Contracts (two); Evidence (two); Jurisdiction and Procedure in Equity (two); Property (two); Sale of Personal Property (two); Trusts (two). *Third year.*—Agency (two); Constitutional Law (two); Jurisdiction and Procedure in Equity (two); Partnership and Corporation (two); Suretyship and Mortgages (two); Jurisdiction and Practice in United States Courts (one); Law of Persons (one); Conflict of Laws (one hour for half year); Points in Legal History (one hour for half year).

MUSEUM OF COMPARATIVE ZOOLOGY.—This important department of the University is the monument of the genius and zeal of one man—Louis Agassiz. Born at Motiers, Switzerland, in 1807, he came to this country to lecture in 1846. In the following year Abbott Lawrence founded the Scientific School, and the Professorship of Zoölogy was offered to Agassiz, who accepted it and entered on its duties in 1848. As the College possessed no collections of natural history, Agassiz began to make them at his own expense, and a wooden building—now the Old Society Building on Holmes Field, but first called Zoölogical Hall—was put up to shelter them. In 1852 friends of the College raised \$12,000, and purchased the collection, to which Agassiz continued to add. In 1858 Francis C. Gray left \$50,000 to the Corporation for the establishment of a Museum of Comparative Zoölogy, and the Massachusetts Legislature, at the instance of the indefatigable naturalist, appropriated (1859) one hundred thousand dollars, payable from sales of lands in the Back Bay district, towards the erection of a suitable museum. By private subscription \$71,125 were also raised. The College ceded about five acres, and on June 17, 1859, the corner-stone was laid. Agassiz's plan was for a building 364 feet long by 64

¹ Dr. O. W. Holmes, in *The Harvard Book*, i, 218.

feet wide, with two wings, each 205 feet in length and 64 in width. Two-fifths of the north wing were first completed, and sufficed for the then existing collection. The War of the Rebellion checked both public and private munificence, except that, in 1863, the Legislature granted \$10,000 for the publication of an "Illustrated Catalogue of the Museum," but specimens were steadily accumulated. In 1865 Professor and Mrs. Agassiz and several assistants made an expedition to Brazil at the expense of Nathaniel Thayer, and returned after more than a year, with very large and rare collections. More room being needed, the Legislature, in 1868, appropriated \$75,000, further increased from private sources, and the north wing was completed (1871). In 1871 Agassiz was appointed Director of a Deep-Sea Exploring Expedition, fitted out by the United States Coast Survey Bureau, and in the small steamer, the "Hassler," he explored the West Indies, skirted the Eastern Coast of South America, rounded Cape Horn and ascended the Pacific Coast to San Francisco. The fruits of this expedition were added to the collections at the Museum. In 1873 Mr. John Anderson, of New York, gave to the Trustees of the Museum the Island of Penikese, together with \$50,000, to found a summer School of Natural History. On December 14, 1873, Agassiz died. As a fitting memorial to the great naturalist a subscription fund was raised, amounting to \$310,674, of which \$50,000 was voted by the State, and \$7594 was subscribed in small amounts by 87,000 school teachers and school children throughout the country. This fund was devoted to the maintenance of the Museum. In 1876 the institution was formally handed over to the University, but on the express condition that its Faculty should retain their privileges of independence. The Curator alone is appointed by the Harvard Corporation. Alexander Agassiz has been the Curator since 1875, and it is owing chiefly to his personal munificence and solicitude that the great edifice planned by his father has been brought almost to completion. The floor area of the natural history portion of the Museum is four acres, distributed as follows: Lecture-rooms, laboratories, general and special, and professors' room, 51,500 sq. ft.; exhibition-rooms (open to the public) 49,432 sq. ft.; storage-rooms, including work-rooms for specialists, 41,978 sq. ft.; library and reading-room, 5300 sq. ft.; photographic-room, coal and boiler-room, packing-room and Curator's rooms, 4884 sq. ft.; hall and stairs, partly available for specimens, 21,220 ft. For many years past the Museum authorities have published occasional *Bulletins*.

OTHER DEPARTMENTS.—*Divinity School.*—For almost the whole of the first two centuries instruction in Divinity was a part of the regular academic course. In 1815, however, the proposal was made to found a separate school, which was organized in 1819. In 1826 Divinity Hall was built, through

the efforts of the Society for the Promotion of Theological Education in Harvard University. Originally Unitarian in its teachings, the School declined after the first enthusiastic period of Unitarianism had been spent. In 1879 a subscription was opened to save the institution from collapsing, and the result was so satisfactory that since that time the School has been able to resume its activity. The instruction is non-sectarian, extending over three years; and students are at liberty to elect courses in other departments of the University. The tuition fee is only \$50 a year, but President Eliot, in his report for 1888-89, wisely recommended that it be raised to the level of that of the other Cambridge departments. "The Protestant ministry," he says, "will never be put on a thoroughly respectable footing in modern society until the friar or mendicant element is completely eliminated from it. There are no good reasons why Protestant students of theology should be taught fed and lodged gratuitously; students of law, of medicine or of the liberal arts are not." The receipts of the Divinity School in 1889 were \$27,938.85; the payments were \$27,513.63. The students in 1890 number thirty-five.

The Peabody Museum of American Archaeology and Ethnology was founded by George Peabody, of London, in 1866, with a gift of \$150,000, of which \$60,000 were set aside for a building fund, and the remainder was devoted to the purchase of collections and specimens. Jeffries Wyman was Curator of the Museum till 1874. The collections were stored in Boylston Hall till 1876, when, the building fund having accumulated to \$100,000, a building was begun. A large addition was made to it in 1889. Besides acquiring collections by purchase and exchange, the officers of the Museum have conducted explorations in several parts of the American continent. The institution, although forming a part of the University, is under the direction of a Board of Trustees, originally appointed by Mr. Peabody, and renewed from time to time, when vacancies occurred, by themselves.

The Bussey Institution, a school of agriculture and horticulture, was founded by James Bussey, who died in 1861. Property in Jamaica Plain, valued at \$413,000, was transferred to the University; one-fourth of the income was, according to the terms of Mr. Bussey's will, applied to the Divinity School, and one-fourth to the Law School. In 1871 a building was erected; sheds and green-houses soon followed. In 1870 James Arnold bequeathed \$100,000 for the encouragement of agriculture and horticulture, and with this sum nurseries were established in connection with Bussey Institution, where a park, open to the public, has been laid out, the City of Boston co-operating with the Harvard Corporation for its maintenance. In 1879 a professorship of agriculture was founded.

In 1882 the Faculty of the *Veterinary School* was

organized; the following year a hospital was built, and nine students attended. The course, covering three years, embraces instruction in anatomy, physiology, chemistry, botany, materia medica, therapeutics, the theory and practice of veterinary medicine, surgery and allied subjects. The School still lacks a proper endowment.

The *Dental School*, organized in 1867, confers diplomas upon students who have studied medicine or dentistry three whole years, at least one continuous year of which must have been spent at the School. The instruction of the first year is identical with that of the Medical School; then follow courses in dentistry. The fees for the first year are \$200; for the second, \$150, and for any subsequent year \$50. In the present year (1890) the school has 35 members. The school was located at No. 50 Allen Street, Boston, from 1870 till 1883, when it removed to the old Medical School quarters in North Grove Street.

The *Botanic Garden*, founded in 1805, contains about seven and a half acres. Besides the professor's house, there are a herbarium (the best in the country), with library, laboratory and lecture-room, and a conservatory. To the distinguished botanist, Asa Gray, who for many years was its head, this institution owes much of its success.

The *Astronomical Observatory* dates from 1839, and had its first home in the Dana House, under the direction of William Cranch Bond. In 1843 a fund was raised with which part of the present observatory was built in 1846. Edward Bromfield Phillips bequeathed, in 1849, \$100,000 for the maintenance of the institution, the purchase of books, instruments, etc. The west wing was added in 1851. A *Bulletin* of the observatory is published at intervals.

The *Lawrence Scientific School* was founded by a gift of \$50,000 from Abbott Lawrence in 1847, to furnish instruction for students, who wished to present themselves as candidates for the degree of Bachelor of Science. Half of the donation was immediately applied to the erection of a suitable building; the other half to the establishment of a professorship of Civil Engineering. Mr. Lawrence gave further assistance until his death, in 1855, when he bequeathed \$50,000 for the general purposes of the school. In 1865 Samuel Hooper endowed a chair of geology, and John B. Barringer, in 1872, left about \$35,000 to encourage the study of chemistry. But, with the large laboratories of Chemistry and Physics on the one hand, and the Museum of Comparative Zoölogy on the other,—not to mention the facilities afforded by the College for the study of the higher mathematics,—the special work possible for the Scientific School has become more and more restricted, and it seems probable that its separate existence will terminate by merging its courses with those of the College.

II. PROGRESS OF EDUCATION.

Having thus followed the corporate and material

growth of Harvard, let us now briefly review the course of education, and compare, so far as the records allow, the studies and methods which at different periods were supposed to be necessary and sufficient to bestow a liberal culture upon the students. At the outset, since Harvard was pre-eminently a theological seminary, the studies were chiefly theological, and tended to the training of ministers for the Puritan Colony. According to the laws passed in President Dunster's time, the following was required of candidates to the Freshman Class: "When any scholar is able to read Tully or such like classical Latin author *extempore*, and make and speak true Latin in verse and prose *suo (ut aiunt) Marte*, and decline perfectly the paradigms of nouns and verbs in the Greek tongue, then may he be admitted into the College, nor shall any claim admission before such qualification." The scholars read the Scriptures twice a day; they had to repeat, or epitomize the sermons preached on Sunday; and were frequently examined as to their own religious state. "The studies of the first year," says Quincy, "were logic, physics, etymology, syntax and practice on the principles of grammar. Those of the second year, ethics, politics, prosody and dialects, practice of poesy and Chaldee. Those of the third, arithmetic, geometry, astronomy, exercises in style, composition, epitome, both in prose and verse, Hebrew and Syriac. In every year and every week of the College course every class was practiced in the Bible and catechetical divinity; also in history in the winter, and in the nature of plants in the summer. Rhetoric was taught by lectures in every year, and each student was required to declaim once a month."¹ Another rule, dating from Dunster's administration, was: "The scholars shall never use their mother tongue, except that in public exercises of oratory, or such like, they be called to make them in English." It is presumable that the ordinary student acquired a fair knowledge of Latin, while those who were destined for the ministry learned a sufficiency of Greek and Hebrew. The teaching was conducted by the President and two Tutors, who were occasionally assisted by a graduate candidate for a higher degree.

In 1650 the Overseers first ordered a visitation; "Between the 10th of June," runs their vote, "and the Commencement, from nine o'clock to eleven in the forenoon, and from one to three in the afternoon of the second and third day of the week, all scholars of two years' standing shall sit in the Hall to be examined by all comers in the Latin, Greek and Hebrew tongues, and in Rhetoric, Logic and Physics; and they that expect to proceed Bachelors that year to be examined of their sufficiency according to the laws of the College; and such as expect to proceed Master of Arts to exhibit their synopsis of acts required by the laws of the College." The qualifications for Bachelors were as follows: "Every scholar

¹ Quincy, i, 191.

that, on proof, is found able to read the original of the Old and New Testament into the Latin tongue, and to resolve them logically, withal being of honest life and conversation, and at any public act hath the approbation of the Overseers and Masters of the College, may be invested with his first degree." The undergraduate course was originally three years; in 1654 it was extended to four years. The candidate for Master of Arts was required to study an additional year or till such time as he "giveth up in writing a synopsis or summary of Logie, Natural and Moral Philosophy, Arithmetic, Geometry and Astronomy, and is ready to defend his theses or positions, withal skilled in the originals, as aforesaid, and still continues honest and studious, at any public act, after trial, he shall be capable of the second degree."

This was the general nature of the College curriculum during the seventeenth century. In 1726 Tutors Flynt, Welsted and Prince made the following report, which is interesting because it mentions not only the subjects studied, but also the text-books used:

"1. While the students are Freshman they commonly recite the Grammars, and with them a recitation in Tully, Virgil and the Greek Testament, on Mondays, Tuesdays, Wednesdays and Thursdays, in the morning and forenoon; on Friday morning Dugard's or Farnaby's Rhetoric, and on Saturday morning the Greek Catechism; and towards the latter end of the year they dispute on Raum's Definitions, Mondays and Tuesdays in the forenoon.

"2. The Sophomores recite Burgersdicius's Logie and a manuscript called New Logie in the mornings and forenoons; and towards the latter end of the year, Heereboord's Meletemata, and dispute Mondays and Tuesdays in the forenoon, continuing also to recite the classic authors, with Logie and Natural Philosophy; on Saturday mornings* they recite Wollebius' Divinity.

"3. The Junior Sophisters recite Heereboord's Meletemata, Mr. Morton's Physics, More's Ethics, Geography, Metaphysics, in the mornings and forenoons; Wollebius on Saturday morning; and dispute Mondays and Tuesdays in the forenoon.

"4. The Senior Sophisters, besides Arithmetic, recite Allsted's Geometry, Gassendus's Astronomy, in the morning; go over the Arts towards the latter end of the year, Ames's Medulla on Saturdays, and dispute once a week."

At this time Monis, a converted Jew, gave instruction in Hebrew, and all students, except Freshmen, were required to attend his recitations four times a week. One exercise was "the writing the Hebrew and Rabbinical," and the others were copying the grammar and reading, reciting it and reading, construing, parsing, translating, composing, reading without points. The foundation, by Thomas Hollis, of a chair of Divinity, added a professor to the small corps of teachers. The Hollis Professor had charge

of the instruction in theology, and was directed to begin each exercise with a short prayer. He gave both public and private lectures, and prepared students in Divinity for the ministry. In 1735 many of the students were permitted by the Faculty to take lessons in French of a certain Longloiserie, who had, however, no official connection with the College; this permission was revoked when charges of heresy were preferred against the Frenchman. The endowment by Hollis of a professorship of Mathematics, placed mathematical and scientific study on a surer basis, although Theology and the Classics were still esteemed the chief sources of learning. The philosophical apparatus, destroyed by the burning of Harvard Hall in 1764, was sufficiently extensive for conducting the experiments and illustrating the laws of science as taught at that time. There were, among other things, two complete skeletons and anatomical cuts, a pair of globes of the largest size, machines for experiments in Mechaunics, Hydrostatics, Pneumatics and Optics, microscopes, telescopes (one of twenty-four feet), "a brass quadrant of two feet radius, carrying a telescope of a greater length, which formerly belonged to the celebrated Dr. Halley."¹

In 1756 the Overseers, desirous of raising the standard of elocution, suggested that the Corporation should take measures for that purpose. Accordingly, it was voted "that the usual declamations in the Chapel should be laid aside, and in their stead the President should select some ingenious dialogue, either from Erasmus's 'Colloquies,' or from some other polite Latin author, and that he should appoint as many students as there are persons in such dialogue, each to personate a particular character and to translate his part into polite English, and prepare himself to deliver it in the Chapel in an oratorical manner." The Overseers themselves occasionally attended the performance of these dialogues, and sometimes "expressed their acceptance and approbation." An effort was likewise made at this time to encourage greater diligence in the study of Latin, Greek and Hebrew, and to promote "disputations in English in the forensic manner," but the effort was not very successful.

In 1760 we have a recommendation which seems to be the origin of the regular examination system: it was voted "that twice in a year, in the Spring and Fall, each class should recite to their Tutors, in the presence of the President, Professors and Tutors, in the several books in which they are reciting to their respective Tutors, and that publicly in the College Hall or Chapel; and that the two senior classes do once every half year, in the same presence, but under the direction of the Mathematical Professor, give a specimen of their progress in philosophical and mathematical learning." In 1761 the Overseers made sug-

¹ A complete list of the apparatus destroyed may be found in Quincy's History, ii, 182-183.

gestions with a view to the improvement of the students in Latin, recommending "that more classical authors be introduced and made part of the exercises, and that Horace should be earlier entered upon." From these various recommendations the custom arose of holding public exhibitions before visiting committees of the Overseers; but the visitors soon found it irksome to listen to recitations and sophomoric eloquence, which, they said, although creditable, "did not afford sufficient scope for the display of genius." In May, 1763, a report was made "that Horace is more in use than it has been, that Caesar's 'Commentaries' has been recently introduced, and that the several classes translate English into Latin once every fortnight." We learn from Nathaniel Ames's diary that, at this time, "Watts's *Logic*" was studied by the Freshmen, and that Homer and Euclid were begun early in the Sophomore year; also, that at the forensic disputes such subjects as "The Soul is not Extended" and "The Future State is Revealed by the Light of Nature" were discussed.

In 1766 semi-annual exhibitions became a regular part of the College work. At the same time the system of teaching was re-organized. Theretofore each Tutor had taught "all the branches to the class assigned to him throughout the whole collegiate course;" now each Tutor had charge of a special department, and taught that subject to the classes in turn: one Tutor had Greek; another, Latin; another, Logic, Metaphysics and Ethics; and the fourth, Natural Philosophy, Geography, Astronomy and the elements of Mathematics. On Friday and Saturday each class was instructed in Elocution, English Composition, Rhetoric, "and other parts of the *Belles-Lettres*," by another Tutor. The Divinity Professor had charge of all the instruction in Divinity. All scholars attended "the Tutors on Mondays, Tuesdays, Wednesdays and Thursdays three times a day, and once a day on Fridays and Saturdays." Senior Sophisters ceased to attend recitations at the end of June; the lower classes worked until Commencement week.

This general scheme was preserved down to the present century. In 1790 annual examinations were formally established, "to animate the students in the pursuit of literary merit and fame, and to excite in their breasts a noble spirit of emulation." The examination was oral, and if any student neglected or refused to attend, he was liable to a fine not exceeding twenty shillings, or to be admonished or suspended. The students at first rebelled, and one of them was expelled "upon evidence of a little boy" that he threw a stone through the window of the Philosopher's room—where the examiners were in session—and struck the chair occupied by Governor Hancock.

Instruction in science during the third quarter of the eighteenth century was given by Professor John

Winthrop, a friend of Franklin, and one of the ablest scientific investigators of his time. He conceived a theory of earthquakes, observed the transits of Mercury (1740) and that of Venus (1761), explained the nature of comets, and experimented in many branches of what was then called "natural philosophy." When some of the orthodox had scruples against using lightning-rods, because, they said, thunder and lightning were tokens of the Divine displeasure, and that "it was a degree of impiety to endeavor to prevent them from doing their full execution," Professor Winthrop rejoined in an essay that "Divine Providence did not govern the material world by immediate and extraordinary interposition of power, but by stated general laws;" wherefore, it is as much "our duty to secure ourselves against the effects of lightning, as from those of rain, snow or wind, by the means God has put into our hands." In 1783 the appointment of John Warren and Benjamin Waterhouse to be respectively Professor of Anatomy and Surgery and Professor of the Theory and Practice of Physic extended the instruction of the College into a new field. In 1792 a Chair of Chemistry and Materia Medica was added. But these three professorships were really the nucleus of the Medical School, and the courses given through them hardly belonged to the College proper.

Of the modern languages French received the earliest attention. In 1735, as stated above, Longloisserie had been granted permission to teach that language. In 1780 similar permission was accorded to Simon Poullin; although he received no official appointment, "he was allowed the same privileges with Tutors as to the Library and Commons, and a chamber in the College," and his tuition fees were charged in the quarter by bills. Two years later Albert Gallatin was allowed to teach on the same terms, and in 1787 Joseph Nancrede was regularly appointed instructor. In 1816 Francis Sales taught both French and Spanish. In 1825 Charles Folsom was instructor in Italian, and Charles Follen instructor in German; and the next year Portuguese appears on the list of studies.

In 1784 the attendance of Resident Graduates, Seniors and Juniors, who were not preparing for the ministry, upon a part of the exercises of the Professor of Divinity, was no longer required; but the two upper classes had to recite once a week from Doddridge's "Lectures," and to attend the Professor's weekly lecture "on some topic of positive or controversial divinity." At this time, also, Sallust and Livy were introduced into the Latin department, and in the Greek Xenophon's *Anabasis* was substituted for his *Cyropædia*. In 1787 Horace, Sallust, Cicero (*De Oratore*), Homer and Xenophon took the place of Vergil, Cicero's *Orations*, Caesar and the Greek Testament, and the number of recitations was increased. The Classics formed the backbone of instruction during the first three years: in addition,

the Freshmen studied rhetoric, the art of speaking, and arithmetic; the Sophomores had algebra, and other mathematical branches; the Juniors had Livy, Doddridge's *Lectures*, and the Greek Testament; the Seniors had logic, metaphysics, and Ethics. For the two lower classes Hebrew¹ was prescribed, for which French might be substituted. All the classes had instruction in declamation, chronology and history. Blair's *Rhetoric* was introduced as a text-book in 1788. In 1805 a professorship of Natural History was founded by subscription.

In 1803 the standard of admission to the Freshmen Class was raised. A candidate was now required to pass a satisfactory examination in Dalzel's *Collectanea Græca Minora*, the Greek Testament, Vergil, Sallust and Cicero's *Select Orations*; he must have a thorough acquaintance with the Greek and Latin grammars, including prosody; he must be able to translate these languages correctly, and be proficient in arithmetic to the rule of three, and in geography.

In 1820 a chair of Mineralogy and Geology was established. By this time the foundations of a real University had been laid; the Medical, Law and Divinity departments were growing up, and in the College itself several of the branches had so increased in importance that more than one teacher was needed to direct them. The erection of new buildings, the creation of new professorships, and the increase in the number of students, all indicated expansion, and called for corresponding improvements in methods. Doubtless, too, the influence of foreign methods in University education began to appear at Harvard, to which Edward Everett and George Ticknor, as teachers, returned after pursuing a course of higher study in Europe.

In May, 1824, a committee appointed by the Overseers to report upon the state and needs of the College, presented, through its chairman, Joseph Story, a report recommending "that the College studies shall be divided into two classes; the first embracing all such studies as shall be indispensable to obtain a degree; the second, such in respect to which the students may, to a limited extent, exercise a choice which they will pursue." It was further recommended that students who were not candidates for a degree be admitted to pursue particular studies to qualify them for scientific and mechanical employments and the active business of life. The first suggestion was the germ of the Elective System; the second suggestion, only recently given a fair trial, opened the facilities of Harvard to special and graduate students. Both were strongly opposed by the Faculty. It is a noteworthy fact that the habitual attitude of the leading colleges in England and America has been stubbornly conservative. The great pioneers in literature, philosophy and morals were not college professors: this is perhaps not surprising, because the

professorial mind is acquisitive and critical rather than creative and original. The teacher, whose work is largely a work of repetition and routine, comes to rely upon methods; whereas, it is a sign of originality to scorn methods. In the Continental Universities of the Middle Age the foremost men of the time were often to be found in the corps of lecturers; as at Paris, to cite a single instance, during the thirteenth century. And in our own century, the Universities in France, Germany and Italy have had among their lecturers men who represented the most progressive thought in each of these countries. But in England and America, with occasional exceptions, this was rarely the case. Conservatism, one of the strongest traits of the Anglo-Saxon race, has had no stronger fortresses than the American and English seats of learning. So our professors of one generation have been expounding the views of thinkers whom the professors of the preceding generation frowned upon.

So radical a change, therefore, as the proposed election by students of the courses which they would study filled the conservative Faculty of Harvard with alarm. The theory of education which then obtained regarded all youths between the ages of fifteen and twenty as having the same tastes and the same capacities; each to be dosed with learning similar in kind and quantity to that prescribed to his fellows. The Bachelor's degree was the proof that the Faculty had succeeded, after a four years' trial, in pouring a certain number of similar facts into the brains of all those who received it. The Elective System, on the other hand, recognized that each youth differed from every other, and that the subject best fitted to develop the mental powers of one might have no such effect on another. Admitting this, it proposed, so far as possible, to find out the peculiar capacities of each student, and to provide the instruction most congenial to them.

In spite of the opposition of the Faculty, the Overseers and Corporation adopted the recommendations, but these were carried out very imperfectly. In 1824 all studies were required, except that Juniors might "choose a substitute for thirty-eight lessons in Hebrew, and the Seniors had a choice between Chemistry and Fluxions." French and Spanish being extras, attendance on them was voluntary. By the revised Statutes, in 1826, "a student could attend in modern languages after the first third of the Freshman year in place of certain specified courses in Greek, Latin, topography, Hebrew, and natural science, and a Senior might also substitute natural philosophy for a part of intellectual philosophy." In practice, the one department in which the Elective System was fairly tried was in the French and Spanish Languages and Literature, then under the charge of Professor George Ticknor. The force of teachers was too small to enable the College to offer many elective courses, even had the prevailing sentiment been in favor of so doing; but in the department of Modern Languages there were

¹ A Hebrew Commencement part was delivered as late as 1817.

five instructors—quite enough for the demands made upon them. Above all, Professor Ticknor was an earnest advocate of the reform, and bent his energy to show its superiority over the traditional methods. In 1833 he reported: "The system of volunteer study was begun in this department in 1826 with thirteen students. The number of students embracing it has constantly increased every year; and now exceeds the number of regular students. The teachers are particularly gratified with the proficiency of their volunteer students." The number of volunteer students in modern languages in 1833 was 103 out of 210 who took these courses. In his report for 1830–31, President Quincy announced that the system had been introduced, under very favorable auspices, by Dr. Beck in the Latin, and by Mr. Felton in the Greek departments. In 1834 regulations were adopted "which established a minimum in mathematics, Greek, Latin, modern languages, theology, moral and intellectual philosophy, logic and rhetoric, level to the capacity of faithful students in the lowest third of a class, and provided that students who had attained the minimum in any branch might elect the studies which they would pursue in place thereof, being formed into sections of not less than six members, without regard to classes, and having additional instruction provided for them. The minimum covers about all the instruction regularly provided by the College in the departments named."

Nevertheless, the innovation made but little progress except in Professor Ticknor's department. "I have succeeded entirely," he wrote in 1835, "but I can get these changes carried no further. As long as I hoped to advance them, I continued attached to the College; when I gave up all hope I determined to resign. . . . If, therefore, the department of Modern Languages is right, the rest of the College is wrong." Professor Longfellow, who succeeded Mr. Ticknor, was fortunately imbued with his ideas, and continued his methods. In 1838 Professor Benjamin Peirce proposed that mathematics should be dropped at the end of the Freshman year, any student who so dropped them to be allowed to substitute natural history, civil history, chemistry, geography, Greek or Latin, in addition to the prescribed course; but the College lacked the means to provide instruction in several of those branches. In 1839, upon the recommendation of Professors Beck and Felton, the Corporation ordered "that those students who continue the study of Greek or Latin, shall choose as a substitute one or more of the following branches: natural history, civil history, chemistry, geology, geography and the use of the globes, popular astronomy, modern languages, modern oriental literature, or studies in either Greek or Latin which may not have been discontinued in addition to the prescribed course in such branch. The times and orders of these studies will depend on the convenience of the instructor and the decision of the Faculty, and each student will be re-

quired to engage in such a number of studies as shall in the judgment of the Faculty be sufficient reasonably to occupy his whole time.' When this plan was submitted to the Overseers, Theophilus Parsons wisely declared that upon their decision hung the question "whether Harvard College shall or shall not become a University. In no institution intended to answer the purposes of a University, and to be called by that name, is it attempted to carry all the scholars to the same degree of advancement in all the departments of study. The reason of this is, obviously, that any such attempt must greatly retard the advancement of the whole." Already Professors Beck and Felton in the Classical branches, and Professor Peirce in the mathematical had testified to the complete success of the experiment. In 1840–41 French was a required study,—a noteworthy fact, as President Eliot remarks, "for changes in the selection of studies held to be essential, and therefore required of all, are quite as important as additions to the list of studies which it is agreed should be optional."¹

The following scheme, adopted in the year 1841, shows concisely the extent to which the Elective System had advanced:

<i>Freshman Year.</i>	{ Prescribed: Mathematics, Greek, Latin, History. Elective: None.
<i>Sophomore Year.</i>	{ Prescribed: English Grammar and composition, rhetoric and declamation, one modern language, history. Elective: Mathematics, Greek, Latin, natural history, history, chemistry, geology, geography, the use of the globes, and any modern language; so far as the means of such instruction are within the resources of the University.
<i>Junior Year.</i>	{ Prescribed: English composition, one modern language, logic, declamation, physics, psychology, ethics, forensics, history. Elective: Same as in Sophomore Year, and a more extended course in psychology and ethics.
<i>Senior Year.</i>	{ Prescribed: Rhetoric, English composition, political economy, constitutional law, forensics, theology, history, declamation. Elective: Political ethics, a more extended course in physics, and any of the elective studies above enumerated.

Elective studies were thus generally countenanced, but they were not yet deemed equivalent, so far as the scale of marks showed, to the prescribed courses; for the Faculty decreed that "in forming the scale of rank at the end of a term, there shall be deducted from the aggregate marks given for an elected study one-half of the maximum marks for each exercise in such elected study; so that a student by only obtaining one-half of the maximum marks adds nothing to his aggregate, and by obtaining less than half is subject to a proportionate reduction."

Professors Beck, Felton, Peirce and Longfellow continued to be the advocates of this broad system of instruction, and they reported from year to year the advances made in their respective departments; but

¹ An exhaustive account of the Elective System at Harvard will be found in President Eliot's Report for 1881–85.

the opposition was still strong, either from the conviction of some of the Faculty that the system was bad in itself, or from the inability of the College to provide a sufficient number of courses to make the system equally serviceable in all directions. In 1847 it was no longer in vogue in philosophy; two years earlier the Faculty prohibited any student, unless for especial reasons, to study more than one modern language at a time. Mr. Longfellow protested against this exclusiveness, but, although he appealed to the Corporation, the rule was maintained. In 1846 "chemistry was a required study in the Freshman year instead of an elective study from the beginning of the Sophomore year; no modern language was required in either the Sophomore or the Junior year; the elective course in geology was confined to the Senior year, instead of being accessible from the beginning of the Sophomore year; no elective course in geography was provided; Story's Constitution was a required study for Juniors instead of Seniors; psychology and ethics were elective instead of required for Juniors; and political ethics were required instead of elective for Seniors." "If the number of elective studies had been large," says President Eliot, in criticising these regulations, "the scheme would have been a very liberal one, for election began early and the number of studies prescribed in the last three years was not large. The number of elective studies was, however, so small as practically to confine the choice of the students within narrow limits." The Faculty then consisted of only eleven members, and there were but six instructors in addition; the students then (1846) numbered 279. President Everett requested the opinions of the Faculty as to the advisability of continuing the system of elective studies. The opinions were evenly divided, but those professors who had given it the best trial were in favor of it. A new scheme was adopted (Dec. 29, 1846), which, with many modifications, lasted twenty years. "It allowed every Senior to select three from the following studies, namely, Greek, Latin, Mathematics, German, Spanish, and Italian, and every Junior to select three from the same studies, Italian excepted. All other studies were prescribed; but among the prescribed studies were natural history for Freshmen and Sophomores, and French and Psychology for Sophomores." Thus every Senior and Junior who did not select mathematics had to study three languages during the last two years, as well as during the Sophomore year. The number of exercises was also increased; Freshmen had sixteen and Seniors twenty-three per week. In 1849 this excess was relieved by requiring only two instead of three elective studies from Seniors and Juniors.

President Sparks was hostile to the elective system, and soon introduced changes which narrowed its scope. No Junior or Senior might take more than one elective; if he took more than one, it was regarded as an "extra," and did not count. Professor

Peirce vigorously opposed this retrograde step, and he was seconded by Professors Beck and Longfellow. "The voluntary system, as it has been called," wrote President Sparks in his last Report (1851-52), "is still retained to a certain extent, rather from necessity than preference. The number and variety of the studies for which the University has provided instruction are so large that it is impossible for any student, within the period of four years, to give such a degree of attention to them as will enable him to acquire more than a limited and superficial knowledge from which little profit can be derived." "The last sentence is," to quote President Eliot, "an unanswerable argument for an elective system in a University." In 1856-57 a further curtailment was made; French was again optional; Juniors were required to take two out of the three studies, Latin, Greek and Mathematics, and a half-year's course in molecular physics was required of them. In 1858 chemistry was made elective for Juniors; in 1862 patristic and modern Greek was added to the free list. German, Spanish and elementary Italian were also included among the Senior and Junior electives, but as the highest mark attainable in any of them was only six, instead of eight—the maximum in required studies—"students who had any regard for College rank were debarred from pursuing these undervalued elective studies."

In 1865, however, the advocates of the Elective System were once more in the majority. The Faculty, although still small in number, and overworked through the custom of dividing classes into small sections, voted "that botany be made an elective study in the Junior year, that Greek in that year be an elective instead of a required study, and that Juniors be allowed two elective studies instead of one; that German should be introduced as a required study into the second term of the Sophomore year, and that Roman history, Greek history and philosophy, and German should be added to the elective studies of the Junior year. Subsequently, Greek poetry was added." In 1867 a new scheme was drawn up, according to which all the work of the Freshman year was required; the Sophomores had seven hours a week *required*, and six hours *elective*; the Juniors and Seniors had six hours *required*, and six or nine hours *elective*. But slight changes occurred until 1870, when, by raising the tuition fee from \$104 to \$150 per annum, the increase of income enabled the employment of a larger force of instructors and the consequent extension of the Elective System. Year by year the number of required studies was lessened. In 1872 the Seniors were free to choose all their courses; in 1879 this privilege reached the Juniors; in 1884 it was extended to the Sophomores. In the latter year the Freshmen had nine hours a week of electives and seven hours of required studies. But for all the classes a certain number of themes and forensics was prescribed.

In 1885 the Elective System was brought to its

logical conclusion by being extended to Freshmen. At the present time (1890) the only prescribed work is: *Freshmen*, Rhetoric and English Composition, three hours a week; Chemistry, lectures once a week, first half-year; Physics, once a week, second half-year; German, or French, three hours a week, for those who do not present themselves for examination on the study at entrance. *Sophomores*, twelve Themes, *Juniors* and *Seniors* a forensic, a thesis, and an examination in argumentative composition in each year.

The two leading objections to the Elective System—first, that students (particularly Freshmen) cannot be trusted to select the studies best fitted for their development; and second, that some students will begin too early to specialize, and so fail to derive a liberal education from their College training—have been equally disproved by the experiment at Harvard up to the present time. The number of those who, through idleness or injudicious choice, have failed, has been very small, and is constantly kept down by the checks which the Faculty has provided—frequent examinations, and the appointment of a member of the Faculty to consult with and overlook each student. In 1889 the Overseers, fearing that too many of the students might abuse the privilege of voluntary attendance at lectures, suggested that a more strict method of marking absences and of registration should be adopted; and this has been done. But even such restrictions as these must sooner or later be abandoned, when the idea of what a University should be triumphs—not a reform school, nor a seminary, nor a substitute for paternal superintendence, but a treasury of learning from which every properly qualified person may draw in proportion to his ability. Our American public and most of our educators are still too tightly bound by the traditions dating from a time when colleges were but higher boarding-schools, to realize as yet the significance and the superiority of the University ideal towards which we have seen, in this brief review, Harvard steadily approaching.

With the growth of the Elective System there has grown up a class of special students, not candidates for a degree, and of graduate students who either desire to take a higher degree or to pursue for a time some special branch of advanced study. Of the former, the average annual number between 1828 and 1847 inclusive was only three, and little attention was paid to them. In the latter year the Scientific School was opened, and for three years all its members were designated "special students." In 1850 the School was put on a better basis, examinations for admission were required, and the "specials" no longer attended. It was not until 1876 that the College was again officially opened "to persons not less than twenty-one years old, who shall satisfy the faculty of their fitness to pursue the particular courses they elect, although they have not passed the usual examinations for admission to College, and do not propose to be candidates for the degree of Bachelor of

Arts." In 1881 the restriction as to age was annulled, and prescribed as well as elective courses were offered to these students, then called "unmatriculated" and (since 1882) "special."

The Graduate Department has likewise grown very rapidly. It is attended not only by Harvard graduates, but also by those from other colleges, who come here to complete their training. The work done by them is, in fact, the kind of work which belongs to a University, and to this department the best efforts of the professors will inevitably be more and more devoted as the general standard of learning is raised. The higher degrees (Master of Arts, Doctor of Science and Doctor of Philosophy) are conferred after one or two years of successful graduate study. In early times candidates for the Master's degree were required to spend a year in the College after their graduation, and to pass a satisfactory examination. In 1844 this custom was abandoned, and for nearly thirty years any one who had taken the Bachelor's degree was entitled to the Master's degree on the payment of five dollars three years after graduation. This, of course, deprived the degree of A.M. of all scholastic value; but since 1872 no person has received it at Harvard unless he has fulfilled the requirements above stated, and the Master's degree is now a certificate that one year of graduate work has been well performed. During the academic year 1888-89 there were ninety-nine graduate students connected with the University, of whom ten were non-residents. Of the latter, nine were holders of fellowships, by the terms of which the incumbents are allowed to pursue their studies abroad under the direction of the Academic Council.

Thus have the methods and courses of instruction been slowly liberalized and improved. The Classics and Mathematics, before which, as before Gog and Magog, educators fell down and worshipped, declaring them to be the only true agents of culture, have gradually been placed in their proper position—not degraded nor laid on the shelf, but prohibited from excluding proper reverence for Science, History and the Modern Languages, which are now recognized as being important means to culture. And the work done in Greek and Latin and Mathematics, being no longer obligatory, is more earnest than in the days of compulsion, and productive of more good. The old superstition that the degree of A.B. will be unintelligible, unless all who receive it have taken the same courses, still befores the eyes of some conservatives; but experience will certainly dissipate this, together with other ancient delusions, and the deliberations now (1890) in progress to shorten the academic course from four to three years, by entitling a student to his degree whenever he shall have passed satisfactorily the required number of studies, prove that the last stronghold of the conservatives will soon fall.

The raising of the standard of admission to Harvard has naturally wrought a complete change in the teaching of the preparatory schools. In 1827 the

candidate for the Freshman Class must be thoroughly acquainted with Latin and Greek Grammar, including prosody; he must be able to construe and parse Jacob's Greek Reader, the Gospels in the Greek Testament, Vergil, Sallust and Cicero's Select Orations, and to translate English into Latin; he must be well versed in Ancient and Modern Geography, in the fundamental rules of Arithmetic, in vulgar and decimal fractions, in proportion, simple and compound, in single and double fellowship, in alligation, medial and alternate, and in algebra to the end of simple equations, comprehending also the doctrine of roots and powers, and in arithmetical and geometrical progression. Now, however, many of the studies formerly taken up in College are embraced in the ordinary preparatory school curriculum. Seventy years ago boys entered Harvard at the age of fourteen; now the average at entrance is nearly nineteen. There are two classes of studies—*elementary* and *advanced*—on one of which the candidate for admission is examined. The former class (in 1889) comprised, 1, a short composition on some classic English author, and the correction of specimens of bad English. 2, Greek. The translation at sight of simple Attic prose, with questions on the usual forms and constructions. 3, Latin. As in Greek. 4, German, and 5, French. Translation at sight of ordinary prose. 6, History, including Historical Geography. Either the History of Greece and Rome, or the History of the United States and England. 7, Mathematics. Algebra, through quadratic equations, and Plane Geometry. 8, Physical Science. Either Astronomy or Physics, or a course of experiments in mechanics, sound, light, heat and electricity, not less than forty in number, actually performed at school by the pupil. The examinations in *Advanced Studies* comprise, 1, Greek. Translation at sight of average passages from Homer, or of ten difficult passages from Homer and Herodotus, with questions on construction and prosody. 2, Latin. Translation of average passages from Cicero and Vergil. 3, Greek and Latin Composition. 4, German. One work of Lessing, Schiller, Goethe, Chamisso and Freytag, with Grammar and Composition. 5, French. One work of George Sand, Sandeau, Scribe and Legouvé, Henri Gréville, La Fontaine, Molière, Racine and Corneille, with grammar and composition. 6, Mathematics. Logarithms; Plane Geometry, with its application to Surveying and Navigation; either Solid Geometry or the Elements of Analytic Geometry. 7, Physics. A course of at least sixty experiments in addition to those of the elementary physics. 8, Chemistry. Sixty experiments performed by the pupil. The candidate is also permitted to take optional examinations, and thus to qualify himself to pursue more advanced courses. He may, for example, be examined in the prescribed Freshman work or in any elective open to Freshmen.

This account of the progress of education cannot be more appropriately concluded than by appending the

following table, in which is shown the number of Elective courses provided by the College for the year 1888-89:

Semitic	11	Romance Philology	4½
Sanskrit and Zend	4	Philosophy	11½
Greek	14	Political Economy	6½
Latin	12	History	17½
Greek and Latin	1	Roman Law	1
English	8	Fine Arts	3½
German	8	Music	3½
Germanic Philology	2	Mathematics	15
French	8	Physics	13
Italian	3	Chemistry	12½
Spanish	3	Natural History	19½

182

There were besides four and a half prescribed courses.

A word should also be said concerning the constantly increasing usefulness of the College Library. In 1860 the system of "card catalogues" was introduced, and since the completion of the new wing, in 1876, the books have been wholly re-arranged. Mr. Justin Winsor, who succeeded Mr. John L. Sibley as Librarian in 1877, has initiated many improvements. The plan of reserving the works needed by students in the various courses has proved so satisfactory that the Reading Room is no longer large enough to accommodate all the students who would use it. In special cases permission is also granted to go directly to the stacks and alcoves. For several years past the Library has issued an occasional *Bulletin*. One of the assistants prepares the *University Catalogue*, which has been published annually in pamphlet form since 1819. Before that, from 1803, the list of students was printed on a broadside. The Catalogue of Alumni, issued triennially¹ from 1700 to 1880, and quinquennially since the latter date, is edited by another assistant at the Library. This year (1890) it will appear for the first time in English instead of Latin. Two interesting facts may be recorded here: Ko Kun Hua, a mandarin, was instructor of Chinese in the College from 1879 to 1882, and in 1881 members of the Greek department gave a satisfactory performance of the *Edipus Tyrannus* of Sophocles in the original language at Sanders Theatre, the music being composed by Professor J. K. Paine.

III. STUDENT LIFE.

COMMONS.—An adequate account of the life of the students at Harvard, from generation to generation, would be very interesting, but sufficient material is lacking. I shall attempt to present, however, as briefly yet satisfactorily as possible, the records I have found, and I shall present them chronologically and topically, so that the reader who so desires can trace the growth of undergraduate conditions, and compare

¹The earliest known catalogue of graduates is dated 1674; the next, 1682. Down to the Revolution Masters of Arts were called "Sirs," and so appear in the early catalogues. The terms Senior and Junior *Sophisters* were dropped in 1850.

those of one period with those of another. The development of the College, as we have seen, has been from a state of subservience to civil and religious authority to a state of independence; a similar process is illustrated in the development of student life. Students were originally treated like school-boys; they are now treated like men, hampered as little as is practicable by academic police regulations; and one of the most valuable lessons they now learn at the University is that of self-dependence, whereby they build up their character and fit themselves for their battle with the world.

But the designers of the "schoole at Newtowne" had no such ideal in view. They were themselves members of an austere community, and undertook collectively to admonish, correct and punish any individual member who might be deemed delinquent; and they imposed on their seminary a system similar to that by which adult lives were guided. If we bear in mind that Harvard was, for many years after its founding, a theological seminary, in which the scholars were mere boys, we shall understand the principles by which its discipline was framed. In the great European universities of the Middle Age, at Bologna, Padua and Paris, the students were often the masters, and the Faculty were the servants; but at Harvard the relations were reversed; the Faculty stood *in loco parentis* to the undergraduate, and brooked no question of their authority. The Faculty provided not only lodging and board for the student, but directed his worship and his recreation with the same severity as his studies; he was a member of a large family, in which the President or Tutor assumed the rôle of father, and believed, like most fathers at that time, that the child should not be spoiled from too sparing an application of the rod.

First in importance in an account of student life, excepting of course, education, which has already been sketched, is the history of Commons. And from the very beginning of Harvard College, complaints of bad fare reach us. When Eaton and his wife were examined in regard to their conduct at this Seminary (1637-39) the latter confessed that she had provided very scantily for the students. Their breakfast, she deposed, "was not so well ordered, the flower not so fine as it might, nor so well boiled or stirred." Beef was allowed them, but she never gave it, and she was stingier in her husband's absence than in his presence. She denied them cheese when they sent for it, and although she had it in the house; "for which," she said, "I shall humbly beg pardon of them, and own the shame, and confess my sin. . . . And for bad fish, that they had it brought to table, I am sorry that there was that cause of offence given them. I acknowledge my sin in it. And for their mackerel, brought to them with their guts in them, and goat's dung in their hasty pudding, it's utterly unknown to me; but I am much ashamed it should be in the family, and not prevented by myself or

servants. . . . And that they made their beds at any time, were my straits never so great, I am sorry they were ever put to it. For the Moor his lying in Sam Hough's sheet and pillow-bier, it hath a truth in it; he did so one time, and it gave Sam Hough just cause of offence. . . . And that they eat the Moor's crusts, and the swine and they had share and share alike, and the Moor to have beer, and they denied it, and if they had not enough, for my maid to answer, they should no, I am an utter stranger to these things, and know not the least footsteps for them so to charge me. . . . And for bread made of heated sour meal, although I know of but once that it was so, since I kept house, yet John Wilson affirms it was twice; and I am truly sorry that any of it was spent amongst them. For beer and bread, that it was denied them by me betwixt meals, truly I do not remember that ever I did deny it unto them; and John Wilson will affirm, that generally, the bread and beer was free for the boarders to go unto. And that money was demanded of them for washing the linen, it's true it was propounded to them, but never imposed upon them. And for their pudding being given the last day of the week without butter or suet, and that I said it was miln of Manchester in Old England, it's true that I did say so, and am sorry they had any cause of offence given them by having it so. And for their wanting beer betwixt brewings, a week or half a week together, I am sorry that it was so at any time, and should tremble to have it so, were it in my hands to do so again."¹

Eaton and his wife were discharged and heavily fined, but the students still continued to live at Commons, where the fare improved. Parents paid for their sons' schooling in produce and kind, whereby the larder was better stored. On the Steward's book we have entries of "a barrel of pork," "a old cow," "turkey henes," "two wether goatts," "a bush. of parsnapes," "a ferkinge of butter," "a red ox," "appelles," "a ferking of soap," "rose watter," "three peeks of peasse," "beadle," "fouer shotes from the farm," "tobaeco," etc.; which were doubtless applied to the use of the students.

The Laws, Liberties and Orders of Harvard College (1642-46), adopted under President Dunster, state that no scholar shall "be absent from his studies or appointed exercises above an hour at morning bever, half an hour at afternoon bever, an hour and a half at dinner, and so long at supper." The "morning bever" was eaten in the battery, or in the student's chamber; the "afternoon bever" came at about four o'clock, between dinuer and supper, which were served in the hall. Dunster also drew up (1650) a series of rules for the regulation of the students' diet. The Steward was required to give notice to the President when any student was indebted for more than £2 for his board, in order that the youth might be

¹ *Harvard Book*, II, 78, 79.

sent to his friends, "if not above a day's journey distant." The Steward was also forbidden "to take any pay that is useless, hazardous or imparting detriment to the college, as lean cattle to feed." It was decreed further that "WHEREAS young scholars, to the dishonor of God, hindrance of their studies and damage of their friends' estate, inconsiderately and intemperately are ready to abuse their liberty of sizing [extra food or drink ordered from the buttery] besides their commons; therefore the Steward shall in no case permit any Students whatever, under the degree of Masters of Art, or Fellows, to expend or be provided for themselves or any townsmen any extraordinary commons, unless by the allowance of the President, or two of the Fellows, whereof their Tutor always to be one, or in case of manifest sickness, pre-signified also unto the President, or in case of a license, of course granted by the President to some persons whose condition he seeth justly requires it."

The steward and cook must keep their utensils "clean and sweet and fit for use;" but they were not "bound to keep or cleanse any particular scholar's spoons, cups or such like, but at their own discretion." A scholar who "detained" any vessel belonging to the College was fined three pence. No scholars were permitted to go into "the butteries or kitchen, save with their parents or guardians, or with some grave and sober strangers; and if they shall presume to thrust in, they shall have three pence on their heads." At meals the scholars must sit orderly in their places, and none must rise or go out of the Hall without permission before thanksgiving be ended. Finally, the Butler should receive ten shillings on September 13th, and ten more on December 13th, "toward candles for the Hall for prayer time and supper, which, that it may not be burdensome, it shall be put proportionably upon every scholar who retaineth his seat in the buttery."

In early times the position of Steward and Butler were both filled by graduates; and some of the students waited on table, for which they were paid. William Thomson, for instance, of the Class of 1653, received quarterly one pound "for his services in the Hall;" Zechariah Brigden (Class of 1657) was given for "ringing the bell and waytinge, £1 2s.," and John Hale, of the same class, received for "waytinge and his monitor-work £2 11s."

Dunster's rules remained in vigor, with occasional modifications, down to 1734. Judge Sewall states that in 1674 a student was punished for "speaking blasphemous words," by being obliged "to sit alone by himself uncovered at meals during the pleasure of the President and Fellows;" from which we infer that it was then customary to have the head covered while eating. Order was maintained by the presence of the Tutors at Commons; and the Corporation, or Overseers, frequently fixed the price which the Steward and Butler might charge for their food and liquors. Thus, in October, 1715, the latter was pro-

hibited from taking more than two pence a quart for cider until the 1st of February.

That students lodged outside of the College buildings seems to have been an early practice, necessitated by the lack of sufficient accommodations in the Halls; and that some of those who lodged in the Halls boarded outside is evident from the order passed in 1724 to compel all such scholars, graduates and undergraduates to eat at Commons, unless the President and a majority of the Tutors granted them leave to do otherwise. This rule was the source of much trouble, and was long resisted. A visiting committee of the Overseers reported, in 1732, that this rule ought to be enforced; that students and graduates should be prevented "from using punch, flip and like intoxicating drinks," and "that Commons be of better quality, have more variety, clean table-cloths of convenient length and breadth twice a week, and that plates be allowed."

New laws, consonant with these recommendations, were passed in 1734. Students, in order to "furnish themselves with useful learning," must "keep in their respective chambers, and diligently follow their studies, except half an hour at breakfast, at dinner from 12 to 2, and after evening prayers till nine of the clock." Breakfast, or "morning bever," was still served at the buttery, and eaten usually in the student's chamber. No resident in the College might "make use of any distilled spirits or of any such mixed drinks as punch or flip in entertaining one another or strangers;" and no under-graduate might "keep by him brandy, rum or any other distilled spirituous liquors," or send for them without leave from the President or a Tutor. The clean linen cloths, of suitable length and breadth, and pewter plates were furnished by the College; but the plates were to be maintained at the charge of the scholars. Section 3, Chapter V, of these laws runs as follows: "The waiters, when the bell tolls at meal-times, shall receive the plates and victuals at the kitchen-hatch, and carry the same to the several tables for which they are designed. And none shall receive their commons out of the Hall, except in case of sickness or some weighty occasion. And the Senior Tutor or other Senior scholar in the Hall shall crave blessing and return thanks. And all the scholars, while at their meals, shall sit in their places and behave themselves decently and orderly, and whosoever shall be rude or clamorous at such time, or shall go out of the Hall before thanks be returned, shall be punished by one of the Tutors not exceeding five shillings."

The buttery came to be a recognized department of the College, where students could purchase provisions, beer, cider and other extras, in order that they might have no excuse for frequenting the public-houses and taverns in the town. The butler was authorized to sell his wares at an advance of fifty per cent. beyond the current price, and from this profit he derived a

part, if not all, of his salary. He and the cook were enjoined to keep their utensils clean, to scour the kitchen pewter twice every quarter, and the drinking vessels once a week or oftener. Among the other duties of the butler, he was required to "wait upon the President at the hours for prayer in the Hall, for his orders to ring the bell, and also upon the Professors for their lectures, as usual;" to "ring the bell for Commons according to custom, and at five o'clock in the morning and nine at night;" to "provide candles for the Hall," and to "take care that the Hall and the entry adjoining be swept once a day and washed at least once a quarter, and that the tables and forms be scoured once a week (except in the winter season, when they shall be scoured once in three weeks, or so often as the Tutors shall require it)."

Despite these explicit regulations and the fines mulcted for the infringement of them, there were frequent cases of grumbling and disobedience on the part of the students, and of neglect or of undue parsimony on the part of the butler and steward. Before 1747 permission to board in private families was generally granted, whereat the Overseers were displeased and voted that it would be "beneficial for the College that the members thereof be in Commons." After a struggle lasting more than two years the Steward, to whose mismanagement and "scrimping" the students' discontent was attributed, was discharged and a new one appointed. That same year (1750) the Corporation voted "that the quantity of Commons be, as hath been usual, viz.: two sizes of bread in the morning; one pound of meat at dinner, with sufficient sauce (vegetables), and half a pint of beer; and at night that a part pie be of the same quantity as usual, and also half a pint of beer; and that the supper messes be of four parts, though the dinner messes be of six." The Overseers persisted in their recommendation that all students be compelled to board at Commons; the Corporation, on the contrary, deemed that so sweeping a law would be unwise. But the former, in 1757, passed a resolution that it would contribute to the health of the students, "facilitate their studies and prevent extravagant expense," if they "were restrained from dieting in private families;" and as an inducement, it was further voted "that there should be pudding three times a week, and on those days their meat should be lessened." In 1760 the Corporation prohibited students "from dining or supping in any house in town, except on an invitation to dine or sup *gratis*;" but this law could hardly be strictly enforced, because many students had still, through lack of accommodations in the Halls, to lodge outside, and some of these probably continued to "diet" at private houses. In July, 1764, the Overseers recommended that no student should be allowed to breakfast in the town; that breakfast be thenceforth furnished at Commons; that either milk, tea, chocolate or coffee be provided; and that students, if they preferred, might prepare their breakfast in their own chambers, but

might not eat it in one another's chambers. The completion of Hollis Hall, in 1764, enabled most of the students to lodge in the College, and they, together with all Professors, Tutors and graduates, were obliged to board at Commons. There was a rebellion in 1766, caused partly by the refusal of the College officers to grant excuses for absence from prayers, and partly by the poor quality of the food; among other grievances the Steward had served bad butter for many weeks past.

Of the fare previous to this time, Dr. Holyoke (Class of 1746) said: "breakfast was two sizings of bread and a cue of beer; evening Commons were a pye." Judge Wingate (Class of 1759) wrote: "As to the Commons, there were in the morning none while I was in College. At dinner we had, of rather ordinary quality, a sufficiency of meat of some kind, either baked or boiled; and at supper we had either a pint of milk and half a biscuit, or a meat pye or some other kind. [Commons] were rather ordinary, but I was young and hearty and could live comfortably upon them. I had some classmates who paid for their Commons and never entered the Hall while they belonged to the College. We were allowed at dinner a cue of beer, which was half a pint, and a sizing of bread, which I cannot describe to you. It was quite sufficient for one dinner." Before breakfast was regularly served at Commons, there was much disorder in getting the morning or the evening "bever" at the buttery-hatch. In the *mêlée* the bowl of milk or chocolate might be upset, and "sometimes the spoons were the only tangible evidence of the meal remaining."

During the Revolutionary War new difficulties interfered with the satisfactory management at Commons. This was one of the grievances adduced by the students when they petitioned the General Court to be moved back from Concord to Cambridge. In August, 1777, the Corporation, in order "that the charge of Commons may be kept as low as possible, *Voted*, that the Steward shall provide at the common charge only bread or biscuit and milk for breakfast; and, if any of the scholars choose tea, coffee or chocolate for breakfast, they shall procure these articles for themselves, and likewise the sugar and butter to be used with them; and if any scholars choose to have their milk boiled, or thickened with flour, if it may be had, or with meal, the Steward, having seasonable notice, shall provide it; and further, as salt fish alone is appointed . . . for the dinner on Saturdays, and as this article is now risen to a very high price, and through the scarcity of salt will probably be higher, the Steward shall not be obliged to provide salt fish, but shall procure fresh fish as often as he can." In 1783 the Faculty voted that in future no students should "size" breakfasts in the kitchen, nor take their dinner from the kitchen on Lord's Days.

In 1790 a new code of College Laws was published, in which the old prohibition against dining or sup-

ping with townspeople (except *gratis*) was reiterated and, among other things, students were required to give notice to the Steward on the first Friday of each month what they wished for breakfast during the month. The fine for eating out of Commons was one shilling, raised, in 1798, to twenty cents. At Commons the students sat at ten tables, in messes of eight on each side. The Tutors and Seniors occupied a platform raised eighteen or twenty inches. Down to 1771 the custom prevailed of placing students according to the rank of their families, the lists, written in a large German text, being hung up in the Hall, and those students who belonged to the "first" families had the privilege of helping themselves first at table. The waiters were students, paid for their services, and generally respected by their classmates. Boiled meat was served on Monday and Thursday, roast meat on the other days; each person had two potatoes, which he must peel for himself. "On 'boiling days' pudding and cabbage were added to the bill of fare, and, in their season, greens, either dandelion or the wild pea." Cider had taken the place of beer at meals, each student being allowed as much as he wished. "It was brought to the table in pewter quart cans, two to each mess. From these cans the students drank, passing them from mouth to mouth, as was anciently done with the wassail bowl."¹

Of course, complaints never ceased. At one time the butter was "so bad that a farmer would not take it to grease his cart-wheels with." At other times, when the Steward had furnished, for the sake of economy, nothing but veal or lamb for weeks together, the students would assemble outside the buttery and set up a concerted bleating and baaing, as a hint for him to vary their diet. In 1790 the Steward became one of the financial officers of the College, and his purveyor's duties were transferred to the Butler and Cook.² In order to prevent the students from "resorting to the different marts of luxury, intemperance and ruin," the Buttery was made "a kind of supplement to the Commons," where they could procure, "at a moderate advance on the cost, wines, liquors, groceries, stationery, and in general such articles as it was proper and necessary for them to have occasionally, and which, for the most part, were not included in the Commons fare. The Buttery was also an office where, among other things, records were kept of the times when the scholars were present and absent." In 1801 the Buttery was abolished, it having for some time previous "ceased to be of use for most of its primary purposes. The area before the entry doors . . . had become a sort of students' exchange for idle gossip, if nothing worse. The rooms were now redeemed from traffic, and devoted to places of study. . . . The

last person who held the office of Butler was Joseph Chickering, a graduate of 1799."

The handing out of supper from the kitchen-hatch was the source of constant disturbances; but the Faculty made a long struggle to preserve this ancient custom. At last, however, after repeated failures, they desisted, and from the year 1806 supper was served regularly at Commons in the Hall. A record of the Faculty for August 31, 1797, is worth quoting: "The time of the Butler's Freshman being greatly taken up with the public duties of his station, and with the private concerns of the Buttery, and his task being laborious, *Voted*, That in the future the Butler's Freshman be excused from cutting bread in the kitchen, and that it be cut by the servants in the kitchen." In 1807 discontent over Commons led to one of the liveliest rebellions in the history of the College; among other violent acts a student named Pratt at dinner did "publicly in the Hall insult the authority of the College by hitting one of the officers with a potatoe." That same year the Professors, Tutors, the Librarian, graduates and undergraduates were required to take all their meals at Commons, but the fare seems not to have improved. In 1819 a row occurred in Commons between the Sophomores and Freshmen, which caused many suspensions, and furnished the theme of the mock-heroic poem, *The Rebellion*. Four years earlier Commons had been removed from Harvard Hall to the just-completed University Hall, where they were held till their abolition in 1849. In 1818 the wages of the waiters were reduced; each waiter received board *gratis* for three-quarters of the time during which he was in service. In 1823 the "Master of the Kitchen" was directed to furnish no more cider at breakfast or supper; and the next year wine was denied at the Thanksgiving Dinner. In 1825 students who obtained permission might board at a private house; but they might not lodge outside of the College unless the Faculty approved. President Quincy purchased in England plate to be used at Commons, each article having the College seal; during the Civil War this service was sold, being bought chiefly by the alumni, who thus secured mementoes of an obsolete phase of Harvard life. After 1842 the College renounced responsibility for Commons, which was assumed by a contractor, who rented the rooms in University and provided the food. At length, in 1849, Commons were abolished, as they had come to be patronized by less than one-sixth of the whole number of students residing at the University. "This state of things," says President Sparks, in his report for that year, "afforded a clear indication that, whatever advantages may have been derived from this arrangement in former times, it was no longer necessary. It was resolved, therefore, . . . to leave the students to procure their board in such private houses as they might select. . . . The experiment has now been tried for one term, and with such success as to make

¹ Hall's "College Words and Customs," 1850, p. 75.

² In 1872 the title of Steward, who had long been the Treasurer's agent at Cambridge, was changed to Bursar.

it improbable that the Commons will again be revived."

It cannot be denied, however, that the system, in theory at least, was a good one, for it provided food at moderate rates to a large number of students. The trouble was that, in the effort to economize, the quality of the food was poor, and the quantity scanty; so that while poor students might tolerate it for the sake of getting a college education, those who came from more prosperous families were inevitably dissatisfied. And with the increase of prosperity throughout the country the number of well-to-do students naturally exceeded that of the poor. For fifteen years, therefore, the students boarded at private houses, either singly or in clubs, except that in 1857 the College conducted a restaurant at the old Brattle House. In 1864 Dr. A. P. Peabody interested Nathaniel Thayer in the subject of students' board, which now cost more than some of those whose means were small could well afford to pay, and he offered \$1000 towards the re-organization of Commons. The old railroad station (situated near the site of the present Law School) had been bought by the College, one of its rooms being then occupied by the *Regina Bonarum*, or "Queen of the Goodies," as the head bed-maker was nicknamed by the students. The Corporation consenting, this building was properly fitted up, and the Thayer Dining Club ate in it, beginning in 1865. The number of students who desired to partake of the Club's Commons soon exceeded the capacity of the rooms; and Mr. Thayer contributed \$5000 (to which some other subscribers added \$2000) to build an addition. The management of the Club was left to its members, under the supervision of a Faculty committee of three. Upon the completion of Memorial Hall the Thayer Club was expanded into the Dining Association, and, in the autumn of 1874, Commons were removed to Memorial Hall, where they have ever since been held. The Association consists of a President, Vice-President and of two directors from each School and each College Class; the President and Vice-President are elected by a general vote, the directors by a vote of the members of their School or Class who belong to the Association. No wine, beer or other alcoholic drinks, and no tobacco may be used in the Hall. Dinner, originally served at 2 P.M., is now served from 5.30 to 6.30; breakfast, from 8 to 9; lunch, from 12.30 to 1.30. The price of board is charged on the students' term-bills. The number of boarders at Memorial Hall is about 700, and as there are usually many more applicants than can be seated these must wait for vacancies to occur. The food is unquestionably much better than was ever supplied by the old Commons, and, although grumbling is frequently heard, the majority of the students appreciate the advantages they enjoy. Thus the difficult problem of feeding the students has been successfully solved; they control the management of Commons, and can therefore provide such

fare as the majority desire, while the College, as is right, keeps the accounts. In 1889 the Foxcroft Club was organized, where students can procure plain food at even cheaper rates than at Memorial Hall—thirty-five cents a day being sufficient to satisfy an economical student of small appetite.

In conclusion, I will set down for purposes of comparison, the price of food at Commons at different periods. In 1664-65 it was about 75 cents per week; in 1765, \$1.22; in 1805, \$2.24; in 1806, \$1.89; in 1808, \$1.75; in 1833, \$1.90; in 1836, \$2.25; in 1840, highest, \$2.25, lowest, \$1.75; in 1848, highest, \$2.50, lowest, \$2; from 1864 to 1890 the price at Memorial Hall has varied from about \$3.75 to \$4.25; Foxcroft Club (1890), lowest about \$2. The cost of board in private houses, or at "Club tables," has always been dearer than at Commons. A member of the Class of 1846 tells me that in his time excellent fare was furnished for three dollars per week, and more than four dollars was considered an extravagant price. At the present time private board may be had at from five dollars to eight dollars per week.

PRAYERS.—The history of the religious services in the College, like the history of Commons, deals with a very interesting side of student life. Enforced attendance at prayers was the cause of almost as many rebellions and protests as was scanty food in the Hall. The writer on this subject in *The Harvard Book*, states thus concisely the various places where the religious exercises at Harvard have been held: "Originally religious services were held by each class in their Tutor's room; afterwards all the students came together in Commons Hall or the Library; and later an apartment in the old Harvard Hall was used as a chapel. In 1744 Holden Chapel was erected, which was a building of one story, entered by the door at the western end, the seats of which, with backs, were ranged one above another, from the middle aisle to the side walls. Soon after 1766 a room on the lower story of the new Harvard Hall was taken for devotional exercises. Here likewise the seats rose one above another, the Freshmen occupying those in front, the Sophomores sitting behind them, the Juniors and Seniors coming next; while on either side of the desk, which was at the end nearest the street, were seats for the instructors and others." While the College was in exile at Concord (1775-76), recitations were held there in the court-house, and prayers in the meeting-house. On the completion of Massachusetts Hall, services were held in the Chapel in the upper part of that building, until 1858, when Appleton Chapel was erected, and has since served for both the week-day and Sunday worship of the College.

From the earliest time the students had attended the First Parish Church on Sundays. This was rebuilt in 1756 (on the southwest corner of College Yard, near the present site of the old Law School), and an agreement was made between the Corporation and the First Parishioners, by which the front gallery was re-

served for students, and a pew on the floor for the President and his family; and the College, having agreed to pay one-seventh of the cost of the building and all future repairs, had also the right to use it on Commencements and public occasions. It was soon found that the students put so little into the contribution box that in 1760 the Corporation voted "that the box should not be offered (ordinarily) on the Lord's Day to the Scholars' gallery, but that instead they should be taxed towards the support of the ministry, in each of their quarterly bills, nine pence lawful money." In 1816 the connection between the College and the First Parish Church was severed, and the Sunday worship of the students was conducted in the Chapel in University Hall by officers of the Divinity School. The Church was taken down in 1833, when its successor, the present First Church, was erected.

Since the College was originally a seminary, founded by a church-going people for the especial purpose of training up youths to become ministers, it is not surprising that the rules concerning prayers and worship were strict. In President Dunster's time it was required that, "Every Scholar shall be present in his Tutor's chamber at the 7th hour in the morning, immediately after the sound of the Bell, at his opening the Scripture and prayer, so also at the 5th hour at night, and then give account of his owne private reading. Every one shall so exercise himselfe in reading the Scriptures twice a day, that he shall be ready to give such an account of his proficiency therein, both in Theoreticall observations of the Language, and Logick, and in Practicall and Spiritual truths, as his Tutor shall require, according to his ability; seeing the entrance of the word giveth light, it giveth understanding to the simple. *Psalm* cxix, 130." The *Laws, Liberties and Orders* adopted at that time (1642-46) also state, § 5: "In the public church assembly, they shall carefully shun all gestures that show any contempt or neglect of God's ordinances, and be ready to give an account to their Tutors of their profiting, and to use the helpe of storing themselves with knowledge, as their Tutors shall direct them. And all Sophisters and Bachelors (until themselves make common place) shall publicly repeat sermons in the Hall, whenever they are called forth." And again, § 14: "If any Scholar, being in health, shall be absent from prayers or lectures, except in case of urgent necessity, or by leave of his Tutor, he shall be liable to admonition (or such punishment as the President shall think meet), if he offend above once a week."

The President himself conducted the daily services in the Hall. The undergraduates translated in the morning the Old Testament from Hebrew into Greek, and in the evening, they translated the New Testament from English or Latin into Greek; but Freshmen were allowed to use the English Bible. After this reading the President expounded the passages

read, and then closed with prayer. Once President Rogers's prayer was much shorter than usual. "Heaven Knew the Reason!" wrote Cotton Mather; "the scholars, returning to their Chambers, found one of them on fire, and the Fire had proceeded so far, that if the Devotions had held three Minutes longer, the Colledge had been irrecoverably laid in Ashes, which now was happily preserved." The translating was not popular, and students shirked it as often as they dared. In 1723 it is reported that the attendance by Tutors and graduates at prayers was good, but not at the readings; but that the undergraduates attended both. In 1795 it was ordered that the students during the prayer and at the blessing should stand facing the desk, but that they should sit during the reading from the Scriptures.

The morning service was for a long time the occasion when students made a public confession of misconduct, and when the President announced the names of those who were to be punished by degradation, admonition or expulsion. Many records of these confessions are preserved. I quote a few: President Leverett's *Diary*, under date of November 4, 1712, reads: "A. was publickly admonish'd in the College Hall, and there confessed his Sinful Excess, and his enormous profanation of the Holy Name of Almighty God. And he demeaned himself so that the Presid^t. and Fellows conceived great hopes that he will not be lost." Again, March 20, 1714, Leverett says of Larnel, an Indian who had been dismissed: "He remained a considerable time at Boston, in a state of penance. He presented his confession to Mr. Pemberton, who thereupon became his intercessor, and in his letter to the President expresses himself thus: 'This comes by Larnel, who brings a confession as good as Austin's (St. Augustine), and I am charitably disposed to hope it flows from a like spirit of penitence.' In the public reading of his confession, the flowing of his passions were extraordinarily timed, and his expressions accented, and most peculiarly and emphatically those of the grace of God to him; which indeed did give a peculiar grace to the performance itself, and raised, I believe, a charity in some, that had very little I am sure, and ratified wonderfully that which I had conceived of him. Having made his public confession, he was restored to his standing in the College." Tutor Flynt writes in his *Diary*, November 4, 1717: "Three scholars were publicly admonished for thieving and one degraded below five in his class, because he had been before publicly admonished for card-playing. They were ordered by the President into the middle of the Hall (while two others, concealers of the theft, were ordered to stand up in their places, and spoken to there). The crime they were charged with was first declared, and then laid open as against the law of God and the House, and they were admonished to consider the nature and tendency of it, with its aggravations; and all, with them, were warned to take heed and regulate themselves, so that they might

not be in danger of so doing for the future; and those who consented to the theft were admonished to beware, lest God tear them in pieces according to the text. They were then fined, and ordered to make restitution two-fold for each theft." President Wadsworth relates that the public confession of B., who had been engaged in disorder, was read in the Hall after morning prayer, June 29, 1727. "But such a disorderly spirit at that time prevailed, that there was not one undergraduate in the Hall besides B, and three Freshmen; there were also the President and the two Senior Tutors, but not one Graduate Master or Bachelor besides them. When the Scholars, in thus absenting from the Hall, refused to read a confession of, or admonitions against, the aforesaid disorders, it too plainly appeared that they had more easy and favorable thoughts of those disorders themselves than they should have had; the Lord, of his Infinite grace in Christ, work a better temper and spirit in them." As late as May 26, 1786, there is record of a public confession in the Chapel.

Prayer was held at six in the morning. In 1731 a schedule of fines for absences, tardiness and misbehavior at Chapel was adopted. Rebellions frequently broke out, but the regulations were enforced. After prayer there were recitations until breakfast, at half-past seven—a rule which caused some of the students to take their text-books to Chapel, and to study them clandestinely during the service. In 1773, it appearing that the custom was slighted of repeating on the "Lord's Day evening" the heads of the sermons on the previous day, the Overseers proposed that one of the students should read aloud a discourse, which would not only foster piety, but also encourage "just and graceful elocution." Then declamations were made after evening prayers, as appears by an entry in the *Diary* of J. Q. Adams: "March 24, 1786. After prayer I declaimed, as it is termed; two students every evening speak from memory any piece they choose, if it be approved by the President."

At the beginning of the year the first three members of the Sophomore Class read on successive Mondays, after evening prayers, the so-called "Customs" to the Freshmen, who were required to listen with decency. J. Q. Adams, in his *Diary* for March 26, 1786, says: "After prayer, Bancroft, one of the Sophomore Class, read the Customs to the Freshmen, one of whom (McNeal) stood with his hat on all the time. He, with three others, were immediately hoisted (as the term is) before a Tutor and punished. There was immediately after a class meeting of the Freshmen, who, it is said, determined they would hoist any scholar of the other classes, who should be seen with his hat on in the Yard, when any of the Government are there."

Practical jokes were played upon the minister from an early period. In 1785 the College Bible was missing, and also two Indian images which stood on the gate-posts of a Cambridge resident. All these were

found by a Tutor in a room of a student, who was reading the Bible in loud tones to the images. "What is the meaning of this noise?" asked the Tutor angrily. "Propagating the gospel among the Indians, sir," was the student's calm reply. In winter the pulpit was lighted by candles, and sometimes mischievous students bored holes in these, and filled them with powder, which, when the flame reached it, put out the lights. At another time, flat pieces of lead inserted in the candles, produced the same result. Many were the assaults made on the College bell, in the endeavor to prevent its ringing for prayers; once the monitor who marked absences was locked in his room, but he found out the culprits, and marked them only as absent. When Ashur Ware, who hesitated in his speech, conducted the service, the students used to sneeze, making the sound *A-a-shur, A-a-shur-ware*. "Pull-crackers" being fastened to the lids of the Bible, they exploded when it was opened, whereupon President Kirkland reproved the students so earnestly, that many of the students went out saying, "That's right," "The President's right." Dr. Kirkland used to be summoned to prayers by the Regent's Freshman, who rang the bell morning and evening. Once, when Edward Everett was President, the gate which led from the enclosure of Wadsworth House was nailed up, so that he had to go round in order to reach the Chapel in University. He was so incensed, that he lectured the students, using as a text Dante's appeal to Florence, "What have you done to me?" Everett's lack of humor, which prevented him from seeing the disproportion between the annoyance he had suffered and the treatment Dante received from the Florentines, was not lost on some of his hearers. Many efforts were made to secure more reverence at the services, but they often failed. And no wonder, when we remember that, besides the usual ceremony, it was the custom for each Divinity student, who was a beneficiary of the Hopkins Fund, to read four theological dissertations, each ten minutes long, after evening prayers. "In one year the undergraduates were required to listen to thirty-two such dissertations, among which were an English essay on 'Ejaculatory Prayer,' and a Latin disquisition on 'The Hebrew Masoretic Points.'" Absences were announced in Latin every Saturday, and excuses were given in Latin. Common excuses were, "*semel aegrotavi*," "*bis invitui*," "*detentus ab amicis*," "*Ex oppido*," and "*tintinnabulum non audivi*." One Freshman, charged with three absences, replied, "*Non ter, sed semel absui; Carolus frater locked me up in the Buttery*." Once (April 18, 1821) only three students appeared at prayers, which were, nevertheless, conducted as usual: the rest of the College had gone the preceding evening to see Kean act in Boston, and a heavy snow-storm had prevented their return.

President Quincy was absent from prayers only twice during the sixteen years of his administration, and then he was detained in court as a witness. He

sat directly in front of the organ, on the west side of the University, opposite the minister; and whenever, after the services, he had an address to make, he would read it from manuscript. Henry Ware, Sr., then conducted morning, and his son evening prayers. In 1831 a charge of sectarianism was raised against the form of services, but a member of the Corporation replied that the "objection is not that they *contain* sectarianism, but that they *omit* sectarianism." Statistics prepared in 1830 show that during the preceding year, absences, excused and unexcused, of the Senior Class averaged only two a week for each individual. Excuses were then granted by the President, but in 1844 President Quincy required that every minor must "bring a written excuse from his parent, guardian or physician. This brings him continually under domestic surveillance, and gives the Faculty of the College evidence of the reality of his excuse of the most unquestionable authenticity." From that time, therefore, we may probably date the first flow of that stream of "doctor's certificates" and parental excuses, which flooded "the office" every Monday morning, until, by the abolition of compulsory attendance, the need of those documents ceased. Disturbances were usually greater at evening than in the morning, perhaps because the spirit of mischief was not wholly aroused in those who got out of bed, drew on boots and overcoat, and ran to Chapel at six o'clock A. M. That was the hour for prayers, except in winter, when they came at seven o'clock. No occasion was lost for shuffling or stamping with the feet, until at last the long seats were replaced by settees, so that the monitors could see who made the noise. The Bible was stolen in 1831 and in 1852, and again in 1863. In 1852 it was sent by express to the Librarian of Yale College, who had it returned to Harvard. On one of the fly-leaves the following inscription was found: *Hoc Biblém raptrm xi a pulpíte Harvard Coll. Chapellí Facultati Yali ab Horr. Coll. vndergraduatibz donater rewardem meriti et lenitatis in expellendo sophomores XXVfer et receptor idem in vestro librarienculo refinet: covers servimus in vsem chessboardi pro Helter Skelter Club.*

During President Walker's term (1853-60) evening prayers were discontinued; at the morning service a choir was introduced, and a "Service Book," prepared by Prof. Huntington, was used. The experiment of holding prayers after breakfast did not succeed. The bell was still the object of many futile attacks; once, indeed, some students succeeded in cutting out the tongue, but the Janitor, Mills, beat the strokes with a hammer. Attempts to plug the keyholes of the Chapel doors likewise failed; the alert watchman always frustrated them in time. Once the seats allotted to the Freshmen were painted green, mottoes were daubed on the walls, and the building was wantonly defaced; later (in 1870), stripes like those on a barber's pole were painted on the columns in the porch of the Chapel. When President Hill, in

the absence of Dr. A. P. Peabody, conducted the exercises, a lighted bunch of fire-crackers was thrown into the pulpit, but he calmly put his foot on the fuse before the crackers exploded. When the news came of the capture of Richmond, President Hill announced it after the services, and the students went out singing "Old Hundred."

After President Eliot's accession (1869) the choir was discontinued, and the whole body of students, led by the Glee Club, sang, using a book of "Melodies and Hymns," compiled in 1870. Each student was allowed fifty unexcused absences during the year; the number being reduced to forty in the case of those who were excused on Mondays. Each unexcused absence counted three censure marks; each tardiness counted eight. The "prayer line" included all students who roomed within a third of a mile of the Chapel. When the unexcused "cuts" amounted to ten, the student was privately admonished; at twenty "a public admonition" was given, but no longer in public; after forty cuts, the student was suspended. These punishments were regulated by the Dean. Parents who objected on religious ground to their sons' attendance at Chapel, could have them permanently excused.

But already public sentiment began to show itself against compulsory attendance at religious services. It was argued that a student who, after a hasty toilet, goes to Chapel and listens perfunctorily to the reading of the Scriptures and to prayers and hymns, could not be expected to derive much good therefrom; an empty stomach does not conduce to a devotional frame of mind. But the conservatives for a long time opposed any change; it was necessary, they said, to have some means for getting the students up in the morning, and prayers subserved this end exactly. The would-be reformers replied that it was hardly decorous to convert an avowedly religious ceremony into a mere academic roll-call. Then the conservatives insisted that to abolish compulsory attendance would be to justify those critics of the College who were continually charging Harvard with irreligion. The reformers retorted that it was Pharisaical to pretend that the majority of the students attended Chapel in a worshipful spirit, and that it would be better honestly to allow each student to choose for himself. But the conservatives long prevailed.

From September, 1872, to February, 1873, morning prayers were discontinued while alterations were making in Appleton Chapel. President Eliot, in his Report for that year, said: "The Faculty thus tried, quite involuntarily, an interesting experiment in College discipline. It has been a common opinion that morning prayers were not only right and helpful in themselves, but also necessary to College discipline, partly as a morning roll-call and partly as a means of enforcing continuous residence. It was therefore interesting to observe that the omission of morning prayers for nearly five months, at the time of year when the days

are shortest and coldest, had no ill effects whatever on College order or discipline. There was no increased irregularity of attendance at morning exercises, no unusual number of absences, and, in fact, no visible effect upon the other exercises of the College, or upon the quiet and order of the place. The Professors and other teachers living beyond the sound of the prayer-bell would not have known from any effect produced upon their work with the students that morning prayers had been intermitted." In spite of this practical experiment, however, the Overseers clung to the old custom, and vetoed a vote of the Corporation to make attendance at prayers voluntary. In November, 1874, Sunday morning prayers were abolished, Sunday evening prayers having been discontinued in 1766. But the agitation was not abandoned, and finally, in October, 1886, attendance at daily prayers and Sunday services ceased to be compulsory. Since that time the services have been performed in rotation by the Plummer Professor, or by one of the five preachers to the University appointed annually from among conspicuous clergymen of various denominations. The services are short, and the average attendance of students who go of their own accord has been satisfactory. The preacher for the time being meets any students who wish to confer with him every morning during his term. Exercises, with a sermon, are also held on Sunday evenings in Appleton Chapel; and during the winter months a "Vesper Service" is held every Thursday at five o'clock, at which the singing is performed in part by the congregation, and in part by a choir of boys and by soloists especially engaged. The cost of maintaining these various religious exercises was \$7555.33 for the year 1888-89.

DISCIPLINE.—In the foregoing pages I have given an account of some of the laws by which the students were formerly governed, and of some of the ways in which the ever-fertile undergraduate mind evaded or contravened them. I propose now to describe a little more fully the various codes of College discipline, and some of the famous instances when the students, throwing over all restraint, lived in open rebellion with their governors. One fact is impressed upon us in reviewing this department of college life: discontent and rebellion were vehement just in proportion to the burden of repression. College students are men "in the making;" they are endowed with a large amount of human nature—a truth which Faculties have often overlooked; they can usually be led more easily than they can be driven; and as they have been permitted larger liberty, they have behaved with greater decorum.

At the outset, Harvard being a seminary which scholars entered at thirteen and left at seventeen, the discipline was stern, of the Puritan type of sternness. The *Laws, Liberties and Orders* of 1642 announced that "§2. Every one shall consider the main end of his life and studies to know God and Jesus Christ, which is eternal life; John xvi, 13." §6.

"They shall eschew all profanation of God's holy name, attributes, words, ordinances, and times of worship; and study, with reverence and love, carefully to retain God and his truth in their minds."

§7. "They shall honor as their parents, magistrates, elders, tutors and aged persons, by being silent in their presence (except they be called on to answer), not gainsaying; showing all those laudable expressions of honor and reverence in their presence that are in use, or bowing before them, standing uncovered, or the like." §8. "They shall be slow to speak, and eschew not only oaths, lies, and uncertain rumors, but likewise all idle, foolish, bitter, scoffing, frothy, wanton words, and offensive questions." §9. "None shall pragmatically intrude or intermeddle in other men's affairs." §11. "None shall, under any pretence whatsoever, frequent the company and society of such men as lead an unjust and dissolute life. Neither shall any, without license of the Overseers of the College, be of the artillery or trainband. Nor shall any, without the license of the Overseers of the College, his Tutor's leave, or, in his absence, the call of parents and guardians, go out to another town." §12. "No scholar shall buy, sell, or exchange anything, to the value of sixpence, without the allowance of his parents, guardians, or Tutors; and whosoever is found to have sold or bought any such thing without acquainting their Tutors or parents, shall forfeit the value of the commodity, or the restoring of it, according to the discretion of the President." §17. "If any scholar shall transgress any of the laws of God, or the House, out of perverseness, or apparent negligence, after twice admonition, he shall be liable, if not *adultus*, to correction; if *adultus*, his name shall be given up to the Overseers of the College that he may be publicly dealt with after the desert of his fault; but in greater offenses such gradual proceeding shall not be exercised."

A little later (May 6, 1650) the Overseers passed an order prohibiting students, without permission, from being "present at or in any of the public civil meetings, or concourse of people, as courts of justice, elections, fairs, or at military exercise, in the time or hours of the college exercise, public or private. Neither shall any scholar exercise himself in any military band, unless of known gravity, and of approved sober and virtuous conversation, and that with the leave of the President and his Tutor. No scholar shall take tobacco, unless permitted by the President, with the consent of their parents and guardians, and on good reason first given by a physician, and then in a sober and private manner." On October 21, 1656, the General Court ordered "that the President and Fellows of Harvard College, for the time being, or the major part of them, are hereby empowered, according to their best discretion, to punish all misdemeanors of the youth in their Society, either by fine, or whipping in the Hall openly, as the nature of

the offence shall require, not exceeding ten shillings or ten stripes for one offence." A record of the Corporation for June 10, 1659, after stating that "there are great complaints of the exorbitant practices of some students of this College, by their abusive words and actions to the watch of the town," declares that the watch, "from time to time, and at all times, shall have full power of inspection into the manner and orders of all persons related to the College, whether within or without the precincts of the said College houses and lands." But it is forbidden "that any of the said watchmen should lay violent hands on any of the students, being found within the precincts of the College yards, otherwise than so they may secure them until they may inform the President or some of the Fellows. Neither shall they in any case break into their chambers or studies without special orders from the President or Fellows. . . . Also, in case any student . . . shall be found absent from his lodging after nine o'clock at night, he shall be responsible for and to all complaints of disorder of this kind, that, by testimony of the watch or others, shall appear to be done by any student . . . and shall be adjudged guilty of the said crime, unless he can purge himself by sufficient witness." Another record of the Corporation (March 27, 1682) declares that "Whereas great complaints have been made and proved against X., for his abusive carriage, in requiring some of the Freshmen to go upon his private errands, and in striking the said Freshmen; and for his scandalous negligence as to those duties that by the laws of the College he is bound to attend; and having persisted obstinately in his will, notwithstanding means used to reclaim him, and also refused to attend the Corporation, when this day required; he is therefore sentenced, in the first place, to be deprived of the pension heretofore allowed him, also to be expelled the College, and in case he shall presume, after twenty-four hours are past, to appear within the College walls, that then the Fellows of the place cause him to appear before the civil authority."

From these records of the seventeenth century we can form some idea of the discipline and punishments to which the first two generations of Harvard students were subjected. By the character of a law we infer the nature of the offense which it is intended to prevent. Those early students were awed by the religious menaces which their misdemeanors brought down upon them; and when, in spite of theological terrors, they disobeyed, they were flogged; finally, if stripes and expulsion failed, they might be handed over to the civil authorities. We wonder how many students presented a doctor's certificate that the use of tobacco, "in a sober and private manner," would benefit their health, and how often the town watchman was beaten or harassed. We may be sure that the Tutors were restrained by no softness of heart from applying salutary doses of birch to delinquents

who could not be cured by milder remedies: the Puritan master, like the Puritan father, believed that he whipped Satan when he whipped a refractory boy, and he was only too piously glad to smite the arch-enemy who lurked beneath the skin of an undergraduate. From Judge Sewall's *Diary* we get a description of one of these floggings, in 1674. The culprit, who had been guilty of "speaking blasphemous words," was sentenced to be "publicly whipped before all the scholars," to be "suspended from taking his bachelor's degree," and "to sit alone by himself uncovered at meals during the pleasure of the President and Fellows." The sentence was twice read before the officers, students and some of the Overseers, in the library: the offender knelt down; the President prayed; then came the flogging; after which the President closed the ceremonies with another prayer. In a preceding section I have alluded to another form of punishment—the public confession of their sins by guilty students.

While all the undergraduates were subjected to this austere correction from above, the lot of the Freshman was peculiarly hard, for he was amenable not only to the College officers, but also to the upper classmen. Indeed, down to the present century, he occupied a position similar to that of a "fag" at the English public schools. "The Ancient Customs of Harvard College" contain the following provisions: "1. No Freshman shall wear his hat in the College yard, unless it rains, hails or snows; provided, he be on foot, and have not both hands full. 2. No Undergraduate shall wear his hat in the College yard when any of the Governors are there; and no Bachelor when the President is there. 3. Freshmen are to consider all the other Classes as their Seniors. 4. No Freshman shall speak to a Senior with his hat on; or have it on in a Senior's chamber, or in his own if a Senior be there. 5. All Freshmen (except those employed by the Immediate Government) shall be obliged to go on any errand (except such as shall be judged improper by some one in the Government) for any of his Seniors, Graduates or Undergraduates, at any time, except in studying hours or after 9 o'clock in the evening. 6. A Senior Sophister has authority to take a Freshman from a Sophomore, a Middle Bachelor from a Junior Sophister, a Master from a Senior Sophister, and any Governor of the College from a Master. 7. Every Freshman, before he goes for the person who takes him away (unless it be one in the Government), shall return and inform the person from whom he is taken. 8. No Freshman, when sent on an errand, shall make any unnecessary delay, neglect to make due return, or go away until dismissed by the person who sent him. 9. No Freshman shall be detained by a Senior when not actually employed on some suitable errand. 10. No Freshman shall be obliged to observe any order of a Senior to come to him or go on any errand for him, unless he be wanted immediately. 11. No Freshman, when

sent on an errand, shall tell who he is going for, unless he be asked; nor to tell what he is going for, unless asked by a Governor. 13. When any person knocks at a Freshman's door, except in studying time, he shall immediately open the door without inquiring who is there. 14. No scholar shall call up or down, to or from, any chamber in the College, nor (15) play football or any other game in the Yard, or throw anything across the Yard. 16. The Freshman shall furnish the bats, balls and footballs for the use of the students, to be kept at the Battery. 17. Every Freshman shall pay the Butler for putting up his name in the Buttery. 18. Strict attention shall be paid by all the students to the common rules of cleanliness, decency and politeness. The Sophomores shall publish these customs to the Freshman in the Chapel whenever ordered by any in the Government; at which time the Freshmen are enjoined to keep their places in their seats, and attend with decency to the reading."

In early times discipline was supervised not only by the President and Tutors, but also by the Corporation and Overseers. As the College grew in numbers, however, and petty offences demanding prompt attention came up frequently, and as the convening of either Board required some delay, the conduct of the undergraduates fell more and more to the charge of the officers of Immediate Government, whose independent records date from September, 1725. Just a century later (June, 1825) the Immediate Government received the official title of "Faculty of the University." That the early students, notwithstanding the severity of the regulations which hemmed them about, did not submit meekly, we have good reason to suppose, although the records that exist are few. We may remember, however, that the Undergraduates, instigated by persons unknown, raised so great a commotion against President Hoar that he deemed it prudent to resign (1675). Hints reach us of occasional excesses at the end of the seventeenth century, and during the long struggle of the Mathers to control the College, accusations of immorality, ungodliness and disorders were rained upon it by those Draconic moralists and their friends. Cotton Mather, whose information concerning the acts and plots of Satan were always recent and precise, not only saw "Satan beginning a terrible shake in the churches of New England," but that he had taken up his quarters at Harvard College, whence he could be dislodged only by the election of Cotton Mather to the Presidency; which his Diabolical Majesty took care to prevent by sowing guile and lies against Mr. Mather in the hearts of the Governors of that seminary. Discontent thus fomented rose to such a point that the Overseers sent a committee to visit the College. It reported that although there was a considerable number of virtuous and studious youth, yet there had been a practice of several immoralities—particularly stealing, lying, swearing, idleness, picking of locks and too

frequent use of strong drink. Private lectures, it was alleged, were much neglected; the scholars, also, too generally spent too much of the Saturday evenings in one another's chambers, and Freshmen, as well as others, were seen in great numbers, going into town on Sabbath mornings to provide breakfasts. In 1732 another visiting committee pronounced the government of the College to be "in a weak and declining state;" and proposed remedies for restoring discipline. By this time flogging, although not abolished, had begun to be disused, and fines to be imposed, except for misdemeanors of the gravest sort. In 1734 the code of Laws was revised. I quote the list of punishable offences and the mulcts attached to them as the best and briefest means of illustrating the favorite forms of mischief at this period, and the valuation which the Faculty set upon them. The most heinous crime, "Undergraduate tarrying out of town one month without leave," was punished by a fine not exceeding £2 10s. The other offenses, with the penalties in shillings and pence attached to them, were as follows:

	s.	d.
Tardiness at prayers	1	
Absence from prayers, tardiness at Professor's public lecture . .	2	
Tardiness at public worship	3	
Absence from Professor's public lecture	4	
Absence from chambers, sending for prohibited liquors, going to meeting before bell-ringing, going out of College without proper garb	6	
Absence from public worship, neglecting to repeat sermons, sending freshman in studying time	9	
Rudeness at meals, keeping guns, going on skating	1	
Undergraduates tarrying out of town without leave, not exceeding <i>per diem</i>	1	3
Ill behavior at public worship, prayers or public divinity lectures, not declaiming or not giving up a declamation, absence from recitation, bachelors neglecting disputation, lodging strangers without leave, entertaining persons of ill character, frequenting taverns, undergraduates playing any game for money, selling and exchanging without leave, lying, drunkenness, having liquors prohibited under penalty (second offence, 3s.) keeping or fetching prohibited liquors, going upon the top of the College, cutting off the lead, concealing the transgression of the 19th Law, tumultuous noises (second offence, 3s.), fighting or hurting any person	1	6
Respondents neglecting disputations . . . from 1s. 6d. to . . .	3	
Profane cursing, firing guns or pistols in College Yard, undergraduates playing cards or going out of town without leave . . .	2	6
Profanation of the Lord's day, neglecting analysing, neglecting to give evidence	3	
Graduates playing cards, opening doors by picklocks	5	
Butler and cook to keep utensils clean	5	
Undergraduates tarrying out of town one week without leave . .	10	

The student of penology will observe that in this tariff, transgressions of arbitrary academic or theological requirements are punished more severely than misbehavior which indicates real moral defects: thus "neglecting analysing" is twice as wicked as lying; absence from recitation is as blameworthy as drunkenness; opening doors by picklocks is nearly three times as reprehensible as entertaining persons of ill character. But such discrepancies as these are common to all codes of conduct based on theology and not on morality.

In 1735 the Overseers recommended the Corporation "to restrain unsuitable and unseasonable danc-

ing in the College." Degradation to the bottom of the class, striking the name from the College lists, and expulsion were the highest punishments, after fines, admonition and public confession failed; and though flogging was less frequently administered, the Tutors still kept up the old custom of "boxing." The new Laws seem to have been effective, for in 1740 a visiting committee pronounced the condition of Cambridge to be satisfactory. The Whitefield revival excited many of the students to a stricter observance of their duties, but the improvement was only temporary; still, the sweeping accusations brought against Harvard by Whitefield and Jonathan Edwards had no better inspiration than theological zeal. Charles Chauncy declared that in his experience, extending over more than twenty years, the College was never "under better circumstances in point of religion, good order and learning than at this day" (1743). But, says Quincy, "the changes which occurred in the morals and manners of New England about the middle of the eighteenth century unavoidably affected the College. 'Profane cursing and swearing,' 'habits of frequenting taverns and ale-houses,' 'the practice of using wine, beer and distilled liquors by undergraduates in their rooms,' greatly increased. Tutors were insulted, and combinations to perpetrate unlawful acts were more frequent. Laws were made, penalties inflicted, recommendations and remonstrances repeated, without either eradicating those evils or materially diminishing them."¹ In 1755 two students were expelled for gross disorders. Discontent with the fare provided at Commons was one of the chief perplexities which President Holyoke had to encounter. In 1766 broke out a rebellion which raged for a month. Two years later "great disturbances occurred; the Tutors' windows were broken with brickbats, their lives endangered, and other outrages committed." The Faculty expelled three of the perpetrators and rusticated others. Some of the students, who had withdrawn from the College in order to escape punishment, petitioned to be reinstated; the Faculty refused to entertain their petition before twelve months should elapse. They then applied to the Overseers, who referred them to the Corporation, which, in view of the fact that "many who have been great friends and benefactors to the society have condescended to intercede in their behalf," recommended the Faculty to re-admit them, provided they should make a public humble confession. So they came back, thanks to the influence of their intercessors, but against the official protest of President Holyoke.

The patriotic spirit now ran high in the College, but some of the Tory students, to show their loyalty to the King, brought "India tea" into Commons and drank it, to the incensement of the Whigs. The Faculty, to prevent trouble, advised the tea-drinkers

to desist from a practice which "was a source of grief and uneasiness to many of the students, and as the use of it is disagreeable to the people of the country in general." During the Revolution, discipline was unusually lax, owing either to the spirit of independence which showed itself among the sons not less than among the fathers, or to the unavoidable excitement and interruptions, or to the weakness of President Langdon. We have already related how, in 1780, the students held a mass-meeting, and passed resolutions demanding his resignation, and how he complied.

In 1790 the Laws of the College were revised, and among the new requirements the students were to submit to an annual public examination "in the presence of a joint committee of the Corporation and Overseers," and other gentlemen. The Seniors and Juniors asked for exemption, but were refused. Accordingly, some of them, on the morning of April 12, 1791,—the day appointed for the examination,—put 600 grains of tartar emetic in the kitchen boilers. The officers and students came in to breakfast, but very soon, all but four or five, were forced to rush from the Hall. The conspirators hoped to escape detection by drinking more coffee than the rest; but after awhile they were discovered. Three were rusticated, one to Groton for nine months, and one to Amherst for five months. A memorandum of April 6, 1792, states that twenty-three Sophomores were fined two shillings apiece for supping at a tavern. Fines continued to be exacted down to 1825, after which date they were nearly all abolished, except in cases where College property was injured. But it is evident that this system was never very effectual in preventing mischief, because the penalty was never paid by the student, but was charged in the term-bill for his father to pay.

The condition of Freshmen slowly improved, although the Corporation, as late as 1772, having been recommended to abolish the custom requiring Freshmen to run on errands for upper classmen, voted that, "after deliberate consideration and weighing all circumstances, they are not able to project any plan in the room of this long and ancient custom, that will not, in their opinion, be attended with equal, if not greater, inconveniences." During the present century the instinctive antagonism between Freshmen and Sophomores found a vent in rushes between those classes; and tagging was gradually replaced by "hazing." The terrors and torments to which the callow Freshman was subjected on "Bloody Monday" night, at the beginning of the autumn term, were often carried far beyond the bounds of fun and sometimes resulted in the bodily injury of the victim. The Faculty strove by the most strenuous penalties to put an end to hazing, but it only disappeared about fifteen or twenty years ago, through the influence of the Elective System, which broke down class barriers, and above all through the increased age of the students, who, being no longer boys when they came to College, were no longer amused by boyish deviltry.

¹ Quincy, ii, 90, 91

Among the famous "rebellions," I have already mentioned that of 1768, when, says Governor Hutchinson, "the scholars met in a body under and about a great tree, to which they gave the name of the tree of liberty!" "Some years after, this tree was either blown or cut down," and the name was given to the present Liberty Tree, which stands between Holden Chapel and Harvard Hall, and is now hung with flowers for Seniors to scramble for on Class Day. The next important rebellion occurred in 1807, when the three lower classes protested against the bad food at Commons. Without waiting for the President to investigate and correct, they indulged in disorders. Two students were publicly admonished for "smoking segars," and "occasioning great disturbance" at the evening meal. The troubles increased, and with them the alarm of the Faculty. Three Sophomores were suspended, whereat Eames, one of their classmates, "did openly and grossly insult the members of the Government, by hissing at them, as they passed him, standing with the other waiters in the Hall." Eames was accordingly suspended, but three students went to the President and guaranteed that the rest would behave properly at Commons, if Eames were pardoned. The pardon was granted. A few days later the four classes marched out in a body from dinner, complaining of the fare. The Faculty immediately voted "that no more Commons be provided till further orders, and that all students have leave to diet out at proper houses, till further orders." The Corporation met, and ordered the President to attend Commons "on Sunday morning next," adding that "in consideration of the youth of the students, and hoping that their rash and illegal conduct is rather owing to want of experience and reflection than to malignity of temper or a spirit of defiance, [the Corporation] are disposed to give them an opportunity to certify in writing to the President, as he shall direct, their admission of the impropriety of their conduct, their regret for it, and their determination to offend no more in this manner." Seven days were allowed for this confession to be made, but, although the time was extended, some of the students refused, and, on April 15th, seventeen of the recalcitrants were dismissed. The so-called "Rebellion Tree," which stands to the east of the south entry of Hollis Hall, got its name, if we may credit tradition, from the fact that the students used to assemble under it during the troublous episode just described.

In 1819 a row at Commons between the Sophomores and Freshmen led to another rebellion. Three Sophomores were suspended, which caused another outbreak, and the suspension of two more. Both classes joined in the revolt. The Faculty, unable to disperse the rebellious gatherings in the Yard, rusticated six Sophomores. The whole Sophomore Class then withdrew from the College; but after an absence of a fortnight, they sought re-admission, which was granted to all save those who had been rusticated or sus-

pended. This affair was the theme of the best-known of college satires—*The Rebelliad; or, Terrible Transactions at the Seat of the Muses*, by Augustus Peirce, of the Class of 1820.

In April, 1823, "a very remarkable uprising among the Seniors took place." A student, X., was about to graduate at the head of his class. It was reported that a certain Z. had informed the President that X. had spent money in dissipation. X. denied the charge, and offered to show his account-book. Nevertheless, he was deprived of the scholarship he had hitherto enjoyed, and was forbidden to deliver his oration at the Spring Exhibition. Z. was one of the speakers on that occasion, and was vehemently hissed. X. was held responsible for the disturbance and dismissed. The Seniors immediately resolved not to attend any College exercise at which Z. was present; and when he came to the Chapel to declamation, they hustled him down-stairs. The Faculty expelled four of those concerned in this disorder; but the Seniors held a meeting and voted to repeat their violence if Z. came to evening prayers. He entered "after the service had begun, whereupon the class rose up as before and drove him from the place, the President loudly calling them to order and refusing to go on with the exercises. After tea the bugle was sounded under the Rebellion Tree; and when the students had assembled Dr. Popkin addressed them, advising them to disperse, and reminding them of the consequences of their not doing so. 'We know it will injure us *in a degree*,' was the reply. A majority of the class then resolved that they would not return to their work until the four expelled members were recalled and Z. was sent away from College; that they would attend prayers the next morning for the last time, and if Z. appeared that they would put him out and punish him severely; but if he did not appear, that they would leave the Chapel themselves. Z. did not come, having left Cambridge on the previous evening; and accordingly the class rose quietly in a body and marched out of the Chapel, while the President again discontinued the services. After breakfast, thirty-seven, comprising all who had engaged in or who approved of the proceedings,—the so-called 'White List,' in distinction from the others, who were styled the 'Black List,'—were dismissed, and thus prevented from graduating at Commencement." Many years later the College gave them their degrees. X. was afterwards a member of the Examining Committee in Greek; Z., who confessed before his death that his suspicion was unfounded, became a clergyman, and was elected to the Massachusetts Legislature.

The last and most violent of the rebellions was that of 1834. Dunkin, an Englishman, who tutored in Greek, requested M., a Freshman, to read certain Greek proper names. M. replied that he did not care

to do so; the Tutor insisted that he would be obeyed. The Freshman declared that he was of age, and that he would not be dictated to. The matter was reported to President Quincy, who asked M. to retract; but the latter preferred to break his connection with the College. That night Tutor Dunkin's recitation-room, in the northeast corner of Massachusetts, was broken into, the furniture and windows were smashed. At prayers the next morning there was whistling, groaning, and squeaking of concealed toys. The following morning torpedoes were thrown in the air and exploded on the floor of the Chapel. Finally the President expostulated with the Freshmen who had been engaged in these proceedings, and threatened to prosecute them in the civil courts. Whereat the Freshmen were exasperated, and showed their exasperation by renewed rioting. One of them, B., from South Carolina, was dismissed. His classmates petitioned for his recall, because many of their number were guiltier than he. Then the mutiny spread to the Sophomores, all but three of whom absented themselves from prayers on three consecutive occasions. The Faculty dismissed all but those three—an unprecedented measure. But the Sophomores appeared at prayers the next morning and drowned the President's voice in cries of "Hear him! hear him!" The service was discontinued, and the unruly class was ordered by the President to remain; but out it marched from the Chapel. The Freshmen's petition was not granted, and they plunged into new insubordination, which resulted in the dismissal of two of them and of one Junior. The Juniors resented this, voted "to wear crape on the left arm for three weeks, to publish an article in the newspapers and to burn the President in effigy." The Faculty, with the consent of the Corporation, now brought legal proceedings against members of the Sophomore Class—one for trespass and one for assault on the College watchman. The President (June 4th) published an open letter in the newspapers, giving an account of the rebellion. A week later the Seniors, to whom the infection had penetrated, drew up a rejoinder, and sent it to the public press. Every Senior was thereupon required to confess what he had had to do with this document; eight were concerned with its preparation and circulation, two approved of it, fourteen had no concern in it and two were absent. On June 30th there were more tumults, followed by three suspensions. On Class Day, July 16th, the Class Poet, Royall Tyler, instead of his poem, read a formal prohibition from the President against his reading the poem. Then came a burst of groans and hisses; but in the evening the poem was delivered before an enthusiastic audience at a supper at Murdock's (afterwards Porter's) Hotel. Thus during more than two months the work of the College was interrupted, and many of the Seniors who lost their degrees that year did not receive them until several years later.

In 1846 the office of Proctor was established. The

Proctors lived in the College buildings, and preserved order, forming the "Parietal Committee," over which the Regent presided. The Regent had charge of weekly lists of absences, monitors' bills, petitions for excuses and similar duties. Like the President, he had a meritorious Freshman to assist him. From time to time the Laws of 1790 were revised, and although in practice more liberty was allowed than formerly to the students, the statute-book was still very severe. Thus, in 1848, the following were designated as "high offences:" "Keeping any gun, pistol, gunpowder, or explosive material, or firing or using the same in the city of Cambridge; being concerned in any bonfires, fireworks or unauthorized illuminations; being an actor or spectator at any theatrical entertainment in term time; making or being present at any entertainment within the precincts of the University, at which intoxicating liquors of any kind are served; going to any tavern or victualling-house in Cambridge, except in the presence of a parent, guardian or Patron." Among simple misdemeanors are set down: Keeping a dog, horse, or other animal without leave of the Faculty, and playing at cards or dice. The Patron here referred to was "some gentleman of Cambridge, not of the Faculty," appointed by the Corporation to have charge of the expenses of students who came from places outside of the Commonwealth, if their parents desired. He received a commission of two and a half *per cent.* of the amount of the term bill of the students whose money was entrusted to him. The last Patron was appointed in 1869.

Sitting on the steps of the College buildings, calling to or from the windows, lying on the ground, collecting in groups—these also were punishable offences not very long ago. Bonfires were prohibited; "any students crying fire, sounding an alarm, leaving their rooms, shouting or clapping from a window, going to the fire, or being seen at it, going into the College Yard, or assembling on account of such bonfire, shall be deemed aiding and abetting such disorder, and punished accordingly," say the Laws of 1848. Violations of decorum were (1849) "smoking in the streets of Cambridge, in the College Yard, the public rooms or the entries, carrying a cane into the Chapel, recitation rooms, library or any public room." "Snowballing, or kicking football, or playing any game in the College Yard" were added to this list in 1852. No student might be absent over-night, and to each class was assigned a Tutor, who granted excuses from Chapel (1849). Sitting out of alphabetical order at any Chapel exercise became punishable in 1857; cheering—except on Class Day—or "proclaiming the name of any person whatever in connection with the cheering on that or any other occasion" appeared on the list of prohibitions the previous year.

But despite these restrictions we have heard from persons who were undergraduates during the middle decades of this century tales that indicate that the

students often enjoyed a larger freedom than was allowed them by the "College Bible." To serve as "supe" in one of the Boston theatres, when some celebrated actor or singer performed, was not uncommon, but doubtless the risk of being found out enhanced the enjoyment of this and other unlawful mischief. When a line of horse-cars was opened between Harvard and Bowdoin Square (1856) it became impossible to prevent the students from making frequent trips to town. Previous to that the means of communication had been an omnibus once an hour. So custom, which is stronger than laws, gradually established the right of students to visit Boston when they chose, provided they obeyed the rules when within the College precincts. The billiard-room in the basement of Parker's was patronized by almost enough collegians to justify Artemas Ward's witticism. There were still sporadic cases of hazing which called for severe measures from the Faculty. The silence of the Yard was from time to time startled by an exploded bomb or lighted by a sudden bonfire in the dead of night. Once a huge turkey was found hanging on the College bell when the janitor came to ring for morning prayers; once a pair of monstrous boots dangled from the Chapel spire, and once there was a life-and-death struggle in the Chapel between the watchman and a desperate student. But the explosions grew fainter, and the fires, except on Commencement night, burnt lower and lower, and the inscriptions in paint or lamp-black on the walls of the University were few and far between. Almost the last serious mischief—the blowing up of a room in Hollis—took place nearly twenty years ago; and of late years the College drain has performed its humble duties undisturbed by gunpowder. And whenever any of these last spasms of an expiring era did occur, they no longer met the approval or excited the laughter of the majority of the students. The reason is plain—such pranks and disorders were the legacies of a time when the average Senior at graduation was not older than the Freshman is now at admission.

Upon President Eliot's accession (1869) the office of Dean was created to relieve the President from many disciplinary duties. The Dean performed, in a measure, the functions of the former Regent, but besides being the chief police officer, he had also a general supervision of the studies of the undergraduates. Under him the Registrar attended to minor matters of discipline, such as the granting of excuses. This office was abolished in 1888, its work being now assigned to the Secretary and his assistant.

Most of the old laws have disappeared from the "College Bible;" public opinion is now stronger than the printed rules in setting the standard of conduct. There are still regulations against throwing snow-balls, playing any game in the yard or entries, smoking on the steps or in the entries, and loitering in such manner as to obstruct them. Playing on musical instruments, except at specified

hours, is also forbidden; and it is not lawful to keep dogs in College rooms. Discipline is enforced by admonition; by probation, "which indicates that a student is in serious danger of separation from the College;" by suspension—a temporary separation; by dismissal, which "closes a student's connection with the College, without necessarily precluding his return;" and by expulsion, which "is the highest academic censure, and is a final separation from the University."

Thus have the students attained, little by little, to almost complete liberty of action; and since the responsibility for their conduct has been thrown on themselves, and not on the Faculty, the *morale* of the College has steadily improved. When there were many laws, the temptation to break them was too great to be always resisted; when Tutors and Proctors were looked upon as policemen and detectives, the pleasure of outwitting and harassing them was mingled with a sense of superior cunning or with the exultation of successful daring. Persons whose experience enables them to compare the present condition of the undergraduates with that of fifty or even of thirty years ago, agree that serious delinquencies, such as drunkenness and profligacy, are relatively far less common now than then. The increase in orderliness can be testified to by any one whose acquaintance with Harvard life extends no farther back than two or three lustres. And it may be added that the immemorial antagonism between the Faculty and the students was never milder than at present, when Committees, composed in part of undergraduates and in part of members of the Faculty, exist for the mutual interchange of wishes and suggestions. In old times, students were treated either as servants or as possible culprits; the newer, and true method is to treat them like men.

COMMENCEMENT.—The first Commencement exercises were held on the second Tuesday of August, 1642, "the Governors, Magistrates and the Ministers from all parts, with all sorts of scholars and others in great numbers," being present. Nine Bachelors' degrees were conferred that year, and four the next. In 1685, we learn from Sewall's *Diary*, under the date July 1st, that "besides Disputes, there are four Orations, one Latin by Mr. Dudley, and two Greek, one Hebrew by Nath. Mather, and Mr. President [Increase Mather] after giving the Degrees, made an oration in praise of Academical Education of Degrees, Hebrew Tongue. . . . After dinner y^e 3d part of y^e 103d PS. was sung in y^e Hall." Two years later, Governor Andros attended Commencement, and by his direction, "Mr. Ratcliff sat in y^e pulpit,"—an act of gubernatorial authority which incensed the sturdy Calvinism of the College, because Ratcliff was the Church of England Chaplain to his Excellency. Even thus early, the day had become the occasion of festivities not to be missed by any one who had the means or could spare the time to attend them. And after the

academic diet of orations in the learned languages and of copious prayer had been partaken of, young and old turned with whetted appetite and thirst to the food and drink provided by the College and by the graduating students. The consumption of punch and liquors did not at first alarm the Corporation, but a vote of theirs, on June 22, 1693, states that "having been informed that the custom taken up in the College, not used in any other Universities, for the commencers [members of the graduating class] to have *plumb-cake*, is dishonorable to the College, not grateful to wise men, and chargeable to the parents of the commencers, [the Corporation] do therefore put an end to that custom, and do hereby order that no commencer, or other scholar, shall have any such cakes in their studies or chambers; and that if any scholar shall offend therein, the cakes shall be taken from him, and he shall moreover pay to the College 20 shillings for each such offence."

What was peculiarly harmful in "*plumb-cake*," we are not told; but frequent laws were fulminated against it. In 1722 an ordinance was passed "for reforming the Extravagancys of Commencements," and providing "that no preparation nor provision of either Plumb Cake, or Roasted, Boyled or Baked Meates or Pyes of any kind shal be made by any Commencer." "Distilled Lyquours" or "any composition therewith" were also forbidden under a fine of twenty shillings, and the contraband articles were "to be seized by the Tutors,"—but whether or not the latter were allowed to eat and drink the seized food and drink, we do not know. That the Tutors, however, believed with Iago that "Good wine is a good familiar creature, if it be well used," is plain from the following entry in Mr. Flynt's *Diary*, on the eve of Commencement, 1724: "Had of Mr. Monis two corkscrews 4d. a piece." Monis was a converted Jew, who taught Hebrew in the College for nearly forty years, and kept a small shop in what is now Winthrop Square. But the *plumb-cake* stuck in the throats of the Corporation, who, in 1727, voted that "if any who now doe, or hereafter shall, stand for their degrees, presume to do anything contrary to the Act of 11th June, 1722, or go about to evade it by plain cake, they shall not be admitted to their degree, and if any, after they have received their degree, shall presume to make any forbidden provisions, their names shall be left or rased out of the Catalogue of the Graduates."

In 1725 the inauguration of President Wadsworth fell upon Commencement day. There was, as had been usual on such occasions, says Quincy, a procession "from the College to the meeting-house. The Bachelors of Art walked first, two in a rank, and then the Masters, all barcheaded; then followed Mr. Wadsworth alone as President; next the Corporation and Tutors, two in a rank; then the Honorable Lieutenant-Governor Dunmer and Council, and next to them the rest of the gentlemen. After prayer by

the Rev. Mr. Colman, the Governor, on delivering the keys, seal and records of the College, to the President-elect, as badges of authority, addressed him in English, investing him with the government thereof, to which the President made a reply, also in English, after which he went up into the pulpit and pronounced *memoriter* a Latin oration; and afterwards presided during the usual exercises." The earlier Commencements had been held in the College Hall, but from this time on they were held in the first meeting-house; afterwards, from 1758 to 1833, in the old First Parish Church; then in the present First Parish Church (1834-72) then in Appleton Chapel (1873-75) and in Sanders Theatre since 1875.

As the Province grew during the 18th century, Commencement became more and more of a popular celebration; and, although the means of communication were few and roundabout, it was flocked to by graduates and sight-seers from all parts of Massachusetts. Ladies in high coiffures and bell-shaped hoops drove out from Boston in their coaches. Ministers, magistrates and merchants came on horseback or in wagons. On no other occasion could you then have seen so large an assemblage of the wealth, learning and dignity of the Province. There was the Governor, with his Council and military escort and members of the General Court to represent the State; there were the most edifying professors and clergymen, who could preach or pray by the hour in one living and three dead languages, to represent the Church; there were the friends and families of the students to represent the best society of the Province. The towns-people of Cambridge were all there; and a nondescript crowd of the idle or the curious. The exercises in the Chapel were sober enough, propped as they were by theology; but in the afternoon and evening punch and flip rose into the heads which had been filled with Greek and Hebrew in the morning, and there were disgraceful scenes.

The Corporation, awakening to the scandal, voted, in 1727, that "Commencements for time to come be more private than has been usual; and, in order to this, that the time for them be not fixed to the first Wednesday in July, as formerly, but that the particular day should be determined upon from time to time by the Corporation, and that the Honorable and Reverend Board of Overseers be seasonably acquainted of the said day, and be desired to honor the solemnity with their presence." The next year the Governor directed the Sheriff of Middlesex to prohibit the setting up of booths and tents on the land adjoining the College; and in 1733 the Corporation and three Justices of the Peace in Cambridge concerted measures for keeping order, by establishing "a constable with six men, who, by watching and walking towards evening on these days, and also the night following, and in and about the entry to the College Hall at dinner-time, should prevent disorders." Friday was fixed upon for the

Commencement exercises, but so great was the outcry—both against the day (which came too near Sunday) and against the attempt at privacy—that, in 1736 Wednesday and publicity were returned to. In 1749 two gentlemen whose sons were about to be graduated offered the College £1000 if “a trial was made of Commencement this year in a more private manner.” The Corporation, mindful of the lack of funds, were for acquiescing, but the Overseers would consent to no breach in the old custom. The Corporation, therefore, had to content themselves by recommending to parents that, “considering the awful judgments of God upon this land, they retrench Commencement expenses, so as may best correspond with the frowne of Divine Providence, and that they take effectual care to have their sons’ chambers cleared of company, and their entertainments finished on the evening of said Commencement day, or, at furthest, by next morning.” In 1759 it was voted that “it shall be no offense if any scholar shall, at Commencement, make and entertain guests at his chamber with punch;” in June, 1761, it was deemed no offense for scholars in a sober manner, to “entertain one another and strangers with punch, which, as it is now usually made, is no intoxicating liquor.” In 1760 all unnecessary expenses, and dancing in the Hall or other College building during Commencement week, were forbidden. Once (in 1768) the date was changed because a great eclipse of the sun occurred. In 1764, on account of small-pox, and from 1775 to 1781, on account of the war, Commencements were omitted. In 1738 the questions maintained by three candidates for the Master’s degree sounded Arian in the ears of the orthodox, and, in 1760, it was the President’s duty to assure himself that all the parts to be delivered were orthodox and seemly, and he was enjoined “to put an end to the practice of addressing the female sex.” The post-Revolutionary celebrations soon surpassed any that had gone before, both in the number of the attendants and in the merrymaking. The art of brewing intoxicating punch was rediscovered. The banks and Custom-House in Boston were closed on this day; the new bridge shortened the journey to Cambridge. Few, even among the rich, then had summer places along the shore or in the country, so that, although the Harvard holiday came at the end of August, “all the élites”—to use an expression of Dr. John Pierce—were present. Prohibitions against extravagance in dress on the part of the commencing seem to have been little heeded, for “in 1790 a gentleman afterwards prominently connected with the College, took his degree dressed in coat and breeches of pearl-colored satin, white silk waistcoat and stockings, buckles in his shoes, and his hair elaborately dressed and powdered according to the style of the day.”

Until about 1760 the exercises, consisting of “theses and disputations on various logical, grammatical, ethical, physical and metaphysical topics,” were con-

ducted in Latin. In 1763 the first oration in English was delivered, and little by little that language predominated. Commencers were entitled to parts according to their rank, the lowest part being a Conference; then followed Essays, Colloquies, Discussions, Disquisitions, Dissertations, and, highest of all, but the last on the programme, Orations—the salutatory in Latin, and two in English.

From the *Diary* of the Rev. John Pierce,¹ who attended every Commencement from 1784 to 1848 (except that of 1791, when he was absent at his mother’s funeral), we get valuable information concerning the Commencements of the first half of this century; and I can do no better than to make a few extracts which show the character of the observances from year to year, and the changes that crept in. Dr. Pierce gives the list of all the speakers, with comments on their effusions and many other details, so that I limit myself to quoting what is most important, or amusing: 1803—“The sentiments of Farrar in an English dissertation were well adapted to oppose the rage for novel-reading and plays which is so prevalent, especially in the capital.” “At dinner the greatest decorum prevailed.” 1806—“The theatrical musick with which the exercises was interspersed was highly disgusting to the more solid part of the audience.” 1809—“Instead of dining in the hall as usual, I went with my wife to the house provided by Mr. Parkman, where, it was computed, there were 500 persons who dined in one large tent in the fields. The expense must have been at least \$1000.” 1810—Exercises four hours long. 1811—“The new President [Kirkland] acquitted himself with great dignity and propriety. His prayers were short. But for style and matter they exceeded all we have been accustomed to hear on such occasions.” 1812—“I dined in the hall. The students did not wait as formerly.” 1813—An Oration in French was given. 1814—Exercises lasted five hours. Dinner in the new Hall [University] for the first time. 1815—“Fuller excited loud applauses from the notice he took of the deposed imperial despot of France.” “The most splendid dinner I ever witnessed on a similar occasion,” prepared by Samuel Eliot, Esq. 1818—Oration in Spanish. “There was less disorder, as there were fewer tents on the Common.” 1819—“The oldest graduate and clergyman” present “was the Rev. Dr. Marsh, of Weatherfield, Conn. (1761). He probably wore the last full-bottomed wig which has been seen at Commencement.” 1820—“The Master’s oration, by [Caleb] Cushing, was sensible and delivered *ore rotundo*.” 1821—“The President was 2½ minutes in his first prayer and 2 in his last.” “For the first time since the University was founded no theses were published, no theses collector having been appointed.” 1824, August 25—“We were detained from entering the meeting-house from X to XI. 40, by the tardiness of the Governour.

¹ Proceedings of the Mass. Historical Soc., Dec., 1889, Jan., 1890.

At length the cavalcade arrived at University Hall with General La Fayette, who was cordially welcomed by President Kirkland in a neat and peculiarly appropriate address, delivered in the portico, in the hearing of a large and mixed multitude. A procession was then formed, which proceeded to the meeting-house amid continual shouts of assembled throngs. As soon as order was restored, the President made a prayer of 3 minutes. . . . A large portion of the speakers made personal allusions to our distinguished guest. In every instance such allusions were followed by loud shouts, huzzas and the clapping of hands. At nearly 5 we left the meeting-house for the hall, where I dined in company of La Fayette and suite." 1826—"Of Southworth, who defended physical education, it was reported that he was the strongest person in College, having lifted 820 lbs." 1827—Emerson's [Edward B.] oration lasted 36 minutes. 1828—"For the first time for many years, no tents were allowed on the Common." 1829—"At dinner 'I set the tune, St. Martin's, the 17th time, to the LXXVIII Psalm. Tho I set it without an instrument, yet it was exactly in tune with the instruments which assisted us. I asked the President how much of the psalm we should sing? Judge Story replied, Sing it all. We accordingly, contrary to custom, sang it through, without omitting a single stanza. It was remarked that the singing was never better. But as the company are in 4 different rooms, it will be desirable on future occasions to station a person in each room to receive and communicate the time, so that we may sing all together, or keep time, as musicians express it." 1830—"A prayer by Dr. Ware, of 4 minutes, in which, as Dr. Codman remarked, there was no allusion to the Saviour or his religion." None of the parts "were contemptible; and none electrified the audience, as is sometimes the case." 1831—"The psalm 'was pitched a little too high." 1833—"The concluding oration of the Bachelors by [Francis] Bowen, was a sober, chaste performance. The manner of his bidding adieu to the old meeting-house, as this was to be the last Commencement observed in it, was particularly touching." 1834—Exercises in the new church, which "is so much larger and more convenient than was the former that all who desired were accommodated." 1835—"By my suggestion, as thanks are commonly returned after dinner, when there is great hilarity, and it is difficult to restore order, the usual psalm, LXXVIII, was substituted." 1836—"Be it noted that this is the first Commencement I ever attended in Cambridge in which I saw not a single person drunk in the hall or out of it. There were the fewest present I ever remember, doubtless on account of the bis-centennial celebration to be observed next week." 1837—"A dissertation by R. H. Dana was on the unique topic, Heaven lies about us in our Infancy. He is a handsome youth and spoke well. But his composition is of that Swedenborgian, Coleridgean and dreamy cast which it requires a peculiar structure of mind to un-

derstand, much more to relish. . . . The speakers were mostly heard. None had a prompter. For the first time they carried their parts rolled up in their left hands. Two or three only were obliged to unroll them to refresh their memories. The concluding oration, for the first time within my memory, contained not only no names, but even no mention of benefactors. . . . Wine was furnished at dinner as well as cider. As honey or molasses attracts flies and other insects, so these inebriating liquors allure graduates addicted to such drinks, particularly the intemperate, to come and drink their fill." 1838—"Notwithstanding the efforts of the friends of temperance, wine was furnished at dinner. There was nevertheless pretty good order in the hall. . . . There was a meeting in the Chapel after dinner, and it was resolved, though with some opposition, to have an annual meeting of alumni." 1840—"No man was allowed to wait upon ladies into the meeting-house for fear he should remain." 1841—"The Governor and suite arrived in good season, escorted by an elegant company of Lancers. 1842—First year in which the following notice was published in the order of exercises: "A part at Commencement is assigned to every Senior, who, for general scholarship, is placed in the first half of his class, or who has attained a certain rank in any department of study." "I saw much wine-drinking. When will this 'abomination of desolation' be banished from the halls of Old Harvard? To add to the annoyance of many attendants, cigars were smoked without mercy." 1843—"The dinner was very soon despatched. Indeed, the Bishops [Doane and Eastburn] and others compared it to a steamboat dinner, on account of the haste in which it was eaten. . . . Wine in abundance was furnished; and though but comparatively few partook of it while the company were together, yet afterwards there was a gathering of wine-bibbers and tobacco-smokers who filled their skins with vinous potations, the hall with a nauseous effluvia, and the air with bacchanalian songs and shouts." Mrs. Quincy, as usual, held a levee at the President's (Wadsworth) House, in the garden of which a brass band "discoursed sweet music." 1844.—Thirty parts assigned; twenty-two performed. "This was the first commencement, probably, . . . in which no exercises were assigned to candidates for the Master's degree." 1845—"Votaries of Bacchus" less noisy than usual. At Prof. Beck's large and sumptuous entertainment wine was "administered by black servants." 1846—"The dinner was served with only wine and lemonade, for the first time, it is believed. 1847.—Levee at President Everett's. "The band of music in attendance played at my solicitation Tivoli, Marseillais Hymn and Auld Lang Syne." No speeches after dinner, for want of time. 1848.—Twenty-six parts delivered; "all spoke sufficiently loud." "I prefaced my setting the psalm with the remark that as time had not yet beaten me, I should beat time once more, as this practice enables a large company

the better to keep time." Between 1784 and 1848 there were but six rainy Commencements, viz.: 1796, 1798, 1835, 1837, 1845, 1846.

Dr. Pierce's long record ceased just at the time when the character of Commencement was permanently changed. After the middle of this century Class Day drew off the ladies from Commencement, which became more the day of the graduates in which even the Seniors counted for little. Until 1869 the celebration was usually held on the third Wednesday of July; since 1870 it has been held on the last Wednesday in June. In the morning the President, the Governor of Massachusetts, the Faculty and recipients of honorary degrees head a procession composed of Seniors and candidates for higher degrees and proceed, led by a brass band, to Sanders Theatre. The President, Professors and those of the students who are to deliver their parts wear gowns; the other students are in ordinary evening dress. The President sits in the old presidential chair, whose knobs were made, tradition says, by President Holyoke. The distinguished guests, Faculty and speakers occupy the rest of the platform; the candidates for degrees sit below in the orchestra. The balconies are filled by the families and friends of the commencers. The exercises last from two and a half to three hours—most of the orations being in English. Then the President hands the degrees in large bundles to the marshals, who distribute them to the candidates. Meanwhile the graduates have begun to throng the College Yard. Each class holds a reunion in one of the College rooms, where claret and rum punch, lemonade and sandwiches are provided. At one o'clock the Association of the Alumni meets in Harvard Hall. At two a procession is formed, led by the President and guests and followed by the members of the Classes in order of graduation. Graduates of 1832 and earlier are entitled to dinner free; the others pay one dollar each. The procession marches to Memorial Hall, where, after a frugal repast, there is speaking till about five o'clock, when the assembly, having sung the 78th Psalm and "Fair Harvard," breaks up. From ten to four, polls are open in Massachusetts Hall for the election of Overseers, and as soon after four as possible the vote is announced. In the evening the most boisterous of the newly-made graduates sometimes start bonfires or engage in other noisy demonstrations, but of late years even these traditions of an earlier and more turbulent period have been less heartily kept up.

CLASS DAY.—Class Day seems to have originated in the custom of the Seniors choosing one of their members to bid farewell to the College and Faculty in a valedictory address. In 1760 we learn that each man brought a bottle of wine to the meeting, and that then, and also on the day of the celebration itself, there was disorder. The list of Class Day Orators begins in 1776; that of the Poets in 1786. The earliest ceremonies, to quote James Russell

Lowell, "seem to have been restricted to an oration in Latin, sandwiched between two prayers by the President, like a criminal between two peace-officers." The 21st of June was the day appointed for Class Day, when the Seniors completed their studies; then followed a vacation, after which they came back in August to take their degrees at Commencement. Gradually, the Class Orators adopted English instead of Latin, an innovation which led the Faculty to vote, in 1803, that, whereas "the introduction of an English exercise, which gives it more the appearance of a public Exhibition designed to display the talents of the Performers and entertain a mixed audience than of a merely valedictory address of the Class to the Government, and taking leave of the Society and of one another, in which Adieu Gentlemen and Ladies from abroad are not particularly interested; And whereas the propriety of having but one Person to be the Organ of the Class . . . on this occasion must be obvious, and as at the same time it is more Academical that the valedictory performance be in Latin than in English, as is the practice in Universities of the most established reputation abroad, and was formerly our own; *Resolved*, that the particular kind of Exercise in the Senior Class at the time of their taking leave of the College, Sanctioned by the usage of a Century and a half, be alone adhered to, and consequently that in future no performance but a Valedictory Oration in the Latin language, except music adapted to the occasion, be permitted in the Chapel on the day when the Seniors retire from the Society."

A description of a Class Day a little earlier than this (1793) is given in Robert Treat Paine's *Diary*: "At ten the class walked in procession to the President's, and escorted him, the Professors and Tutors to the Chapel, preceded by the band playing solemn music. The President began with a short prayer. He then read a chapter in the Bible; after this he prayed again; Cutler then delivered his poem. Then the singing club, accompanied by the band, performed Williams' Friendship. This was succeeded by a valedictory Latin Oration by Jackson. We then formed and waited on the Government to the President's, where we were very respectably entertained with wine, etc. We then marched in procession to Jackson's room, where we drank punch. At one we went to Mr. Moore's tavern and partook of an elegant entertainment, which cost 6s. 4d. a piece. Marching then to Cutler's room, we shook hands and parted with expressing the sincerest tokens of friendship."

The Faculty were unable to enforce their restriction as to Latin, although for several years (1803–8) no Poets or Orators are recorded; then the performances went on pretty regularly in English, and were concluded by a dance (of the Seniors only) round the Rebellion Tree. By 1834 the Seniors had begun to entertain their friends with feed punch,

"brought in buckets from Willard's Tavern (now the Horse Railway Station), and served out in the shade on the northern side of Harvard Hall." This practice led to drunkenness and disturbances, and finally, in 1838, President Quincy encouraged the conversion of Class Day into the respectable celebration which it has since been. Not only the Faculty and a few residents of Cambridge, but the friends of the Seniors from far and wide, were invited to the exercises; ladies, young and old, attended the "spreads"—or entertainments—provided by the Seniors, and, with the introduction of the gentler sex, the performances became gentle. In 1850, after the exercises in the Chapel, the class, accompanied by friends and guests, withdrew to Harvard Hall, where there was a rich collation. "After an interval of from one to two hours," writes a recorder at that date, "the dancing commences in the Yard. Cotillions and the easier dances are here performed, but the sport closes in the Hall with the Polka and other fashionable steps. The Seniors again form, and make the circuit of the buildings, great and small. They then assemble under the Liberty Tree, around which, with hands joined, they dance, after singing the students' adopted song, 'Auld Lang Syne.' At parting each member takes a sprig or a flower from the beautiful 'Wreath' which surrounds the 'farewell tree,' which is sacredly treasured as a last memento of college scenes and enjoyments."¹

Others officers, besides the Orator and Poet, were, from time to time, added; there are now three Marshals, chosen for their popularity or for athletic prowess; a Chorister, who writes the music for the Class Song, and conducts the singing at the 'Tree; an Odist, who composes an ode to be sung to the tune of "Fair Harvard," at the morning exercises; and an Ivy Orator. The last officer is expected to deliver a humorous composition, in which he hits off, in merry fashion, the history of the Class, not sparing his classmates nor the Faculty. Forty years ago it was the custom to plant an ivy when a President went out of office; then each Class planted its ivy on Class Day, and listened to the Orator. But the ivy never grew; so the oration was no longer delivered in the open air under the shadow of Boylston, but in the Chapel, and now in Sanders Theatre. The Seniors also choose a Secretary (who publishes, from time to time, a Class Report), a Class Committee, a Class Day Committee, and (recently) a Photograph Committee. A Hymnist and a Chaplain are no longer chosen.

Class Day has come to be the gala day of Cambridge. The "spreads" and "teas" have become more and more elaborate. Every Senior who can afford it takes this opportunity of entertaining his friends, and of paying off social debts. In his evening dress and silk hat he is, from morning till midnight, a person of greater importance than, presumably, he will

ever be again. And on no other occasion in these parts can there be seen so many pretty faces and dresses, so many proud parents, and so much genuine merriment. The literary exercises in the forenoon are followed by the spreads, at some of which there is dancing; then by the exercises at the Tree, with the final struggle for the wreath, and then by teas and dancing throughout the evening. When darkness comes the Yard is illuminated by festoons of Japanese lanterns; the Glee Clubs sing in front of Holworthy; and then, at ten o'clock, a pyrotechnic piece, in which the number of the class is interwoven, is set off; but it is still some time before the last visitors turn towards home, and the Seniors, wearied out with excitement, drop into bed.

On the lists of Class Day Orators and Poets are found the names of many men who distinguished themselves in later life, and so justified their classmates' choice. For instance, among the orators are H. G. Otis, 1783; H. Ware, 1785; J. C. Warren, 1797; J. Walker, 1814; E. S. Gannett, 1820; F. J. Child, 1846; and Henry Adams, 1858. Among the Poets are J. Storey, 1798; W. Allston, 1800; J. G. Palfrey, 1815; G. Bancroft, 1817; W. H. Furness, 1820; R. W. Emerson, 1821; G. Lunt, 1824; F. H. Hedge, 1825; C. C. Felton, 1827; O. W. Holmes, 1829; J. R. Lowell, 1838; and E. E. Hale, 1839. The old custom of giving a jack-knife to the ugliest man in the Senior Class was abandoned when classes became so large that either there was less intimacy among their members, or it was impossible to agree upon the person to be thus distinguished; but each class still presents a cradle to the first child born of a member of the Class. The class of 1877, owing to internal dissensions, failed to elect Class Day officers, except a secretary.

DRESS.—I have come upon no description of the dress of the students during the 17th century. Probably there were no restrictions. But, by the middle of the last century, some of the students were so extravagant in their garb as to call out the following vote from the Overseers (October, 1754): "It appearing to the Overseers, that the costly habits of many of the scholars, during their residence at the College, as also of the candidates for their degrees on Commencement days, is not only an unnecessary expense, and tends to discourage persons from giving their children a College education, but is also inconsistent with the gravity and demeanor proper to be observed in this Society, it is therefore recommended to the Corporation to prepare a law, requiring that on no occasion any of the scholars wear any gold or silver lace, or any gold or silver brocades in the College or town of Cambridge; and that, on Commencement days, every candidate for his degree appear in black, or dark blue, or gray clothes; and that no one wear any silk night-gowns; and that any candidate who shall appear dressed contrary to such regulations may not expect his degree." Gowns were

¹ College Words and Customs.

introduced about 1760, but, after the Revolution, the prescription of 1754 seems to have been unobserved; for, in 1786, another sumptuary law was established, prescribing a distinct uniform for each of the classes. "All the Undergraduates shall be clothed in coats of blue gray, and with waistcoats and breeches of the same color, or of a black, or nankeen, or an olive color. The coats of the Freshmen shall have plain button-holes. The cuffs shall be without buttons. The coats of the Sophomores shall have plain button-holes, like those of the Freshmen, but the cuffs shall have buttons. The coats of the Juniors shall have cheap frogs to the button-holes, except the button-holes of the cuffs. The coats of the Seniors shall have frogs to the button-holes of the cuffs. The buttons upon the coats of all the classes shall be as near the color of the coats as they can be procured, or of a black color. And no student shall appear within the limits of the College, or town of Cambridge, in any other dress than in the uniform belonging to his respective class, unless he shall have on a night-gown or such an outside garment as may be necessary over a coat, except only that the Seniors and Juniors are permitted to wear black gowns, and it is recommended that they appear in them on all public occasions. Nor shall any part of their garments be of silk; nor shall they wear gold or silver lace, cord, or edging upon their hats, waistcoats, or any other parts of their clothing. And whosoever shall violate these regulations shall be fined a sum not exceeding ten shillings for each offence."¹

The students rebelled against this prescription, and, in 1798, the rules about frogs and button-holes were abrogated, but the blue-gray or dark-blue coat was still prescribed. Three-cornered cocked hats were then in fashion; the hair "was worn in a queue, bound with a black ribbon, and reached to the small of the back." Ear-locks were subjected to curling-tongs and crimping-iron. Lawn or cambric furnished ruffles for the shirtbosom. The shoes were pointed, and turned upward at the end, "like the curve of a skate." Buckles for the knees and shoes, a shining stock for the throat, a double-breasted coat, waistcoat and breeches, completed the toilette of the student at the close of the last century.

Again, in 1822, the Faculty tried to regulate the dress of the undergraduate, and passed the following ordinance, which was not formally abolished for many years; "Coat of black mixed (called also Oxford mixed, black with a mixture of not more than one-twentieth, nor less than one twenty-fifth part of white), single breasted, with a rolling cape, square at the end, and with pocket-flaps, the waist reaching to the natural waist, with hannels of the same length; with three crow's-feet made of black silk cord on the lower part of the sleeve of the coat of a Senior, two on that of a Junior, and one on that

of a Sophomore. Waistcoat, of black-mixed or of black, or, when of cotton or linen fabric, of white; single-breasted, with a standing collar. Pantaloon, of black-mixed, or of black bombazet, or, when of cotton or linen fabric of white. Surtout or great-coat, of black-mixed, with not more than two capes; or an outer garment of camlet or plaid. The buttons of the above dress must be flat, covered with the same cloth as that of the garment; not more than eight nor less than six on the front of the coat, and four behind. A surtout, or outside garment, is not to be substituted for the coat; but the Students are permitted to wear black gowns, in which they may appear on all public occasions. A night-gown of cotton, or linen, or silk fabric, made in the usual form, or in that of a frock-coat, may be worn, except on the Sabbath and on Exhibition or other occasions when an undress would be improper. Neckcloth, plain black, or plain white. Hat of the common form and black; or a cap, of an approved form. Shoes and boots black." This costume was to be worn, moreover, in vacation as well as in term-time, under penalty of dismissal. In the catalogue of 1825 the following prices are given: "coat, \$15 to \$25; pantaloons, \$4 to \$8; vest, \$3 to \$5; outside coat, \$15 to \$25."

In the catalogue for 1849 the requirements for dress are stated thus: "On Sabbath, Exhibition, Examination and Commencement Days, and on all other public occasions, each student in public shall wear a black coat, with buttons of the same color, and a black hat or cap." But with the increase of students, the difficulty of examining the color of their buttons also increased; moreover, academic sentiment tended toward freedom in this as in other matters, so that, although the sumptuary laws still remained in the College "Bible," they were less frequently enforced, and from about 1860 we hear no more of them. Students now dress as they please; the force of custom suffices to bring the Seniors out in evening dress and silk hats on Class Day and Commencement; and since custom of late years has sanctioned the wearing of tennis suits to college exercises, the last vestige of uniformity and soberness in dress has vanished.

COLLEGE SOCIETIES.—College societies have played so large a part in undergraduate life during the present century that we are curious to know what societies there were at Harvard two centuries ago. I have found, unfortunately, no mention of clubs or societies in early times. About the middle of the 18th century the Faculty took particular pains to improve the declamation of the students; and this seems to have led to the formation of speaking clubs; for in the entertaining *Diary* of Nathaniel Ames (Class of 1761) there are several memoranda of plays, such as "The Roman Father," Addison's "Cato," "The Revenge," and "The Orphan,"—performed by the students in their rooms. Under date of Nov. 13, 1758,

¹ Laws of 1790.

Ames says "Calabogus Club begun;" Dec. 9, "went [to] Whitfield club [at] Hooper's cham[ber];" Dec. 31, "Club at my chamber;" May 5, 1759, "Joyn'd the Tea Club;" Oct. 19, "Joyn'd a new Club." What the proceedings of these societies were we can only conjecture. Not until 1770 do we come to an association which still exists. This, the "Institute of 1770," was originally a Speaking Club, founded by Samuel Phillips, John Warren and other Seniors in the Class of 1771. No member was allowed to speak in Latin without special leave from the President. The orators spoke on a stage four feet in diameter, two feet high, "with the front Corners clipt," and they chose such subjects as "The Odiousness of Envy," and "The Pernicious Habit of Drinking Tea." In 1773 this Club united with the "Mercurian Club," founded two years before by Fisher Ames. In 1801 it called itself "The Patriotic Association," and, later, "The Social Fraternity of 1770." In 1825, two more rivals, "The Hermetick Society" and the "Ἀκριβοῦς ὁμιλία" coalesced with it, under the name of the "Institute." It passed from the Seniors to the Juniors, and at last to the Sophomores, who elect in May every year ten Freshmen; these, at the beginning of their Sophomore year, elect the rest of the members of their Class. The "Institute" kept up its literary exercises until about fifteen years ago, when it became merely the mask behind which the Δ.Κ.Ε., a secret society, hid itself. The first four or five "tens" were members of the Δ.Κ.Ε.; the others had the empty honor of calling themselves members of the "Institute." The Δ.Κ.Ε. is now the most harmful society in the College; its regular meetings resemble the *Kucipe* of German students; its neophytes are subjected to silly and sometimes injurious hazing, under the guise of initiation; its members give three theatrical performances each year. Some of the most prominent members of the Class of 1883, finding that they could not reform the Δ.Κ.Ε., resigned from it in a body.

The Harvard Chapter of the Phi Beta Kappa was founded in 1779. In its origin it was a secret society, devoted to the encouragement of literary exercises. Its members were Seniors and Juniors. In 1831 the veil of secrecy was withdrawn, and the mystic letters Φ.Β.Κ. were found to stand for *Φιλοσοφία Βοηθὴ Κηρύσσειν*,—"Philosophy the guide of life." Its members were chosen according to their rank in scholarship; rarely, besides the first twenty-five, a man of lower grade was admitted. The active work of the Society ceased long ago; but it holds a meeting annually on the day after Commencement, at which graduate and undergraduate members attend, to listen to an oration and a poem by men of distinction chosen for the occasion. Honorary membership is coveted by those who failed while in College to secure the rank required for election, but who since graduation have distinguished themselves.

The "Hasty Pudding Club" is the most characteristic and famous of all the Harvard Societies. It was

founded in 1795 by members of the Junior Class, among whom were Horace Binney and John Collins Warren. Its aims were to "cherish the feelings of friendship and patriotism." At its weekly meetings two members in turn provided a pot of hasty pudding. Besides the regular debates and essays, there was given a public performance every Spring, at which an oration and poem were delivered. About 1845 the custom of performing a farce originated; this has gradually been extended until now there are three theatrical performances each year—one before Christmas, one before the Fast Day recess, and one, "Strawberry Night," just before Class Day. For many years past the "Pudding" troupe have repeated their performances in Boston and New York for the benefit of the University Boat Club. Up to 1849 the meetings were held in the rooms of the members; then, the College allowed the Society to use Stoughton 29, to which three other rooms were subsequently added. But, owing to a fire in 1876, which broke out in the Pi Eta rooms in Hollis, the Faculty removed the Club to the wooden Society Building on Holmes Field. This was so far away that the meetings were poorly attended, and the Class of 1880 hired supplementary rooms on Brattle Street. That Class also raised a subscription among its members for a new building; the Class of 1881 took the scheme up, laid it before the graduates, formed committees for collecting funds, and so pushed the project that in 1888 a large new club-house, containing a library, meeting-rooms and theatre, was dedicated on Holyoke Street. Formerly, the Seniors chose eight Juniors who in turn elected the members from their class. To be on the "first eight" was deemed a sign of great popularity. But with the increase in membership this old scheme, which engendered much wrangling, has been given up; the members are elected in larger squads, and their names are arranged alphabetically. The Class of 1881 also abolished the old initiation,—running in the Yard, going to bed at sunset, writing mock-essays, and the bath in the meal-tub,—childish performances which no longer suited the times. The "Pudding" is now the largest social organization in the College; its secrecy has been abandoned, and it ought in the future, if properly directed, to be not only the best exponent of undergraduate opinions, but also a strong means of fostering the interest of the graduates in undergraduate affairs.

The "Medical Faculty" held an unique place among Harvard societies, and so deserves to be recorded. It was founded in 1818, its object being "mere fun." Its early meetings were held in the rooms of the members. "The room was made as dark as possible and brilliantly lighted. The Faculty sat round a long table, in some singular and antique costume almost all in large wigs, and breeches with knee-buckles. This practice was adopted to make a strong impression on students who were invited in for examination. Members were always examined for ad-

mission. The strangest questions were asked by the venerable board, and often strange answers elicited,—no matter how remote from the purpose, provided there was wit or drollery. . . . Burlesque lectures on all conceivable and inconceivable subjects were frequently read or improvised by members *ad libitum*. I remember something of a remarkable one from Dr. Alden (H. U. 1821), upon part of a skeleton of a superannuated horse, which he made to do duty for the remains of a great German Professor with an unspeakable name. Degrees were conferred upon all the members, M.D. or D.M. (Doctor of Medicine or Student of Medicine) according to their rank. Honorary degrees were liberally conferred upon conspicuous persons at home and abroad.”¹ A member of the Class of 1828 writes: “I passed so good an examination that I was made *Professor longis extremitatibus*, or Professor with long shanks. . . . It was a society for purposes of mere fun and burlesque, meeting secretly, and always foiling the government in their attempts to break it up.”¹ It printed Triennial Catalogues travestying those of the College. The doggerel Latin of the prefaces to these has been aptly called “piggish.” The catalogue of 1830, after stating that “this is the most ancient, the most extensive, the most learned, and the most divine” of societies, adds: “The obelisks of Egypt contain in hieroglyphic characters many secrets of our Faculty. The Chinese Wall, and the Colossus at Rhodes were erected by our ancestors in sport. . . . It appears that the Society of Free Masons was founded by eleven disciples of the Medical Faculty expelled in A.D. 1425. Therefore we have always been Antimason. . . . Satan himself has learned many particulars from our Senate in regard to the administration of affairs and the means of torture. . . . ‘Placid Death’ alone is co-eval with this Society, and resembles it, for in its own Catalogue it equalizes rich and poor, great and small, white and black, old and young.” From the Catalogue of 1833 we learn that, “our library contains quite a number of books; among others ten thousand obtained through the munificence and liberality of great Societies in the almost unknown regions of Kamtschatka and the North Pole, and especially through the munificence of the Emperor of all the Russias. It has become so immense that, at the request of the Librarian, the Faculty have prohibited any further donations. In the next session of the General Court of Massachusetts, the Senate of the Faculty (assisted by the President of Harvard University) will petition for 40,000 sesterces, for the purpose of erecting a large building to contain the immense accumulation of books. From the well-known liberality of the Legislature, no doubts are felt of obtaining it.” Among the honorary degrees conferred was one on Alexander I of Russia, who, not understanding the joke, sent in recognition a valuable case of surgical

instruments, which went by mistake to the real Medical School. Chang and Heng, the Siamese Twins, Sam Patch, Day and Martin, and Martin Van Buren were also among the honorary members. The “Medical Faculty” was suppressed by the College Government in 1834, but it was subsequently revived; but its proceedings have been kept so secret for so many years past that only on Class Day are even the names of the Seniors who belong to it known, from their wearing a black rosette with a skull and bones in silver upon it.

Only one other society which was organized in the last century still exists: the Porcellian or Pig Club, founded in 1791 for social purposes, and united, in 1831, with the Knights of the Square Table. It still maintains the secret initiation, but is otherwise a convivial organization, having a small membership, and consequently heavy dues. The Club is now (1890) erecting a large club-house on the site of the rooms which it has occupied for many years.

Of other societies which once were famous and have long since been dissolved, mention should be made of the Navy Club (1796–1846), whose flagship consisted of a marquee “moored in the woods near the place where the house of the Honorable J. G. Palfrey now stands;” and of the Harvard Washington Corps, (1811–34), a military company whose parades and feasts were notorious. Then there was the Engine Society, which managed the fire-engine presented to the College by the Legislature after the burning of Harvard Hall; it used to attend the fires in Cambridge and the neighboring towns, the firemen staying themselves with rum and molasses—“black-strap”—and was forcibly disbanded in 1822, after it had flooded the room of the College Regent. About 1830 a passion for secret societies swept through the American Colleges, and Harvard had its chapters of many Greek Letter Societies, which flourished until the advent of the Class of 1859, when they were abolished by the Faculty. At that period there also existed a lodge of mock Free Masons. The tendency during the past generation has been in an opposite direction. Of late the old Greek Letter organizations have been revised, but as social clubs, and secrecy—so attractive to the juvenile imagination—is now held in less esteem. Five of these social clubs now have houses of their own,—the Porcellian, the A. D., the Alpha Delta Phi, the Zeta Psi and the Delta Phi. The O. K., founded in 1859, is literary and holds fortnightly meetings in the rooms of its members. The Pi Eta (1860) and the Signet (1870) are Senior Societies which draw their members from those who do not belong to the Hasty Pudding. The introduction and expansion of the Elective System have greatly modified the social aspects of the College, by obliterating the distinction between class and class, and it is evident that this modification will increase rather than diminish.

In the past, societies founded for literary or intel-

¹ “College Words and Customs,” 1850, pp. 199, 200.

lectual purposes almost universally became transformed into social organizations, where conviviality and good fellowship were the prime requisites. But of late there have sprung up societies composed of men who are interested in the same work, and who discuss their favorite topics at their meetings. Such societies are the Classical Club (1885); La Conference Française (1886); the Deutscher Verein (1886); the Harvard Natural History Society (1887); the Boylston Chemical Club (1887); the Electrical Club (1888); the Historical Society (1880); the Finance Club (1878); the Free Wool Club (1889); the Philosophical Club (1878); the Art Club (1873); the English Club (1889); and the Camera Club (1888). The religious organizations are the Society of Christian Brethren (1802); the St. Paul's Society (1861); and the Total Abstinence League (1888). The Pierian Sodality, or College orchestra, was founded in 1808; the Glee Club in 1858. The Harvard Union, the College debating club, was founded in 1880. There are also a Chess Club, and organizations of members from the chief preparatory schools (Andover and Exeter), and of students from the Southern States, from Minnesota and Connecticut. Many of the literary clubs give public lectures, and the musical societies give concerts during the winter and spring months.

HARVARD JOURNALISM.—Harvard journalism has not, on the whole, taken so high a rank as might be desired; it has not, for example, kept the plane which the students' publications of Oxford and Cambridge have held. And yet undergraduates have, from time to time, been connected with the Harvard journals who have later achieved a reputation in literature. The first paper published was the *Harvard Lyceum*, July 14, 1810; among its editors were Edward Everett and Samuel Gilman, author of "Fair Harvard." It expired in 1811, after eighteen numbers had appeared. The *Harvard Register*, an octavo of thirty-two pages, was issued in March, 1827, but died from lack of support in February, 1828, although George S. Hillard, R. C. Winthrop, C. C. Felton and E. H. Hedge were on its editorial board. *The Collegian*, starting in February, 1830, ran out after six numbers. O. W. Holmes was one of its contributors, and furnished several pieces which have since been republished in his collected works. *Harvardiana* had a longer life (September, 1835–June, 1838), and had J. R. Lowell as one of its editors. The next venture, *The Harvard Magazine*, was launched in December, 1854, and, although some times on the verge of foundering, floated till July, 1864. Among its originators were F. B. Sanborn, Phillips Brooks and J. B. Greenough. In 1866 appeared a new *Collegian*, but after three numbers it was suppressed by the Faculty. In May, 1866, the *Advocate*, a fortnightly, was issued, and it has had a prosperous career ever since. In 1873 *The Magenta* (whose name was subsequently changed to *The Crimson*) was founded, and ran successfully till 1883, when

it was consolidated with the *Daily Herald* (founded in 1882). Previously to the *Herald*, in 1879, *The Echo*, the first College daily, had been started. In 1876 an illustrated fortnightly, *The Lampoon*, was founded, and soon extended its circulation outside of the College, through the clever skits and parodies of Robert Grant, F. J. Stimson and J. T. Wheelwright, and the comic cartoons of F. G. Attwood. Its publication ceased in 1880, but in the following year a new series was begun. *The Harvard Monthly*, more solid in character, was founded in 1885. Moses King, a member of the Class of 1881, published an illustrated monthly, called the *Harvard Register*, from January, 1880, to July, 1881.

SPORTS AND GYMNASTICS.—We have no record of the games and sports in which the students of the 17th century indulged. Freshmen, down to the Revolution, were required to "furnish batts, balls and footballs for the use of the students, to be kept at the Buttery." Drilling with the train-hand was a favorite diversion of our ancestors, and as it seems to have been followed by a good deal of drinking, the Harvard Faculty rarely allowed students to "train." In days when the Freshmen were fags, they, at least, did not lack physical exercise, often of a peculiar kind. In N. Ames' *Diary* we meet such entries as these: "June 26 (1758). President's Grass Mow'd." "July 1, finished the President's hay." Hunting was also to be had in this neighborhood, for the same diarist reports, "Sept. 10 (1759) a Bear seen. Men hunt him." "Sept. 11. Bear kil'd, a dance this evening." "Sept. 26, a Bear kil'd by Brall Bliss & others." There was skating, too, on Fresh Pond. Frequent fights, or rushes, took place between the two lower classes. A writer in the *New England Magazine* (vol. iii, p. 239) describes "a custom, not enjoined by the Government, [which] had been in vogue from time immemorial. That was for the Sophomores to challenge the Freshmen to a wrestling match. If the Sophomores were thrown, the Juniors gave a similar challenge. If these were conquered, the Seniors entered the lists, or treated the victors to as much wine, punch, etc., as they chose to drink. . . . Being disgusted with these customs, we [Class of 1796] held a class-meeting, early in our first quarter, and voted unanimously that we should never send a Freshman on an errand; and, with but one dissenting voice, that we would not challenge the next class that should enter to wrestle." The Harvard Washington Corps, a military company, was established about the year 1769, and from its motto *Tam Marti quam Mercurio* was called the Marti-Mercurian Band. It flourished nearly twenty years; was revived in 1811, and was finally disbanded in 1831.

The first regular training in gymnastics was given by Dr. Charles Follen, who, about 1830, set up apparatus on the Delta. At that time swimming was the favorite sport, and as the Charles River had not yet been turned into a sewer for Brighton, its waters were

clean. Rowing-parties made their *rendezvous* at Fresh Pond. Colonel Higginson¹ tells of a member of the Class of 1839 who was cited before the Faculty on the charge of owning a ducking-float there, and when he pleaded that it was in no way a *malum prohibitum*, he was told "that no student was allowed to keep a domestic animal except by permission of the Faculty, and that a boat was a domestic animal within the meaning of the statute." Cricket, base-ball and foot-ball, but of old-fashioned, crude varieties, were played at that time. The last "was the first game into which undergraduates were initiated, for on the first evening of his college life the Freshman must take part in the defense of his class against the Sophomores." About 1844, Belcher Kay opened a gymnasium.

Rowing began in earnest in 1844, when the Class of 1846 bought an eight-oared boat, the "Star," which they re-named the "Oneida." "It was 37 feet long, lapstreak built, heavy, quite low in the water, with no shear and with a straight stem." Other boats, the "Huron," the "Halcyon," the "Ariel" and the "Iris," were almost immediately purchased, each belonging to a club. In 1846 a boat-house was built. The races took place among the various college clubs and also with outsiders. On August 3, 1852, the first inter-collegiate race was rowed at Centre Harbor, on Lake Winnepiseogee, between the Harvard "Oneida" and the "Shawmut," of Yale, the former winning by about four lengths over a two-mile course. The next race with Yale, in 1855, on the Connecticut at Springfield, was won by the Harvard "Iris," when short outriggers were used for the first time, and the steering was done by the bow oar (Alexander Agassiz). The next year the first University boat was built at St. John, then the chief rowing town on this side of the Atlantic; and the Harvard crew competed in the usual 4th of July regatta on the Charles River. In 1857 Harvard, having been defeated by Boston clubs, ordered a six-oar shell of Mackay, with which (June 19, 1858) she won the Beacon Cup, and beat a workmen's crew on July 4th. This year was organized an Inter-collegiate Rowing Association, composed of Harvard, Brown, Yale and Trinity, but, owing to the drowning of the Yale stroke-oar, Dunham, just before the race, the regatta was abandoned. Yale, Brown and Harvard met on Lake Quinsigamond in 1859, and the last won easily, repeating her victory in 1860. Then followed a lull till 1864, when Harvard was beaten by Yale. The annual race between these two colleges took place at Worcester down to and including 1870—Harvard winning seven out of nine times. Sliding seats, used first by Yale in 1870, were adopted by Harvard in 1872; the Ayling oars were introduced from England at Cambridge in 1870, and from time to time improvements were made in the outriggers and row-locks. The most famous

of all the races in which Harvard competed was rowed against Oxford, from Putney to Mortlake, four miles and three furlongs, on Aug. 27, 1869. The crews consisted of four men with a coxswain, and Oxford won by six seconds in 22 min. 41½ sec. The college regattas were now revived, and were held at Springfield in 1871-73, and at Saratoga 1874-76. Amherst and Cornell each won twice, and Columbia once. But this system did not commend itself to Harvard and Yale; the number of crews entered (eleven in 1873 and thirteen in 1875) caused many fouls and disputes, and, beginning with 1877, Harvard and Yale agreed to row by themselves. Since 1878 their annual race has been held on the Thames River, at New London, two or three days after Commencement. Harvard has usually rowed a preliminary race with Columbia. In 1874 Robert Cook introduced the "Oxford stroke" at Yale, which was adopted and perfected by W. A. Bancroft (H. U. 1878), the oarsman to whom, more than all others, Harvard owes its aquatic prestige. In order to bring out and train as many oarsmen as possible, the system of "Club crews" was encouraged during the seventies, but these were superseded (1879) by Class crews, which compete every May over the Charles River course. Freshmen races with other colleges—Cornell, Columbia, University of Pennsylvania, &c.—have been kept up. The methods of training have undergone great changes. At first, oarsmen trained for only a few weeks before the race; then, a very severe diet was insisted upon; finally, for the past fifteen years, the training has begun in the autumn and continued throughout the college year, but the food and drink allowed have been more rational. About a fortnight before the race the 'Varsity crew goes to New London where quarters were built for it in 1881, and receives final instruction from a coach. Harvard's great lack, during recent seasons, has been a competent coach. The recently completed Weld Boat-house will, it is hoped, encourage rowing as a pastime for students who do not belong to the 'Varsity or Class crews.

Base-Ball, the second in importance of University sports, is even younger than Rowing. It originated, apparently, in the old game of rounders. Up to 1862 there were two varieties of base-ball—the New York and the Massachusetts game. In the autumn of 1862 George A. Flagg and Frank Wright organized the Base-Ball Club of the Class of '66, adopting the New York rules; and in the following spring the city of Cambridge granted the use of the Common for practice. A challenge was sent to several colleges: Yale replied that they had no club, but hoped soon to have one; but a game was arranged with the Brown sophomores, and played at Providence June 27, 1863. The result was Harvard's first victory. Interest in the game grew rapidly. On July 9, 1864, Harvard encountered the Lowell Club—then the most famous in New England—on the Boston Common, but was defeated. Class nines were organized, and from the

¹ *Harvard Book*, ii, 188.

best of these the Varsity nine was made up. For several years the chief contests were between Harvard and the Lowells or the Trimountains, and,—among professionals—the Athletics, of Philadelphia, and the Atlantics, of Brooklyn. In 1868 the first game with Yale was played. From that year until 1871 Harvard had a remarkable nine, of which A. McC. Bush was captain and catcher. In 1869 it made a long tour, playing the strongest clubs in the country, professionals as well as amateurs, and all but defeating the Red Stockings of Cincinnati, then the champions. After Bush and his colleagues left college Harvard was less successful during several years, but under the captaincy of F. W. Thayer, '78, it was again the leading college club. He invented the catcher's mask—an invention which brought about the greatest possible change in the method of play; sacrifice hits, base-stealing and curve-pitching—which was declared an impossibility by instructors in physics—came in at this time, and added to the precision of the game. Since 1878 Harvard, although frequently victorious, has had but one excellent nine, that of 1885, captained by Winslow. The nine trains in the Gymnasium during the winter, and is coached by a professional; but recently the Faculty has forbidden it from playing matches with professionals. The most remarkable game on record was played by the Harvards and Manchesters in 1877; it lasted twenty-four innings, neither club making a run. Games in Cambridge were played on the Delta, until that was chosen as the site of Memorial Hall; then Jarvis Field was converted into a ball-field. About 1876 base-ball and foot-ball were played on Holmes Field; and a little later a cinder fifth-mile track was laid out on Jarvis by the Athletic Association. About seven years ago Holmes Field was regraded, a quarter-mile track was laid and the base-ball diamond fixed there. Jarvis has since then been given up to foot-ball and tennis. In 1889 a large field belonging to the Norton estate was leased for athletic purposes; it is now proposed to reclaim the large tract of marsh land belonging to the College on the further side of the Charles, in order to furnish sufficient space for all possible athletic needs.

Foot-ball, which has lately come to be *par excellence* the autumn sport, was played in desultory fashion up to 1873, when the University Foot-ball Association was organized. The team consisted of fifteen players, and more dependence was placed on individual speed and strength than on concerted play. Gradually, experience suggested improvements, and at Princeton and Yale more than at Harvard the standard of the game was raised. The number of players was reduced to eleven, and in 1880 the Rugby rules were adopted. In 1885 the playing was so rough that the Harvard Faculty refused to allow the Harvard team to compete; but this prohibition was removed the following year. In 1889, however,

brutal acts, tricks and "professionalism" again called for a remedy, and Harvard, having withdrawn from the "triangular league" with Princeton and Yale, is now negotiating for the formation of a "dual league" with Yale in foot-ball, base-ball and general athletics, similar to the agreement in rowing.

The Old Gymnasium, built in 1860, sulliced, for a time, for the needs of the students, but with the rapid increase in the membership of the college after 1870, the building became overcrowded, and in 1878 Augustus Hemenway (H. U. 1876) gave the College the new Gymnasium, which, in size and appointments, surpassed any other in the country. The Athletic Association, founded in 1874, has stimulated the growing interest in physical exercise by holding Winter meetings (at which there are sparring, wrestling, fencing, tumbling, jumping, tugs-of-war, etc.) and Spring meetings (at which there are running, leaping and other out-door sports). The best Harvard athletes (since 1876) have competed at the Intercollegiate Games at Mott Haven, where Harvard has stood first nine times, Columbia three times, and Princeton and Yale once each.

Of the other athletic organizations it is unnecessary to speak in detail. Cricket, although venerable, has never been able to compete in popular favor with base-ball. Bicycling was introduced in 1879, almost simultaneously with Lawn Tennis; the latter has perhaps done more than any other sport to improve the general physique of the students. La Crosse, Sparring, Canoeing and Shooting have all their votaries; and the introduction of Polo indicates the increasing number of wealthy students. Under the superintendence of Dr. Dudley A. Sargent, the Director of the Gymnasium, students are examined and assigned the apparatus best adapted to their several needs. Track athletics are also in charge of an assistant. The Faculty, by appointing a Committee to confer with the officers of the various organizations, and to superintend the games, have shown their determination to prevent athleticism from being pushed to a harmful extreme. The problem that confronts them is comparatively new in America, and by no means has a satisfactory solution yet been found. As yet there is not here, what there has long been in England, a large body of gentlemen athletes, who pursue sport for its own sake: our public opinion is determined by professionals who fix the standard and set the pace. College athletes emulate them, to the detriment of the amateur or gentlemanlike spirit which should rule college sports. And since more and more young men go to college for the sake of the excitement and amusement to be had there, or because they excel in athletics, the Faculty have to devise means for curbing the excessive athleticism towards which these tend, while allowing, at the same time full scope for the normal and wholesome exercise of the great majority of industrious students.

IV. CONCLUSION.

It would be a grateful task to record, if space permitted, somewhat of the lives of the many men who, during the past two hundred and fifty years, have co-operated either by gifts or money or by their learning, patience and devotion, to the growth and welfare of Harvard University. No other institution in this country has had so long a life, and to none other have so many of the best efforts of society been devoted age after age. The existence and fostering of the College at all, what are they but proofs that at every period a certain portion of the community have recognized the inestimable benefits that spring from the dissemination of Truth? We cannot too often repeat that buildings and rich foundations do not, of themselves, constitute a University,—that the Truth of which the University should be the oracle can be taught only by wise and true men. And if you look down the list of those who for two centuries and a half have governed and taught at Harvard, you will find no lack of such men. They have differed according to the times in which they lived and worked in their views concerning Truth, but they have been harmonious in their conviction that Truth, and nothing else, should be taught here.

When Harvard was founded, the unexplored forests stretched almost to Cambridge; the early teachers may have kept their flint-locks by their desks, against a sudden sally of the Indians. But in spite of these actual dangers, in spite of the absence of all the higher appliances of education, the seminary grew. It embodied the ideals and hopes not only of this neighborhood, but of the whole New England Colony. We have seen how at first, being the offshoot of a theocratic community, Harvard was bound, on the one hand, by the Church, and, on the other hand, by the State. The Pilgrims who came to Plymouth, the Puritans who settled Boston, did not believe in liberty of conscience; they desired to worship God after their own fashion, and were intolerant of any other worship. And for two generations, as we have seen, they imposed their rigid rules unchallenged on the College. But at the beginning of the 18th century the community was already made up of considerable numbers of non-Calvinists, and among the Calvinists themselves there were degrees of strictness. All through that century there was a conflict between the liberals and the moderates, and, although the former happily prevailed, the Orthodox Church still excluded members of other denominations from taking part in the Government or the instruction of the College. Significant is it that the first conspicuous benefactor of Harvard in the 18th century was a Baptist. Not until 1792 was a layman, James Bowdoin, elected to the Corporation; and, although the election, a dozen years later, of Henry Ware to the chair of Theology plainly indicated the beginning of the end of sectarian control, it was not until 1843 that the Board of Overseers was open to clergymen of any denomination.

That year, therefore, is a landmark in the history of Harvard; in that year she was emancipated from bondage to a single sect.

Even longer was her servitude to the State. Colonial and Provincial Governors, their Councils, and the General Court exercised from decade to decade an *ex officio* control over the College. To them the teachers had to look for salaries, and we have seen how often they looked in vain, how many wore themselves out for a mere pittance, and how President after President was hampered and persecuted by the law-makers in Boston. Nor did their condition improve when Massachusetts became an independent Commonwealth; for the State retained its control, but shirked the obligations which that control imposed, and at last cut off all subventions. The College, forced to support itself, and proving that it could do so, demanded that in justice it should govern its own affairs; but, although experience showed how pernicious is the mixing up of education with partisanship, it was not until 1865 that the Legislature at last released its hold. That year is the other great landmark in Harvard's career; it witnessed her emancipation from the State, and the transfer of the conduct of her affairs to those most interested in her prosperity—her alumni.

From restrictions to liberty has been likewise the course of her progress in other things. Once, all studies were prescribed; now each student is free to choose the studies most congenial to his tastes and talents. Restrictions as to worship, dress and diet have all passed away; we read of them now in the old books, with feelings not unlike those aroused by the sight of mediæval instruments of torture at Nuremberg,—they belong to another time; the wonder is that men could have thought them profitable or necessary at any time.

We discern three critical periods in the development of Harvard: first, that covered by the administration of Leverett, when the attempts of the Mather faction were frustrated, the relations between the Corporation and the Overseers were fixed, the old Charter was revived, and the munificence of Hollis and other benefactors strengthened the resources of the College; second, Kirkland's term, when the College was expanded into a University through the creation of departments of Medicine, Law and Divinity, when methods of instruction were reformed, and when more liberal views of religion began to be held, however timidly; third, the present administration of President Eliot, during which, besides marvelous growth in the College and Schools, and besides the erection of many buildings and the creation of new departments, there are to record the recognition of what a university should be, and the endeavor to raise every department to the level of that recognition. At no other period has Harvard had so decisive an influence on the educational standard of the United States as between 1870 and 1890; and henceforth,—freed from the trammels

of Church and State, loosed from the bonds of obsolete methods, with the consciousness of noble work achieved, with equipments and appliances undreamt of even half a century ago, with not merely a struggling colony but a vast nation within reach of her voice,—what may she not achieve as the guardian and imparter of Truth!

CHAPTER V.

CAMBRIDGE—(Continued).

THE DIVINITY SCHOOL OF HARVARD UNIVERSITY.

BY REV. A. P. PEABODY, D.D.

THERE never was a time when Harvard College was not, or had not, a Divinity School. The training of ministers was the prime purpose of its establishment. For the first quarter of a century more than half of its graduates became ordained ministers and several of the unordained are known to have been preachers. The Hollis Professor of Divinity always had Divinity students under his tuition; while the Professor of Hebrew did what he could to enable every undergraduate to read the Old Testament in its original tongue.

The first movement toward the increase of the teaching power in this department was in 1811, when, by the will and from the estate of Samuel Dexter, an endowment accrued to the College for a Lectureship on Biblical Criticism. Rev. Joseph Stevens Buckminster was appointed lecturer, and had delivered a single course of lectures before his death in 1812. Rev. Wm. Ellery Channing succeeded him, holding the office but one year. In 1813 Andrews Norton was chosen Lecturer, and first as Lecturer, then as Professor, gave instruction in the Criticism of the New Testament till 1830. In 1814 the Hollis Professor, the Professor of Hebrew and Mr. Norton received the first regular class of students in Theology,—a class of six, all of them graduates of that year. This class completed its course of study in 1817, and has been followed by an unbroken annual series of classes of virtual graduates in theology, though the academic degree of Bachelor of Divinity was not conferred till 1871.

In 1813 Samuel Parkman, of Boston, gave the College a township in Maine "for the support of a Professor in Theology." After this gift became available for its purpose, it was increased by the donor's son, Rev. Dr. Francis Parkman, and, thus augmented, is the present endowment of the Parkman professorship.

In 1815 the President and Fellows addressed a circular to the friends of the College, representing the need of added funds for theological education. The

result was a fund of nearly thirty thousand dollars, and the organization of an active and efficient "Society for promoting Theological Education in Harvard University."

In 1819 the Divinity School was first constituted a distinct department of the University under the charge and tuition of the Hollis Professor, Rev. Henry Ware, Senior, D.D., the Professor of Hebrew, Sidney Willard, and the Dexter Lecturer, who now received the appointment and title of Dexter Professor of Sacred Literature. The immediate management of the Divinity School was placed temporarily under the charge of the Society above named, subject, of course, to the control of the governing Boards of the University. Under the auspices of this Society the present Divinity Hall was erected in 1826. The Society still exists, and is in possession of funds to a considerable amount, the income of which is appropriated in part to the aid of divinity students, in part to other purposes in the interest of the Divinity School.

Since these early endowments of the department of theology, two professorships have been instituted, one dependent for its support on certain property bequeathed to the College by the late Benjamin Bussey, the income of which is, in accordance with his will, divided equally between the Law and the Divinity Schools, and a professorship of Ecclesiastical History, endowed from a fund left by Mr. Winn, of Woburn, in trust for the advancement of liberal views in theology.

Divinity Hall contains a chapel and rooms occupied by students. Several apartments were at first used for the library and for class-rooms. But there has been recently erected a library large enough to contain, with its present 22,000 volumes, the accumulations of a century to come, and having also apartments which are now used as lecture-rooms, and which can be so occupied till the remote time when they shall be required for the reception of books.

The Divinity School has at the present time invested funds to the amount of nearly \$400,000, and an annual income of not far from \$40,000. Its graduates have numbered about 500, and of late years it has had from thirty to forty names of students on the annual catalogue. There are now actively engaged in the instruction of the school six professors,—one in the department of Theology, one in Ethics, one in the Interpretation of the New Testament, one in Ecclesiastical History, one in Hebrew and the Interpretation of the Hebrew Scriptures, and one in Semitic Languages in general and their literature.

The history of the Divinity School should embrace, chief of all, some notice of the men whose services have given it an honored place among the departments of the University. The Hollis Professor of Divinity, under whose virtual presidency the school was organized, was Rev. Henry Ware, D.D., known to the larger public by his controversy with Dr. Woods,

of Andover,—to the members of the University, and especially to his pupils in theology, for learning level with the highest standard of his time, for pre-eminent candor in the statement of opinions other than his own, for equal patience and skill as a teacher, and for personal traits which never failed to win admiration and love. He resigned his active duties in 1840, and the office remained vacant till 1882, when it was filled by Rev. David G. Lyon, Ph.D., the present incumbent, who holds the foremost place among Assyriologists in this country, and who also gives instruction in Hebrew and Arabic. Since Dr. Ware's resignation portions of his work have been performed by the Parkman professors, and more recently by Rev. Charles C. Everett, D.D., and Rev. Francis G. Peabody, D.D., both too well known to need any added testimony to their surpassing ability and merit.

Sidney Willard, Hancock Professor of Hebrew, remained a member of the Theological Faculty till his resignation, in 1831. He was succeeded in 1840 by Rev. George R. Noyes, D.D., the instruction in that department having meanwhile been given by Dr. Palfrey. Dr. Noyes's translations of large portions of the Hebrew Scriptures and of the entire New Testament are enduring monuments of a broad, deep and conscientiously faithful scholarship. He held, together with the professorship of Hebrew, the Dexter Lectureship, and his services in the criticism of the New Testament were so valuable and so valued that, while he lived, there was no thought of relieving him of the double charge, for neither part of which was it easy to find his equal. He was succeeded in 1869 by Rev. Edward J. Young, D.D., an accomplished Hebrew scholar, and on his resignation the place was filled and is still filled by Rev. Crawford H. Toy, D.D., who in his department has, if equals, no superior.

In the criticism of the New Testament, Professor Norton left in some respects a unique impression on his pupils and readers. He united to the firmest faith in the genuineness and authenticity of the Gospel the most daring and unscrupulous handling of the contents of the Christian Scriptures, rejecting not only what was made doubtful by documentary evidence, but whatever his critical taste judged to be spurious. His interpretations of the sacred text and his opinions with regard to it were so evidently the result of the maturest thought and were so impressively uttered, that it seemed impossible to dissent from them. His great work in defence of the genuineness of the Gospels is, perhaps, the strongest series of arguments ever urged with reference to that subject, and it may be doubted whether more recent discussions have shaken any one of its positions, or impaired the validity of any portion of its reasoning. In his realm he was an autocrat, with willing subjects. Rev. John G. Palfrey, D.D., who succeeded him, differed very widely from him. With equally decided opinions of his own, he was generous and hospitable toward other minds, invited dissent, and encouraged freedom of

thought. His most elaborate works were on the Old Testament,—works which represented the advanced scholarship of their time in a department in which adepts of our day have left those of half a century ago very far behind. He resigned in 1839, and the office was merged in that of the Professor of Hebrew till 1872, when it was again filled by Ezra Abbot, D.D., recognized on both sides of the Atlantic as second to no then living scholar in everything appertaining to a scientific knowledge of the New Testament in its original tongue. On his death, in 1884, the office passed, we might say by a necessity which superseded choice, to Rev. Joseph H. Thayer, D.D., who had been Dr. Abbot's most intimate associate in the study of the New Testament, who had recently resigned a similar Professorship at Andover, and who, by works, indispensable for a Biblical scholar, is insuring for himself enduring reputation and the gratitude of coming generations of students and lovers of the New Testament.

The Parkman Professorship was first filled by Henry Ware, Jr., D.D., in 1829, and he assumed his charge under the style of "Professor of Pulpit Eloquence and Pastoral Care,"—a fit title for him, as he had distinguished himself in both those spheres of service during his pastorate, which failing health alone induced him to resign. His most important professional function was the careful and elaborate criticism of the sermons prepared by the students, and beyond this, and far above it, were the effluence and the influence of a soul thoroughly consecrated to Christ and to the ministry of His Gospel. He was succeeded, in 1842, by Rev. Convers Francis, D.D., a man of vast erudition, whose teaching power would have been greater had his learning been less abundant and more thoroughly systematized. He had for his successor, in 1863, Rev. Oliver Stearns, D.D., who had been President of the Meadville Theological School, and who brought and maintained a high reputation as a scholar and teacher. Both of these Professors gave instruction in ethics and in systematic theology. Since Dr. Stearns' resignation, in 1878, the professorship has remained vacant; but its special work has been performed with equal faithfulness and skill, by Professor Francis G. Peabody, for the last two years, with the valuable assistance of Rev. Edward Hale.

In Ecclesiastical History, Rev. Frederic H. Hedge, D.D., filled, with characteristic ability, an unendowed and scantily paid professorship from 1857 to 1876, during the first fifteen years of this period having been pastor of a church in Brookline, and for the last four Professor of German in the College. In 1882 Ephraim Emerton, Ph.D., was appointed Winn Professor of Ecclesiastical History, and has given ample proof of his fitness, as a scholar and a teacher, for a chair of so high educational importance in the training of Christian ministers.

CHAPTER VI.

CAMBRIDGE—(Continued.)

THE PUBLIC SCHOOLS.

BY PROF. J. N. F. IWEED, A. M.

At a session of the General Court of the Colony of Massachusetts Bay in New England, commenced on the 11th of June, 1642, the Court, taking into consideration the great neglect in many parents and masters in training up their children in learning, ordered and decreed:—

"That in every town the chosen men appointed for managing the prudential affairs of the same, shall henceforth stand charged with the care of the redress of this evil; and for this end they shall have power to take account from time to time of the parents and masters and of their children, concerning their calling and employment of their children, especially of their ability to read and understand the principles of religion and the capital laws of the country, and to impose fines upon all those who refuse to render such account to them when required; and they shall have power to put forth apprentices, the children of such as they shall find not to be able and fit to employ, and bring them up." (Mass. Coll. Record, Vol. ii. 6-9.) This is a plain assumption on the part of the General Court of the right and duty of the State to see that every child should receive an elementary education, three things being specified, ability to read, and understand the principles of religion and the capital laws of the country.

In 1647 an ordinance was passed "that every township in this jurisdiction, after the Lord hath increased them to the number of fifty householders, shall then forthwith appoint one within their town, to teach all such children as shall resort to him to write and reade, whose wages shall be paid either by the parents or masters of such children, or by the inhabitants in general by way of supply, as the major part of those that order the prudentials of the towne shall appoint, Provided, those that send their children be not oppressed by paying much more than they can have them taught in other towns:—and it is further ordered that when any towne shall increase to the number of 100 families or householders, they shall set up a Grammar School, the master thereof being able to instruct youth so farr as they may be fitted for the University: Provided, that if any towne neglect the performance thereof above one yeare, every such town shall pay 5s to the next schoole till they shall perform this order." (Mass. Coll. Rec. Vol. ii. 203.) It will be seen by these quotations from the Records, that the General Court of the Colony imposed duties upon the several towns regarding the care of children, and especially their training in learning, before any definite ordinance was passed providing for the establishment and maintenance of schools. These ordinances of the General

Court may be regarded as indicating the principles upon which our system of public schools has been reared. The same principles, whether as embodied in the legislation or in the measures adopted by the towns, were recognized. For many years there seems to have been no distinct division of the responsibilities of the Colony and of the several towns; so that we find even the compensation of Grammar School teachers provided for partly by appropriations by the Colony and partly by the towns, and partly by tuition fees. This introduction seems necessary to a perfect understanding of the town records.

The first notice we have of a school, other than the College in Cambridge, is contained in a Tract published in London, in 1643, in which the writer says that there is "By the side of the Colledge a faire grammar schoole, for the training up of young schollars, and fitting them for Academicall Learning, that still as they are judged ripe, they may be received into the Colledge; of this schoole Master Corlet is the Mr., who has well approved himself for his abilities, dexterity and painfulness in teaching and education of the youth under him." "The precise date," says Dr. Paige, "when the Grammar School in Cambridge was established does not appear; but before 1643 Mr. Corlet had taught sufficiently long to have acquired a high reputation for skill and faithfulness." Dr. Hildreth (I know not on what authority) places the establishment of the school probably at 1636-37.

This school, it will be seen, was not established to meet any requirement of the General Court, as it was not till 1647 that the ordinance was passed requiring such schools.

At this date Cambridge probably contained the number of families requisite for the maintenance of a Grammar School, and Mr. Corlet's school seems to have answered the requirement for Cambridge.

In 1648 "It was agreed, at a meeting of the whole Towne that there should be land sold of the Common, for the gratifying of Mr. Corlet for his pains in keeping school in the Towne, the sum of ten pounds, if it can be obtained; provided it shall not prejudice the Cow-Common."

This may be regarded as a semi-adoption of the school by the town, though in this, as in subsequent grants, it seems rather as a gift than a salary.

Again in 1654, "The Town consented that twenty pounds should be levied upon the several inhabitants, and given to Mr. Corlet for his present encouragement, to continue with us." The General Court, also, in 1659, granted Mr. Corlet 200 acres of land.

In 1662 the town made an order "to grant Mr. Corlet, in consideration of the fewness of his scholars, ten pounds, to be paid to him out of the public stock of the town." Also in 1664,—"Voted that Mr. Elijah Corlet be paid out of the town rate annually twenty pounds so long as he continue to be schoolmaster in this place."

This seems to be a full adoption of the school by

the town; but yet, "In answer to the petition of Mr. Corlet, the Court having considered of the petition, and being informed the petitioner to be very poor, grant him 500 acres of land where he can find it according to law."

In 1680 an official answer of the town to certain questions proposed by the County Court, says: "Our Latin School Master is Mr. Elijah Corlitt; his scholars are in number, nine at present." This is the first official recognition of the school. "Under all these discouragements," says Dr. Paige, "the veteran teacher seems to have persevered bravely up to the close of his life, for there is no evidence that a successor was elected till after his death."

In 1690 "The selection, on behalf of the town, called John Hancock to keep school for the town, to teach both Grammar and English, with writing and cyphering."

In 1691 the salary was fixed at £12, and in 1692 it was raised to £20.

This is the first time that the term *salary* is used in the records, as applied to the school-master. "Besides the Grammar school," says Dr. Paige, "others of a lower grade were established, but their scanty patronage affords slight grounds for boasting. In March, 1680, it was certified that Master Corlett had only nine scholars, and it was added, 'For English our schooldame is goodwife Healy,' at present but nine scholars. Edward Hall, English schoolmaster, at present but three scholars."

In 1692 the town granted to the Menotomic (now Arlington) people a quarter of an acre of land for the accommodation of a school-house, "so long as it was improved for that use and no longer." It does not appear, however, that the town provided for the building of the house or the support of the school.

In 1728 the town granted an allowance of "twenty-four pounds towards the promoting of schools in the Wings of the town," (Arlington and Brighton); and the same appropriation was made for several successive years, the money to be divided equally.

The first School Committee, consisting of Hon. Francis Foxcroft, Samuel Danforth, Esq., Wm. Brattle, Esq., and Edward Trowbridge, Esq., was elected in 1741, "to inspect the Grammar Schools, and to inquire (at such time as they shall think meet) what proficiency the youth and children make in their learning."

This committee seems to have been elected for an indefinite time, as no other notice of a School Committee is recorded for many years; nor does it seem to have performed other than the specific duties of inspecting the Grammar School. Teachers were still elected by the selectmen.

Again in 1761, "it was voted that Samuel Danforth, John Winthrop, Esq., Dea. Samuel Whittemore, together with the selectmen, be authorized to make such regulations for the ordering and the governing of the Grammar School as they shall judge expedient

and to cause them to be duly observed and put into execution."

But notwithstanding the previous choice of a School Committee, and the appointment of another committee to make regulations for the ordering and governing of the Grammar School, the selectmen are desired, the next year, to provide a Grammar School master.

In 1766 the inhabitants of the Northwest Precinct, and those on the south side of Charles River (who have up to this time received specific sums voted by the town), are allowed to draw their full and just proportion of the money granted for schooling according to their Province tax.

Another advance towards a School Committee with full powers was made in 1770, when "it was voted that a committee of nine persons be and hereby are fully empowered to choose a Grammar School Master: the Hon. Judge Danforth, Judge Lee, Col. Oliver, Judge Sewell, Mr. Abraham Watson, Jr., Mr. Francis Dana, Mayor Vassall, Mr. Samuel Thacher, Jr., Professor Winthrop; they, or a major part of the whole, being notified; and that said committee be a committee of inspection upon the said school master, and that said committee be and hereby are empowered to regulate said school."

This comes the nearest to being a School Committee in the modern sense, but falls short in being the committee on a single school. It was more than twenty years before a committee having charge of the *schools* was appointed.

In 1794 a committee was "appointed to divide the town into Districts, as the law directs, and to put the schools in operation." The present territory of Cambridge was first divided into three districts, afterwards to five.

In 1795 "a committee, consisting of Josiah Morse, Abiel Holmes, Major John Palmer, Wm. Locke, Jonathan Winship, Rev. John Foster and Rev. Thaddeus Fiske, was chosen for the purpose of superintending the *schools* in this town and carrying into effect the school Act."

This appears to be the first committee charged with the care of all the schools, the others being appointed to inspect, etc., the Grammar School. In 1802 provision was made for schools in the several districts, "to meet the quantity required by law."

Up to this time, for about a hundred and fifty years, the public school system seems to have been in a state of development from principles recognized in the Ordinances of 1642-47.

"The first school-house," says Dr. Paige, "known to have been erected in Cambridge stood on the westerly side of Holyoke Street, about midway between Harvard and Mount Auburn Streets. The lot was owned in 1642 by Henry Dunster, president of the College; it contained a quarter of an acre of land, on which there was then a house that was not his dwelling-house. There are reasons for believing that the 'Fair Grammar School' had been established

in that house, and that it remained there five or six years."

In 1647 President Dunster and Edward Goffe contracted with Nicholas Withe, Richard Wilson and Daniel Hudson, masons, to build a school-house, probably on that lot, and for the same grammar-school. It does not appear that this school-house was erected by the town, but by certain individuals, of whom President Dunster, and perhaps Mr. Goffe, were the chief.

In 1656, however, President Dunster made a proposition to the Townsmen "for the acquitting and discharging of forty pounds upon the account of his outlayings for the school-house." The townsmen did not "yield" to the proposition of Mr. Dunster, but said: "If Mr. Dunster shall please to present any proposition concerning his outlayings for the school-house to the town when met together, they shall be willing to further the same according to justice and equity."

"Perhaps," says Dr. Paige, "in consequence of some such proposition by Mr. Dunster, it is recorded that, at a meeting Nov. 10, 1656, the town do agree and consent that there shall be a rate made to the value of £108 10s., and levied of the several inhabitants, for the payment for the school-house; provided every man be allowed what he hath already freely contributed thereto, in part of his proportion of such rate."

Whatever Mr. Dunster received as his part of this appropriation, nothing further appears till after his death, when, in 1660, his heirs renewed the claim for further remuneration. The town, though denying that in strict justice anything was still due, yet "considering the case as now circumstanced, and especially the condition of his relict widow and children," levied £30 on the inhabitants, and paid it to Mr. Dunster's executors,—an absolute deed of sale of the house and land and a clear acquittal for the full payment thereof being given.

From what has been said it appears that the first school-houses (or school-housing, as it is called in the records) were not built by the town alone, although appropriations were made from time to time to aid in their building and repairs.

From 1795 the schools may be regarded as reduced to a *system* and placed under a School Committee, whose duty it was "to carry into effect the School Act."

The time following the Revolution to about 1830 was shown, by the seventh annual report of the Hon. Horace Mann, secretary of the Massachusetts Board of Education, to be that at which the schools of Massachusetts were at their lowest ebb.

The grammar schools of the State, where pupils could be fitted for College, required before the Revolution, had, to a great extent, passed away, and their places had been supplied by private schools and academies. Under these circumstances the interest in

the public schools was much less, especially of those who were able to patronize private schools or academies. As an illustration of this, Mr. Mann states that in 1837 twenty-nine of the largest and richest towns in the Commonwealth raised but \$2.21 per head for every child of school age, while the average of all the towns of the State, including the smaller and poorer towns, was \$2.81.

It seems, however, that in Cambridge a grammar school, in the English sense of the term, existed from the establishment of Master Corlet's "Fair Grammar schoole" to 1838. A portion of the legacy of Edward Hopkins appears to have been expended in support of this grammar school from the time it was first received—about 1713.¹

In 1838 a High School building for the whole town was erected at the corner of Broadway and Winsor Street.

This location seems to have been unsatisfactory to the people of some parts of the town, and "it is very likely," says Mr. Smith, in his *History of the High School*, "that the removal of the classical school from Old Cambridge, where it had existed from the time of Corlet, was one reason why Josiah Quincy, president of Harvard University, petitioned the Legislature in the same year for permission to withdraw the Hopkins Fund from the public school, and by the aid of it establish a private classical school."

In 1839 the Legislature granted the petition, and a private classical school was established. The same act, however, provided that when the school should cease to be supported the trustees should pay over

¹ Edward Hopkins, born near Shropshire, in England, in 1600, early in life became a convert to the religious doctrines of the Puritans, and in 1637 came to America.

After spending a short time at Boston he joined the settlement at Hartford. There he soon became one of the most prominent men, holding many important offices, among others, Governor of the Colony of Connecticut. In 1653 he returned to England, where he died in 1657.

By his will, dated London, March 7, 1657, after disposing of much of his property in New England in legacies, and particularly to the family of Rev. Mr. Hooker, his pastor, he makes the following bequests:

"And the residue of my estate there (in New England) I do hereby give and bequeath to my father, Theophilus Eaton, Esq., Mr. John Davenport, Mr. John Cullick and Mr. William Goodwin, in full assurance of their trust and faithfulness in disposing of it according to the true intent and purpose of me, the said Edward Hopkins, which is to give some encouragement in those foreign plantations for the breeding of hopeful youths both at the grammar school and college, for the public service of the country in future times.

"My farther mind and will is, that within six months after the decease of my wife five hundred pounds be made over into New England, according to the advice of my loving friends, Major Robert Thomson and Mr. Francis Willoughby, and conveyed into the hands of the trustees before mentioned in further prosecution of the aforesaid public ends, which, in the simplicity of my heart, are for the upholding and promoting the kingdom of the Lord Jesus Christ in those distant parts of the earth."

His widow lived to an advanced age, dying in 1689, having survived all the trustees by more than thirty years. The estate was finally settled in Chancery, the college at Cambridge and "Grammar School" receiving in all £1251 13s. 2d.

One-fourth of the income of this amount was given to the "Grammar School" from 1793 to 1839.

[For a full account of this fund see "Report of Cambridge School Committee" for 1885.]

a fourth part of the net income of the funds to the treasurer of the town of Cambridge, on condition that the said town should provide and maintain a school, and pursue and comply with the following duties and provisions, viz.: That the town of Cambridge should annually apply so much of said income as may at any time hereafter be paid to the treasurer thereof, to the instruction of nine boys in the learning requisite for admission to Harvard University, the said instruction to be furnished in a public school in said town, the instructor of which should be at all times competent to give such instruction, and the said town was required to admit into said school, free of expense, any number of boys, not exceeding nine, at any time, who, being properly qualified, should be selected and presented for admission thereto by the President and Fellows of Harvard College and the minister of the First Church in Cambridge; who, it was added, "shall be the visitors of said school for the purpose of seeing that the duties and provisions in this section are duly complied with and performed."

In 1854 the private classical school seems to have failed of support, and on the proposal of the trustees, the city of Cambridge assumed the obligations, provided in the act of 1839, and appointed a Hopkins Classical Master in the High School. This arrangement has been nominally kept up to the present time, though it is doubtful if the President and Fellows of the College, and the minister of the First Church, find it necessary to exercise much vigilance in regard to the qualification of teachers, etc.

The location of the High School, on Winsor Street and Broadway, being still found inconvenient for the whole population, classical instruction was re-established in Old Cambridge in 1843, and it was also given in the Otis School, East Cambridge.

This state of things existed about four years, when, in 1847, the Cambridge High School was reorganized in the building originally erected for its accommodation. The next year (1848) a new school-house was built on Amory Street.

Mr. Elbridge Smith, who was then principal of the High School, gives the following account of the dedication of the building:

"The dedication of the school-house on Amory Street, in June, 1848, was an event of considerable social and educational importance. The Hon. James D. Green was at that time Mayor of the city, and showed that earnestness and public spirit which always marked him in his private, as well as in his public life. The Rev. William A. Stearns, D.D. (afterwards president of Amherst College), was chairman of the High School Committee. The Rev. John A. Albro, D.D., of the Shepard Congregational Church, a man of remarkable personal and professional worth, was also rendering important service on the same committee. William W. Wellington, M.D., was then in the first years of that service on the School

Committee which was destined to be so long and so useful to the city of Cambridge. Edward Everett was president of Harvard College, and from him was expected the principal address on the occasion. It was an occasion to which all repaired with high expectations, and from which they retired with those expectations more than realized." The addresses were all of permanent value, and Mr. Everett has very justly given his address a place in the second volume of his "Orations and Speeches."

The interest in this school by the city, and by its friends connected with the university, is shown by the fact that the city appropriated seven hundred dollars for furnishing the school with apparatus, while considerable additions were made by the proceeds of lectures.

In 1850 the City Council gave more than eight hundred dollars' worth of books to the High School library, which enabled the city to draw from the State Treasury an equal amount, under the provisions of a law then in existence.

Prof. Louis Agassiz manifested his interest in popular education by giving a course of four lectures at the City Hall, of which the proceeds were generously given for the library; and he also gave to the pupils of the school gratuitous lectures for an entire year.

Much of the interest then manifested in this school was due to the exertions and influence of the principal of the school, Mr. Elbridge Smith.

"It ought to be stated," says Mr. Wm. F. Bradbury, at present head master of the High School, "that the sum of eight hundred dollars mentioned by Mr. Smith as appropriated by the City Council as a nucleus of a library for the school, was secured by the efforts of Mr. Smith, who made up a large part of it by contributing valuable books from his own private library. He also spent money lavishly from his own pocket in increasing the appliances of the chemical and philosophical department. In fact, he looked upon the school as his own child, and made no account of time or money spent in fostering it."

At the suggestion of Prof. Cornelius C. Felton, Mr. Smith informs us that "A new feature was incorporated into the course of study of the High School. This was the formal study of English authors, in place of collections of extracts, which till then had been exclusively used in all our public schools."

"It is believed," says Mr. Smith, "that this was the beginning in this country of that earnest study of English literature which is now so prominent a feature in all our high schools, and which has extended to schools in other grades."

Prof. Felton was certainly fortunate that his suggestion was made to Mr. Smith, for no man was better qualified to make it a success than he.

During the first decade of the city government, much was done to complete the *systematic* grading of public school instruction, begun in 1834. "It is no exaggeration," says Mr. Smith, "to say, that then

the idea of Huxley was fully realized,—that a course of public education should be like a 'ladder standing in the gutter and its top resting in the university.'"

Under these influences of a better organization, and the awakened interest in public school instruction throughout the State, the Cambridge schools seem to have made very decided progress. The grammar schools sent so many graduates that the building on Amory Street was entirely inadequate to the wants of the High School, and in 1864 a new high school building was erected at the corner of Broadway and Fayette Street.

"At the time it was built," says Mr. Bradbury, "it was one of the finest school buildings in the State. . . . With the land the entire cost was sixty-five thousand dollars; and it was supposed that it would be ample in its accommodations for the High School for twenty years." Yet in 1870 it became necessary to occupy the hall as a school-room. In 1872 and 1874 other changes were made, not contemplated when the building was erected, and parts of the building used as school-rooms, which were unfit. In 1878, the school having increased to five hundred pupils, it became necessary to establish a "colony" in a neighboring grammar school house.

This unexpected growth of the High School, taken in connection with the fact that the standard for admission was high, furnishes the best evidence of the prosperous condition of our grammar schools. During this period our schools, and especially the grammar and primary schools, suffered much from badly constructed school-houses, and the standing of the schools reflects great credit on the teachers and the School Committee.

All our grammar school buildings had been constructed on the old plan of a large room in which from one to two hundred pupils had sittings, and small, ill-ventilated rooms where recitations were conducted by the assistant teachers.

In 1868 Professor Goodwin, in a report on the Washington School, says: "All the departments are in as good a condition as the arrangement of the building permits. This arrangement is such that half the teachers are required to hear their recitations in large rooms nearly filled with scholars not reciting, so that the double duty of keeping order and imparting instruction is too great for even the ablest teacher, while the other half hear their smaller divisions in small rooms poorly ventilated, in which the air is usually so bad that the children are in an unfit state to be taught." He states his belief "that one-half the value of the Principal's instruction is lost by the necessity of transmitting it over the heads of seventy or eighty pupils to a class standing on the other side of a large hall."

What Professor Goodwin has said of the arrangement of Washington Grammar School is true of the other grammar school buildings of the city. Pro-

fessor Atkins' report of the primary buildings is scarcely more flattering.

In 1869 Mr. E. B. Hale, who had been appointed Superintendent of Schools in 1868, devoted a large part of his report to "School Accommodations," in which he emphasized Professor Goodwin's statements, and suggested to the committee the importance of urging upon the city authorities the necessity of "remodeling as many of the grammar school houses as practicable the coming season."

In accordance with these suggestions of the School Committee and the superintendent the grammar school houses were, in the years 1870-71, remodeled and greatly improved. But it was impossible to make such changes in their arrangements as to have them compare favorably with the new school-houses, built on the modern plan, in most of the cities and large towns of the Commonwealth.

Within a few years some new buildings have been erected for the grammar and primary schools that do credit to the city; and at the present time another first-class grammar school house is nearly finished, still another is under contract, and a high school house is in process of erection. But we are not yet as well supplied with modern structures as most of our sister cities. But, though obliged to confess that Cambridge was for some years, and is now, behind others in the matter of school buildings, we may claim, it is believed, to have taken, in the matter of school discipline, a step in advance of any of the principal cities of the State. In 1866 a case of corporal punishment, though by no means severe as compared with the punishments in schools of Cambridge and other cities and towns at that time, gave rise to much controversy, which finally resulted in the passage of the following order by the School Committee:

"It is enjoined on the instructors to exercise vigilant, prudent and firm discipline, and to govern by persuasion and gentle measures as far as practicable. No pupil shall be kept after school hours more than half an hour after each session. No scholar on entering the schools of the city shall be subject to corporal punishment in any form. But if any scholar prove to be disorderly or refractory, such scholar, on due notice to parent or guardian, and on the written consent of the committee having charge of the school, shall be liable to corporal punishment during the remainder of the term.

"Any instructor may suspend a pupil from school for violation of the School Regulations or the rules of the school, or for any other sufficient cause; but he shall immediately report the case to the parent or guardian of such pupil, and to the sub-committee of the school, or to the Superintendent of Schools, with a written statement of the cause of such suspension."

The School Committee's report for 1889 says: "This rule has been in force for twenty years. In the majority of the schools corporal punishment has not been inflicted in a single instance; in the others the number of cases have varied from year to year, with changes in the supervising committee; but in no year, at least within the last ten years, have there been a hundred cases in all the schools of the city."

The truant law has been of great service to the schools, though but a few comparatively have been sent to the truant school. These few have, however,

served as a warning to such an extent as very much to reduce this class of offenders; and it is believed the recent amendment to the law, including obstinate and disobedient pupils, will be equally efficacious.

Within the past few years important changes and additions have been made in our schools. In 1856 the High School was divided,—the Latin School being placed under the principalship of Mr. Bradbury, and the English High School under that of Mr. Hill.

Mr. Bradbury had for many years been eminently successful in preparing candidates for college, making the Cambridge High School one of the best feeders of Harvard. Mr. Hill came to us from Chelsea, where he had proved himself one of the best High School teachers in the State. It is believed that the division will be advantageous to both departments, especially, to that of the English High School.

INDUSTRIAL SCHOOL.—In February, 1884, the Cambridge Industrial Association, through a committee appointed for the purpose, made to the School Board the following proposals and suggestions:

"Our Association has, in the basement of the City Building, Brattle Square, well-equipped work benches, with tools and all accommodations for the instruction of twelve (12) boys under the charge of a competent and experienced teacher. These implements, equipments and instruction the Association offers for the use of either of the City Schools during the present school year, *free of expense*, in case the School Committee think such use advisable.

"The Association would suggest, if it seems practicable to the Committee, some such plan as this: That the boys of higher classes, whose record in school is good and who have any aptitude in the use of tools, be allowed one afternoon in the week, to substitute for their regular literary employment two hours' practice at the bench, it being understood that they shall keep up with the studies of their classes, and that their presence and conduct in the work-room be reported as part of their school record. The room could be open for this purpose as many afternoons in the week as the Committee may desire, twelve boys being received at a time.

"A similar experiment having been tried with success in Boston, it is believed that equally good results might follow in Cambridge, and that no little mechanical dexterity might be thus gained by the pupils without any essential interruption of their other studies."

The School Committee accepted the proposal and adopted the plan suggested, a class being sent from each of the seven grammar schools. The same offer was made and accepted in 1885 and in 1886.

In September, 1886, the School Committee appointed a special committee to "consider the question of industrial training and the practicability of connecting it with the school system."

The following is the report of that committee:

"Whereas, the Industrial Association has offered to give to the City of Cambridge the tools and apparatus used by it in industrial education in the basement of the City Building in Brattle Square,—"

"Your Committee recommends that industrial instruction be given to seven (7) classes, consisting of twelve (12) boys each; that one of these classes be taken from each of the following grammar schools: Allston, Harvard, Putnam, Shepard, Thorndike, Washington and Webster; that the boys forming the classes shall be chosen by lot from those whose parents or guardians are willing to have them join such a class; that such instruction be given during the school session, the course of instruction to each class to consist of sixteen lessons, and to be similar to that given during the past year by the Industrial Association; that the management of such instruction be committed to a committee of five, one from each Ward, to be appointed by the chairman of the Board, and

that this Board request the City Council to make an appropriation of four hundred (400) dollars to defray the expenses of such industrial instructor."

This report was adopted and its recommendation carried out. The City Council at once appropriated the four hundred dollars, and the seven classes received instruction.

There is no school question more prominently before the community at the present time than that of making manual training a branch of instruction in the common schools; and in Cambridge this question has assumed special importance since Mr. Frederick H. Rindge made to the city his generous offer of an industrial school building ready for use, together with a site for the same.

The object and aim of the school, as proposed by him, are best made known in his own words. He says: "I wish the plain arts of industry to be taught in this school. I wish the school to be especially for boys of average talents, who may in it learn how their arms and hands can earn food, clothing and shelter for themselves; how, after a while, they can support a family and a home; and how the price of these blessings is faithful industry, no bad habits and wise economy; which price, by the way, is not dear.

"I wish also that in it they may become accustomed to being under authority, and be now and then instructed in the laws that govern health and nobility of character. I urge that admittance to such school be given only to strong boys who will grow up to be able workmen."

"Strict obedience to such a rule would tend to make parents careful in the training of their young, as they would know that their boys would be deprived of the benefits of said school unless they were able-bodied. I think the industrial school would thus graduate many young men who would prove themselves useful citizens."

This munificent gift by Mr. Rindge was gratefully accepted, and we now have in successful operation an Industrial School which, it is believed, is not surpassed by any in the country.

KINDERGARTEN.—About eleven years ago Mrs. Quincy Shaw established three free Kindergartens in Cambridge. These, in common with many others in neighboring towns, were established to prove by thorough experiment whether this theory could be carried out in practice.

A sub-committee, having this under consideration, reported that the result was eminently successful. A petition containing 1600 or 1700 names, representing largely the parents of children educated in these Kindergartens, asked to have the schools made a permanent part of our educational system. Under these circumstances, the committee reported in favor of granting the petition, and recommended the adoption of the following order: That Kindergartens be established by this Board as a part of public school instruction in Cambridge.

The order recommended was adopted, and, at the meeting of the Board in May, the following letter from Mrs. Shaw, addressed to the chairman of the School Board, was received :

DEAR SIR.—In consideration of the decision on the part of your Board to establish kindergartens as a part of the regular Public School system, I wish to ask if you will, at the close of this school year, undertake the care of those kindergartens now carried on by me in Cambridge? They are located as follows: 76 Moore Street, Cambridgeport; Boardman School, Winsor Street, Cambridgeport; and 41 Holyoke Street, Cambridge. I can only hope that you will find them satisfactory for the beginning of all education for children, that you will be as anxious to increase their number as I am to have it done, and that your action in the matter may serve as an example to other places, so that the Kindergarten may really become a national benefit.

Mrs. Shaw's generous proposal was accepted, and the following order adopted :

That the thanks of this Board be tendered to Mrs. Shaw, in recognition of the public benefit conferred by her in the establishment and maintenance of the kindergartens which she has so generously tendered this Board, and which the Board has accepted as part of the Public School system of the city of Cambridge.

Subsequently, the Concord Avenue Kindergarten, which had been maintained for several years by Cambridge ladies, was offered to the Board and accepted.

There are now among the public schools of Cambridge four kindergartens, containing 209 pupils, under the charge of seven teachers. As soon as suitable rooms can be provided, three more of these schools should be opened, in order that all sections of the city may share in the advantages they afford.

THE WELLINGTON SCHOOL.—The Cambridge Training or Practice School was added to our system in 1886. This school is believed to be, in some respects, unique. It was suggested and planned by the superintendent, Mr. Cogswell, the design being "to give young women of Cambridge who desire to teach, and who have made special preparation for the work, an opportunity to gain experience under conditions favorable to their own success, and without prejudice to the interests of their pupils."

"This school differs from the other schools in this respect—all the classes are taught by young teachers, under the immediate supervision of a master and a female assistant, who are held responsible for the instruction and management of the school."

"Graduates of the English High School or the Latin School, who have graduated from one of our State Normal Schools or the Boston Normal School are preferred candidates for the position of teacher in this school; other persons of equal attainments may, however, be elected by special vote of the Committee on the Training Class. Teachers accepting service in this school do it with the understanding that they will remain a year, unless excused by the Committee on the Training Class."

"The salary during the year of service is \$200, and the Committee on the Training Class is authorized to expend for salaries an amount not exceeding the aggregate maximum salaries paid to female teachers for the instruction of the same number of pupils in the primary and grammar schools."

It is thus seen that the Training School has made no addition to the cost of instruction in our schools. The only doubt at first was whether the pupils attending this school would be as well taught as those in the other schools. It was claimed by its advocates that the inexperience of the young teachers would be offset by the large experience of the principal and his assistant, and it is believed by the committee and superintendent that the results have vindicated the claims.

At no period in the history of our schools have they furnished such means for education in all departments as at present. From the beginning the development of the system was gradual; but within the last twenty years, since the appointment of a superintendent, the progress of our schools in all respects has been greatly accelerated. In no respect, it is believed, excepting the condition of its school buildings, are the schools of Cambridge surpassed by those of any city in the Commonwealth.

Such has been the progress of public school instruction in Cambridge. In the mean time there have been, here as elsewhere, private schools, though none have established themselves as permanent institutions. It was during the last part of the last century and the early part of this, that most, if not all, of the academies and large private schools in the State were established—as a consequence, undoubtedly, of the failure of the public schools of that period, in most towns, to prepare pupils for college. In Cambridge, however, the Grammar School (in the English sense of the term) continued up to 1839, when the High School was established. It will be seen, therefore, that the same want was not felt here, as in many other parts of the State, during the period when the principal academies were established. From the time of the establishment of the High School the encouragement for private schools of a classical character seems to have been still less. As has been stated, the "Hopkins Classical School" of 1839, though aided by the "Hopkins Fund," failed of support in 1851.

THE PUBLIC LIBRARY.—The Cambridge Public Library is a direct descendant from the Cambridge Athenaeum. This was incorporated in February, 1849, for the purpose "of maintaining in the city of Cambridge, a lyceum, a public library, reading-room, lectures on scientific and literary subjects, and for promoting such other kindred objects as the members of the corporation shall from time to time deem advisable and proper."

In October, 1850, the corporation received from Mr. Edmund T. Dana, of Cambridge, the gift of a lot of land containing ten thousand square feet, and situated on the corner of Main and Pleasant Streets, in Cambridgeport. The deed of gift contained the following conditions: "(1) That the corporation shall, within

two years, erect upon the land, and complete so as to be fit for occupation, a building suitable for the purposes of the Cambridge Athenæum as set forth in the act whereby the same was incorporated. (2) That the land and building (with the exception of the lower story and cellar of the building, which may be used for other purposes) shall be used forever for the purposes set forth in the Act of Incorporation."

An edifice named the "Athenæum" was erected on the land during the following year, at a cost of about \$18,000, and dedicated and opened to the public in November, 1851. The foundation of the library was due to a bequest of \$1000 for the purchase of books, received by the will of Mr. James Brown of Watertown. With these books, and others contributed from various sources, the library was established, a room in the Athenæum having been furnished for the purpose, and Miss Caroline F. Orne appointed librarian. A catalogue of the books having been prepared and printed, the library was opened for the delivery of books in November, 1857. According to the regulations any resident of Cambridge known to the librarian, or recommended by any citizen thus known, was entitled to the use of the library upon the payment of one dollar per annum, and subscribing a promise to comply with the regulations adopted for its management.

The Athenæum Corporation, in March, 1858, disposed of its real estate and personal property to the city of Cambridge. The library was also transferred to the city, which obligated itself to contribute not less than \$300 per annum for the term of fifteen years for its support and increase, and to maintain it forever for the use of the inhabitants of Cambridge.

Mr. Dana having released the Athenæum Corporation from the conditions of his deed of gift, the "Athenæum" became the "City Hall," and the library, now the property of the city, received the name of the "Dana Library," in accordance with an ordinance bearing the date June 30, 1858.

The intentions of Mr. Dana in relation to the library, which, till 1879, bore his name, are evident from the following clause, being clause No. 23 of his last will and testament:

"I give to Edmund T. Hastings and to William W. Wellington, and to the survivor of them, fifteen thousand dollars, in trust, to appropriate the same in such manner as I may, by any instrument, in writing under my hand, appoint."

In a separate instrument, bearing the same date as the will, the testator did direct as follows:

"To Edmund T. Hastings and William W. Wellington, or whosoever else may execute the trust created by the twenty-third clause of my will:

"The sum of fifteen thousand dollars, bequeathed by the said twenty-third clause, is to be paid over, if and whenever my trustees or trustee shall deem it expedient to do so, to the City of Cambridge, to be held by the said City in trust, as an entire fund, the income thereof to be appropriated annually, forever, to the increase and support of the library of the Cambridge Athenæum; provided, however, that it and whenever my said trustees or trustee shall be of opinion that it is not expedient that the said sum of fifteen thousand dollars should be so ap-

propriated, the same to be paid over to my heirs-at-law; and provided, further, that the said capital sum be paid over, either to said City of Cambridge, or to my heirs-at-law, within three years from my decease.

"ELISH T. DANA."

The trustees appointed by the will, in an instrument signed by them and transmitted to the City Council, signified their intention to pay this sum of fifteen thousand dollars to the city of Cambridge, whenever they should receive it from Mr. Dana's executor.

It unfortunately happened that the instrument referred to in Mr. Dana's will and copied above, though signed by Mr. Dana, was not duly attested. It was therefore contended by the residuary legatees, "that, by the twenty-third clause in the will, nothing passed to the City of Cambridge, the same not being named as legatee; and it not being competent for a testator, by a duly executed will, to create for himself a power to dispose of his estate to legatees by another instrument not duly executed as a will or codicil." The case was brought, by the administrator, with the will annexed, before the Supreme Court of this State, which, after a full hearing, decided that the twenty-third clause in the will, with the unattested instrument signed by Mr. Dana, did not "create a valid bequest to the City of Cambridge."

Thus were the generous intentions of Mr. Dana frustrated; and the munificent donation, which he designed for the library, passed into the hands of his residuary legatees.

In 1874 the library was made free to the public, and in June of that year Miss Orne, after a long and faithful term of service, was succeeded by the present librarian, Miss Almira L. Hayward.

In 1875 the library was arranged by subjects, and a new catalogue was issued. In 1879, by vote of the City Government, the name of the library was changed to the Cambridge Public Library, thus identifying it more closely with the other public institutions of the city.

The catalogue printed in 1875 was followed by five supplements, and these by six bulletins. The library had increased, meanwhile, from seven to eighteen thousand volumes; and in 1885 the need of a new catalogue had become imperative. An additional appropriation of two thousand dollars was granted, in 1886, for this purpose, and the new catalogue was issued in 1887.

In addition to this general catalogue completed in 1887, a separate list of children's books was prepared early in 1888. The intent of this catalogue was to save much wear of the larger catalogue; and, as it embraces all the juvenile books of the library as well as other books especially useful and instructive to young people, it has been found to be of great service to all.

The crowded state of the rooms occupied by the library had begun to attract general attention, and

a movement had been made by several private citizens towards providing better accommodations, when the munificent offer of Mr. Frederick H. Rindge, of Los Angeles, California—a former resident of Cambridge—was made public through Hon. William E. Russell, then mayor of Cambridge.

On June 14, 1887, Mr. Rindge, being in Boston, sent to the City Council, through the mayor, the following communications:

BOSTON, June 14, 1887.

HON. WILLIAM E. RUSSELL:

DEAR SIR,—It would make me happy to give the City of Cambridge the tract of land bounded by Cambridge, Trowbridge, Broadway and Irving streets, in the City of Cambridge, and to build thereon and give to said city a Public Library building, under the following conditions,—That on or within said building, tablets be placed bearing the following words:

First.—Built in gratitude to God, to His Son Jesus Christ, and to the Holy Spirit.

Second.—The Ten Commandments, and "Thou shalt love thy neighbor as thyself."

Third.—Men, women, children, obey these laws. If you do, you will be happy; if you disobey them, sorrow will come upon you.

Fourth.—It is noble to be pure; it is right to be honest; it is necessary to be temperate; it is wise to be industrious,—but to know God is best of all.

Fifth.—(Words for this tablet to be given hereafter).

It is my wish that a portion of said tract of land be reserved as a playground for children and the young. I ask you to present this communication to the city government of Cambridge, and notify me of its action in relation to it. Should the gift be accepted, I hope to proceed at once with the work.

Yours respectfully,

FREDERICK H. RINDGE.

HON. WILLIAM E. RUSSELL:

DEAR SIR,—Should the City of Cambridge accept my gift of land and Public Library building, I suggest that a committee, composed of the following named citizens of Cambridge, be appointed by the city government of Cambridge to confer with my agent, Mr. Francis J. Parker, in matters relating to the accomplishment of the purposes of the building and land. Mr. Justin Winsor, Col. T. W. Higginson, Hon. Samuel L. Montague, Hon. William E. Russell.

Yours respectfully,

FREDERICK H. RINDGE.

Mayor Russell also stated that the tract of land mentioned contained nearly 115,000 square feet; 224 feet each on Broadway and Cambridge Streets; 590 feet on Trowbridge Street; and 520 feet on Irving Street. It was Mr. Rindge's intention that the building should cost from \$70,000 to \$80,000, and that the surrounding land be laid out as a public park. The following resolutions presented by the mayor were unanimously adopted by both branches of the city government:

"*Resolved*, That the city of Cambridge accepts with profound gratitude the munificent gift of Mr. Frederick H. Rindge, of land and building for a Public Library as stated in his letter of June 14, 1887; that the city accepts it upon the conditions stated in said letter, which it will faithfully and gladly observe as a sacred trust, in accordance with his desire.

"*Resolved*, That in gratefully accepting this gift, the city tenders to Frederick H. Rindge its heartfelt thanks, and desires to express its sense of deep obligation to him, recognizing the Christian faith, generosity, and public spirit that have prompted him to supply a long-felt want by this gift of great and permanent usefulness."

The gentlemen named by Rindge accepted the trust, and plans from five of the leading architects of the country were submitted to them. Those presented by Messrs. Van Brunt and Howe were finally selected,

and the building was begun in the autumn of 1887 and completed in June of 1889.

The Library Building.—The library building, a fine specimen of modified Romanesque architecture, is an ornament to the city and a perpetual monument to the wise generosity of its donor. The material used is known as "Dedham wood stone," a light-brown granite found in the woods of Dedham, Mass. This is relieved by trimmings of Longmeadow brown sandstone. The beautiful arched entrance, the round tower, and the general form of the building give it a distinctive character suited to its purpose. The elaborately carved capitals of the pillars and the frieze on the Irving Street end of the building attract general admiration. The interior is finished in ash, and the coloring of the walls is in terra-cotta, old gold, or olive green shades. The reading room, being finished to its arched roof and well lighted by electricity, affords the place for study and reading which is so desirable in every library. The Cambridge Memorial Rooms are furnished with numerous cases and drawers, in which to preserve souvenirs of the artists and authors of Cambridge.

The book-room, or "stack," as it is called, occupies the rear wing, and has a capacity of 85,000 volumes. This is as nearly fire-proof as possible, having iron book-cases extending from the basement to the third story; iron floors and stairs, and fire-proof doors shutting it off from the main building. The books are at present arranged thus: Basement, periodicals and government publications; first floor, fiction and juvenile books; second floor, biography, history, and travel; third floor, miscellany, science, art and poetry. As the library now contains about 27,000 volumes, there is abundant shelf-room for many years. The dedication of the new building occurred on the 29th of June, 1889. The presentation of the deed of gift was made, on behalf of Mr. Rindge, by Mr. Parker, and accepted by Hon. Henry H. Gilmore, mayor of Cambridge. He in turn presented the key of the building to Mr. Samuel L. Montague, president of the Board of Trustees, who replied by appropriate words of thanks for the generous and beautiful gift. Other addresses were made by Colonel T. W. Higginson, of the Board of Trustees, and Mr. S. S. Green, librarian of the Worcester Public Library.

The books were moved during the next week, and the library opened to the public on the first Monday in August, 1889.

Desiring to meet the wants of those living at a distance from the library, the trustees have, during the past year, established five delivery stations where books from the library are received and delivered three times a week. These stations have been found a great convenience to those readers who might not often visit the library itself.

As a means of bringing the public schools and the library into closer relations, each teacher in the High Schools, and the three higher classes in the grammar

schools, has been allowed the use of ten cards. By a weekly delivery to each school of books to be used as the teachers direct, a large amount of good reading has been put into the hands of children. It has been the aim of teachers and librarian to make this a means of elevating the taste of our young people by introducing them to better books than they would themselves select.

The Cambridge Memorial Rooms, devoted to the history of the city, have already begun to attract many visitors. Here are to be preserved the works of Cambridge authors and artists, and such memorials of them as may be donated or purchased. About three hundred volumes have already been placed in these rooms, and several historic souvenirs have also been received.

In 1873 Mr. Isaac Fay, a public-spirited citizen of Cambridge, bequeathed to the library \$1000, the income of which was to be expended in the purchase of books. In accordance with the wish of the donor, this income has been spent for valuable additions to the library.

The Citizens' Subscription Fund, begun in 1888, has now reached the sum of \$13,000. About \$2000 of this amount has been spent for standard works in foreign languages and for additions to the departments of science and history. A large number of instructive and entertaining books of travel have also been duplicated for school use.

Since occupying its new building the library has been rapidly growing in popular favor as well as in books. The annual appropriation from the city treasury must meet the current expenses, and it is hoped that in time the income from the Citizens' Fund will afford ample means for the steady increase of the library, which now numbers about 27,000 volumes.

CHAPTER VII.

CAMBRIDGE—(Continued).

LITERATURE.

BY THOMAS WENTWORTH HIGGINSON.

IN the admirable "History of Cambridge" by Rev. L. R. Paige, D.D.—a book which needs only an index to make it a model of its kind—there are chapters on the civil, military, ecclesiastical and educational history of Cambridge, but none on the literary history. Yet it is doubtful if any municipality in this country can equal Cambridge in the number and variety of its authors. Its very foundation was literary—as literature was counted in Puritan days—since Rev. Thomas Shepard, its first clergyman, was not merely known, in the admiring phrase of his day, as "the holy, heavenly, sweet-affecting and soul-ravishing Mr.

Shepard," but was a voluminous author and was the cause, through his personal weight and influence, of the selection of "Newetowne" as the site of the infant college. Mr. Shepard was the author of "The First Principles of the Oracles of God," "The Parable of the Ten Virgins," "The Sincere Convert," "The Saints' Jewel," "Theses Sabbaticæ," and various other works, most of which were published in London and some of which went through several editions. Copies of these are preserved in the Boston and Cambridge Public Libraries and in that of the Shepard Historical Society, in the church he founded. His "Church Membership of Children" was published at Cambridge in 1663, and his "Eye Salve," an election sermon, in 1673, also at Cambridge. The first printing press in America had been established in the town much earlier than this, at the expense of Rev. Joseph Glover, an English dissenter, and others. Mr. Glover himself embarked in 1638 for the colony, bringing with him the press and type and Stephen Daye as printer. Mr. Glover died on the passage, but the press arrived safely and was ultimately placed in the house of President Dunster, on Holyoke Street, who took to himself not merely the press, but the widow Glover. For some thirty years all the printing done in America was in Cambridge, Stephen Daye being followed by his son, Matthew, and he by Samuel Green. The first work printed at this press was "The Freeman's Oath," in 1639. About a hundred books were printed here before 1700, the list including Eliot's celebrated Indian Bible and "The Book of the General Lawes & Libertyes Concerning the Inhabitants of the Massachusetts." It was not until 1664 that permission was given to set up a press in Boston; and Thomas, in his "History of Printing," claims that "the press of Harvard College was for a time as celebrated as the presses of the Universities of Oxford and Cambridge, in England."

Of the early presidents of Harvard College, Mr. Dunster was an eminent Oriental scholar and superintended—a doubtful kindness to literature—the preparation of the "New England Psalm Book." Cotton Mather expressed the unavailing hope "that a little more of art was to be employed in it" than had proved to be the case, in its original form, and the holy Mr. Shepard thus criticised its original compilers, Rev. Richard Mather, of Dorchester, and Rev. Messrs. Eliot and Weld, of Roxbury:

"You Roxbury poets, keep a heart of the crime
Of missing to give us very good rhyme,
And you of Dorchester, your verses lengthen,
But with the text's own words you will them strengthen."

It was therefore handed over to President Dunster for publishing, and the final form in which it appeared is the result of his labors. His successor, Rev. Charles Chauncy, published a few sermons, and President Urian Oakes yet more, including one with the resounding title, "The Unconquerable, All-Conquering and More-than-Conquering Soldier,"

which was, it is needless to say, an Artillery-election sermon (1674). President Increase Mather, it is well known, was a voluminous author and writer; and from his time (1701) to the present day there have been few presidents of Harvard College who were not authors. Rev. Thomas Hooker, although a voluminous theologian, yet remained in Cambridge so short a time (1633-36) that he is hardly to be counted among Cambridge authors, especially as his works were all published at a later date.

During the eighteenth century the Cambridge professors gave themselves rather to scholarship, such as it was, than to literature. Samuel Sewall, grand nephew of the celebrated judge of that name, first taught the grammar school in Cambridge, and then (1762) became college librarian and instructor in Hebrew. He published a Hebrew Grammar, a Latin version of the first book of Young's "Night Thoughts," and various Greek and Latin poems and orations; he also left behind him a MS. Chaldee and English dictionary, which still awaits a publisher in Harvard College Library. His kinsman—though with the name spelt differently—Jonathan Sewell, born in Cambridge (1766), became an eminent lawyer and law-writer in Canada, was one of the first to propose Canadian federation in a pamphlet (1815), and left behind him a work on "The Judicial History of France so far as it relates to the Law of the Province of Lower Canada." The eighteenth century also brought the physical sciences to Harvard College, to invade the old curriculum of theology and philology; though, as Prof. Goodale has shown, the prominent object of this change was to enable the clerical graduates to prescribe for their own parishioners. The first Professor of Mathematics and Philosophy was appointed in 1727, Isaac Greenwood being the incumbent; in 1738 he was followed by John Winthrop, who was, according to Prof. Lovering, "greatly in advance of the science of his day," and whose two lectures on comets, delivered in the College Chapel in 1759, are still good reading. The year 1783 saw the founding of the Harvard Medical School, and this, though situated in Boston, was not without its effect in Cambridge. Dr. Benjamin Waterhouse, the most eminent of the early professors, was a resident of Cambridge till his death, and was instrumental in establishing the botanic garden near his residence.

If the eighteenth century brought science to Cambridge, the opening of the nineteenth brought literature, in the person of a man whose memory is now almost wholly identified with public life. The appointment of John Quincy Adams in 1806 as Professor of Rhetoric and Oratory was a distinct step in intellectual training, and his two volumes of lectures still surprise the reader by their good literary judgment and recognition of fundamental principles. Levi Hedge was appointed (1810) professor of Logic and Metaphysics and aided the thought of the university

while Adams gave it expression. A few years more brought to Cambridge and to the university a group of men at that time unequalled in America in varied cultivation and the literary spirit—Andrews Norton (1811), Edward Everett (1812), Joseph Green Cogswell (1814), Jacob Bigelow and George Ticknor (1816), Jared Sparks (1817), Edward T. Channing (1819), Charles Folsom (1821), George Bancroft (1822). Some of these men were temporarily, others permanently connected with the university, but all left their permanent mark on Cambridge. No American professor ever exercised so prolonged and unquestionable a literary influence as Prof. E. T. Channing; no one trained so many authors ultimately distinguished in American literature.

The influences of a college town have clearly shown themselves in Cambridge through the creation of what may be called literary families, in which authors have appeared in groups. Rev. Abiel Holmes, D.D., came to Cambridge as pastor of the First Parish in 1792, and both he and his eldest son, Dr. Oliver Wendell Holmes, became authors; nor has his younger son, John Holmes, wholly escaped the same impulse. The Ware family came here in 1805, and were a race of authors; the two Henrys, Dr. John, William, John F. W. and George being all authors. Rev. Charles Lowell came to reside here before 1819; and he and his children, Rev. Robert T. S. Lowell, James Russell Lowell and Mrs. S. R. Putnam, were all authors. Richard Dana (born 1699), the head of the Boston bar in his day, was a native of Cambridge, as was Richard Henry Dana, the poet, his grandson; so was Richard Henry Dana, the lawyer and author of "Two Years Before the Mast;" so was his son, the third of the name, and editor of the *Civil Service Record*. The Channing family, closely connected with the Danas, were represented in Cambridge by Prof. E. T. Channing, already mentioned; by his nephew, the brilliant orator and writer, William Henry Channing, and now by a younger relative, the present Prof. Edward Channing, well known as a rising historical writer. With these two families may well be classed their kinsman by marriage, Washington Allston, whose prose and verse were as original and characteristic as his paintings, and who was long a resident of our city. Rev. Frederick Henry Hedge, long eminent as a scholar, was the son of a professor; and both Rev. Joseph Henry Allen and Rev. E. H. Hall represent the Ware family on the mother's side. William W. Story, the sculptor, who lived in Cambridge in his youth, was the son of Judge Story, the most eminent legal writer, in some directions, whom America has produced; and his son-in-law, George Ticknor Curtis, also resided here for a time. The Quincy family was also strongly literary through several generations; and though President Quincy's sons never, I think, resided in Cambridge, his grandson, Josiah P. Quincy,

was for some time a resident among us. Prof. Benjamin Pierce and his sons, James and Charles, were or are all mathematical writers. The present Prof. Charles E. Norton is also a distinguished representative of Cambridge authorship in its second generation; and the children of Dr. Palfrey are authors like himself, both his sons having contributed to military history, and his eldest daughter, Miss Sarah Palfrey, having written prose and verse under the name of "E. Foxton." To these accumulated instances of academic or literary families I may perhaps properly add those of my own household, as my father, who became steward of the college, was a pamphleteer, my mother wrote several children's books, my elder brother published a little work on American Slavery, and all before I myself became an author. My wife, Mary Thacher Higginson, has also published two small volumes.

Between 1825 and 1850 Cambridge became the residence of a series of men eminent in literature: Professor H. W. Longfellow, Rev. Dr. Palfrey, Professors Bowen and Lovering and the two Wymans, Rev. Dr. Walker and Rev. Convers Francis. The latter had the choicest private library in Cambridge, though surpassed in some directions by that of Thomas Dowse, now in the possession of the Massachusetts Historical Society, and at a later period by that of George Livermore. Professors Joel Parker, Simon Greenleaf and Theophilus Parsons, of the Law School, were also authors. A group of eminent foreigners also arrived here and became connected with the university: Professors Charles Follen, Charles Beck, Francis Sales and Pietro Bachi, all authors or editors, to whom was afterwards to be added the gifted and attractive Agassiz. His name suggests that, on the scientific side also, there were men in Cambridge who gave to science a literary attraction; Thomas Nuttall in botany and ornithology, followed later by Wilson Flagg, who wrote on similar subjects; Dr. T. W. Harris, the pioneer American entomologist,—worthily succeeded at the present day by Samuel H. Scudder,—Prof. John Frisbie and Prof. John Farrar. Cambridge has also been the source of editorship of some important and influential periodicals, looking in different directions. William Lloyd Garrison lived here for some years while editing the *Liberator*; Rev. Thomas Whittemore, while conducting the *Trumpet*, he being also president of the Cambridge Bank and representing Cambridge in the Legislature; and Rev. Edward Abbott was founder and editor of the *Literary World*. There were also in Cambridge women of literary tastes and achievements. Margaret Fuller Ossoli, a native of Cambridge, was the most eminent of these; but the list includes also Mrs. John Farrar, Miss Caroline F. Orne, Miss Sarah S. Jacobs, Mrs. Elizabeth C. Agassiz, Mrs. Rose Hawthorne Lathrop, Mrs. Mary A. Denison and Miss Charlotte F. Bates. Mrs. James Russell Lowell (Maria White) also wrote here some of her thoughtful and tender poems.

With the more recent expansion of the university, the list of resident authors has become almost co-extensive with the list of instructors, and a special calendar is published at intervals, giving the bibliography of their work. Other former students of the university, in some of its departments, have taken up their abode here and done literary work, among whom might be named Rev. A. B. Muzzey, Christopher P. Cranch, John Fiske, Joseph Henry Allen and many others. The leader of American letters, Ralph Waldo Emerson, was himself a resident of Cambridge and taught a school here before he went to Concord, but before he became an author.

Among authors who have resided here, though without present or past connection with the university, may be named Joseph E. Worcester, W. J. Rolfe, W. D. Howells, T. B. Aldrich, H. E. Scudder, John Bartlett, Francis Wharton, Melville M. Bigelow, Rev. A. V. S. Allen, Rev. G. Z. Gray, Rev. C. H. Spaulding, Arthur Gilman, William Winter, George P. Lathrop, Oscar Fay Adams and W. M. Griswold. Provision has been made in the new Public Library building for a special collection of the works of our native and our resident authors—not including those who were simply here as students in the university—and should this plan be carried out in its fullness, it is doubtful whether Boston or New York can show a similar collection of greater variety or of more intrinsic value.

CHAPTER VIII.

CAMBRIDGE—(Continued).

MUSICAL.

BY WILLIAM F. APTHORP.

LIFE in university towns has a peculiar physiognomy, and life in Cambridge has never been quite exempt from this peculiarity. But in very few respects can the every-day life in Cambridge have been more singular than in its relation to Music. The musical history of Cambridge, taken as an aggregation of facts and occurrences, comes nearer to being a blank page than that of almost any town of its size and age in the country. Just what one would have expected to be the prime fostering influence to musical activity in the daily life of the place—Harvard College—worked for a long while, if indirectly, rather in the opposite direction. It seems paradoxical, at first sight, that the University, which was for many years virtually, although not officially, one of the most active centres of musical life in the town, should have, in another way, been an obstacle in the path of all larger developments in the public culture of the art, such as we find in most other towns of about the same size, and of far less intellectual and artistic im-

portance. But this seeming paradox is seen really to be none, on closer inspection; its reason is not hard to discover.

That Boston owes its prominent position in the literary and artistic history of our country in a large measure to the proximity of Harvard University has often been said, and is no doubt quite true. For many years Harvard University represented the chief intellectual nucleus in the United States; and the wealth of Boston brought with it that opportunity and leisure which are needful to make the humanities of life seem a necessity. The research and erudition of Harvard were not slow in being mirrored in the culture of Boston. One after another were intellectual men drawn from various parts of the country by the brighter, more active and profounder intellectual life of Harvard; but many of them, especially those who did not enter into direct, officially recognized connection with the University—either in the capacity of teacher or student—found the more brilliant social life and larger opportunities of Boston more attractive, while the mere three miles that separated the capital from the seat of learning presented no obstacle to their enjoying its refining and elevating influence. Thus comparatively few men of intellectual weight—such men as form the mental leaven of a community—have been drawn actually to make Cambridge their place of residence, unless for the purpose of special study at the University, or to join the ranks of its professors or tutors. By far the majority preferred Boston; Harvard was next-door, so to speak, as an ever-near inspiration and resource. Its influence was to be felt, to all intents and purposes, as keenly and pervasively in Boston as in Cambridge itself. This influence of Harvard University upon Boston culture, exerted as it has been both directly and in the way of attracting men of an intellectual or artistic cast to the city, can hardly be overrated. Indeed, in so far as the art of music is concerned, it is a fact that the initiative to much of the active musical life for which Boston has long been noted, and to which she owes her recognized position as one of the chief musical centres of the country, came really from Harvard, if in a wholly unofficial way. But of this more, later on.

The point which it is important to appreciate here is, that what of influence was exerted by the University either directly or indirectly upon the intellectual, artistic or even specially musical culture and organized musical activity of Boston, was so readily responded to, it bore fruit so soon and of such good quality, that Boston pretty well absorbed it all and there was little left to work efficaciously in Cambridge itself. If Harvard often gave the initiative, and, so to speak, sowed the seed, Boston was unmistakably the fittest soil wherein that seed could sprout, grow and ripen. The very proximity of Boston, the ease of communication between it and Cambridge, and the exceeding activity of musical

life in the capital, in which the resident of the university town could participate at little expense or trouble, acted as an obstacle to Cambridge taking active measures to further the public or organized cultivation of music within her own precincts. What would have been the use? Boston was there, only three miles off—just over the way, as it were—with her concerts, theatres, opera and oratorios, and that was enough. There was not even a chance for local vanity to come into play as an incentive to local action—and heaven knows that Cambridge has always had her fair share of local pride; all competition with Boston in the way of musical enterprise would have been hopeless from the outset. Boston had too much the start, besides having more opportunity, more money and more leisure to attend to such things. Cambridge was wisely content to let Boston make music for her. Thus it came about that many of those incentives to musical activity and enterprise which came originally from Harvard, while they worked with often astonishing efficacy in Boston, failed, and for this very reason, to be productive of any very tangible results in Cambridge itself. Boston was inspired with enough zeal for herself and Cambridge too. Naturally it would be idle to claim that all the musical activity for which Boston has long been noted arose from an impulse given by Harvard University; but, although by no means all, it is true that no little of the musical activity in Boston can be traced in the end to such a source. Music is not the only department in which Harvard has done somewhat more to improve Boston than it has to improve Cambridge.

It has seemed worth while to dwell upon this point at such length, in order to explain the otherwise astounding vacancy of the musical annals of Cambridge. For it needs a little explanatory prelude to lead up to a statement such as this: that a New England town, over two centuries and a half old, which has been for nearly the whole of that period the seat of the first university in the country, which has been an incorporated city for forty-four years, and now has a population of upwards of 60,000 souls, has never had a theatre nor a music hall! That is to say, has never had a place especially built for a theatre, nor a hall constructed for the especial purpose of having music publicly performed therein. Much as if Cambridge never had a musical society, association or organization of importance. But it is not so bad as that, as we shall see in the sequel.

In the earlier days what little music was made was almost exclusively confined to the churches. Cambridge, like many another town, had her fair taste of the old New England psalmody. Those old psalm-tunes, harmonized in the clumsiest fashion, and often incorrectly, formed the staple of people's musical diet in those times, both in and out of the church. It seems incredible now that people should ever have taken to such things for the sake of musical enjoy-

ment, and it is highly probable that it was largely a sense of association that helped to make them palatable. The old tunes had become endeared to most of their votaries early in life, and often, no doubt, for quite other reasons than purely musical ones. No man can but have a certain affection through life for the tunes with which his mother used to sing him to sleep, when he was a child. Besides, people went to church in earnest then, and all that was associated with church-going appealed pleasantly to their taste and imagination. It seems as if the early taste for psalm-singing, for which New England was noted,—psalm-singing not only as a part of divine worship, but as a means of social musical recreation,—could only be accounted for in this way; for, even in the earlier colonial period, intercourse with England and the Continent was easy and frequent enough to give people abundant opportunity for making the acquaintance of music that was not only intrinsically better, but infinitely fitter for purposes of recreation than these raw-boned and ill-harmonized old tunes. No doubt, in the beginning, Puritan severity looked considerably askance at all purely secular music; and a remnant of this feeling survived for a long time in greater or less vigor. But with all possible arguments in favor of the superior propriety of singing psalms over all other forms of music, a certain force of endearing association must have been at work to make this exercise seem not only proper and profitable, but enjoyable as well. True it is that this passion for psalm-singing, for other purposes than those of worship, became deeply ingrained in the New England character; indeed, it has not been eradicated yet. Go on a summer's Sunday evening into the parlor of almost any country hotel you please, and your ears will be pretty sure to be greeted with a braying and discordant survival of this old practice. Only what is now done of a Sunday evening was then done at any time. Tate and Brady, with the appropriate music, was for a long time what people looked to for their musical solace. Of course, during the first two decades of the present century, the less good of the old tunes had fallen into disuse, the better ones had been reharmonized, and new ones written. Secular music, too, had in a certain measure supplanted the psalm-tunes as a means of home recreation, and a higher class of church music had, little by little, made its way into the Divine service. Instrumental music, too, had for some time been cultivated by amateurs. Yet it is surprising how late it was before an organ was placed in many of the churches. There was no organ in the First Church in Cambridge until 1827—by a curious coincidence, the year of Beethoven's death—and it is plain enough from some remarks in Dr. Holmes's sermon on the occasion (delivered on September 30th) that this addition was considered no little of an innovation. The learned divine said: "The introduction of an organ, instead of diminishing, should increase the number of singers

in the congregation. It is not, you will remember, intended as a substitute for the voice, but as an aid to it." He could not have been more carefully explanatory had a church-organ then been heard of for the first time.

As I have said, the popular musical impulse came first from the churches, in Cambridge as elsewhere in New England, and a general fondness for signing psalm-tunes was the first result. But in Cambridge, whatever attempts were made to indulge this taste in an organized way have long since been forgotten. If any private singing clubs or societies were formed, no trace of them remains; they must have had very fluctuating and brief existences. In Boston the Handel and Haydn Society was formed in 1815, and it is likely enough that this rendered either the formation of a similar society in Cambridge unnecessary, or its survival impossible.

But what general music-loving society in Cambridge apparently did not do, or else did only to little purpose, for itself, some of the students of the University did. On November 9, 1786, was formed the Singing Club of Harvard University, a small club of undergraduates. That the main object of the club was for its members to sing together the then current New England psalmody appears from the records of its expenditures, in which several very grim-sounding psalm-tune books are mentioned among the purchases made by the club. Of other music bought there is little mention made; but now and then we come across small (at times incredibly small) sums of money, disbursed for the purchase of musical instruments. So it would seem as if the singers did not sing wholly unaccompanied. Among the original members of this curious little club we find President Kirkland, Judge Samuel Putnam, and in 1799, Leverett Saltonstall. It disbanded in May, 1803. This Singing Club of Harvard University would hardly have been worth mention here, had it not been the immediate forerunner of another far more important organization, which came in for what legacy of music and musical instruments the older body had to bequeath. This younger organization is one of real historical importance, for it has of later years had an immense, if indirectly exerted, influence upon the musical life of Boston, and by reflection, upon that of Cambridge itself. Let not the reader, especially if he live in Cambridge, smile when I say that this new society was the Pierian Sodality. That the Pierians have never played very well, either in the beginning or since, may be admitted at the outset; the present writer certainly can admit it with a tolerable grace, for he was once a Pierian himself. But the salutary and far reaching influence the Pierian Sodality came in time to exert, was exerted otherwise than through its musical performances.

The Sodality was projected and organized in 1808, by five young sophomores, to wit: Alphens Bigelow, Benjamin D. Bartlett, Joseph Eaton, John Gardner

and Frederick Kinloch. Its object was the practice and performance of instrumental concerted music by its members. Many distinguished names are in its lists of membership, albeit not many names of musicians. George B. Emerson and Henry K. Oliver, (class of 1817) are to be noted. Later on we find the Hon. Robert C. Winthrop playing the trombone, Francis Booth, the composer, playing the flute, and John S. Dwight, the distinguished critic, playing the clarinet.

The detailed history of the Pierian Sodality belongs more properly to the annals of Harvard University than to those of Cambridge. But a few facts and dates may not be out of the way here. The secretary's records for the first twenty-four years of the Sodality's existence have been totally lost; it is only from the year 1832 that we can begin to follow the club's proceedings accurately. In this year the club was reduced to a single member, who, however, used to hold meetings by himself with laudable regularity, and duly record the same. But it is known that the Sodality's orchestra used to furnish music at the College Exhibitions and to give serenades on its own account as early as 1827. This fashion of serenading lasted until about 1858, when the Glee Club was formed, and open-air nocturnal performances fell more legitimately to its share. The Glee Club was founded by Josiah Bradlee, Benjamin W. Crowninshield, John Homans and C. H. Learoyd. It gave its first public concert, in conjunction with the Pierians, in Lyceum Hall, March 29, 1858,—a custom which has been kept up, with but few interruptions, ever since. It probably reached its highest point of excellence between 1864 and 1866, when George L. Osgood was leading first tenor. It was he, too, by the way, who, in his capacity of class chorister, put a sudden stop, in 1866, to the time-honored custom of omitting three beats from the measure between the phrases of "Fair Harvard" in the Class Day singing. Before his Class Day, people used to wait for this curious laming of the rhythm, as for one of the regular features of the day, and they were never disappointed.

But, to return once more to the Pierian Sodality. It has been already hinted that its historical importance did not reside in its musical performances; it is important and interesting to us here because of its offshoots. It was not unnatural that many of its members, on graduating from the University, should feel not only a deep interest in, but almost a sense of responsibility concerning the musical life of the community they were to begin life in. A large proportion of them were Boston men; the fact of their membership in the Pierian Sodality (that is, in a club of instrumental performers) naturally indicated them as ardent music-lovers, while their University degree gave assurance that they were men of a certain liberal culture. It is just such men as these who would instinctively dive to the very heart of

musical circles in their after-college life, and more or less take the lead in promoting musical enterprise.

On July 27, 1837, a circular letter was issued by a committee of the Sodality, calling a general meeting of the honorary and immediate members (that is what would now be called the graduate and active members), to be holden in No. 6, University Hall, on Commencement Day, August 30th. This circular was signed by E. S. Dixwell, J. S. Dwight, Henry Gassett, Jr., C. C. Holmes, J. F. Tuckerman and W. T. Davis. It was proposed to unite the old members into a permanent association for the promotion of musical taste and science in the University. The meeting was attended by from thirty to forty gentlemen, J. M. Wainwright being appointed chairman, and Henry S. McKean secretary. A report of the committee was read by John S. Dwight, and several resolutions were adopted. Among them was that the Association should meet annually on Commencement Day, for the pleasure of social intercourse, and for the discussion of plans for promoting the interests of music in the University. It was likewise voted that plans be considered for introducing the study of music into the academic course, and for the formation of a musical library. At an adjourned meeting on the following Commencement Day, August 29, 1838, a constitution was adopted, and the style of General Association of Members of the Pierian Sodality of Harvard University was fixed upon. Two years later, at the fourth annual meeting, it was voted to sever all connection with the parent society, the Pierian Sodality, and the new title, Harvard Musical Association, was adopted.

The early years of the Association can have been neither very prosperous nor full of hope; for, at the eighth annual meeting, holden in Lyceum Hall, August 28, 1844, it was proposed that it should dissolve. But this motion was, luckily, never carried through, and the Association, if it did little or nothing else, continued to meet every Commencement Day; indeed, the very next year (1845) it was incorporated under an act of the Legislature. On March 14, 1848, the Association held its annual meeting (the eleventh) for the first time in Boston, at "the Music Rooms of Mr. Hews, in Washington Street." Henceforth the Harvard Musical Association should be considered as belonging to Boston rather than to Cambridge; but it still maintained its relations with the University, unofficial though they were, and every Commencement Day it had its room in or near the College Yard, where a light lunch, drink, tobacco and social chit-chat awaited the members. This custom was kept up until shortly after 1860, when it fell into disuse.

This is not the place to speak in detail of the influence the Harvard Musical Association has exerted upon music in Boston. Still a few of the results of its energy may well be detailed here, for they are not uninteresting from the bearing they have had upon

the musical life of Cambridge. Curiously enough, among the musical enterprises, the inception of which can be traced to the Harvard Musical Association, there are comparatively few in the promotion of which the Association took any official action, or, indeed, in the history of which it appears at all in its corporate capacity. But at its annual suppers it often happened that one or another member would propose a musical scheme, which would then be freely discussed, its value and the best means of carrying it out determined. Then such members as felt personally interested in it would unite in pushing it, although the Association, as such, would take no official part in the business. Yet it is noteworthy that hardly a piece of musical enterprise was ever mooted by a member of the Association, without its being discussed quite as fully and freely at these meetings as if it had been really official business. In this way, the building of the Boston Music Hall, the purchase of the Great Organ, the introduction of music into the academic course at Harvard, even to the engagement of John K. Paine as organist and instructor in music at the University, are really quite as traceable to the influence and energy of the Harvard Musical Association as were its more avowed pieces of enterprise, such as the giving of chamber concerts and the establishment of the symphony concerts, which were given in Boston for seventeen seasons, from 1866-67 to 1882-83.

What is most important to our present purpose is to note that almost all the musical enterprises, traceable either directly or indirectly to the Harvard Musical Association, were carried out in Boston; thus the influence of the Association was mainly exerted in the direction of centralizing the best musical executive means, and the most favorable conditions for musical performance in the State capital. And so successful were these efforts that, as has already been pointed out, little opportunity or necessity was left for Cambridge to do anything musically for herself. Had Harvard University, in the beginning, shown more disposition to look with favor upon the efforts of the Association to foster the cultivation of music within her own gates, all might have been different. All the original members of the Association were sons of *Alma Mater*, and very much disposed at first to work harmoniously with their Mother for the good cause of Art. But in the early forties, music was not merely ignored, but positively despised in New England, save by especially musical people; and the Overseers and Faculty of Harvard University were by no means ahead of their time in their respect for the art. The most well-meant attempts of the young Association to induce the University officially to recognize the dignity of the art of music were met with rebuff after rebuff, and it is no wonder that its members soon turned their energies to cultivating the art in a more prudent field, namely in Boston, and independent of the University. Had it been otherwise,

Harvard University might have been one of the chief musical educators and promoters of musical culture in New England, if not in the whole country—with the Harvard Musical Association as the secret power behind the throne; and Cambridge might, in time, have grown to be a sort of musical centre, in the sense that Oxford was for a long while in England. But this was not to be; at least, it was not to be so soon as, nor to the extent that, it otherwise might have been.

Of course, the city lived its own musical life in private, as other cities do; Cambridge has never lacked its fair share of music-lovers. And, if these went to Boston for their concerts, oratorios and operas, they made no little music among themselves in a quiet, unassuming way at home. But of such home-music little or no trace remains; it forms no part of history.

The University, however, did not forever remain obdurate to the claims of music to be regarded as a legitimate factor of education; musical instruction of a sound and reputable, if rather limited sort, became in time obtainable at College, if it was not recognized as a part of the regular academic course. But a change was to come, and this change was brought on, more than by anything else, by the engagement, in 1863, of John K. Paine as organist and musical instructor to the University, to succeed Levi P. Homer, deceased. Nothing could be more apt to bring the University to a due sense of what it owed to the art of music than the presence, in its own body of instructors, of this ardent, energetic, thoroughly equipped and uncompromising musician. His position in the University must have been a pretty arduous one at first; at that time he was, musically speaking, an ultra-classicist, a determined *Bachianer*, and, as such, could look for little sympathy, much less for comprehension, from even those members of the Faculty who were inclined to be musical. But he, with some others behind him, left no stone unturned to enlarge the scope and emphasize the importance of musical instruction in the University. That old influence, which, years before, the Harvard Musical Association had sought in vain to bring to bear upon the University directly from without, now proved fruitful and efficacious when wielded within its own gates by this determined musician, who was, by the way, also a member of the Harvard Musical Association, and backed up energetically by other members. In 1873 Mr. Paine was appointed Adjunct Professor of Music, and in 1875 he was raised to a full professorship. This was the first chair of music ever created in an American University. The dignity of the art was at last fully recognized by Harvard; music was admitted as a regular elective study in the academic course, and high honors, *Summi Honores*, could be won in it. Thus was the original dream of the Harvard Musical Association, that offshoot of the older Pierian Sodality,

more than realized; and who shall say that the thoughts, efforts and impetus of the Association had not much to do with making its realization possible?

But Professor Paine's influence has not been felt in the University only; it has been active in the general musical life of Cambridge also. Since the erection of the Sanders Theatre, in 1876, Cambridge has shown signs of an ever-increasing determination not to be wholly dependent on Boston for concerts. True, these concerts have been given by imported talent—the Listemann Quartet, the Thomas Orchestra or (as of later years) the Boston Symphony Orchestra—but the funds for their support have been raised in Cambridge itself. And among the foremost of those to whose zeal and energy the maintenance of these concerts has been due, Professor Paine has always been found. Now a regular series of orchestral concerts in Sanders Theatre is as much a matter of course, every winter, as it is in Boston itself.

CHAPTER IX.

CAMBRIDGE—(Continued).

MEDICAL HISTORY.

BY HENRY O. MARCY, A.M., M.D., LL.D.

IN the formation of a new settlement, by people representing in a high degree the culture of the period, it is but natural to expect that the civilization represented by it would be a fair exponent of the times. This in an exceptional degree is true of the history of Cambridge, and it finds its exponent in medicine, as well as in the other learned professions. Although in the early period of the settlement of Cambridge the practice of medicine was, in a considerable measure, associated with that of the clerical profession, the records of the colonists clearly show that they recognized the importance of a man specially trained as a surgeon, and to supply the need entered into an agreement with one John Pratt, who came from England and settled in Cambridge. He was undoubtedly the first physician recognized as a "Doctor of Physick." It is recorded on a fly-leaf of the "Colony Records," vol. i., under date of March 5, 1628, that said Mr. Pratt came to Cambridge under an agreement with the "Company of Adventurers." A proposition being made to entertain a surgeon for the plantation, Mr. Pratt was propounded as an able man upon these conditions, namely,—“That £40 Sterling should be allowed him, viz., for his chest £25, the rest for his own salary the first year; provided he continue three years, the company to be at the charge of transporting his wife and a youth, to have £20 a year for the other two years, and to build him a house at the Company's charge, and to allot him one

hundred acres of ground; but, if he stay but one year, then the company to be at charge of his bringing back to England, and he to leave his servant and the chest for the company's service.” It is in evidence that he practiced with and sought the good of the settlement for some years, but becoming dissatisfied, he wrote a letter of complaint to a friend in England, because of which he was called sharply to account by the magistrate in November, 1685. It will be remembered that, at this time, Cambridge, the so-called New Towne, was the seat of government for the Colony, and the hope was expressed by Governor Dudley that men of ability might be attracted here by the advantages which the settlement offered. In 1683 Wood wrote that, “the inhabitants of the New Towne are most of them very rich and well stored with cattle of all sorts.” The Courts, both general and particular, were held in Cambridge exclusively, until May, 1636, when they were removed to Boston. Although not germane to the history of medicine, this letter of John Pratt is of sufficient interest to refer to, somewhat in detail. It is clearly evident that, then as now, the attractions to induce settlers were emphasized in glowing language, and that the deprivations and hardships incident to a new country oftentimes caused a longing to return to old England, and that this homesickness found expression in strong language of discontent. The original letter appears not to be in preservation, but it was deemed of sufficient importance, coming from such a source, to be taken notice of by the authorities, lest therefrom permanent harm should come to the colony. “At the Court of assistants,” says Winthrop, November 3, 1635, “John Pratt, of Newtown, was questioned about the letter he wrote into England, wherein he affirmed divers things, which were untrue and were of ill-repute for the state of the country, as that here was nothing but rocks, and sands, and salt marshes, etc. He desired respite for his answer until the next morning; then he gave it in writing, in which, by making his own interpretation of some passages and acknowledging his error in others, he gave satisfaction.”¹

The answer indicates clearly the purport of the letters in question and is on record as follows:²

“The answer of me, John Pratt, to such things as I hear and perceive objected against me, as offensive in my letter. First, generally, whatsoever I writ of the improbability or impossibility of subsistence for ourselves or our posterity without tempting God, or without extraordinary means, it was with these two regards: first, I did not mean that which I said in respect of the whole country, or our whole patent in general, but only of that compass of ground wherein these towns are so thick set together; and secondly, I supposed that they intended so to remain, because

¹ Savage's "Winthrop," i. 173, 174. Paige's "History of Cambridge," p. 24.

² Paige's "History of Cambridge," pp. 24-26.

(upon conference with divers) I found that men did think it unreasonable that they or any should remove or disperse into other parts of the country ; and upon this ground I thought I could not subsist myself, nor the plantation, nor posterity. But I do acknowledge that, since my letter, there have been sundry places newly found, as Neweberry, Concord, and others which will afford good means of subsistence for men and beasts, in which and other such like new plantations, if the towus shall be fewer and the bounds larger than these are, I conceive they may live comfortably. The like I think of Conecticott, with the plantations there now in hand, and what I conceive so sufficient for myself, I conceive so sufficient also for my posterity. And concerning these towus here so thick planted, I conceive they may subsist in case that, besides the conveniences which they have already near hand, they do improve farms somewhat further off, and do also apply themselves to and do improve the trade of fishing and other trades. As concerning the intimation of the Commonwealth builded upon rocks, sands and salt marshes, I wish I had not made it, because it is construed contrary to my meaning, which I have before expressed. And whereas my letters do seem to extenuate the judgment of such as came before, as having more honesty than skill, they being scholars, citizens, tradesmen, etc., my meaning was not so general as the words do import ; for I had an eye only to those that had made larger reports into England of the country than I found to be true in the sense aforesaid. And whereas I may seem to imply that I had altered the minds or judgments of the body of the people, magistrates and others, I did not mean this in respect of the goodness or badness of the land in the whole plantation, but only in point of removal and spreading further into other parts, they afterwards conceiving it necessary that some should remove into other places, here and there, of more enlargement ; and whereas I seem to speak of all the magistrates and people, I did indeed mean only all those with whom I had any private speech about those things. And as for the barrenness of the sandy grounds, etc., I spake of them then as I conceived, but now, by experience of mine own, I find that such ground as before I accounted barren, yet, being manured and husbanded, doth bring forth more fruit than I did expect. As for the not prospering of the English grain upon this ground, I do since that time see that rye and oats have prospered better than I expected, but as for other kinds of grain, I do still question whether they will come to such perfection as in our native county from whence they came . . .

"And, as concerning that which I said, that the gospel would be as dear here as in England, I did it to this end, to put some, which intended to come hither only for outward commodity, to look for better grounds, ere they look this way. As for some grounds of my returning, which I concealed from my friends, for fear of doing hurt, I meant only some particular

occasions and apprehensions of mine own, not intending to lay any secret blemish upon the State. And whereas I did express the danger of decaying here in our first love, etc., I did it only in regard of the manifold occasions and businesses which, here at first, we meet withal, by which I find in my own experience (and so, I think, do others also), how hard it is to keep our hearts in that holy frame which sometimes they were in where we had less to do in outward things, but not at all intending to impute it as necessary to our condition, much less as a fruit of our precious liberties which we enjoy, which rather tend to the quickening of us, we improving the same as we ought.

"This, my answer (according with the inward consent and meaning of my heart), I do humbly commend to the favorable consideration and acceptance of the Court, desiring in this, as in all things, to approve myself in a conscience void of offence towards God and man.

"JOHN PRATT."

His offence was pardoned and he continued to reside in Cambridge for nearly ten years, when he sailed for England with Capt. Thomas Coytmore, and, together with his wife was wrecked and drowned near the coast of Spain in December, 1646.

"This man was above sixty years old, an experienced surgeon, who had lived in New England many years, and was of the First Church at Cambridge, in Mr. Hooker's time, and had good practice and wanted nothing. But he had been long discontented, because his employment was not so profitable to himself as he desired, and it is like he feared lest he should fall into want in his old age, and therefore he would needs go back into England ; for surgeons were then in great request there, occasioned by the war ; but God took him away childless."

The dissatisfaction, of which the letter referred to, written by Surgeon Pratt, is an exponent, grew to such proportions that rival factions centred about the two great ecclesiasties of the day, Mr. Cotton, of Boston, and Mr. Hooker, of Cambridge, both in a measure physicians as well as clergymen, which resulted in Mr. Hooker, accompanied by more than fifty families, removing to Hartford, Conn. Of the original settlers, there are reported to have been but eleven families left, which gave little need of a practitioner of medicine in their midst.

The bitter persecution in England, to which the Puritans had been subjected, had caused them to foresee the possibility of a removal to the New World, and a considerable number of their ministers had, on this account, studied medicine. These men formed a large proportion of the early physicians of the colony. As a rule, they had been liberally educated, and some of them are the authors of the first medical treatises

published in America. For the most part they practiced only among the members of their own respective societies. During the period of the early settlement of the colonies few men were specially trained in the practice of physic, and medicine was distinctly an art rather than a science,—the period which preceded the teachings of Sydenham, under whose guidance the art of medicine may be said to have taken a new departure. The people believed in specifics, and remedies were prescribed as sovereign cures. Two schools of medical practice prevailed in Europe,—the one taught the use of vegetable substances alone; the other advised, for the most part, mineral compounds. The first of these schools styled themselves the Galenists, since they followed the teachings of Galen: the ancestry of the botanic doctor of the last generation, the eclectic of to-day.

The other school accepted the teachings of Paracelsus and gave "chemical" medicines (so-called), mineral compounds, and a few of the most active vegetable extracts. These men were frequently called chemists. The rivalry between the two schools was naturally a bitter one, but from each comes the name commonly ascribed to the apothecary, as druggist and chemist. The literature of the medical profession was scanty and consisted generally, in America, of certain limited facts concerning disease, together with a knowledge of certain drugs which were to be taken as a remedy for certain diseases. I quote as follows from the "Memorial History of Boston": "I had the privilege of examining and reporting to the Massachusetts Historical Society on a paper of medical directions placed in my hands by the Hon. Robert C. Winthrop, the president of the society. It is headed, 'For my worthy friend, Mr. Wintrop,' and signed 'Ed. Stafford.' Its date is 1643, and I was not able to decide whether it was intended for Governor John Winthrop, or for his son, the Governor of Connecticut. The list of remedies is made up principally of simples, or vegetable substances; St. John's wort, black hellebore, great bryony root, the four great cold seeds, maiden-hair, fennel, parsley, witch-hazel, elder, clown's all-heal (*stachys palustris*), saffron, fox-glove, jalap, scammony, snake-root, are among these, many of them inert, some dangerous, if not carefully handled. Caranna and tacamahacca, two gums, of which it used to be said, 'Whatever the tacamahacca has not cured the caranna will,' and Burgundy pitch are also enumerated. Of mineral substances, lime-water, salt, saltpetre, *crocus metallorum* (sulphuretted oxide of antimony) are mentioned. "A Wilde Catt's skin on ye place greived" is recommended for pains in the heart or limbs. More formidable to the imagination than any of these is, 'my black powder against ye plague, small-pox, purples, all sorts of feavers, poyson, either by way of prevention or after infections.' This is made by burning toads to charcoale and reducing this to powder. It belongs to that list of abominations which disgraced the old pharmacopœias, but which

have disappeared from the armamentarium of regular practitioners. As late, however, as the year 1789, Cullen had to censure Vogel for allowing burnt toads and swollen chicks to remain on his list of remedies.

"The Winthrops to one of whom Dr. or Mr. Stafford's directions were given—assisted their fellow-citizens with medical counsel as well as in many other ways. The Governor of Connecticut, John Winthrop, treated a great number of medical cases in Hartford, and left a record of his practice extending from 1657 to 1669. This manuscript was also intrusted to me. I examined it very carefully and reported upon it in the lecture before the Massachusetts Medical Society to which I have already referred. From it we may get an idea of what was likely to be the kind of treatment to which our Boston predecessors would be submitted. The excellent Governor seems to have been consulted by a great number of persons, to have had a wider circle of practice, it may be suspected, than many of those who called themselves doctors. The common diseases of all ages and both sexes appear to have come under his care. Measles and their consequences are at first most prominent, and fever and ague had often to be treated. He used the ordinary simples dear to mothers and nurses—elecampane, elder, wormwood, anise, and the rest; and beside these certain mineral remedies. Of these, nitre (saltpetre) was his favorite. Another favorite prescription was spermaceti, which, like Hotspur's fop, he seems to have considered 'the sovereign'st thing on earth,' for inward bruises and often prescribes it after falls and similar injuries. Other remedies were antimony, now and then a little iron, or sulphur, or calomel, rhubarb, jalap, horse-radish (which I remember Cullen recommends for hoarseness), guaiacum and the old mithridate or farrago, which, like so many foolish mixtures, owed all its real virtue to opium. He amused his patients with doses of coral and of amber, and sometimes gave them (let us hope without their knowing it) some of those unmentionable articles which insulted the senses and the stomachs of seventeenth and eighteenth century patients. One medicine which he very often prescribes he calls *rubila*. After long search I found this consisted of four grains of diaphoretic antimony, with twenty grains of nitre and a little salt of tin. I do not remember that the Governor ever mentions bleeding or blistering. Whether busy practitioners found time to bleed their patients as readily as those who had little else to do might be questioned. One of my old friends told me that the Philadelphia doctors used to order blood letting more frequently than the Boston ones, because there was in that city a set of professional bleeders. . . .

"By the kindness of the late librarian of the American Antiquarian Society I had placed in my hands a manuscript of Cotton Mather, entitled, 'The Angel of Bethesda, an essay upon the Common Maladies of Mankind, offering first the Sentiments of Piety,' etc., and 'a Collection of plain but Potent and Approved

Remedies for the Maladies.' This starting-point is, of course, theological. 'Sickness is, in fact, *Flagellum Dei pro peccatis Mundi*.' The treatise is full of pedantry, superstition, declamation and miscellaneous folly."¹

John Winthrop, the founder of Boston and Governor of Massachusetts, was well versed in medicine, but his public services to the Colony were so marked that his minor ministrations among friends and neighbors are thrown into the back-ground. The venerable Cotton says of him, just before his death, that he had been "a Help for our Bodies by Physick, for our Estates by Law."²

The Apostle Eliot, under date of September 4, 1647, writes to Mr. Shephard, the minister of Cambridge, and expresses the desire that, "Our young Students in Physick may be trained up better than yet they bee, who have onely theoretical knowledge and are forced to fall to practice before ever they saw an Anatomy made, or duely trained up in making 'experiments,' for we never had but one Anatomy in the Country, which Mr. 'Giles Firmin' (now in England) did make and read upon very well, but no more of that now."

Since anatomy is the old name for a skeleton, Mr. Firmin may be considered to date as the first medical lecturer of America. He excited an interest in the subject to such a degree, that at the session of the General Court, October, 1647, just following the date of Eliot's letter they resolved, "We conceive it very necessary y^e such as studies physick, or chirurgery, may have liberty to reade anotomy and to anotomize once in foure yeares some malefacto in case there be such as the Courte shall allow of."³ Mr. Firmin studied at the University of Cambridge and was learned in medicine. After a time he moved to Ipswich, where he was known as a physician; subsequently, however, he studied theology, returned to England and was ordained, settled as a rector, but continued to practice medicine.

Charles Chauncy, that stern Puritan, president of Harvard College, and also Leonard Hoar, who succeeded him, were regular graduates of medicine at Cambridge, in England. Chauncy left six sons, all of whom were educated at Harvard College and became preachers. "They had," says Cotton Mather, "an Eminent skill in 'Physick' added unto their other Accomplishments; which, like 'him' (their father), they used for the 'Good' of many; as, indeed, it is well known that until Two Hundred Years ago 'Physick in England' was no Profession distinct from Divinity."⁴

John Rogers, the fifth president of the college, was also a practitioner of medicine. Hoar was the first

president who was a graduate of the institution, but Rogers was an earlier graduate, who became its president afterwards. Elisha Cooke was a prominent physician, as also a politician. He graduated at Harvard in the class of 1657, being one of the first natives of the town that studied medicine.

In the notes of the period of the early settlement of Cambridge there is little comment made upon the prevailing diseases as the causes of death. Yellow fever occurred in Boston in 1649, having been introduced from ships arriving from the West Indies. A strict quarantine was established by order of the General Court on March 16th, prohibiting the landing of persons or goods from such vessels. No further sanitary regulations were adopted until October, 1665, when a warrant was issued by the General Court, ordering vessels coming from England to be placed in quarantine. This was on account of the "plague" existing in London at that time, but was repealed two years afterward, owing to the disappearance of the disease. These two orders, adopted to meet the emergencies, comprise the whole legislation of the seventeenth century so far as it relates to quarantine in Massachusetts. The quarantine grounds were near the Castle. In 1693 the yellow fever was brought to Boston from the Barbadoes, but few of the citizens of Boston and vicinity were affected by it. It was recorded in the winter of 1650 that "the Lord was pleased to inflict us with coughs, agues and fevers."

"Under date of 1671, this summer many were visited with ague and fever, and again in September of the next year agues and fevers prevailed, mostly among us about the bay."⁵

John Josselyn writes in September, 1671, of finding the inhabitants exceedingly afflicted with the fever, ague and bloody flux.

In 1721, with the exception of Dr. William Douglass, there was not a single practitioner of Boston who was a regular graduated physician. He died in October, 1752, having passed his whole professional life in Boston, where he had much influence as a physician. Small-pox prevailed in 1721 more extensively and fatally than ever in Boston and its vicinity. A statement of results was made officially in the *Boston News Letter*: "Boston, Feb. 24, 1721-2. By the Selectmen. The number of persons visited with the small-pox since its coming into town in April last having been inquired into by direction from the Selectmen amounts to 5889, 844 of whom died," October recording the exceptional mortality of 411. There is no record of the extent of this scourge in Cambridge, but references to it are found in the *New England Courant* for November, December, January. Under January 22, 1722, it is stated, "On Friday last the General Assembly of this Province met at Cambridge. There not being a sufficient number to make a house on Wednesday, to which day they were before pro-

⁵ Church Records, Rev. Mr. Danforth, Roxbury.

rogued, they are adjourned to Tuesday next, when they are to meet a few miles out of town, the small-pox being now in the heart of that place." The Town Records show that a committee was appointed January 29th to provide "for the relief of such persons and families as may stand in need thereof, in case the small-pox spread amongst us."

Dr. Zabdiel Boylston, of Boston, at about this time first introduced inoculation for the small-pox, but he encountered the most violent opposition. Of 286 persons who were inoculated for the small-pox but six died. Rev. Cotton Mather is accredited with having strongly advocated inoculation, based upon his knowledge of the methods of inoculation which had long been practiced in Constantinople, and had been published in the "Transactions of the Royal Society of London."

In 1730 the small-pox again prevailed to an alarming extent in Cambridge. Town-meetings were held to devise means for its extermination. A vote passed indicates the public opinion regarding inoculation; "Whereas, Samuel Danforth, Esq.'s, late practice of inoculation of small-pox amongst us has greatly endangered the town and distressed sundry families amongst us, which is very disagreeable to us; wherefore voted that said Samuel Danforth, Esq., be desired forthwith to remove such inoculated persons into some convenient place, whereby our town mayn't be exposed by them." The college studies were broken up for a time and the students dispersed. Again in 1752 small-pox caused the breaking up of the college work from April 22d until the following autumn.

An epidemic occurred in Cambridge in 1740 which was called the "throat distemper," and is probably the same disease that Dr. Thacher describes as an influenza, somewhat resembling the recent attack of La Grippe which, in the early winter of 1890, spread over both continents. Thacher describes it, "The amazing rapidity with which it spread through the country resembled more a storm agitating the atmosphere than the natural progress of a disease from any contagious source. Almost a whole city, town or neighborhood became affected with its influence in a few days, and as it did not incapacitate the people in general from pursuing their ordinary occupations, it was common to observe in every street and place of resort a constant coughing, hawking, and wheezing, and in public assemblies little else was to be heard or attended to. Although all classes of people experienced the operation of the influenza, it is remarkable that a small number of people, comparatively speaking, were so ill as to require medical attendance, and instances of its fatal termination were of rare occurrence."¹

It proved so fatal in Cambridge, however, that the students were dismissed from college by a vote passed June 23, 1740. "Whereas, through the holy Provi-

dence of God, several families in the town of Cambridge are visited with the throat distemper, and the President's and Steward's families are under very afflicted circumstances by reason of that mortal sickness, and whereas we apprehend that there is great danger of the distemper spreading and prevailing as it hath done formerly in other places, and that the students are much endangered thereby; thereby Voted, that they be immediately dismissed from the college and that the vacation begin from this time, and that the Commencement for this year be not until the expiration of the vacation."²

Mr. Paige, in his "History of Cambridge," cites instances from a private note-book of a number of deaths which occurred at this time, and the inference is extremely probable that the cause was the disease which we now know under the name of diphtheria.

Captain Golet, in 1750, describes Cambridge as follows: "After dinner Jacob Wendell, Abraham Wendell, and self took a horse and went to see Cambridge, which is a neat, pleasant village which consists of about an hundred houses and three colleges, which are a plain, old fabrick, of no manner of architect and at present much out of repair; is situated on one side of the Towne and forms a large square; its apartments are pretty large. Drank a glass of wine with the collegians, returned and stopt at Richardson's, where we bought some fowles, and came home in the evening, which we spent at Weatherhead's with sundry gentlemen."³

The next important incidents which occur, relating in a general way to the medical history of Cambridge, are grouped about the period of the Revolutionary War. This little, quiet university town became the focus of the early operative measures which led to the rebellion, culminating in the independence of the States. Her citizens mourned their dead after the battle of Lexington, and Cambridge became the common rendezvous of the troops forming the basis of the Continental Army. The early "New England History and General Register" found the aggregate of troops in Cambridge, in the summer of 1775, a little over eight thousand.

Hospitals were at once established in the larger houses, which were assigned by the Committee of Safety. Drs. John Warren, Isaac Rand, William Eustis, James Thacher, Isaac Foster, Thomas Kittredge, and others, officiated in these hospitals, under the general supervision of Dr. Church. Three houses are still in existence, rendered famous by many previous and subsequent events, which were used, at this time, for hospital purposes.

Between Arrow and Mt. Auburn Sts. was the estate of David Phips, the sheriff of Middlesex, colonel of the Governor's troops, and son of Lieut. Gov. Spencer Phips. This estate was earlier that of Major-General

¹ "Medical Biography," I. 28.

² "History of Cambridge," Paige, p. 132.

³ "N. E. Hist. and Gen. Register."

Daniel Gerkin, Indian superintendent, and it was under Gerkin's roof that Generals Goffe and Whalley, the regicides, were at one time sheltered. This hospital was under the special care of Dr. Dunsmore.

The Rev. Dr. Apthorp's house, erected about 1761, is one of the finest examples of colonial architecture left to us. Since Dr. Apthorp was a representative man in the church episcopate service, he was received with ill-favor by the colonists, although born in Boston, and he removed to England in 1764. The house was styled, in a satirical way, "The palace of one of the humble successors of the Apostles." For a time General Putnam, of Connecticut, occupied it as his headquarters, until the Committee of Safety designated it for hospital purposes.

The celebrated old Brattle house, from the owner of which the street is named, recently purchased by the Social Union, and restored for permanent preservation, was occupied, at the breaking out of the war, by General William Brattle. This house was also used as a hospital, and afterward occupied by General Mifflin, quartermaster-general of the Continental Army. This house was the scene of many interesting events during the siege of Boston.

Dr. Jonathan Potts, a distinguished army surgeon of the Revolution, was the brother-in-law of General Mifflin. Perhaps no residence in Cambridge is associated with the past with greater variety of interesting reminiscences than this of the old Brattle estate, now robbed of its wide acres of lawn and landscape garden. As an interesting incident in the life of Dr. Warren, then the active patriot, better known to history as General Joseph Warren, whose loss the country mourned in the battle of Bunker Hill, I quote the exquisite graphic pen-picture from the diary of Dorothy Quincy: "Several of our brave Cambridge men are killed. Mrs. Hicks sent her eldest boy to look for his father as night came on. He found him lying dead by the roadside, and near him Mr. Moses Richardson and Mr. William Marcy. These three were brought home and hastily buried in one common grave in the churchyard. Ah, the sorrows of that night! How near it brought war to our doors, this first burial of victims of British tyranny! It was no time for funeral ceremonies; and as the terrified and sorrowing friends stood around the rude grave in which was put all that was mortal of these brave men, Dr. Warren tried to comfort them with hopeful words. 'It will soon be over,' he said; 'then rightful honors will be paid to those who fell in defence of our country.' I cannot forget it. The lurid glare of the torches, the group in the graveyard, the tender but hurried burial, without service or even coffins, and Elias Richardson's act of filial love in carefully spreading the cape of his father's overcoat upon the dead man's face, lest the cold earth should fall directly upon it. Dr. Warren himself, they say, had a very narrow escape in the affray. He ran recklessly into it when the British were retreating, and a

bullet whizzed past his head, taking off one of the side curls."¹

The introduction of vaccination into America was by Dr. Benjamin Waterhouse, of Cambridge. He was born in Newport, R. I., March 4, 1754; died in Cambridge, Mass., Oct. 2, 1846, aged ninety-two years. He was educated in London, Edinburgh, and Leyden, where he received his medical degree. In 1783 he became Professor of Theory and Practice of Physick at Harvard College, in Cambridge, where he also promoted the study of Natural History, Botany, and Mineralogy. From 1811 to 1825 he was medical supervisor of the military posts in New England. In 1799 Dr. Jenner communicated to him, his discovery of vaccination by means of kine-pox, and Dr. Waterhouse at once tested it by vaccinating his son Daniel, a lad of five years of age, who had the disease in a mild form. His first publication was in the *Columbian Sentinel*, dated at Cambridge, March 12, 1799. It is entitled, "Something Curious in the Medical Line," and is the first account of vaccination given to the public in America; published in a newspaper, so as to call the attention of the daily farmers to such a distemper among their cows. In the year 1800 he published a tract, entitled, "A Prospect of Exterminating the Small-pox," being the history of variola vaccina, or kine-pox, etc. In it he describes inoculating a servant boy of about twelve years of age with some of the infected thread from England. This is probably the method first adopted for preserving the vaccine virus, which came by a "short passage from Bristol," although in the autumn of 1802, Dr. Waterhouse records the receiving of quill points, or tooth-picks, charged with the virus. Some years ago I remember to have seen a small silver box, said to have been presented to Dr. Waterhouse by Dr. Jenner, which contained enclosed virus. The test of the faith he had in the efficacy of the vaccination of his own son recalls Dr. Boylston's heroic courage in inoculating his son for small-pox.

"Still in the back-ground, and a little at one side, for they were not Boston physicians, but lived on the other shore of the river at Cambridge, are three figures belonging to three physicians, each of whom is a typical representative of a class, all distinct images in my memory.

"Benjamin Waterhouse, whose name stands on his title-pages over an inverted pyramid of titles of great dimensions, studied in London, Edinburgh, and Leyden, at the last of which places he took his medical degree in the year 1780, the same in which died the learned Professor Gaubius, a pupil of the world-renowned Boerhaave. He was a relative of the excellent Dr. Fothergill, of London, with whom he used, as he tells us, to drive upon his rounds of medical visits. He will be long and deservedly remembered as having introduced vaccination into the

¹ "The Cambridge of 1776," page 19.

western world. He was for some years Professor of Theory and Practice in Harvard University. He speaks of himself as Director of the Military Department comprehending the States of New Hampshire, Massachusetts, Rhode Island and Connecticut. He may have voluntarily relinquished practice; but whether this were so or not, I never remember hearing of any patient under his care. He had, however, vaccinated great numbers of persons, myself among the rest. He probably liked to write and lecture and talk about medicine better than to practice it. A brisk, dapper old gentleman, with hair tied in a ribbon behind, and I think powdered, marching smartly about with his gold-headed cane, with a look of questioning sagacity, and an utterance of oracular gravity, the good people of Cambridge listened to his learned talk when they were well, and sent for one of the other two doctors when they were sick. Two brief extracts from an essay of his will sufficiently show his way of thinking and prescribing:

"As to planetary influence, mentioned by Boerhaave and Mead, the various aspects of the sun and moon, their accessions, recessions, perpendicular or oblique irradiations, conjunctions and oppositions, and their effects on us through the medium of our atmosphere, we are not prepared to express a decided opinion. . . . Millipedes have been given with good effect in whooping cough. . . . Physicians in the last century thought they could not practice without millipedes, while too many in this day believe them good for nothing."

"All this was rather too medieval for Cambridge in the nineteenth century.

"While Dr. Benjamin Waterhouse was walking about with his gold-headed cane, like a London physician *minus* his chariot and his patients, Dr. William Gamage was riding around on a rhubarb-colored horse with his saddle bags behind him, and stopping at door after door. Grim, taciturn, rough in aspect, his visits to the household were the nightmare of the nursery. He would look at the tongue, feel of the pulse, and shake from one of his phials a horrible mound of powdered ipecac, or a revolting heap of rhubarb—good, stirring remedies that meant business, but left a flavor behind them which embittered the recollection of childhood. This was the kind of practice many patients preferred in those days; they liked to know they had taken something energetic and active, of which fact they were soon satisfied after one of Dr. Gamage's prescriptions. While Dr. Waterhouse was airing his erudition on foot and Dr. Gamage was jogging round on horseback with his saddle-bags, Dr. Timothy L. Jennison was driving about in an ancient chaise drawn by a venerable nag, chiefly, it may be suspected, to exercise the quadruped and get the benefit of the fresh air for himself, for his practice could hardly have been considerable, although I do remember hearing that he was employed by one family. I believe he was the

safest practitioner of the three, for he was accused of overfondness for old women's harmless vegetable prescriptions, which means that he gave nature a fairer chance than she is apt to have in the hands of learned theorists and heroic routinists. The young man whom Dr. Danforth found it hard to get along with, was his successor in public esteem as a practitioner. Family connection gave me the opportunity of knowing him well. He was my revered friend as well as my instructor, and my longer and fuller acquaintance with him enables me to confirm all that Dr. Green says in his praise."¹

The Medical Department of Harvard was first established at Cambridge, and while here Dr. Waterhouse held his professorship. I quote from Thacher's "History of Medicine in America," "The University at Cambridge, Mass., has contributed to the interest and advancement of medical science, by an institution founded on the generous benefactions of several enlightened and liberal individuals. Dr. Ezekiel Hersey, of Hingham, who died in 1770, bequeathed one thousand pounds, and his widow, at her decease, a like sum, to be applied to the support of a professor of anatomy and surgery. His brother, Dr. Abner Hersey, of Barnstable, who died in 1786, and Dr. John Cuming, of Concord, were also donors to the amount of five hundred pounds each for the same laudable purpose; and William Erving, Esq., of Boston, left one thousand pounds towards the support of an additional professor. In conformity with the views of the patrons and donors, professors of talents and character were in 1782 appointed, by whom lectures on the several branches were regularly delivered, and students received the honors of the institution. In 1780 Dr. John Warren, while surgeon of a military hospital in Boston, commenced a course of anatomical lectures, and in the following year they were attended by the students of the University. Dr. Warren furnished a plan for a medical school which was adopted by the Corporation of Harvard College, and he was appointed first Professor of Anatomy and Surgery, Dr. Benjamin Waterhouse, Professor of the Theory and Practice of Physic, and Dr. Aaron Dexter, Professor of Chemistry. This was the first essay made in New England for the establishment of an institution for medical education. George Holmes Hall and John Fleet were the first who were admitted in course to the degree of Doctor in Medicine at the University, in the year 1788. From a spirit of envy and jealousy towards the professors, great opposition was made to the degree being conferred upon the two candidates, and it was by the address and perseverance of Dr. Warren that the object was finally accomplished. In consequence of many inconveniences, both to professors and students, and of the superior advantages which might result from lectures delivered

¹ Oliver Wendell Holmes' "Memorial History of Boston," vol. iv., chap. x., pp. 561-5.

in a more populous situation, the Corporation and Board of Overseers of Harvard University deemed it expedient to establish a medical school in the town of Boston. The several courses of lectures were accordingly transferred, and commenced in that metropolis in December, 1810."¹

"The establishment of a botanic garden at Cambridge will doubtless prove, at a future period, an excellent auxiliary to the study of botany and pharmacy, and facilitate a knowledge of the indigenous plants of the country and their introduction into our materia medica. Two townships of eastern land have been granted by our Legislature, and a subscription of \$30,000 was obtained for the purchase of land and other expenses of this valuable establishment. It was for several years under the management of William D. Peck, as Professor of Natural History, and a Board of Trustees, of which the President of the Medical Society is *ex-officio* a member."²

The transfer of the Medical Department of the University to Boston caused the medical interests to centre in Boston rather than in Cambridge. There appears to have been no organization of the Cambridge physicians, as such, either in society or public work, until about 1867, when the Cambridge Medical Improvement Society was formed, with meetings at the residences of its members each month, when papers were presented and discussed, with the reports of cases of interest, etc. The attendance upon these meetings has been good from the very beginning of the organization, with much profit to its members and the general interests of the community.

Out of this organization grew the formation of a public dispensary, where the poor were freely treated and the city divided into districts, with physicians appointed to each.

A fund was slowly accumulated for the purchase of land and the building of a hospital. A Board of Trustees was appointed for this purpose, of which Dr. Morrill Wyman was the most active member, and after years of labor, the result has been the establishment of the Cambridge Hospital, with ample surrounding grounds, which is filling a long-felt want.

The Cambridge Hospital was opened in 1867 by Miss Emily E. Parsons, and was kept open a year, when it was closed for want of a suitable house. It was re-opened in 1869 and was closed again in 1872.

At the request of Miss Parsons the following citizens of Cambridge: Hon. Isaac Livermore, Rev. Sumner R. Mason, Dr. W. W. Wellington, Rev. Kinsley Twining, Benjamin Tilton, Rev. Alexander McKenzie and Dr. H. P. Walcott met November 14, 1870, at the residence of the first-named and voted to apply to the General Court for an act of incorporation, under the name of "The Cambridge Hospital;" on the

23d of February, 1871, an act, signed by Governor Claflin on February 13th, was accepted by the above-named persons, who, with their associates and successors, were made a corporation for the purpose of maintaining a hospital in the city of Cambridge for sick and disabled persons, to be called The Cambridge Hospital.

In the early months of 1872 it became evident, by reason of lack of interest on the part of the community, that the hospital could no longer be kept open, and, with the approval of Miss Parsons, it was closed, by vote of the trustees, May 1, 1872, there being then in the hands of the treasurer \$191.47.

In December, 1873, a bequest for \$10,000 was received from the estate of Mr. Isaac Fay; \$100,805.55 have been received in donations and bequests from this date to May, 1886.

In 1883 the lot of land on which the hospital stands was purchased; the erection of buildings was begun in the early spring of 1884, and the hospital was finished and ready to receive patients 1st May, 1886.

The hospital building is on the south side of Mount Auburn Street, overlooking Charles River.

The site has nine and one-third acres. The soil is dry, gravelly or sandy. The surface upon which the present buildings stand is well raised above the crown of Mt. Auburn Street; it is about twenty-five feet above the level of Charles River and sufficiently distant from its bank; it has a water front of 500 feet. On the opposite bank is a park or meadow of seventy acres, given by Prof. Longfellow and others to Harvard College, "to be held by the grantees as marshes, meadows, gardens, public walks or ornamental grounds, or as the site of college buildings not inconsistent with these uses." Facing the south, the wards have the full influence of the sun and a free course for the very desirable southwest breezes of summer. The river in front and the meadows beyond effectually exclude all dust and noise from that direction, and the view is unobstructed to Corey's Hill, two miles away.

The two wards of one story and the centre building of three stories form three sides of a hollow square, the opening towards the south (the axis of the buildings is but three degrees west of the north and south line). At the south end of each ward is a sun room eight feet wide and extending across the whole width of the ward. Along the north end of the wards is a corridor, glazed in winter, which connects the wards with the centre building, and protects all the rooms occupied by the sick and the hollow square from the cold winds of winter. This plan, known as the Lariboisière plan, seems to be as well calculated for this small hospital as it is for the large hospitals, for which it was first designed.

The centre, forty by fifty feet, has on the lower floor rooms for the physician and the matron, a dining-room, a reception-room, an accident-room and a dispensary. The second floor has rooms for six patients,

¹ Thacher's "History of Medicine in America," vol. i, p. 31.

² Thacher's "History of Medicine in America," vol. i, p. 38.

a bath-room and two other rooms. The third story has six rooms for nurses and others.

Each ward is sixty by thirty feet and twelve feet high, the ceiling higher in the middle than at the walls, giving 113 square feet of flooring and 1356 cubic feet of space for each patient; it has ten windows. The sixteen beds are arranged with the heads next the wall and about one foot from it. The door and windows of the south end of the ward are near its middle; this secures the beds from troublesome draughts when they are open. The north end of the building is wider than the ward; in it are the nurses' room and the "tea-kitchen," both opening into the ward; behind this is another room not connected with the ward, for a single very sick patient, so arranged that the friends may visit it without disturbing others. In the extreme end, at the north, separated from the ward by three doors in a corridor, are the lavatory, the bath-room, the water-closet, the linen-room and the clothes-room. It will be observed that these offices are at the north, and the farthest removed from the sick. The arrangement of the nurses' room gives good opportunity for inspection; standing just outside the door of her room the nurse can see every bed and every patient without change of position.

The hospital is arranged for forty beds, but accommodations could be provided for about forty-five patients.

The property of the hospital is held by a corporation which is composed of persons named in the act of incorporation, and such persons as may from time to time be elected by ballot at any legal meeting of the corporation, and of such persons as may at any time give \$500 or upward, or the equivalent of the same in one donation. At any meeting each member shall be entitled to one vote. The management is by a board of twelve trustees which elects its secretary and treasurer, and four practitioners of medicine to constitute a board of consultation, a house physician, eight visiting physicians and such other officers as may be necessary for carrying on the hospital. The whole number of patients at this date (April, 1890) treated in the hospital is 886, of out-patients 842.

It has been found quite impossible to collect the data for giving a sketch of the individual members of the medical fraternity during the long period since Cambridge was first settled. Perhaps this would be hardly desirable in a general history covering so much of public interest, and instead it has been thought wise to furnish in a general way a sketch of the events relating especially to the subjects of general interest viewed from the medical standpoint. The writer is fully aware that there must be, of necessity, many important omissions—a considerable part of which, however, could have been easily filled with a more active co-operation on the part of the living members. The following physicians, members

of the Massachusetts Medical Society, have been, or are, residents of Cambridge:

William Kneeland, M.M.S.S., was born in Boston in 1732, and graduated at Harvard College in 1754, having a distinguished part in the exercises previous to his receiving the first honors of the university. He then studied medicine with an eminent physician. While qualifying himself for his profession he pursued various branches of science, and was noted as an eminent scholar, especially in logic and metaphysics. Before entering upon the practice of his profession he was appointed to a tutorship in the college, which he filled with dignity and approbation for the period of nine years. He became a member of the Medical Society in 1782, and died in 1788, aged fifty-six years.

James P. Chaplin, M.D., was born in Groton, Middlesex County. He studied medicine as a pupil of Dr. Warren, of Boston, graduated at Harvard Medical College and settled as a practitioner in Cambridgeport. He was most successful and won a high reputation in his profession. He established a home for the reception and cure of insane patients, and his success was so remarkable that he enlarged his asylum on quite extensive plans for the accommodation and comfort of those placed under his care. His reputation spread far and wide, until he had more applicants than he could receive. His method of cure was a moral one. By his peculiar calm and commanding manner and admirable judgment he was able to control his patients, to which he added the most careful regimen and much exercise. A member of the Massachusetts Medical Society and officer therein, his opinions were always sought and respected. During the twenty-three years that he practiced medicine in Cambridge he was several times prostrated with illness, and in 1810 was reduced

very low with spotted fever. In 1824 he met with an accident—the breaking of the tibia of his right leg by the kick of a horse. He was suddenly attacked in August, 1828, with violent pain in his head, great intolerance of light and sound. He continued to suffer more or less until October, when he grew worse and died on the morning of October 12th, after having lain in a comatose state for several hours.

Samuel Manning, M.D., became a member of the Massachusetts Medical Society in 1810. He settled in Cambridge about 1820. By his first wife he had five children. In 1822 he married Mrs. Elizabeth Abbott. He died at the age of forty-two, of pneumonia. The children were carefully educated by Mrs. Manning. One daughter married Prof. Cleveland, the father of Dr. Clement Cleveland, of New York. Few women of Cambridge were so prominent in good works as Mrs. Manning; by all known and beloved. She died in 1885, when nearly ninety-five years of age. She had owned and occupied the celebrated Dr. Apthorp House—Bishop's Palace of Revolutionary fame—for about sixty years.

Anson Hooker, A.M., M.D., was born July 17, 1799, in Westhampton, Mass. He graduated in Williams College in 1818, and at the Harvard Medical School in 1822.

He began his medical career at the south end of Boston, and for a time had charge of a Dispensary District. He removed from Boston to East Cambridge in 1825, and from that time until his death, in November, 1869, he was an active and devoted physician. Dr. Hooker was a man of high character, and of more than ordinary ability. His life was a laborious one, but he was enthusiastic in his love of his profession, and he performed its every duty with conscientious fidelity. He had a genial and cheerful disposition, was eminently social and domestic, and carried sunshine wherever he went. His reputation was good in all branches of the profession; in midwifery he was an expert. His obstetrical practice was very large. Those who have examined his records report that they find that he attended about ten thousand cases of labor. His skill in obstetrical operations was proverbial. During the war he was especially detailed by order of Governor Andrew to visit and report upon the condition of the Massachusetts soldiers invalided in the Western United States general hospitals. He performed this duty in a very satisfactory manner, and received the thanks of the Governor for the service rendered.

Dr. Hooker was regarded by the community in which he lived, not only as the good physician, but as the wise counselor and the kind friend.

At various times he was called to fill important offices of trust and responsibility. He served upon the Board of Aldermen and School Committee of Cambridge, and for two years represented the city in the Legislature. His death, at the age of three-score and ten years, was caused by disease of the heart.

The scene at his funeral was impressive. The church in which the services were held was crowded, and the countenances of those present indicated clearly the sadness of their hearts. Places of business were closed, and the whole population seemed to unite in offering a last tribute of affection to one whom they loved and honored. A fitting monument has been erected to his memory by the contribution of his townsmen.¹

Sylvanus Plympton, M.D., was born in Woburn January 1, 1794; prepared for college at Andover; entered Harvard College in 1814, and graduated in 1818; and from the Harvard Medical School in 1822.

April 5, 1823, was appointed surgeon of the First Regiment of Infantry, in the First Brigade and Third Division, of the militia of the Commonwealth of Massachusetts, John Brooks, commander-in-chief.

February 18, 1823, married Mary Bell Warland, daughter of Thomas and Elizabeth (Bell) Warland, and actively practiced his profession in Cambridge until prevented by the protracted illness of his later years.

During this time he had won a high position in the esteem of his townspeople and acquired a large practice. He was especially prized in midwifery. In 1842 he was one of the selectmen of Cambridge, and he served two terms in the Massachusetts Legislature. Died February 1, 1864.

John Appleton, M.D., was born in Salem, Mass., January 9, 1809. He attended school in his native town until his fifteenth year, when his father died. Under the direction of his guardian, Major John Prince, clerk of the courts, in the interval of his studies, he was employed in his office. While there, a love of antiquarian and genealogical researches seems to have been developed. In February, 1830, he entered the office of Dr. A. L. Pierson, of Salem, commencing the study of medicine. During the winter of 1830-31 he attended the Medical School at Harvard University. In February, 1833, he graduated as Doctor of Medicine, and took the Boylston prize. He practiced in his profession for a short time in Boston, and subsequently in other towns. He was quite successful in his profession, but its duties were arduous and wore upon his constitution. He was an accomplished musician, and an occasional composer. He painted in oils and water-colors, and sketched with considerable skill.

He accepted the position of assistant librarian of the Historical Society, which position he occupied until December, 1868, a few weeks before his death, when he resigned. While in the position of librarian, he devoted much time in the cataloguing of all the printed books and pamphlets. In this he showed ample historical and bibliographical knowledge for the work. The first volume of the catalogue

was published in 1859, and the second in the following year.

Dr. Appleton married at Boston, May 22, 1831, Miss Elizabeth M. Messer, who still survives him. He resided in Cambridge for a number of years and died there February 4, 1869, aged sixty years and twenty-six days, leaving two sons and four daughters.

As a physician he was conscientious, aiding and directing nature in her healing efforts, charitable to the poor, affable and instructive to all, winning the good will and confidence of the sick by his honest and gracious appearance; courteous to his seniors, kind to his juniors, he always secured the confidence and love of all with whom he came in contact.

He was a member of the Cambridge Medical Improvement Society, and published several papers in the Proceedings of the Historical Society,—1, "On the Great Seal of New England," July, 1862; 2, "On the Portrait of King William in the Society's Gallery," September, 1862; 3, "On Almanacs, in the reign of Queen Anne," June, 1863; 4, "On an Amortissement of Louis, Duke of Orleans," October, 1863; 5, "On Early Charts of the Harbor of Boston," September, 1864; 6, "On the William Winthrop MSS.," December, 1864; 7, "On the Portrait of Sebastian Cabot in the Society's Gallery," January, 1865; 8, "On the Alleged Portrait of Rev. John Wilson in the Society's Gallery," September, 1867.

Charles Foster Chaplin M. D., was born in Salem in 1800; he pursued his medical studies under the direction of the late Dr. James P. Chaplin, and received his degree at the Harvard Medical School in 1829. Soon after he opened an office in Cambridgeport, and entered upon the duties of his profession. His practice, at first small, gradually increased, and in a few years he was doing a large and lucrative business. He gained the public confidence by his quiet unobtrusive manners, by his plain common sense and practical skill, and by his devotion to the welfare of those entrusted to his care. He was a man of no pretension, and made no effort to thrust himself into notice; but those who employed him found him a kind friend and an agreeable companion, as well as an intelligent and skillful physician. The interest manifested in him during his long illness, the many and anxious inquiries with regard to his disease, the numerous expressions of gratitude and esteem uttered by those to whom he had formerly been a medical adviser, abundantly testify to his good qualities of mind and heart, and to the deep hold he had upon the affections of those who knew him.

Among his medical brethren he was highly esteemed as a wise counselor and an honorable man. One at least of their number will not soon forget his repeated acts of professional kindness, and the pleasant intercourse they for many years enjoyed as neighbors and friends.

Dr. Chaplin was a lover of the fine arts, in fact his natural tastes inclined him in this direction, rather

¹ By Dr. W. W. Wellington, *Boston Medical and Surgical Journal*, December 1, 1861 p. 520.

than to those studies strictly appertaining to his profession. Many of his leisure hours were devoted to painting and sculpture; and he has left good specimens of his skill in these departments. He was fond of music and was a good musical performer. He loved gardening; and was never more happy than when engaged in cultivating and ornamenting the pleasant grounds attached to his residence.

He was an illustration of the old mythological affinity of medicine, music and the fine arts.

About four years since he was obliged, on account of increasing illness, to retire from his professional duties. His disease was a chronic affection of the brain, and was protracted and painful. At times his sufferings were intense; but they were borne with patience and resignation. He was cheerful and hopeful; however sick he might be to-day, he always expected to be better to-morrow. Throughout his illness he was soothed and cheered by the untiring and self-sacrificing ministries of a devoted wife, whose offices of affection and love became the more arduous and constant as his bodily powers failed and his mental faculties became dim. He passed away peacefully and quietly, leaving behind him many who will long cherish his memory as a kind friend and a good physician.¹

Francis Dana, M.D., was son of Francis Dana, Esq., brother of the poet Dana. He was in Harvard College with the class of 1827, but left before graduation, and commenced the study of medicine. He received his degree in 1831 from the Harvard Medical School, and before settling in Cambridge practiced for some time in the western part of the State. The last years of his life he was librarian of the American Academy of Arts and Sciences. In 1867, at the request of his classmates, the degree of A.B. was conferred upon him, so that he might appear as a member of his class in full standing. He was highly esteemed as a gentleman of the strictest integrity, and as a man of science. He joined the Massachusetts Medical Society in 1836 and died in 1872, at the age of sixty-five, having been in ill health for some time, so that his death was not unexpected.

Jeffries Wyman, A.M. M.D., was born in Chelmsford, Massachusetts, August 11, 1814. His father, Dr. Rufus Wyman, was the first physician at the McLean Asylum for the insane. He was the third son and was named after Dr. John Jeffries, who had been instructor of his father.

He fitted for college at Phillips Academy, Exeter, entered in 1829, and graduated in the class of 1833. He studied medicine with his father and Dr. John Call Dalton, receiving his degree from Harvard Medical College in 1837. He served as house physician at the Massachusetts General Hospital, but never actively entered into the practice of his profession.

He was appointed, soon after graduation, demonstrator to Dr. John Collins Warren, the Hersey Professor of Anatomy and Surgery in Harvard University. He was also chosen as curator of the Lowell Institute, and in 1841 he delivered a course of lectures before the institute, and with the money he received from this source he went to Europe for the purpose of pursuing his favorite branches of study, namely, human and comparative anatomy, natural history and physiology. He studied very carefully the collection at the Hunterian Museum in London, and while there was summoned home, on account of his father's death.

In 1843 he was appointed Professor of Anatomy and Physiology in the Medical Department of Hampden Sydney College, Richmond, Va. He resigned this in 1847, being chosen Hersey Professor of Anatomy at Harvard. In the furtherance of his work and to illustrate his lectures, he began the formation of the Museum of Comparative Anatomy. In 1852 his health compelled him to visit Florida, and from this time, he suffered more or less as an invalid. Twice he visited Europe, and made a voyage to Sumatra in 1856 and to La Plata in 1858. All these journeyings he made tributary to his scientific purposes. For twenty years he worked quietly, happily, not stimulated by loud applause. In 1866 Mr. George Peabody, of London, laid the foundation, by a large gift of money, of an archaeological and ethnological museum, and Dr. Wyman was made curator. He entered with the enthusiasm of youth upon the duties of this office. From 1856 to 1870 he was president of the Boston Society of Natural History. He was also president of the American Association for the Promotion of Science in 1857. These honors came to him unsought. During the few months previous to his death he worked as usual and placed the museums in perfect order. He went to the White Mountains, thinking to derive benefit, but was attacked with several spells of bleeding, and September 4, 1874, a sudden and copious hemorrhage occurred which proved almost at once fatal. Funeral services were held at Appleton Chapel, in Cambridge, and his remains were laid to rest at Mt. Auburn.

Prof. Wyman twice married and left three children, heirs of his honored and memorable name. His earliest article in print was entitled "The Indistinctness of Images formed by Oblique Rays of Light," September, 1837. There is a list of sixty four papers by Prof. Wyman in the Catalogue of the Royal Society of London. This list comprises his works down to 1863. He kept up his contributions to science, the last unpublished manuscript being dated May 20, 1874. His most important contribution to human anatomy in his paper entitled, "Observations on Crania," published in the Proceedings of the Boston Society of Natural History, April, 1868. In Comparative Anatomy his most elaborate essays are that on the "Nervous System of Rana Pipiens," "Embryology of Rais Batis."

¹Obituary notice written by Dr. W. W. Wellington, and published in the *Cambridge Chronicle* in 1877.

His pamphlet entitled, "Notes on the Cells of the Bee," is a model of accurate, patient, ingenious research. His experiments on the development of infusoria in infusions of organic matter, after long-continued boiling in sealed vessels, are among the most thorough and satisfactory which have been made on this crucial subject.

He left his admirable collection of Comparative Anatomy to the Boston Society of Natural History, the specimens of morbid anatomy and monstrosity to the Boston Society of Medical Improvement.

Morrill Wyman, A.M., M.D., LL.D., was graduated A.B. from Harvard University in 1833, and M.D. from its Medical Department in 1837.

He is a member of the Massachusetts Medical Society, to which he was admitted in 1837; of the Cambridge Society of Medical Improvement; of the American Academy of Arts and Sciences, and various other societies.

His published writings include: "A Treatise on Ventilation," Cambridge, 1846, "Autumnal Catarrh," New York, 1872, and Boston, 1876. For many years Dr. Wyman has been justly considered a leader in his profession; was for some time Professor of the Practice of Medicine, Medical Department Harvard University; has been honored by the University with the degree of LL.D.

At the completion of his fiftieth year of active practice he retired as a consultant. The occasion was celebrated by a complimentary dinner given him by the Cambridge Medical Improvement Society.

William Williamson Wellington, A.M., M.D., Cambridgeport, Mass., son of Dr. Timothy Wellington, for forty years a physician in West Cambridge (now Arlington).

Born in West Cambridge, July 29, 1814; received his early education chiefly under his father's direction at home and at a private school kept by John Angier in Medford, Mass.

Entered Harvard College at the age of twelve years, in 1826, without conditions. Continued, however, at school two years longer, and after a second examination was again admitted in 1828; graduated in 1832, and received the degree of Master of Arts in 1851. Kept school three years in the Northfield Academy, and for three summers in West Cambridge. Graduated from the Harvard Medical School in 1838, and in the same year established himself in practice in Cambridgeport, Mass.

Is a member of the Massachusetts Medical Society, of the Cambridge Society for Medical Improvement, honorary member of the Obstetrical Society of Boston, and associate member of the Massachusetts Medical-Legal Society; was one of the coroners of Middlesex County for ten years; was connected for more than forty years with the School Board of Cambridge.

In 1870 he delivered the annual address before the State Medical Society, which was afterwards published.

Upon the completion of half a century of active professional labor Dr. Wellington was tendered a complimentary dinner by the members of the Cambridge Medical Improvement Society, a notice of which, in the daily press, the editor has thought of sufficient interest to append:

"Dr. J. L. Hildreth, president of the society, presided at the banquet, and the committee of arrangements consisted of Dr. James A. Dow (chairman), Dr. H. O. Marcy and Dr. C. E. Vaughan.

"After the banquet Dr. Wellington gave a very interesting account of his early life. The son of a celebrated physician of wide practice, he was graduated classically in 1833; then taught an academy at a distance from Boston. Of his experiences he gave some delightful reminiscences.

"He studied medicine in Boston, and was the pupil of Drs. J. C. Warren, Jacob Bigelow, John Ware, George Hayward and others. He was trained in clinical teachings by his father and John Perry, of Boston, and was associated intimately in his studies with Dr. Cotting, of Roxbury, a life-long friend.

"After graduation Dr. Wellington was further educated in Paris, then the world's medical Mecca. Dr. Wellington gave a most interesting word-picture of Paris and her distinguished teachers, Louis, Chomel, Andree and others. He was associated there with Dr. H. I. Bowditch, the late Dr. Jackson, of Boston, and others.

"In 1847, Dr. Wellington said, he was present at the first operation performed upon a patient under the influence of ether at the Massachusetts General Hospital, which marked the new era in surgery.

"When Dr. Wellington began the work of the profession in Cambridgeport, it was a borough of only about 3000 inhabitants, with only one other physician. Dr. Wyman settled in Cambridge one year earlier than Dr. Wellington and has also seen the town grow into a city of 70,000 inhabitants, from small beginnings.

"Dr. Morrill Wyman was next called upon to speak. He alluded pleasantly to their relations during so many eventful years, practicing side by side. They did not always think alike, to be sure, he said, but their differences have never affected their harmonious personal friendship and regard for one another.

"Dr. A. C. Webber spoke of his forty years of practice in Cambridge by the side of Dr. Wellington. He had always found him a firm friend and wise counselor, and a generous, courteous gentleman, who was never guilty of taking advantage of his professional brethren. Speaking retrospectively, Dr. Webber alluded to the growth of the city and said that the time was once, when he had to take a lantern with him when going through the streets of our city to answer a call at night, because street-lamps were not then in vogue.

"Dr. H. O. Marcy followed in a happy manner, speaking in the highest terms of 'our guest,' to whom

he said he had often turned for help, wisdom and counsel. Dr. Marcy said the younger physicians of Cambridge ought to be thankful that such men as the senior physicians of this city had been men of such noble character and splendid influence as well as skillful practitioners, and had been an example to their juniors in every respect, worthy of emulation.

"Dr. Wellington is in good health and still actively at work, and has the promise of many years of usefulness yet before him. Long may he remain with us is the wish of the entire community."

Charles H. Allen, M.D., joined the Massachusetts Medical Society in 1843. He resided for a number of years in Temple Street, Cambridgeport, and was a very successful practitioner. He was fond of literature, a writer of considerable repute upon a variety of subjects; was proficient in music. He erected a handsome residence on Craigie Street, in Old Cambridge, about 1870, and retired from active practice. Some years later he removed to Chicago, where he devoted a considerable portion of his time to literary pursuits. He died in 1889.

Moses Clarke, M.D., was born January 18, 1818, and died in East Cambridge, March 29, 1864, aged forty-six years. He was the son of Greenleaf Clarke, Esq., of Atkinson, N. H. His mother was the daughter of Dr. William Cogswell, a surgeon in the Revolutionary War, and successor of Governor Eustis in the charge of the Military Hospital, at West Point. Dr. Clarke received a thorough education at Atkinson and Pembroke Academies, and took his medical degree at Dartmouth College in 1843, having studied under the direction of Dr. Josiah Crosby. He first entered upon the practice of his profession at Derry, N. H., but he remained there only one year, when he removed to Cambridge, where he continued in successful practice almost up to the time of his death. He was a member of the School Committee ten or twelve years, and city physician about the same time. In both of these positions he won the respect and love of his associates. He acted also as superintendent of a Sabbath-school at the Almshouse. He was a man of character and independence, and when he knew his duty in a particular path he did not hesitate in its performance, however rough or thorny the way might be. He was a true man in the fullest sense of the word; deceit formed no element in his character. A relative who knew him well says: "He was affectionate in all the relations of domestic life, patriotic and public-spirited as a citizen, highly respected as a physician, honest and independent in action, heroic in suffering and practical and consistent as a Christian."

John Bunker Taylor, M.D., was born in Hinsdale, N. H., October 16, 1821. He died suddenly at Cambridge, February 15, 1889. His father was a farmer. Young Taylor was possessed of energy, natural talent and a determination to make the best of life. He went through the regular curriculum of the young

American country youth of the last generation, developing a good physique on the farm, where he worked summers, attending the district school winters, until sufficiently advanced to enter the Brattle (Vt.) Academy. From there he went to the Union Academy at Meriden, N. H., and completed his preparatory education at the famous seminary at Easthampton, Mass.

He taught school for a time at Chesterfield, and commenced the study of medicine at Northampton. He attended lectures at Pittsfield and entered the office of Dr. Anson Hooker, in Cambridge, as a student, in 1844. He was graduated in medicine from the Medical Department of Harvard University, and joined the Massachusetts Medical Society in 1848.

In 1855 he married Miss Helen M. Reed, of East Cambridge. Four children—two sons and two daughters—have blessed the union. For a number of years Dr. Taylor was a partner in business relations with the late Dr. Anson Hooker. Soon after the commencement of his professional career he was appointed physician to the House of Correction, which position he held until his death. For many years he was a member of the Cambridge School Board. He was one of the trustees of the Cambridge Hospital, and upon the consulting staff from its organization. He held various public and responsible positions and was active in the promotion of temperance and other progressive and reformatory society movements.

Dr. Taylor was most loved by those who knew him best; never demonstrative, yet looked upon as a leader in his section of the city. He possessed more than a fair share of physical vigor, which he gave unreservedly to all who demanded his professional care. His best was freely offered and most fully appreciated at the bedside of the suffering, and his tender sympathies and loving charities will be treasured in kindly remembrance by many hundreds whose only recompense could be given in gratitude and prayers.

In his self-sacrificing daily love he cheerfully practiced the teaching of the Golden Rule, and fell at his post of duty in a touching, almost tragic way, dying on the very couch of the sufferer at whose bedside he was guarding over that most mysterious, almost miraculous of nature's processes, the birth of another independent life.

Anson P. Hooker, M.D., was the son of Dr. Anson Hooker, and was born in Cambridge in 1832. He graduated at Harvard University in the class of 1851, and became a member of the Massachusetts Medical Society in 1855. He was one of the first of the young surgeons to offer his services to Governor Andrew at the breaking out of the Rebellion. He was commissioned surgeon of the Twenty-sixth Massachusetts Volunteers Sept. 10, 1861, and served with honor and distinction in the Department of the Gulf, until he was compelled from disease to resign. He returned home June 18, 1862. The disease continued and hastened his death. He discharged all the trusts imposed upon him with rare ability and great fidelity. He

won the love and respect of all who were associated with him by his amiability of disposition. With a generous heart and open hand, he succored his comrades in distress. He was a wise and safe counselor and a faithful and true friend. His early death in 1873 caused great sorrow among his friends and neighbors, with whom he had spent his whole life, save the time he was absent in service.

Dr. John Kinsley Palmer became a member of the Massachusetts Medical Society in 1856. He early became identified as a pioneer in the movement to secure better advantages for the higher education of woman, and after the establishment of the New England Female Medical College, of which Mrs. Palmer was one of the founders, he accepted the professorship of *Materia Medica*, in which branch of medicine he was especially an expert. He was an enthusiastic teacher and faithfully discharged the duties of this office for a number of years. He engaged with the late Dr. Henry Thayer, of Cambridge, in the preparation of fluid extracts, a branch of business at that time comparatively new, and aided in founding the large commercial house now so widely known to the trade as Henry Thayer & Co. For a number of years previous to his death Dr. Palmer was a confirmed invalid, suffering from gall-stone. He rightly diagnosed his disease and often referred to his enemy that he said would take his life—conditions which were verified by autopsy. Dr. Palmer exercised a wide influence for good in the Cambridge community, was an active promoter of its public charities, greatly esteemed and beloved by all who knew him. He came in the direct descent, through a long line of ancestry, from the first settlers of the Colony, and often pointed with pride to his choice collection of heirlooms, among which was a complete set of well-preserved table service of pewter, comprising a hundred and fifty pieces. He was very fond of natural history, especially devoting himself to conchology, in which department he was an authority, and his private collection was one of the most complete in the United States, valued at five thousand dollars. He died November 29, 1878, after a long period of suffering, borne with patient Christian fortitude.

John I. G. Nichols, M.D., was born in Portland, Me., in 1837. M. D. Harvard 1859. Settled in Cambridge soon after graduating and has remained a very busy worker in his profession to the present. He is an enthusiastic devotee to the science of medicine and is widely sought as a counselor by the medical profession.

Dr. Nichols is a member of the Massachusetts Medical Society, Boston Society of Medical Observation, Cambridge Medical Improvement Society, of which he has been president and vice-president, Middlesex South District Medical Society, visiting physician to Cambridge Hospital, etc.

Henry Sylvanus Plympton, M.D., acting assistant surgeon U. S. Army, September 29, 1862; assistant

Surgeon U. S. Navy, April 28, 1863; died at Cambridge, Mass., September 25, 1863, of disease contracted in the service.

Henry Sylvanus Plympton was born March 13, 1838, in Cambridge, Mass. His parents were Dr. Sylvanus and Mary Bell (Warland) Plympton. His early boyhood was spent in Cambridge. After about two years in school at Concord, Mass., he returned and entered the Lawrence Scientific School with which he remained connected as a student for three years. He graduated from the Medical School, of Harvard University in 1860, and from the College of Physicians and Surgeons in New York City in 1861. He was then appointed one of the resident physicians in Bellevue Hospital, where he remained eighteen months as junior, senior and house physician.

September 29, 1862, he was appointed acting assistant surgeon, U. S. Army, and went to De Camp General Hospital, David's Island, New York Harbor, where he remained until April, 1863. Actuated by the feeling that he was not rendering his country as efficient service as he might in a more responsible position, he presented himself for examination for the navy. Having passed the examination very successfully, he was commissioned assistant surgeon in the U. S. Navy, April 28, 1863, and went on duty upon the receiving ship "North Carolina" (under Capt. R. W. W. Meade, commander), at Brooklyn Navy Yard. After a little more than a month he was attacked with pneumonia, caused by over-work and exposure while attending to his duties, and was soon transferred to the Naval Hospital at Brooklyn, where he remained as a patient about three weeks. His disease had now developed into consumption, and he was brought to his home in Cambridge, where he died September 28, 1863. His remains now lie at Mt. Auburn, in lot No. 3327.

Before his death he was united in marriage with Frances W. Young, of Bangor, Maine. He was from childhood of delicate physical constitution; was amiable in disposition and attractive in personal appearance, and was highly esteemed by the members of his profession and personal friends.

William Caldwell Flowers, M.D., was born at Halifax, Nova Scotia, on October 15, 1832. Entered the Harvard Medical School in 1859; graduated in 1861. Returned to Halifax and practiced until July, 1863. Entered the United States service as acting assistant surgeon August 31, 1863, at Lincoln General Hospital, Washington, D. C. January 1, 1864, he was ordered to Lovell General Hospital, Portsmouth Grove, R. I. On duty in the Department of Texas with the Fourth Cavalry from August 20, 1866, to December 7, 1866. On January 31, 1867, he was ordered to South Carolina, and served in the Freedmen's Bureau at Monk's Corner until October 29, 1867.

Reported for duty at Augusta Arsenal, Augusta, Ga., November 2, 1867, where he remained until October 1, 1873. His resignation from the service was

accepted October 9, 1873. Commenced practice in October, 1873, at Cambridgeport, Mass., where he has since resided. He became a member of the Massachusetts Medical Society in 1863, and is also a member of the Cambridge Medical Improvement Society.

Henry P. Walcott, A.M., M.D., was graduated A.B. (Harvard) 1858, M.D. (Bowdoin) 1861.

Dr. Walcott has devoted a large part of his professional life to the study of Sanitary Science and has rendered his city and State most efficient and valuable services. Has been for years health officer of Cambridge and a member of the State Board of Health. Dr. Walcott has been an active worker in the American Health Association, of which he was the president in 1888.

His contributions to Sanitary Science have been many and he is justly esteemed one of the most distinguished authorities in America in this branch of medical knowledge. He is a member of many medical societies, both American and Foreign.

Henry Orlando Marcy, A.M., M.D., LL.D., son of Smith and Fanny (Gibbs) Marcy, was born in Otis, Mass., June 23, 1837. His ancestry was of Puritan stock—paternal (Marcy—Lawton); maternal Gibbs—Morton—dating back to the early settlers of New England. His grandfather, Thomas Marcy, was one of the first settlers in Northern Ohio. His maternal great-grandfather, Israel, and grandfather, Elijah Gibbs, served in the Revolutionary War and were with General Gates at the surrender of General Burgoyne. His father, who served in the War of 1812, was a teacher by profession.

Dr. Marcy received his preliminary and classical education at Wilbraham Academy and Amherst College, and was graduated from the Medical Department of Harvard University 1863. He was commissioned assistant surgeon of the 43d Massachusetts Volunteers in April, 1863, and in the following November surgeon of the first regiment of colored troops recruited in North Carolina. He was appointed medical director of Florida in 1864, and served on the staffs of Generals Van Wyck, Potter and Hatch.

In the autumn of 1863 Dr. Marcy was married to Miss Sarah E. Wendell, of Great Falls, N. H.

At the close of the war he returned to Cambridge, Mass., and entered upon the active practice of his profession.

In the spring of 1869 he went to Europe for the purpose of study and entered the University at Berlin, where he remained a year as a special student of Professors Virchow and Martin. He then visited the various capitals of Europe and studied the hospitals and their service, spending quite a period in London and Edinburgh. He became convinced of the truth of Prof. Lister's teachings and returned to America to adopt, among the first, the now famous, but then (in this country) unknown methods of aseptic and antiseptic surgery.

For the purpose of devoting himself more especially

to the surgical diseases of women, Dr. Marcy removed to Boston in 1880 and opened in Cambridge a private hospital for women, which is still in successful operation.

He participated actively in the Seventh International Medical Congress, held in London in 1881, and was president of the Gynecological Section of the Ninth Congress, held in Washington in 1887.

He has contributed largely to surgical literature, and is an active worker in the American Medical Association, to the vice-presidency of which he was elected in 1879. In 1882 he was president of the Section of Obstetrics and Gynecology, and for some years a member of the Judicial Council of this association. He is a member of various medical and scientific organizations in both Europe and America, and was president of the American Academy of Medicine in 1884.

The Wesleyan University conferred in 1887 the honorary degree of LL.D. upon Dr. Marcy in recognition of his skill and literary merit.

In 1881 Dr. Marcy published in two volumes the translation of the works of Prof. G. B. Ercolani, of Bologna, Italy, upon the "Reproductive Processes," besides which he has published his own special studies of the uterine mucosa during pregnancy. His best known publications are, "Plastic Splints in Surgery," *Boston Med. and Surg. Journal*, June 28, 1877 (reprint); "Aspiration of the Knee Joint," *Transactions of American Med. Assn.*, 1879 (reprint); "Fracture of the Patella," *Boston Med. and Surg. Jour.*, 1876 (reprint); "Histological Studies of the Development of the Osseous Callous in Man and Animals," *Annals of Anatomy and Surgery*, 1881 (reprint); "Cure of Hernia by the Antiseptic Use of the Animal Suture," *Transactions of the American Med. Assn.*, 1878 (reprint 1879); "The Best Methods of Operative Wound Treatment," *The Medical Gazette*, N. Y., 1882 (reprint); "The Comparative Value of Germicides," 1880; "The Relations of Micro-Organisms to Sanitary Science," 1883; "Medical Legislation," *American Med. Assn. Journal*, 1885 (reprint); "The Climatic Treatment of Disease," *American Med. Assn. Journal*, 1885 (reprint); "The Surgical Advantages of the Buried Animal Suture," *The American Med. Assn. Jour.*, 1888 (reprint); "The Histological and Surgical Treatment of Uterine Myoma," 1882 (reprint 1887); "Exploratory Laparotomy," *American Med. Assn. Jour.*, 1889; "General Treatise on Hernia," 1889; "The Perineum: its Anatomy, Physiology and Methods of Restoration after Injury," *Trans. American Association of Obstetricians and Gynecologists*, 1888; "The Animal Suture: its Place in Surgery," *Trans. American Assn. of Obstetricians and Gynecologists*, 1889 (reprint); "The Cure of Hemorrhoids by Excision and Closure with the Buried Animal Suture," reprint from *Annals of Surgery*, November, 1889.

Albert Lane Norris, M.D., was born on the 4th of March, 1839, at Epping, N. H.

Besides the education received in his native town he was a student at the Phillips Academy, Exeter, N. H., and later for some time at the Wesleyan Academy, Wilbraham, Mass. Because of ill health he was obliged to relinquish study, and for about four years he engaged in business.

He graduated in medicine at Harvard in 1865, and at once entered the service of the United States as an assistant surgeon under contract. He was commissioned assistant surgeon One Hundred and Fourteenth Infantry, United States Colored Troops, October, 1866, and mustered out April 2, 1867.

Dr. Norris settled in Cambridge in 1867, and early entered upon an extensive practice.

He visited Europe in 1869 for the purposes of study, spending some months in Berlin, Vienna and Edinburgh. He has devoted especial attention to obstetrical studies.

Among his published articles are: 1, "Diaphragmatic Hernia;" 2, "Ectopia Cordis;" 3, "Transfuso Sanguinis;" 4, "Dystocia with Craniotomy;" 5, "Puerperal Metritis." Dr. Norris is a member of the American Medical Association, Massachusetts Medical Society, Boston Society of Medical Observation, Gynecological Society, Cambridge Medical Improvement Society, Military Order of the Loyal Legion, etc.

Alfred Fairbanks, Holt, M.D., was born in Lyndeboro', Hillsboro' County, New Hampshire, December 16, 1838. His early life was spent on the home farm, attending the schools of his native town a part of each year. In 1855 and for the three following years he attended the academy at Mt. Vernon, N. H., during the fall and spring, teaching school in the winter.

In the summer of 1857 he commenced the study of medicine with the physician of his native town.

In the winter of 1858-59 he attended a full course of lectures at the Harvard Medical School and a part of a course in 1859-60.

In the spring of 1860 he entered Medical School of the University of Vermont, where he graduated in June of that year. Coming to Cambridge a few weeks later, he established himself as a physician, occupying an office on Main St. near Norfolk. Here he remained until April 16, 1861. On the evening of that date he enlisted in a company of volunteers for the war, and on the morning of the 17th started with his comrades for the seat of war. This company was raised by Capt. J. P. Richardson, and was beyond question the first company organized especially for the war of the great Rebellion of 1861.

Dr. Holt served with this company for the three months for which they were mustered. A part of the time, however, he was detailed as hospital steward of the Third Regiment Massachusetts Militia, to which his company was attached.

Returned to Cambridge late in July on the expiration of his term of service, and at once sought admission to the medical corps of the great volunteer army

then being organized. Passed his examination before the medical board, and early in November, 1861, he joined what became the Thirtieth Massachusetts Volunteers, then being recruited at Lowell. December 6, 1861, he was mustered as assistant surgeon of that regiment. January 2, 1862, he embarked with his regiment for Ship Island, Miss.

Dr. Holt entered New Orleans with his regiment August 2, 1862, after witnessing the great bombardment, assault and capture of the forts below the city by the United States Navy.

Dr. Holt remained in this department during his service. He participated in nearly all the battles and campaigns in this extreme part of the South. He was complimented in general orders by the department commander for humane bravery in caring for the wounded on the field at the battle of Baton Rouge, La., August 5, 1862.

In December, 1862, Dr. Holt was promoted to surgeon of the First Texas Cavalry, made up of Union men who had been driven from their native State on account of their Union sentiments. Among these men were those who had, before and since the war, held high and important positions, both in their State and the nation.

In December, 1863, Dr. Holt left the medical department and was made the senior major of his regiment. In December, 1864, he was promoted to lieutenant-colonel. For the last two years of the war, or after he left the medical department, he was almost constantly in command of his regiment. He was mustered out of service with his command at San Antonio, Texas, November 1, 1865, having served almost continuously in the field from April 17, 1861. He never lost more than a day or two at a time from sickness and had only one furlough of a month, and that during the winter of 1865, when no active operations were going on. He was slightly wounded in a cavalry fight near Murfreesboro', Tenn., in the fall of 1864.

In the winter of 1866, Dr. Holt resumed the practice of medicine in Cambridge, where he has since resided; joined the Massachusetts Medical Society in 1867; appointed medical examiner in 1879, an office he still holds; appointed surgeon-general of Massachusetts in January, 1884 (since reappointed by Governors Ames and Brackett); appointed pension examining surgeon on the Boston Board April, 1889, and on the organization of said board was made its president; health officer of Cambridge from 1880 to June, 1889, when he resigned; degree of M.A. conferred by University of Vermont in 1886; member Massachusetts Medical Society, Cambridge Medical Improvement Society (ex-president), American Public Health Association, American Medical Association, Medico-Legal Society (vice-president) and Boston Society Medical Observation.

Edward R. Cogswell, M.D., was born in Maine in 1841. Graduated at Harvard University in class of 1864; received his medical degree at Harvard 1867;

was appointed health officer of Cambridge 1878-79. Author of sanitary condition of Cambridge in report of Massachusetts State Board of Health, 1878.

Few citizens have taken a deeper interest in the welfare of Cambridge. Dr. Cogswell has served the city in various capacities; at present is a member of the Board of Aldermen.

Dr. Cogswell, in common with many of his classmates, left college to enlist in the service of his country. He served with distinction with the troops enlisted for nine months, in the campaigns of North Carolina.

Augustus Peck Clarke, A.M., M.D., son of the late Seth Darling Clarke and Fanny Peck Clarke, was born in Pawtucket, Providence County, R. I., September 24, 1833. His father, Seth Darling Clarke, was of the eighth generation of Joseph Clarke (Joseph¹, Joseph², Joseph³, Joseph⁴, Joseph⁵, Ichabod⁶, Edward⁷) and Alice Pepper, who came from Suffolk County, England, to Dedham, Mass., prior to the year 1640. His mother, Fanny Peck, was of the sixth generation of Joseph Peck (Joseph¹, Nathaniel², Nathaniel³, David⁴, Joel⁵), who came in the ship "Diligence" from Beccles, England, to Hingham, Mass., in the year 1638. Dr. Clarke completed his preparatory course in the Grammar School at Providence, R. I., and entered Brown University in September, 1856. Received the degree of A.M. from that University in class of 1860; studied medicine and received the degree of M.D. from Harvard University in class of 1862; entered the army as assistant surgeon of the Sixth New York Cavalry, August, 1861; served in the Peninsular Campaign, conducted by General McClellan, and was taken prisoner at the battle of Savage Station, Va., June 29, 1862, and was afterwards sent to Richmond; promoted to the rank of surgeon of Sixth New York Cavalry, May 5, 1863. At the opening of the campaign made by the Army of the Potomac, under the command of General Grant, in the spring of 1864, Dr. Clarke was appointed surgeon-in-chief of the Second Brigade, First Division of the Cavalry Corps, whose daring achievements rendered immortal the name of Sheridan. Dr. Clarke was chief medical officer of the brigade until the closing campaign of 1865, when he was appointed surgeon-in-chief of the entire First Division of Cavalry. These labors he also performed until the division was disbanded, July 1, 1865. During his four years' service Dr. Clarke participated in upwards of eighty-two battles and engagements with the enemy. October 4, 1865, he was brevetted lieutenant-colonel "for gallant and meritorious conduct during his term of service." Immediately after the close of his military service he removed to Cambridge, Mass., where he soon established a reputation in the practice of medicine, in which profession he has since continued his labors. Dr. Clarke was married in Bristol, R. I., October 23, 1861, to Mary H. Gray, daughter of the late Gideon and Hannah Orne Gray.

For 1871-73 Dr. Clarke was elected to the Cambridge Common Council, and for 1874 to the Board of Aldermen. He declined further municipal service. He is a member of the Massachusetts Medical Society, and has been one of its councilors; is vice president of the Gynecological (Medical) Society of Boston, member of the American Academy of Medicine and of the American Association of Obstetricians and Gynecologists, and of the American Public Health Association. He is a member of the American Medical Association and of the British Medical Association. He was one of the founders of the Cambridge Medical Society and was its secretary several years; also member of the Ninth International Medical Congress at Washington. He is a prominent member of the Cambridge Club, and is president of the Cambridge Art Circle. He is a member of the G. A. R. and of the Military Order of the Loyal Legion of the United States. He has been a frequent contributor of articles to the public press and to different medical societies and journals. The following are the titles of some of the papers Dr. Clarke has contributed: "Cases of Tracheotomy," *Boston Medical and Surgical Journal*, 1868; "Series of Histories of Wounds and Other Injuries," "Medical and Surgical History of the War of the Rebellion," 1865; "Cases of Puerperal Peritonitis," 1868; "Inguinal Hernia," 1870; "Perforating Ulcer of the Duodenum," *Boston Medical and Surgical Journal*, 1881; "Removal of Intra-Uterine Fibroids," *Ibid.*, 1882; "Cerebral Erysipelas," *Ibid.*, 1883; "Hemiplegia," *Journal American Medical Association*, 1884; "Uterine Displacements," *Ibid.*, 1884; "Obstinate Vomiting of Pregnancy," *Ibid.*, 1885; "Vascular Growths of the Female Meatus Urinarius," *Medical Press and Circular*, London, England, 1887, and *Transactions of the Ninth International Medical Congress*, 1887; "Pathogenic Organisms," *Journal of American Medical Association*, 1888; "Rabies and Hydrophobia," *Ibid.*, 1883; "Fracture of the Cervical Vertebra," *Ibid.*, 1881; "Induced Premature Labor," *Ibid.*, 1885; "Renal Calculi," *Ibid.*, 1885; "Pelvic Cellulitis," *Ibid.*, 1886; "Early and Repeated Tapping in Ascites," *Ibid.*, 1886; "Abortion for Uncontrollable Vomiting of Pregnancy," *Ibid.*, 1888; "Antepartum Hour-Glass Constriction of the Uterus," *Ibid.*, 1888; "Chronic Cystitis in the Female," *American Journal of Obstetrics*, 1889; "Treatment of Certain Cases of Salpingitis," *Transactions of the American Association of Obstetricians and Gynecologists*, 1888; "Management of the Perineum During Labor," *Ibid.*, 1889; "Rapid Dilatation of the Cervix Uteri," *Transactions of the Gynecological Society*, Boston, Vol. 1, 1889; "Faradism in the Practice of Gynecology," *Ibid.*, 1889; "The Treatment of Placenta Prævia," 1890; "On the Importance of Early Recognition of Pyosalpinx as a Cause of Suppurative Pelvic Inflammation," 1890.

Edmund H. Stevens, born at Stansted, Canada, January 2, 1846, father and mother being from

New Hampshire; entered college at sixteen; left college at end of second year, and began the study of medicine at the Harvard Medical School. After taking one course of lectures, entered the U. S. Navy in April, 1864, as a medical cadet; was wounded at the battle of Mobile August 5, 1864; was discharged from the navy in December, 1864; after a second course of lectures, entered U. S. Navy as a contract surgeon March, 1865; served three months in Virginia. Graduated in medicine from Harvard Medical School in 1867; from April 1, 1867, to April 1, 1871, was health officer on quarantine, Boston; settled in Cambridge April 1, 1871; was married to Melissa E. Paine, May, 1869; member Massachusetts Medical Society; member Boston Society for Medical Observation; member Cambridge Society for Medical Improvement; member Cambridge School Board from 1876 to 1882; visiting physician Cambridge Hospital.

James Arthur Dow, born in Bath, N. H., December 18, 1844; educated at Newbury (Vermont) Seminary, and at the University of Vermont Medical College; graduating in June, 1867; practiced in Windsor, Vt., until 1870, then located in Cambridge; is a Fellow of the Massachusetts Medical Society; member of the Cambridge Medical Society; has been for three years visiting physician at the Cambridge Hospital.

Edward S. Wood, M.D., graduated at Harvard College in 1867, and at the Harvard Medical School in 1871. Fel. Am. Acad. Arts and Sci.; Mem. Am. Pub. Health Assoc.; Mass. Med.-Leg. Soc.; Bos. Soc. Med. Observ.; Bos. Soc. Med. Sci.; Bos. Soc. Med. Improv.; Mem. Revision Com. U. S. Pharmacop., 1880; Professor Chem. Harv. Univ.; Chem. Mass. Gen. Hosp.; editor (with Dr. R. Amory) of "Wharton & Stille's Medical Jurisprudence, Volume on Poisons," 4th ed.; author, "Illuminating Gas in its Relation to Health," *Rep. and Papers Am. Pub. Health Assoc.*, iii; Trans., "Poisoning by the Heavy Metals and their Salts, including Arsenic and Phosphorus," *Ziemssen's Cyclop.*, xviii; Contrib., "The Relation which Chemistry bears to Forensic Medicine," Trans. Mass. Med.-Leg. Soc. I.

Frederick W. Taylor, M.D., was born in Cambridge, June 22, 1856; graduated from Harvard University, in the class of 1878; received his medical degree from the Medical Department of Harvard College in 1882; was house pupil Massachusetts General Hospital, 1881-82; student of medicine in Germany, 1882-83, since which time he has been in the practice of medicine in North Cambridge; is a member of the Massachusetts Medical Society, Cambridge Medical Improvement Society, and is one of the physicians to the Cambridge Hospital.

A biographical sketch of each member of the medical profession to the present would be of much interest and value; but the limit of this article prevents the completion of a subject left to some future historian.

The editor deeply regrets the necessary omission

of an outline, at least, of the lives of some of the members of the profession, both past and present, who have been and are men eminent in letters and science.

CHAPTER X.

CAMBRIDGE—(Continued).

MILITARY.

BY COL WILLIAM A. BANCROFT.

"On yonder hill the lion fell,
But here was chopped the eagle's shell."—*Holmes.*

As the headquarters of Washington, and as the camp of a large portion of the American army during the siege of Boston, Cambridge possesses more than a local prominence in the military history of the country; but if the stirring scenes of 1775-76 which were enacted within her borders shall be deemed as to her mere chance events, still as the town which, out of her small population, furnished 450 men for the War of the Revolution, and as the city which sent the first company of citizen volunteers raised to support the national government at the outbreak of the War of the Rebellion, and followed them with an enrollment of men equalling one-sixth of her entire population, there can be no doubt of the patriotic military spirit of her citizens.

While there were exempt from active participation in the training and service of the militia the leading magistrates and clergy, and while old age and infirmity furnished grounds for excusing others, yet, substantially, every male person of arms-bearing age, in the little groups of people which formed the early settlements of the colony, was required to perform active service in the militia.

At first, as military commanders, the leading spirits selected one or two men in each plantation—men usually who had either seen actual service in war in the old country or had acquired some knowledge and experience in military matters by serving with regular troops. Plymouth had the doughty Myles Standish and Cambridge had Daniel Patrick. Later, as the population increased, and something like a military organization was effected, when companies were formed into regiments, and regiments which were composed of the militia of a given number of settlements became a part of a larger body, more officers were required, and the method of selection by election, applied to every other office, was resorted to. This method has been followed ever since, and is engrafted in the Constitution of the Commonwealth, although some have thought that the principle of the original selection was the better. But, be that as it may, a plentiful supply of officers was made. In Cambridge alone, from the first settlement to the

Revolution—from Captain Patrick to Major-General Brattle—the number of military titles bestowed was not small. In fact, it is not improbable that they exceeded in frequency those met with at the present day in some of the Southern and Western States.

Some one has said that the four corner-stones upon which the structure of New England society was built were the church, the public school, the town-meeting and the militia. For generations, certainly, in the old colony days, these institutions existed side by side, and the influences which they have exerted and still exert are potent. Although the militia in time became necessarily, under the changed conditions of the country, comparatively unimportant, and, as originally constituted and made use of, long ago ceased to exist, leaving but a form of language upon the statute-book, still, as the first of the successive stages through which our "force of last resort" has passed, it will be interesting as a part of the following sketch to get some glimpses of the institution as it existed in Cambridge.

It is said that Daniel Patrick, the first Cambridge captain, was induced by Winthrop and his companions to leave Holland, where he served as a common soldier in the sovereign's guard, to accompany them in their venture, and to become for them a military adviser and commander. Rapid promotion it must have seemed to Private Patrick to rise from the ranks at one step to the position of commander of the forces, although in a somewhat less numerous and well-appointed army than that of Holland. Judging from his name, Holland was not the birth-place of this early Cantabrigian man of war, but this circumstance should not detract at all from his military prowess, if, as is probable, he was one of that race whose exploits in the armies both of Europe and of America have proved it to be, on many a hard-fought field, and with many a deed of desperate valor, pre-eminently a race of soldiers. Captain Patrick came to Cambridge, probably from Watertown, in 1632, although it may have been earlier, for he was in Charlestown in 1630, where it is probable that he was, in whole or in part, supported at the public expense, that he might the better devote his energies to the purpose for which he had migrated from Europe. During his residence in Cambridge he received from the authorities a grant of land, which has perpetuated to the present day his title, if not his name. What Cambridge lad, or Harvard student of aquatic bent, but knows of that grassy, pine-capped knoll on the bank of the Charles River just south of the foot of Magazine Street, whose surrounding marsh at the highest tides is still completely covered with water, leaving it the "Captain's Island," as it is, and as it has been, called for over two and a half centuries? What more enduring memorial could have been given him?

In the Pequot War Cambridge is said to have furnished twelve soldiers, presumably under Patrick's

leadership, but it is also recorded that in this expedition he had command of forty men. His military talents, no doubt, led the commander-in-chief to consolidate the Cambridge troops with those from other plantations, and place the whole, who, geographically at least, must have corresponded to a regiment, under Patrick as regimental commander. He continued to reside in Cambridge in the pursuit of his chosen profession until November, 1637, when he removed to Ipswich. Afterwards he went to Stamford, Connecticut, where, in 1643, renewing, as it were, his earlier associations, he met his death at the hands of a Dutchman.

When the regimental organizations were perfected in 1636 Cambridge, besides its company officers, furnished the lieutenant-colonel of the regiment to which it was assigned in the person of Thomas Dudley, who had already been Governor, and who was afterwards elected major-general of all the militia. Later, either in the same or in another regiment, Cambridge furnished a colonel, John Haynes, who also had been Governor, and who was afterwards Governor of Connecticut, and a lieutenant-colonel, Roger Harlakenden. Among the earlier officers was George Cooke, chosen a captain of Cambridge militia about 1637, who was, perhaps, an original member of the Ancient and Honorable Artillery Company, and who certainly was its captain in 1643. Cooke returned to England in 1645, where he fought under Cromwell in the Commonwealth's army, became a colonel and finally lost his life in one of the battles in Ireland. When he was a Cambridge captain he had as his ensign one Samuel Shepard. The latter went to England with his captain, became a major, very likely in Cooke's regiment, and, like Cooke, saw service in Ireland, where it is probable that he too departed this life, though not in battle. Cromwell's campaigns in Ireland were arduous and full of hardship. Did the exigencies of their service permit, it is easy to think of these two soldiers, ere they were separated by death, turning back in memory and in conversation to the little hamlet on the banks of the peaceful Charles, where, as militia officers, they had trained together and unconsciously had prepared themselves for the sternest duties of military life.

Without much doubt the successor of George Cooke as captain of the Cambridge company, or train band, was Daniel Gookin, who came to be a person of considerable importance in the colony. In accordance with the custom of the time, although he received high military promotion, he retained, probably as a kind of honorary captain, the position of commander of the Cambridge company for forty years. By the General Court he was chosen, May 5, 1676, sergeant-major of the Middlesex regiment, a position which has no exact counterpart in a modern military organization, but appears to have been that of a field officer with executive powers, subordinate, no doubt, to those of a regimental commander. Be-

fore this appointment, however, Captain Gookin had performed the duties of this office, and in "King Phillip's War" he appears to have been in command of all the Middlesex County militia, and to have issued orders in accordance therewith. His instructions to Captain Joseph Sill, also a Cambridge man, to put himself in command of the men from Charlestown, Watertown and Cambridge, are characteristic of the man and of the time. They close as follows: "Sill, desiring the ever-living God to accompany you and your company with his gracious conduct and presence, and that he will for Christ's sake appear in all the mounts of difficulty, and cover all your heads in the day of battle, and deliver the blood-thirsty and cruel enemy of God and his people into your hands, and make you executioners of his just indignation upon them, and return you victorions unto us, I commit you and your company unto God, and remain your very loving friend, Daniel Gookin, Senior."

It was in the spring of this year (1676), right in the midst of their planting season, that the danger from the Indians became so imminent that the authorities began to build a stockade around the more thickly-settled portion of the town. As it was a military measure, the militia officers were necessarily concerned, and they, with the selectmen, were empowered to direct the construction of the defences. Before the completion of the stockade the danger subsided, and much of the timber which had been got out was used in the repair of the bridge to Boston, or the "Great Bridge," as it was then called, which crossed the Charles at the foot of the present Boylston Street, where now is the North Harvard Street Bridge, of Brighton.

Five years after he was chosen sergeant-major, at the general election held May 11, 1681. Gookin was elected major-general of all the militia of the colony, and this office he kept until he was seventy-four years of age, or as long as the colony charter lasted. General Gookin was a man of much force of character, and this, together with his prominence in the affairs of the colony (he held civil office for quite as many years as he did military), no doubt attracted the attention of Oliver Cromwell, who selected him to assist in the promotion of a scheme for colonizing Jamaica with people from New England. Gookin was a selectman, a representative to the General Court, in which, during one year of his service, he was Speaker of the House, and held the office of Assistant, corresponding to that of Councillor, from 1652 to 1686, with the exception of the year 1676. Of strong convictions was this Daniel Gookin, and to them, no doubt, he owed his defeat for office in that year, for, having befriended the Praying Indians, the feeling against him became so great, that his election was thereby prevented. Of stern, soldierly qualities, this Cambridge militia officer was uncompromising also in religious matters, and, although an assistant of John Eliot in

the conversion of the Indians, when the Quakers proposed to follow their peculiar doctrines in the colony, they found little consideration at his hands. He made two visits to England, and upon his last return to the colony, brought with him to Cambridge the two regicides, Generals Goffe and Whalley. For this he was denounced by the royalists in the colony, but during the differences which followed the ascension of Charles II. to the throne, he stood stoutly for the chartered right of the colonists. Verily, in those days they made militia officers out of the right stuff!

Up to the time of the abrogation of the colony charter, military service was required of substantially all able-bodied males of sixteen years of age and upwards. Occasionally, upon application to the Court, individuals were exempted from service as private soldiers, chiefly on account of their advanced age; but those who held commissions as officers evinced no disposition to retire for any such reason. On the contrary, there are many instances of service among officers at an advanced age. One is that of Samuel Green, of whom it was said in an obituary that "this Captain Green was a commission officer of the military company of Cambridge, who chose him for above sixty years together; and he died there January 1, 1701-2, *æ* 87, highly esteemed and beloved both for piety and a martial genius. He took such great delight in the military exercise, that the arrival of their training-days would always raise his joy and spirit; and when he was grown so aged that he could not walk, he would be carried out in his chair into the field, to view and order his company."

Was the saying, "Few die and none resign," current then, as now?

In the forces raised in the first half of the 18th century to operate against the French and Indians, Cambridge was represented by both officers and men. Among the former was John Leverett, afterwards president of Harvard College, and there also appear the names of Captain Samuel Gookin, son, and Lieutenant Samuel Gookin, grandson of General Daniel Gookin. The former was High Sheriff, or "Marshal-General" of the colony, and, after the abolition of this office, was High Sheriff of Suffolk and afterwards of Middlesex. His son, at the age of nineteen, he appointed a deputy; and this office the lieutenant retained for sixty-four years. Surely, if there was a spoils system then, this official was spared.

In the expedition against Port Royal (1710), Edmund Goffe, a lieutenant-colonel, was the Cambridge officer of the highest rank. It appears that he was afterwards commissioned "Colonel of all the forces in the western frontiers of Middlesex and Essex, together with the town of Brookfield." He, too, was High Sheriff of Middlesex.

Another Cambridge captain was Ammi Ruhamah Cutter. He graduated from Harvard College in 1725, entered the ministry, and was ordained at North Yar-

mouth, but five years later he was dismissed from his charge on account of his Arminian tendencies. He then adopted the profession of a physician, which he followed for a number of years. He was, no doubt, an active member of the militia in Cambridge. After several years in the service of the country, he appears among the forces before Louisbourg, with the rank of captain, and while engaged there he died.

During the French and Indian War Cambridge was well represented in the army, although by no officer of high rank, sending altogether several companies of soldiers. On one occasion, towards the close of the war, a Cambridge officer, Captain William Angier, showed himself equal to an emergency which threatened serious disaster. The regiment to which his company belonged formed the garrison of Fort Cumberland, in Nova Scotia. Before they were relieved by other troops, the regiment's term of service expired, and it became evident that the enlisted men were preparing to abandon the fort and to return home. Had this desertion been accomplished the fort, no doubt, would have fallen into the hands of the enemy. To avert such a consequence, the commanding officer gave orders to disarm the men. This order was to be executed by the company commanders, and the first company to be paraded for the purpose was Captain Angier's. The first man, upon the captain's order, handed over his piece, but the second not only refused to obey the order, but, when Captain Angier seized the piece to disarm the man, the latter resisted vigorously, and several other men leveled their pieces at the captain's head. It was a critical moment, but, without hesitation, Captain Angier drew his sword and made a pass at the mutineer, with such effect that his fingers were cut, and the captain was able to wrest the piece from him. Overawed by Angier's behavior, the other men quietly surrendered their pieces, and the crisis was passed. This was not the end of the affair, however, and the captain became exposed to still further risk as the result of this performance of duty. What followed suggests, also, something in the nature of a precedent for the recent alleged bestowal of pensions by the United States authorities upon deserters. When the troops returned to their homes, Jackson, the man whose fingers had been cut, brought suit against Captain Angier for his injuries, and obtained a verdict of six pounds and costs, amounting altogether to fifteen pounds, and this sum the captain was obliged to pay. This was, indeed, subordinating the military to the civil authority, but the principle is a familiar one, and, as was right, upon Captain Angier's petition to the General Court, he was reimbursed out of the public treasury for his pecuniary loss, and thus was reconciled military discipline, the regard for law, and the public spirit of the community. Such was the custom of our ancestors! About half a century after this another Jackson, and he, too, a soldier, was a party in a legal proceeding not unlike the above. The later Jackson's name was

Andrew, but he was the defendant. While in command at New Orleans, General Jackson set at naught the authority of a certain judge, who, upon the cessation of hostilities, had the general brought before him on process, and fined him for contempt. The Congress afterwards voted the old hero the amount of the fine.

One of the military organizations which flourished in the eighteenth century, nearly up to the time of the Revolution, and many of whose members were Cambridge men, was a troop of horse. Like most mounted militia companies the character of its membership appears to have been above the average of that of foot companies, and, by special privilege, its officers had the constructive rank of colonel, lieutenant-colonel and major, although in reality its captain, lieutenant and ensign. This privilege of holding constructive rank was possessed by the officers of the present First Corps of Cadets of Boston until 1874, and to them it was doubtless given when that organization was contemporary with this troop of horse. The higher social standing of the members of these organizations was, no doubt, satisfied by this elevation in the rank of their officers, who were usually men upon whom the rank was worthily bestowed. Among the Cambridge commanders of the troop of horse were, probably, Colonel John Vassall, the elder, and certainly Colonel Spencer Phips. Major John Vassall, son of Colonel Vassall, was also an officer in this corps. It was Colonel Vassall who built the historic mansion which, after it was abandoned by its royalist owner, was occupied by Washington as headquarters, and in the present century became the home of the poet Longfellow.

Among the Cambridge militia officers who figured in the decades just prior to the War of the Revolution was William Brattle. In what capacity he first did military service it is uncertain, but in 1729, when but twenty-two years of age, he held the rank of major, and in 1733 was the captain of the Ancient and Honorable Artillery Company. By the year 1739 he had risen to the rank of colonel, held the position of adjutant-general in 1758, was a brigadier-general in 1760, and became major-general of all the Province militia in 1771. Although holding military rank during a period when the country was engaged in actual hostilities, his military activities were confined to the raising of troops and the administration of military affairs in the Province of Massachusetts Bay. But active he must have been, for he followed successively the professions of medicine, theology and law, holding meanwhile, besides his military offices, the civil offices of justice of the peace; selectman, altogether twenty-one years, from 1729 to 1772; representative ten years; councilor from 1755 to 1773, with the exception of 1769, and Attorney-General in 1736 and in 1747. In politics his advocacy of the popular cause, it is surmised, lost him his seat as a councilor in 1769, when he was negatived by the Royal Governor; but he that as it may, he became an

ardent royalist, was allowed the next year to resume his seat in the Council, and as a further reward, no doubt, received his commission as major-general.

To his political about-face, however, General Brattle owed the loss of his residence in Cambridge and in the country; for the time was approaching when the dwellers upon "Tory Row" would no longer find congenial society on the Cambridge side of the Charles, outside of their own circle; when they must either espouse the popular side, or, bidding adieu to their delightful farms and gardens, leave them to be confiscated by their late fellow-townsmen, and seek protection for themselves from the British forces now landed in Boston. The latter course Brattle took, and when the British evacuated Boston, in the spring of 1776, he went with them to Halifax and there, in the fall of the year, he died.

Cambridge was soon to be an armed camp. But first her baptism of blood. The month of April, 1775, had come, and on Cambridge soil it was that the British troops who occupied Boston first set foot with a hostile purpose. Landing at Lechmere's Point (now East Cambridge) on the night of the 18th of April, they began their march towards Lexington and Concord. But Cambridge was prepared. The old Tory militia officers had given way to patriots. Captain Thomas Gardner, who succeeded General Brattle as the commander of the Cambridge militia company, had been elected colonel of the First Middlesex Regiment and his lieutenant, Samuel Thatcher, had succeeded him as captain. Although not apprised of the British movement until after the landing was effected and the regulars had left the borders of the town, for Revere, who gave the alarm, passed out into the country on the other flank of the British, whose advance must have been undiscovered by the immediate neighborhood through which they marched until they were well within the limits of the present town of Arlington—Captain Thatcher assembled his company early on the morning of the 19th, when the alarm reached him, and led them to the conflict. During the day they marched twenty-eight miles, and, together with the Menotomy minute-men, a company formed in the northwest part of the town, under Captain Benjamin Locke, were actively engaged with the enemy, whom they doubtless intercepted on their return. The brigade under Lord Percy, sent by Gage after urgent calls to reinforce the column led by Colonel Smith, passed through Cambridge about the middle of the day, having come out of Boston by way of the Neck and having entered Cambridge by passing over the "Great Bridge," whose planks, in anticipation of Percy's approach, had been taken up, but, with a foresight that was hardly calculated to accomplish the immediate purpose of their removal, had been carefully piled near by, so that they were readily replaced. Although the events of this day have been dignified by the name of a battle, in strictness they were hardly such. The march out both by Smith and Percy was

made without opposition, unless the conduct of the minute-men on Lexington Common can be so termed—conduct which our patriotism says was heroic, and the result of which contributed to intensify the hatred against King George, but which a professional soldier would, under the circumstances, regard as akin to recklessness and of no avail as a military proceeding. The return, to be sure, was an entirely different affair, but in no sense a battle. It was still a march, made certainly under the most harassing conditions, and indeed most perilous to the royal troops, but still the column moved on until its objective-point was reached. Nowhere except on Lexington Common and at Concord bridge did opposing forces face each other in anything like a battle order. In the first instance the groups of patriots melted away so quickly that the British have always been charged with wanton slaughter, and if Major Pitcairn, who insisted to the day of his death that the Americans fired first, was right, this was not a battle. In the second instance, it was but a detachment of the King's troops whom the men of Middlesex faced, and hardly more than one volley on either side was fired when the detachment was withdrawn. But bloodshed there was and plenty of it before the exhausted troops of the King dropped panting to the ground under cover of the guns of the vessels lying in the Charles. The whole country was aroused. Men marched on the alarm from towns thirty miles distant, but there was no concert of action on the part of the Americans. By reason of this fact, and of the admirable order of march adopted by Smith, his troops were able to reach, not without severe loss, the point just east of Lexington village where he found Lord Percy with the reinforcements. When the consolidated column took up its march, it was through one continuous ambuscade of individual foes. Considering the number of men who claim to have opposed the march of the King's forces on that day, and that the number was large there can be no doubt, much credit ought to be given to the King's officers for the manner in which the troops were handled. The circumstances were to them of the most trying description. Exhausted, as many of them were, by loss of sleep, by their long march, by the heat of the day, through lack of provisions (a supply train had been captured by the old men of Menotomy), and above all by the constant fighting, the task of getting back to Charlestown Neck must have seemed to them well-nigh hopeless. The resolution of the officers must indeed have been high, and the discipline of the men that of the best, to have accomplished what they did. Private soldiers, in some instances committed deeds in their nature barbarous, but, driven to desperation by the terrible fire of their hidden foes, it cannot be said that the conduct of the regulars, under the circumstances, was unusually atrocious. But for the unfortunate affair in the morning on Lexington Common, where it is probable that there was a needless destruction of hu-

man life, it can safely be said, in the light of history, that the behavior of her troops on that day detracted nothing from Britain's martial glory.

Hotter and hotter became the fire and more numerous the assailants as the bleeding column entered the territory of Cambridge, whose was the melancholy satisfaction of having more men killed upon her soil than did any other town. The loss of the Provincials in killed on that day is said to have been altogether forty-nine. Of the British fully seventy-three were killed.

Of these numbers twenty-six Americans and nearly twice as many British soldiers fell within the town lines of Cambridge, so that of those who met their death more than half on each side were here slain. Among them were six Cambridge men—William Marcy, Moses Richardson, John Hicks, Jason Russell, Jabez Wyman and Jason Winship. A remarkable experience on that day was that of Captain Samuel Whittemore, another inhabitant of Cambridge in that part called Menotomy. It may be gathered from his obituary published in the *Columbian Sentinel*: "Died at Menotomy the 2d instant (February, 1793), Capt. Samuel Whittemore, Aet. 99. The manly and moral virtues in all the varied relations of brother, husband, father and friend, were invariably exhibited in this gentleman. He was not more remarkable for his longevity and his numerous descendants (his progeny being 185, one of which is the fifth generation) than for his patriotism. When the British troops marched to Lexington he was 81 years of age, and one of the first on the parade; he was armed with a gun and horse-pistol. After an animated exhortation to the collected militia to the exercise of bravery and courage, he exclaimed,—'If I can only be the instrument of killing one of my country's foes, I shall die in peace.' The prayer of this venerable old man was heard, for on the return of the troops he lay behind a stone wall, and, discharging his gun, a soldier immediately fell; he then discharged his pistol and killed another, at which instant a bullet struck his face and shot away part of his cheek-bone, on which a number of the soldiers ran up to the wall and gorged their malice on his wounded head. They were heard to exclaim,—'We have killed the old rebel.' About four hours after he was found in a mangled situation; his head was covered with blood from the wounds of the bayonets—which were six or eight—but providentially none penetrated so far as to destroy him. His hat and clothes were shot through in many places; yet he survived to see the complete overthrow of his enemies, and his country enjoy all the blessings of peace and independence. His funeral will be to-morrow at 4 o'clock P.M., from his house at Menotomy, which his relations and friends are requested to attend.' A pretty good record for a militia captain! A memorial stone by the wayside in Arlington tells briefly the story of his heroism and of his marvelous escape from death. Seth Russell and Samuel Frost, of Menotomy,

were taken prisoners on that day, and were held until June 6th, when an exchange was effected.

By as much as the British troops fought their way pluckily and even savagely down the old Cambridge road to Charlestown, by so much the more did the spirit and valor of the men of Cambridge and their fellow-countrymen shine forth. Undisturbed as had been their outward march through Cambridge town, it was left by the British on their retreat, for such had the movement now become, after suffering their heaviest loss and with their ranks practically disorganized. The red-coats had not much further to go, and fortunate for them it was. Bloody ground was Cambridge on that day of fighting—a solitary day in her 260 years of existence. Hospitals were established, and their number was increased two months later after the carnage on Bunker Hill. Excitement and alarm filled the town into which there soon poured companies of minute men and individual soldiers in response to the circulars which were sent out by the Massachusetts Committee of Safety, one addressed to the towns, and dated April 20th, urging them "to hasten and encourage, by all possible means, the enlistment of men to form an army," and another, dated April 26th, addressed to the other New England Colonies, asking for as many troops as they could spare for the assistance of Massachusetts. Many of the inhabitants left their homes, and by April 22d the volunteers from out of town had become so numerous and apparently so free with what they could lay hands upon, that it became necessary to issue a general order threatening punishment to any soldier who should injure property. On the 26th of April the regiments at Waltham and Watertown were ordered to march to Cambridge, where General Israel Putnam—"Old Put"—had command.

The Provincial Congress, which was sitting at Concord, had resolved that it was necessary to raise an army of 30,000 men, and that Massachusetts should raise, of this number, 16,500 men. In the plan for its organization, fifty-nine men were to form a company, and ten companies a regiment. Artemas Ward was appointed commander-in-chief, and at once established his headquarters at Cambridge, in a house belonging to one Jonathan Hastings, afterwards better known as the Holmes House, which stood, until a few years ago, near the site of the present Hemenway Gymnasium of Harvard University. Many of the soldiers were quartered in the buildings of the College, whose library, apparatus and other valuables it was resolved should be moved to Andover, from which place a part was afterwards removed to Concord, where instruction was given. Other troops were quartered in private houses. The Committee of Safety occupied the Borland House, now known as the Plympton House, between Harvard and Mount Auburn Streets, near Plympton.

Not much was done at first towards the organiza-

tion of the army. Acting independently, although with a common purpose, the Colonies found it difficult to establish subordination, and, until after Washington took command, the troops that occupied Cambridge were governed largely by their respective Colonial authorities, although, by courtesy, observing the orders of General Ward.

There were soon in Cambridge fifteen Massachusetts regiments of foot and a battalion of artillery, but partially organized, under Colonel Gridley. Of the Connecticut troops, General Putnam's regiment was quartered along the present Inman Street, where the general had his headquarters. Little's regiment was at West Cambridge. Other troops were at a breast-work which had been thrown up near the base of Prospect Hill, and a strong detachment was stationed at Lechmere's Point. The Common was used as a drill-ground by the troops who were quartered in the College buildings and near by.

The American leaders were not unanimous as to the plan of action, and particularly as to the advisability of occupying advanced positions which commanded the town of Boston, where the British had remained since the 19th of April. Finally, however, it was determined to take possession of Bunker Hill and Dorchester Heights, but not until the army should be better organized and equipped. Soon after this determination was reached, however, it was learned that Gage intended to occupy Dorchester Heights on June 19th with British troops. Accordingly, to divert his attention and to thwart his purpose, if possible, it was determined to occupy Bunker Hill at once.

"On Friday, the sixteenth of June," says Frothingham, "the commanders of the army, in accordance with the recommendation of the Committee of Safety, took measures to fortify Bunker Hill. Orders were issued for Prescott's, Frye's and Bridge's regiments and a fatigue party of 200 Connecticut troops to parade at six o'clock in the evening, with all the intrenching tools, in the Cambridge camp. They were also ordered to supply themselves with packs and blankets and with provisions for twenty-four hours. Also Captain Samuel Gridley's company of artillery, of forty nine men and two field-pieces, was ordered to parade. The Connecticut men, drafted from several companies, were put under the gallant Thomas Knowlton, a captain in General Putnam's regiment. The detachment was placed under the command of Colonel William Prescott, of Pepperell, who had orders in writing from General Ward to proceed that evening to Bunker Hill, build fortifications to be planned by Col. Richard Gridley, the chief engineer, and defend them until he should be relieved, the order not to be communicated until the detachment had passed Charlestown Neck. The regiments and fatigue party ordered to parade would have constituted a force of at least fourteen hundred; but only three hundred of Prescott's regiment, a part of Bridge's and a part of

Frye's, under Lieutenant-Colonel Brickett, the artillery and the two hundred Connecticut troops were ordered to march. Hence the number may be fairly estimated at twelve hundred. It was understood that reinforcements and refreshments should be sent to Colonel Prescott on the following morning. This detachment paraded on Cambridge Common at the time appointed, and, after a fervent and impressive prayer by President Langdon, of Harvard College, it commenced, about nine o'clock, its memorable march for Charlestown." Proceeding to Charlestown, the fortifying party constructed the redoubt and breast-work which provoked the battle of the following day.

Awakened early in the morning by the British cannon firing upon the newly-made fortifications, which had been discovered at daybreak, Cambridge passed another day of confusion and alarm. Before night came, the lack of machinery with which to manoeuvre the large force of men which had been assembled became painfully apparent to General Ward. Although aware that the detachment on Bunker Hill would be attacked, and, in view of their labors and situation, that they needed both refreshments and reinforcements, he was unable to supply adequately either. Ill supplied with staff officers, and because of the unorganized condition of the patriot troops, he could neither keep himself informed as to the exact state of affairs, nor could he with certainty make provision for such needs as were made known to him. So Prescott's men suffered, and finally lost the day, through lack of ammunition at the critical moment. But the lesson was a wholesome one, and no doubt Washington's labors were made less difficult when he set about the organization of the army in July.

On this day the heroic Colonel Gardner, of Cambridge, received his death-wound and gained immortal fame. Early in the day his regiment, together with General Ward's own and Patterson's, was held in reserve, being stationed in the road leading to Lechmere's Point, but later was ordered forward. Upon reaching Bunker Hill, by the orders of Gen. Putnam the regiment was divided, part of it to work upon the defences which had been commenced at this place, one company to proceed to the rail fence, and the remainder, under command of its colonel, to reinforce the redoubt, which was now about to receive the third assault of the British. When descending the hill towards the redoubt a musket-ball struck Colonel Gardner in the groin and inflicted a mortal wound. As he was carried off the field he was met by his son, a youth of nineteen, serving as a lieutenant in Captain Trevett's company, who on beholding the agonizing sight, was anxious to assist in caring for his father. He was restrained, however, by the colonel, who, after a heartrending interview, bade him go forward to his duty. A few days after the battle, it is related that Colonel Gardner was asked if he was well enough to see his son. "Yes," answered the

hero, "if he has done his duty." The son had distinguished himself in the action and worthily upheld the reputation of his father.

Colonel Gardner lingered in great agony until July 3d, when death came. The orders of Washington, who, on the same day, took command of the army, relating to the loss of this officer were as follows:—"July 4, 1775. . . . Colonel Gardner is to be buried to-morrow at three o'clock P.M., with the military honors due to so brave and gallant an officer, who fought, bled and died in the cause of his country and mankind. His own regiment, except the company at Malden, to attend on this mournful occasion. The places of these companies on the lines on Prospect Hill to be supplied by Colonel Glover's Regiment till the funeral is over." Colonel Gardner had been one of the foremost citizens of Cambridge; was Selectman from 1769 until his death; a Representative from 1769 until the General Court was superseded by the First Provincial Congress, of which, and also of the Second Congress, he was a member; was a member of the Committee of Correspondence, elected by the town in 1772, and by the House of Representatives in 1773, and of the Committee of Safety, elected by Congress, April 14, 1775.

After the battle, Colonel Prescott reported to headquarters in Cambridge the result and received the thanks of General Ward, whom he found, however, in great apprehension lest the enemy should advance on Cambridge. Prescott assured him that such a thing was not likely to be done by the British, who had suffered great loss in killed and wounded, and even offered to re-take the hill that night or perish in the attempt, if three regiments of fifteen hundred men, well equipped with ammunition and bayonets, were put under his command. But General Ward decided that the condition of the army would not justify so bold a measure. "Prescott had not yet done enough to satisfy himself, though he had done enough to satisfy his country. He had not, indeed, secured final victory, but he had secured a glorious immortality."

But now to Cambridge had come the leader who was to secure both victory and immortality, whose service was to overshadow that of all others, no matter how distinguished—a man whose character was to become an object of veneration, not alone to America and to Europe, but to all mankind. Under the elm by him made famous, "the great Virginian drew his blade" on July 3d, and looked for the first time upon the faces of the New Englanders assembled on Cambridge Common. Of majestic presence, Washington appears to have made upon the army, at the beginning of his service as commander-in-chief, the favorable impression which he ever afterwards uniformly sustained.

Upon Washington's arrival, the works which were begun by the Americans immediately after the battle of Bunker Hill, were still further extended, and the

army was organized into three divisions, that at Cambridge, under Major-General Israel Putnam, consisting of his own brigade and that of Brigadier-General Heath, forming the centre. The earthworks which were thrown up in Cambridge made a chain extending across the town, on a line northeast and southwest from the work at the base of Prospect Hill, just outside of Cambridge, near Union Square, Somerville, to the Charles River. On Dana Hill, then called Butler's, a line of fortifications were thrown up which extended from Broadway northerly. Another work was built at what is now the corner of Putnam Avenue and Franklin Street, and ten years ago traces of this were distinctly visible. This work commanded the river as far down as where now stands the Riverside Press. Here another fort covered the interval to Captain's Island, where still another work was thrown up. Farther down, still substantially preserved, through the public spirit of the Dana family and at the joint expense of the city, the Commonwealth and the National Government, which contributed three cannon, stood a three-gun battery, now known as Fort Washington. Subsequently a strong work was constructed at Lechmere's Point.

In the fall of 1775 the troops in General Putnam's division, occupying Cambridge and a portion of the present territory of Somerville, were posted very nearly as follows: Colonel Patterson's regiment, at the base of Prospect Hill, at the work near Union Square, called Fort No. 3; General Heath's regiment, at the Putnam Avenue work, called Fort No. 2; Colonel Phinney's regiment, at the works north of Fort No. 2, on Dana Hill; Colonel Scammon's regiment, at the Riverside work, called Fort No. 1; Colonel William Prescott's regiment, at Cambridge; Colonel Glover's regiment, at Cambridge; Colonel Frye's regiment at Cambridge; Colonel Bridge's regiment, at Cambridge; Colonel Woodbridge's regiment, on the Charlestown road to Menotomy, west of Prospect Hill; Colonel Sargent's regiment, at Inman's Farm.

General Washington at first took quarters at the President's house, on the college grounds, one room having been reserved for the President; but this arrangement was not satisfactory, and after remaining but four days he removed to the Vassall house.

Once or twice, between the battle of Bunker Hill and the evacuation of Boston by the British, there was skirmishing in Cambridge between parties of the opposing forces. General Heath, in his "Memoirs," mentions the following: "November 9th. At the top of high water, the tide being very full, some British Light Infantry, in boats, came over from Boston, and landed on Lechmere's Point; the centinels on the Point came off; the alarm was given; and several hundred Americans forded over the Causeway, in the face of the British, the water at least two feet deep. The British, seeing the spirit of the Americans, although they were very advantageously posted, made a precipitate retreat to their boats. Three or four

Americans were wounded, one mortally. The British ship and floating batteries kept up a brisk fire, but to little purpose. December 12th. A causeway was begun over the Marsh to Lechmere's Point." For the next few days the "approaches were carried on briskly, nearly to the top of the hill." On the 17th "the morning was foggy. A detachment of 300 men, under the direction of General Putnam, broke ground on the top of the hill, on Lechmere's Point, at a distance of not more than half a mile from the ship. Between twelve and one o'clock the fog cleared away and the ship began to cannonade the Americans with round and grapeshot, and some shells were thrown from West Boston. One soldier was wounded and the party driven from the works." The next day work was resumed under the direction of General Heath, and in a few days the fort was completed, notwithstanding the fire from the British batteries, and, from its position, rendered important service in the final bombardment. Heavy cannon were mounted upon it February 25th, and on March 2d this battery, together with the one on Cobble Hill (near where is now the McLean asylum), opened fire on the town of Boston, and continued the fire at intervals until the evacuation, on March 17th. Troops from Cambridge crossed the river in boats on the day of the evacuation and entered the town, where "the inhabitants discovered joy inexpressible." The first act in the drama had been played, and in the next the scene was to shift. The troops left Cambridge, and gradually the traces of their occupation began to be removed. No doubt, too, the inhabitants, although perhaps not filled with the "joy inexpressible" of their Boston neighbors, who had been subjected to many indignities by a hostile army, were very glad to have the troops depart. They had been, to some extent, crowded out of their houses to make room for the soldiers. Their territory, as the Rev. William Emerson wrote, had been "covered over with American Camps, and cut up into forts and intrenchments, and all the lands, fields, orchards, laid common,—horses and cattle feeding in the choicest mowing land, whole fields of corn eaten down to the ground, and large parks of well-regulated locusts cut down for firewood and other public use."

In November, 1777, General Burgoyne having surrendered his army as prisoners of war, they were ordered to Cambridge and placed in charge of General Heath, the commander of this military district, who tells us in his "Memoirs" how the good people of Cambridge were again inconvenienced. "As soon as," he says, "he was notified that these troops were coming under his direction, he set himself in earnest to prepare for their reception. The barracks at Prospect and Winter Hills were directed to be put instantly in order. The Council was applied to aid in the procurement of quarters from the citizens for the officers; nor was this an easy task. The families of the citizens generally wanting the room in their respective houses,

rendered it difficult to obtain so many quarters as were necessary for so great a number, and extended the limits of the parole very considerably." General Burgoyne was assigned to quarters in the Plympton House and General Riedesel in the Lechmere House. During the confinement of the British prisoners in and about Cambridge, numerous collisions between them and their guards took place, two of which described by General Heath, occasioned much excitement. In January, 1778, "Colonel Henley, who had the immediate command at Cambridge," was insulted by a British soldier and "pricked him with a sword or bayonet. General Burgoyne immediately presented a complaint against Colonel Henley, charging him with barbarous and wanton conduct and intentional murder." After an animated discussion on paper between the Generals Heath and Burgoyne, Colonel Henley was ordered before a court-martial which acquitted him. On the day of the anniversary of the battle of Bunker Hill in the same year, "A British officer was shot by an American sentinel on Prospect Hill, the officer attempting to pass contrary to the standing orders." A jury of inquest immediately empaneled, consisting of "William Howe, Benjamin Locke, John Brown, Ebenezer Stedman, Samuel Manning, Nathaniel Austin, Joseph Read, Jr., James Hill, Thomas Barrett, Benjamin Baker, Aaron Hill, Isaac Bradish, James Munroe, Joseph Johnson, good and lawful men of Cambridge," gave as their verdict on the following day, "that the said Richard Brown was shot with a firearm by the sentinel, in Charlestown, near Prospect Hill, between the hours of five and six P.M., on the 17th day of June, A.D. 1778, in attempting to pass the sentinel with two women, after being properly challenged by said sentinel, and so came to death."

On April 5th Burgoyne left Cambridge for Rhode Island, and on the 15th of the same month a portion of the prisoners were marched to Rutland, under the escort of a detachment of militia. The remainder marched for Virginia in the following November, having been held in Cambridge for about a year, and since then none but troops of our native country have set foot on Cambridge soil. To the end of the war, however, the town continued to contribute men and women for the common cause, and shared in the rejoicing when the independence of the country was finally acknowledged.

For a time after the war was over the people of Cambridge, as in the rest of the country, gave little attention to military matters, for they were absorbed in the discussions which preceded the adoption of the constitutions, both of the State and of the Nation, and the establishment of the respective governments. Recognized by the State Constitution, however, the organization of the militia was kept up, and in time militia trainings and musters became annual events. To the War of 1812, although unpopular in New England, Cambridge sent a number of volunteers, who

saw active service, and the Cambridge Light Infantry was in camp at South Boston for fifty-one days. But the first half of the nineteenth century was not prolific in warlike events. Nothing but long lists of names as they appear on the muster-rolls responds to the searcher after martial tales, and the only contests recorded are those which appear on the pages of the Massachusetts law reports in relation to the imposition of militia fines, which enabled the young practitioners then at the bar to pick up a dollar occasionally and no doubt annoyed the learned judges on the supreme bench, whose duty it was to unravel these somewhat petty disputes. But on paper in those days, Massachusetts had an imposing body of troops. Divisions, with their major generals commanding, brigades and regiments, all duly assigned, headquarters designated, staff officers, line officers, general officers, field officers, company officers—all were there. Every man, unless of a class exempt by law, must serve, furnish his own gun (which the caricaturists made sometimes a pitchfork or a cornstalk), and equipments, and appear at muster, or be fined, unless the attorneys aforesaid provided means of escape. Finally the system was given up, and that of the volunteer militia substituted. But ere this had long been done came the terrible conflict to share in which men sprang eagerly forward who a few years before had regarded a militia muster as a hardship. Again, as in 1775, Cambridge was prepared. One of her citizens, James P. Richardson, on January 5, 1861, had printed in the *Cambridge Chronicle* the following notice:—

"The undersigned proposes to organize a company of volunteers, to tender their services to our common country, and to do what they can to maintain the integrity and glory of our flag and Union. Any citizen of good moral character and sound in body, who wishes to join the corps, will please call at my office, Main Street, Cambridgeport.

"J. P. RICHARDSON."

Sixty men had joined by April 13th, when it was announced that the company had been accepted by the Governor. Two days later came President Lincoln's proclamation, asking for 75,000 men to serve three months. April 16th the Governor's orders were issued, and on the morning of the 17th, Lawyer Richardson's office was crowded with the members of the company, which soon after reported at the State-House with ninety-five men. The names of this gallant band were as follows:

Captain, James P. Richardson; First Lieutenant, Samuel E. Chamberlain; Second Lieutenant, Edwin F. Richardson; Sergeants, John Kinnear, Francis M. Doble, George W. Smith, Conrad D. Kinnear; Corporals, Augustus A. Thurston, Daniel F. Brown, Benjamin F. Dexter, John E. Howe; Musician, John C. Copp; Privates, Leonard Arkerson, Edwin Barry, Andrew J. Bate, Joseph H. Baxter, Albert C. Berry, Isaac H. Blake, Robert F. Boume, Charles B. Brown, Solomon M. Busmich, Joseph P. Cartwright, James Gate, Edwin F. Chandler, Frederick Chandler, William Chandler, William H. Clark, William A. Colby, Thomas Costello, Robert D. Crabbie, Jere C. Cronin, Jr., Hugh Cunningham, Charles R. Dakin, Louis P. Davis, Jr., Lowell Ellison, Edwin E. Farbanks, Thomas W. Fredericksen, John C. Gaffney, Robert J. Gamble, Thomas Gamble, Joseph Gay, John Green, Abner A. Grubbs, James W. Hakey, Samuel L. Hart, George W. Hastings, Levi Hawkes, William A. Hayward, Frederick A. Hill, Simon D. Hitchcock, Alfred E. Holt,

Patrick Howard, Charles M. Howlett, William Kavanagh, Frank E. Kelly, Paul Kennedy, John W. King, George W. Lanson, Samuel H. Libbey, Samuel C. Lucy, Thomas H. Lucy, Thomas Martin, Richard T. Marvin, Alfred J. Mason, Joseph Mayer, Timothy McCarthy, Thomas McDonald, Eugene H. McQuillen, Michael McQuillen, Daniel R. Melcher, Horatio C. Moore, George T. Nichols, Thomas A. B. Norris, Jr., James W. Penniman, Calvin D. Peirce, Thomas Preston, William W. Richards, William R. Russell, William Shannon, James Steedy, Charles S. Slate, Samuel F. Slocomb, Henry A. Smith, John Smith, Charles E. Stevens, Warren F. Stone, Michael Sullivan, Timothy Sullivan, William Tibbets, Charles H. Titus, Edwin H. Trulan, John Vose, George W. Waters, George W. Wheelock, Henry White, John A. White, Andrew Wilson.

Of these privates, Peirce and Trulan were mustered in May 6th, after the company arrived at Fortress Monroe, to which it was ordered as Co. C, of the Third Regiment, Colonel D. W. Wardrop. The company remained with the regiment during its three months' service, and upon its return was warmly welcomed by the citizens generally, and by a committee of the city government, who made a special appropriation of money for the occasion.

James Prentiss Richardson, who raised and commanded the company, was born at Framingham, August 20, 1821. His father, Henry Richardson, was a farmer, carriage-builder and trial justice. The future soldier was named after an uncle, who received his middle name from his mother's family. A great-grandfather was the Moses Richardson previously mentioned as one of the six Cambridge men who were killed by the British on April 19, 1775. Young Richardson came to Cambridge as an employee of Messrs. Davenport and Bridges, car-builders, but afterwards he opened a shop of his own to engage in business as a carriage-painter. He had some artistic skill and not unfrequently he was employed to paint portraits. Later he gave up painting, and went into partnership with Eben Denton, a blank-book manufacturer. In this business he remained for a year, but finally he decided to enter the legal profession, for which he had for some time had an ardent longing. Though pretty well on in years to begin the study of law, he applied himself assiduously, and, entering the Harvard Law School, graduated therefrom in 1855. Upon his admission to the bar he located in the office on Main Street, opposite Pearl Street, which is still used as a law office and in which these lines are written.

It is said that clients came early, and found him to be a hard worker, a diligent student and a good fighter. Popular in the community, he was elected by his fellow-citizens to the Board of Aldermen in 1858 and in 1860, and, between his terms of service in the army, in 1862 he held a seat in the Common Council. In politics he was an ardent free-soiler, a staunch Fremont man, and was commander of the Cambridge "Wide-Awakes" in the campaign which resulted in the election of Abraham Lincoln as President of the United States. When the three months service was over he went back to his law practice, but in the autumn of the following year the call for volunteers again took him to the front, this time as captain of Co. A, Thirty-Eighth Massachusetts Volunteers.

Three companies of this regiment—A, B and F—were recruited in Cambridge. On December 4, 1862, he was promoted to be major, and on July 16, 1863, he was made lieutenant-colonel of the Thirty-Eighth which he commanded for the most of the time during the rest of the war, as its colonel was absent. For some time he was, as senior officer, in command of the Third Brigade, Second Division of the Nineteenth Corps. In the battle at Opequan Creek, September 19, 1864, he was severely wounded and was mustered out in July, 1865.

A contemporary writer has described Colonel Richardson's bearing while in the army in the following words:

"The entire absence, in this officer, of that pomp assumed by many of the Eastern officers, and which was seldom found in the Western regiments, together with his desire to make the duties of the rank and file as agreeable as was compatible with good discipline, and his superior military acquirements, had won the attachment of his regiment."

And again of his conduct at Mansura Plains:

"Lt.-Col. Richardson left the ambulance in which he had been obliged to perform the greater part of the march, put himself at the head of the (Third) Brigade, and manoeuvred it over the field of battle as coolly and with as much skill as when on the parade-ground at Camp Kenney."

A proud hour of Colonel Richardson's life it was on the day when the shattered remnant of his regiment, after the close of the war, passed through the streets of Cambridge, escorted by military and civic organizations, welcomed by all the people, with old and young alike assembled to do it honor. The *Cambridge Chronicle*, of that date, says:

"It was a magnificent scene as the procession passed from Broadway to North Avenue, and through the square. The profusion of flowers among the military escort and veterans, the gaily caparisoned horses of the marshal and his aids, the tall figure of Col. Richardson, mounted on a splendid charger, bowing his acknowledgments on either hand, the proud bearing of the veterans, their torn and shot-riddled colors—all combined to make a display worthy of transfer to canvass."

Subsequently, Colonel Richardson accepted a commission as first-lieutenant in the Regular Army, and was assigned to duty with his regiment in the Southwest. His knowledge of law, however, soon secured him a detail as judge advocate, and later, upon resigning from the army, he was appointed judge of a local court in Texas, where, in the city of Austin, he has since resided. Beloved, respected and honored, no name stands higher on the martial roll of Cambridge than that of James Prentiss Richardson.

The first-lieutenant of the company, Samuel E. Chamberlain, had, when quite young, seen service in the Mexican War. On November 25, 1861, he was commissioned captain of a company in the First Massachusetts Cavalry; major October 30, 1862; lieutenant-colonel March 5, 1864; colonel of the Fifth Massachusetts Cavalry, July 26, 1865; and was discharged October 31, 1865, with the brevet rank of brigadier-general. When leading a detachment at Kelly's Ford, March 17, 1863, he received a painful and dangerous wound from a bullet which entered his

left cheek-bone, and which was long afterwards taken out from between his shoulder-blades. With characteristic pluck he soon returned to his post and continued to perform valuable service until his discharge, on the date above given.

The second lieutenant was Edwin F. Richardson. Like Colonel Richardson and General Chamberlain, he, too, re-entered the service, receiving, on October 1, 1861, a commission as first lieutenant in the Twenty-second Massachusetts. Subsequently he gave up his commission, but soon after enlisted as a private, became a sergeant and received a mortal wound in battle May 18, 1864. He lingered in great agony until May 26th, when he was released by death. His body lies buried in the soldiers' lot in Cambridge Cemetery. Lieutenant Richardson was very popular with the members of the company, and his name is warmly cherished in the memory of its survivors and by all who knew him. Of the members of the company, the venerable Rev. Lucius R. Paige says, in a note to his "History of Cambridge:"—"As nearly as can be ascertained, the whole number re-enlisted, with only two exceptions; twenty-seven of them received commissions, and twenty-one were killed in battle or died of wounds and disease contracted in the service." A glorious record!

And glory there was gained, too, by other Cambridge men among the thousands which Cambridge sent to the front, of whom about two hundred were commissioned officers.

Mr. Paige gives the following list:

Brigadier-Generals, Henry L. Ennis, Charles Russell Lowell; Brevet Brigadier-Generals, Samuel L. Chamberlain, Charles F. Walcott; Colonels, P. Stearns Davis, Norwood F. Hallowell, Albert Ordway, Edmund Rice, Brevet Colonel, James B. Smith; Lieutenant-Colonels, William W. Bullock, Jeremiah W. Coveney, J. Durrell Green, William H. Lounsbury, George A. Mosham, David F. Muzzey, James P. Richardson, Samuel W. Richardson, Albert Stickney; Majors, Ezra P. Gould, C. Frederick Livermore, Charles C. Parsons, Henry L. Patten, John T. Richards, Atherton H. Stevens, Jr., Brevet Major, Charles J. Mills; Captains, Thomas H. Annable, Thomas O. Barri, Joseph H. Baxter, James B. Bell, George N. Bennett, Robert T. Boune, John T. Burgess, Richard Cary, Charles H. Chapman, Joseph H. Clark, J. Warren Cotton, Lewis S. Dabney, Alexander J. Dallas, George H. Dana, James T. Davis, Horace Dexter, Edward G. Dyke, Charles W. Folsom, William H. Gertz, Joseph A. Hildroth, Arthur Hodges, George F. Holman, Henry A. Homer, Henry F. Hoppen, Samuel D. Hovey, William G. Howe, Alphens Hyatt, William H. Jewell, Edward B. P. Kinsley, Leudagar M. Lapp, Roger S. Littlefield, Frederick A. Lull, John W. McGregor, Samuel McKeever, Robert L. Newell, William J. O'Brien, William Plummer, Josiah Porter, Thomas L. Robeson, J. Emory Round, Taylor P. Rundlett, John S. Sawyer, George A. Schmitt, J. Lewis Stackpole, George H. Taylor, Levi P. Thompson, George O. Tyler, Charles C. Wehrum, Henry C. Wells, Thomas R. Wells, Edward L. White, William H. Whitney, John B. Whorf, John Wilder, John C. Willey, Andrew Wilson, John T. Wilson, J. Henry Wyman; Brevet Captains, Benjamin Vaughn; Surgeons, Alfred F. Holt, Anson P. Hooker, Alfred A. Stocker, A. Carter Webber; Assistant Surgeons, Henry O. Marcy; First Lieutenants, John S. Allanson, William B. Allyn, John Bigelow, George W. Booth, William S. Buck, Isaac H. Bullard, John H. Butler, A. L. Chamberlain, Daniel H. Chamberlain, Frederick Chandler, William H. Clark, Theodore Collamore, Marcus M. Collins, John H. Conant, George H. Copeland, Calvin A. Damon, Henry C. Dana, Charles M. Duran, Genald Fitzgerald, Charles F. Foster, John C. Gaffney, Thomas L. Harmon, John C. Heyner, Charles A. Holt, George H. Howard, Eli P. Kinsley, Thomas J. Langley, James R. Lawrence, Edward M. Livermore,

Charles A. Longfellow, James J. Lowell, Alphonso M. Lunt, Timothy McCarty, William McDermott, Lebbens H. Mitchell, William Mullett, James Munroe, Isaac H. Pinkham, John H. Rafferty, W. Carey Rice, Darius P. Richards, Edwin F. Richardson, Ezra Ripley, William A. Robinson, Nathan Russell, Jr., Frank N. Scott, Jared Shepard, George B. Smith, George W. Smith, Charles B. Stevens, Frank E. Stinson, William B. Storer, Humphrey Sullivan, Robert Torrey, Jr., Emory Washburn, Jr., Charles P. Welch, Austin C. Wellington, William L. Whitney, Jr.; Second Lieutenants, Leonard C. Alden, Pardon Ahuy, Jr., Rudolph N. Anderson, John V. Aphorpp, Charles P. Blaisdell, George L. Bradbury, Amos W. Bridges, Joseph P. Burrage, Edward F. Campbell, Howard Carroll, William M. Cloney, George Cole, Daniel G. E. Dickenson, Lowell Ellison, George A. Fisher, Thomas J. Fletcher, Nathan G. Gooch, James B. Hancock, Stephen S. Harris, Harrison Hinkley, Henry C. Hobbs, Andrew J. Holbrook, George M. Joy, Henry R. Leighton, John McIntock, Edmund Miles, Daniel S. Parker, William L. Putnam, Brian Rowe, George P. Small, William H. B. Smith, William A. Turtell, William H. Tibbette, Phynon E. Tucker, Oliver H. Webber, Nathaniel S. Wentworth.

Surg.—Rear Admiral, Charles H. Davis; Assistant Surgeon, William Longshaw, Jr.; Henry S. Plympton; Assistant Engineer, John M. Whittemore.

The name of Lieutenant John Read is added.

During a portion of the years 1862 and 1863 a camp of rendezvous and instruction for recruits was maintained on the open lot of land lying partly in North Cambridge and partly in West Somerville, and was designated as "Camp Cameron." Barracks were erected, and a large number of men were quartered here at different times. Bounty-jumpers, however, were afforded too good an opportunity to leave, and it was finally abandoned for Port Independence in Boston Harbor, from which it was more difficult to desert. On one occasion, at least, during the war, it was deemed prudent to put a guard over the munitions of war stored in the arsenal, which, until quite recently, stood on Garden Street, and also over the powder magazine at "Captain's Island." This duty was performed largely by Harvard students, who were thanked by the military authorities.

Nearly three hundred and fifty Cambridge men, of whom about thirty-five were officers, died in the service. On Cambridge Common stands their monument, the corner-stone of which was laid by the mayor and City Council, June 17, 1869. Its inscription is as follows: "THE SOLDIERS AND SAILORS OF CAMBRIDGE, WHOSE NAMES ARE HERE INSCRIBED, DIED IN THE SERVICE OF THEIR COUNTRY, IN THE WAR FOR THE MAINTENANCE OF THE UNION. TO PERPETUATE THE MEMORY OF THEIR VALOR AND PATRIOTISM, THIS MONUMENT IS ERECTED BY THE CITY, A.D. 1869-70." The names appear upon eight tablets, headed by that of Charles Russell Lowell, than whom, at no time and in no country, did braver officer draw sword,—a fit leader of this immortal band.

At the present time Cambridge has two militia companies of infantry, which are both designated by the letter B,—one called the "Massachusetts Guards," attached to the First Regiment, and the other, styled the "Cambridge City Guard," attached to the Fifth Regiment. The former has its armory in the city building at Central Square, Cambridgeport, and the latter's armory is in the city building at Brattle

Square in Old Cambridge. Besides the members of these two organizations, many Cambridge citizens are enrolled as members of different organizations of the State militia, chiefly in the First, Fifth and Ninth Regiments of Infantry, the First Corps of Cadets, the First Battalion of Light Artillery, the First Battalion of Cavalry and in the Signal and Ambulance Corps of the two brigades. The armories furnished by the city are among the very best in the State, and since the introduction of rifle practice as a part of the training of the State force, the city has furnished an excellent rifle range, with barrier and targets of the most approved description. The present range was constructed but a little over a year ago at Cider Mill Pond, on the Belmont line, where a firing shed, with all necessary appointments for heating, etc., was built, so that the militia are able to use the range at all seasons of the year.

The company known as the "Cambridge City Guard" dates its existence from the year 1873, when Mr. John C. Sylvia and others of North Cambridge petitioned the Governor for leave to form a military company in Cambridge, to be attached to the volunteer militia. The petition having been granted, a sufficient number of men were mustered into the service on April 8, 1873, and on the same day George A. Keeler was elected captain, and the company was assigned to the Fifth Regiment as Company "L;" but during the next month the letter was changed to "K," and in December, 1878, the letter was again changed to "B," by which designation it has since been known. Captain Keeler, at the time of his election, was a very young man to hold the position, having hardly more than attained his majority; but, having been trained at school in military drill, and possessed of a dignified presence and a rare control over men, his company was one of the best in the regiment. In the year 1875, under Captain Keeler's command, the company participated with the Fifth Regiment in the centennial observance of the battles of Lexington and Concord, passing over much the same territory as did Captain Thatcher's company a hundred years before, and also in the observance of the centennial anniversary of the battle of Bunker Hill. On this last occasion the company entertained as its guests the Norfolk Light Artillery Blues of Norfolk, Va., many of whose members had fought on the Confederate side during the War of the Rebellion, and which, during the war, as a battery of light artillery, had performed distinguished service. The Norfolk company brought with them, as their guests, General (since Governor) Fitz Hugh Lee, of Virginia, and other eminent citizens of the South, and were banqueted in the evening by the Cambridge company at Porter's Hotel, at which Governor Emory Washburn and other leading citizens joined with the members of the company in welcoming their guests. Many eloquent speeches were made, and on the following day the Virginians were driven about Cam-

bridge and vicinity by the members of the Cambridge company, and were given a dinner at the Prospect House in Waltham. On the 19th the visiting organization was escorted to the Norfolk boat by the City Guard, in whose honor the visitors used one of their field-pieces in firing a salute as they sailed away from the wharf.

In July, 1875, Captain Keeler resigned to attend to his private concerns; but it is interesting to note that this excellent officer re-entered the military service of the State in the following year as a member of the First Corps of Cadets, in which he served for two years. In July, 1886, he again entered the militia as guidon sergeant of the First Battalion of Cavalry, was appointed adjutant on September 3d of the same year, and on January 10, 1889, he was appointed by Brigadier-General Peach, commanding the Second Brigade, captain and aide-de-camp upon his staff. This position Captain Keeler held until the beginning of the present year, when he was appointed by Governor Brackett colonel and assistant inspector-general upon the staff of the commander-in-chief. After the resignation of Captain Keeler, the company elected its first lieutenant, William L. B. Robinson, captain. Captain Robinson remained in command of the company until March, 1879, when he resigned, and the company elected as its commander First Lieutenant William A. Bancroft. Captain Bancroft commanded the company until he was elected colonel of the regiment February 7, 1882. On the 20th of the same month First Lieutenant Thomas C. Henderson was elected captain. Captain Henderson resigned after holding the position for about a year, and on March 12, 1883, First Lieutenant Charles H. Cutler was elected Captain. Under Captain Cutler's command, the company entered a prize drill at Hingham, and obtained the first prize of \$100, and in the winter of 1883-84 a fair was held by the company for the purpose of raising funds, which resulted in putting nearly \$1600 in the company treasury. At the inspection of the company made in the spring of 1884 by the inspector general of the State, the company was marked first in the regiment. Soon after this inspection Captain Cutler resigned, and Captain Henderson was again elected company commander. While Captain Henderson was a second time in command, the company went to New York at its own expense on the occasion of the funeral of General Grant, and formed a part of the military escort.

On February 21, 1887, during the time of the street railway strike, in obedience to a precept issued by the mayor, the members of the company were called to its armory and held in readiness to suppress disorder in case of need, disturbances having broken out previously in different parts of the city. The services of the company were not needed, however; but the promptness with which the members of the company and also those of Company B of the First

Regiment, who were likewise called upon, responded, was recognized both by the mayor and also by the commander-in-chief in general orders. Captain Henderson having been elected a major of the regiment, he was succeeded by First Lieutenant Samuel T. Sinclair, who was elected captain June 11, 1888. During Captain Sinclair's service as commander, the company went to New York with the regiment, which had been detailed, on account of its military proficiency, as escort to the State delegation at the centennial observance of the inauguration of Washington as the first President of the United States. Captain Sinclair resigned November 21, 1889, and was succeeded on December 2, 1889, by First Lieutenant Richard W. Sutton, who had formerly served in the ranks of the company as private, corporal, sergeant and first sergeant, but who had been sergeant-major and afterwards adjutant, and who, at the time of his election as captain of Company B, was paymaster of the regiment. A thorough tactician and a good disciplinarian, with a long experience in the service of the militia, Captain Sutton has already proved himself to be an able company commander, and to-day the company maintains a high standard of efficiency.

During the past fifteen years the policy of the State military authorities has been to disband organizations which have fallen below the standard of efficiency, and that has been kept so high that many a company which formerly would have been considered far above the disbanding limit has found itself outside the militia by reason of orders issued from the State Headquarters. Although subjected to many a rigid inspection, it is believed that at no time since its organization in 1873, has the Cambridge City Guard been found by the State authorities in such a condition as to its military efficiency as to suggest the possibility of its disbandment. And the same can also be said, since the transfer to Cambridge, of its associate company, to which the following relates:—

In the year 1873 Captain Austin C. Wellington, of the Boston "Tigers," was elected major of the First Battalion of Infantry of the Massachusetts Volunteer Militia, consisting of his own and three other companies. Major Wellington at once took steps to improve the efficiency of his battalion, which he afterwards made famous in the militia for the high standard it reached, and as a part of his plan it was determined to transfer one of the companies, the "Washington Light Guard," to Cambridge, where a better class of men would enlist and where the company would receive financial assistance from the citizens. After enough Cambridge men had been mustered in to make a majority of its members, the company voted, under the provisions of the militia law, to change the location of its armory from Boston to Cambridge. This removal of the company was approved, its name was changed to the "Massachusetts Guards" and on January 23, 1874, the company chose as its cap-

tain, Levi Hawkes, than whom no man in Cambridge is better qualified for the position, as his management of the company showed, could have been found. Captain Hawkes was one of the members of James P. Richardson's company, and afterwards enlisted, August 19, 1861, in the Eighteenth Massachusetts Volunteers, in which, as private, corporal, sergeant and sergeant-major of the regiment, which last position he had held for some time previous to the expiration of the regiment's term of service, September 22, 1864, he gained an enviable reputation for his soldierly qualities. Unsurpassed as a drill-master, familiar with military routine and a strict disciplinarian, he might have been a failure as a militia officer, because of the conditions, so different from those to which he had been accustomed in the army. But like a thorough soldier, he grasped at once the needs of a militia company, and during the five years and nine months in which he continued in command he never gave the military authorities nor the citizens of Cambridge cause to bestow anything but praise upon his management of the company. When, after a long term of service, the demands of his private business induced him to resign, it must have been with the consciousness of duty well performed. An ideal citizen soldier, sustaining the martial character in war and in peace—one in the long line of militia captains of whose character and of whose services Cambridge has had no reason to feel ashamed. After the resignation of Captain Hawkes the company elected, on November 3, 1879, the first lieutenant, William E. Lloyd, of Arlington, captain. Captain Lloyd resigned February 26, 1881; the company's next commander was Captain Albert F. Fessenden, elected March 30, 1881. Captain Fessenden was one of the youngest captains in the militia, but proved to be a most capable company commander, and the company, during the two years in which he was in command, maintained its high standard of excellence. Captain Fessenden resigned on April 25, 1883, and was succeeded by First Lieutenant William L. Fox, who was elected captain on April 30th of the same year. While Captain Fox was in command of the company the First Regiment was designated by the commander-in-chief for instruction in heavy artillery drill, and in this branch of duty Captain Fox was the pioneer in the regiment. Captain Fox resigned on January 10, 1884, but afterwards joined another company in the regiment, was appointed its first sergeant and soon became its commander, was transferred to a third company of which he became the captain and in 1888 was transferred to the Fifth Regiment as captain of Company H. Captain Fox holds a high place as a drill-master in the militia and is well known in Middlesex County as an instructor in military drill in the schools of several cities and towns. First Lieutenant Harrison G. Wells was elected captain of the company on January 21, 1884, and administered its affairs so faithfully and capably

as to receive warm praise from Colonel Wellington, the regiment's untiring commander, whose activity in behalf of his regiment was then at its height. Captain Wells resigned July 11, 1885, and was succeeded by First Lieutenant Frank W. Dallinger, the present commander, who was elected captain on the 20th of the same month. Captain Dallinger had enlisted in the company, but so diligently did he apply himself that he mastered a knowledge of his duties in a surprisingly short time and has come to be one of the most active officers in the militia. Well known throughout the State as commander of his company and as a member of the military committee of the Legislature, under him the company has performed its part in the tours of duty which have made the First Regiment famous beyond the borders of the Commonwealth—at the funeral of General Grant in New York in 1885, and at Philadelphia in 1887, where the regiment, by virtue of its attainment to the first place in military excellence, was detailed by the commander-in-chief as escort to the Massachusetts delegation at the Centennial observance of the adoption of the Federal Constitution.

Captain Dallinger has given much attention to instruction in rifle practice, and during one year, at least, every officer and man in the company was a qualified marksman.

It is but just to say that the Cambridge militia companies of to-day are both ably commanded.

An event of much interest to Cambridge people was the observance of the twenty-fifth anniversary of the departure of the company which Colonel Richardson raised for service in the War of the Rebellion. Committees of the City Council and of the citizens at large united in preparations to make the day one long to be remembered by the present generation. A procession passed through the streets headed by Major-General Hincks, himself a veteran of the war and an officer of high rank on the retired list of the regular army, as chief marshal, with a brilliant staff, and containing the two city militia companies, the posts of the Grand Army of the Republic and other veterans of the war, escorting about forty survivors of Richardson's company. The tall form of their now venerable commander again appeared at their head, and the heroic figure of General Chamberlain, their first lieutenant, with his battle-scarred face, was seen once more in their midst. A perfect day and a route of procession lavishly decorated assisted the assembled thousands to greet the hero and his comrades who, a quarter century before, had been ready at the nation's call. Now there were but forty; then there were ninety-five. Years before most of the absent had joined the shadowy army "on Fame's eternal camping-ground;" but on this day none were forgotten, either living or dead. The company was banqueted in the afternoon, and in the evening appropriate exercises, presided over by the mayor of the city, were held in Union Hall, at which those present were privileged to hear

a short address from Colonel Richardson. An incident of the banquet was the presentation of an excellent life size portrait of Lieutenant Richardson—the gift of Mrs. Richardson to her lamented husband's surviving comrades.

Four posts of the Grand Army of the Republic are established in Cambridge, and once a year through the city streets, escorted by the military companies, march the members of this self-limited organization, whose purpose it is, while still its members live, to cherish the memory of their sleeping companions in arms. Nowhere in the broad land is Memorial Day observed with surroundings more impressive and amid associations more suggestive than in the cemeteries at Mount Auburn, at the Soldiers' Monument on Cambridge Common, and in the stately hall of Harvard University, where are recorded the names of those who, taught here in the classic tongue that it is sweet and honorable to die for country, showed to the world by their sacrifice how well they had learned the lesson of patriotism and of loyalty to the flag.

Later in the year the citizens of Cambridge are accustomed to see His Excellency, the Governor of the Commonwealth, on his way to attend the Harvard Commencement, riding in an open barouche, drawn by four horses and escorted by the "National Lancers," now officially designated in the militia of the Commonwealth as Company A, First Battalion of Cavalry, a number of whose members reside in Cambridge. The mounted trumpeters blowing martial music, the guard of honor flanking the carriage of His Excellency, the brilliantly-uniformed staff in carriages which follow, the scarlet coats and nodding plumes of the troopers with their pennoned lances glistening in the sunlight, all suggest the pomp of the royal governors of the eighteenth century, which custom has imposed upon their republican successors, some of whom, it must be confessed, if the spectators may judge from the expression of their countenances as they pass through Harvard Square, are in doubt whether to affect the solemnity of a funeral or the hilarity of a picnic. But, distasteful or otherwise as the custom of taking escort may be to the eminent citizen selected for the time being to fill the executive chair, it is to be hoped that it will long be observed when the official head of the Commonwealth pays his annual visit to the university upon which that Commonwealth bestowed so much assistance in the days of the generations long passed away, when perhaps the custom itself first arose; if, indeed, it be for no other purpose than to remind the public of the care which the fathers of our Commonwealth took to found a college ere scarce they had founded a state.

Within the past few years both of the regiments to which the Cambridge companies are attached have been called here to perform the mournful duty of an escort at the last sad rites paid to officers beloved in their respective regiments—the Fifth, in the spring of 1886, at the burial of Colonel Ezra J. Trull, an officer

of General Peach's staff, and captain of the Ancient and Honorable Artillery Company, who commanded the regiment from 1875 to 1882, and the First, in the fall of 1888, at the burial of Colonel Wellington, stricken down while holding the commission as commander of the regiment, which he had received in 1882. Both colonels were veteran officers of the War of the Rebellion, active in business, social and political matters, and both had spent a score of the best years of their lives in the militia service. Both rest in Mount Auburn, where, a farewell salute, echoed the triple volleys of the regiments they had commanded, and where sounded, in the sweet notes of the bugle, the soldier's good-night. The Fifth Regiment, in 1886, assembled in Cambridge for its annual drill. By permission of the authorities of Harvard College, tents were pitched on Jarvis Field, and a full day's duty was performed by the command, including guard mount and battalion drill in the forenoon, and after dinner, in the armory of Co. B, in the afternoon, a skirmish drill by bugle, in which blank cartridges were used, a review by the mayor of the city and a dress-parade, followed by muster for pay. The evolutions of the regiment were witnessed by thousands of spectators, to many of whom the sight was a novel one. The same regiment assembled here again in the fall of 1888, on the day of the mobilization of the entire State force, when five thousand men were concentrated in Boston in a few hours' time, were put in motion on the minute previously ordered, were marched over a route of parade, and were dismissed and sent to their homes as quickly as they had come together, without disorder, and with as much precision of movement as though it were a daily event of their lives.

CHAPTER XI.

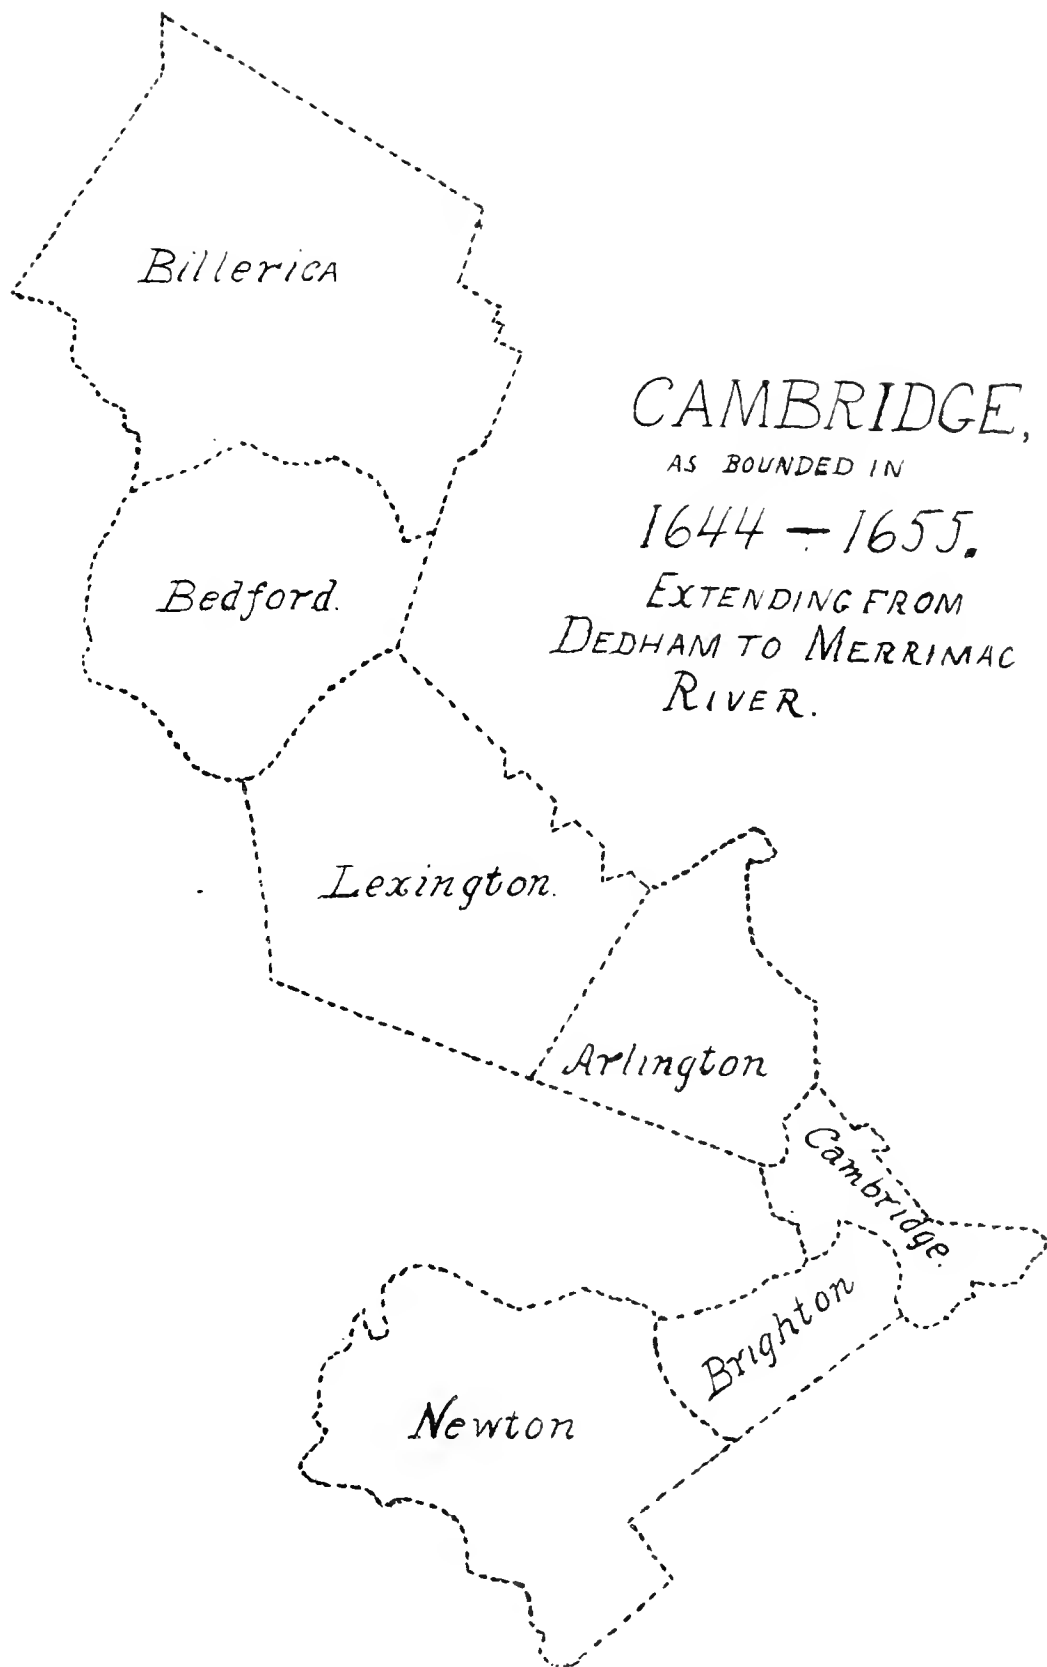

CAMBRIDGE (Continued).

CIVIL HISTORY.¹

BY JOHN LIVERMORE.

LIKE most of the ancient townships of Massachusetts, Cambridge has had its boundary lines changed many times, both by enlargement and diminution.

¹ In giving this sketch of the Civil History of Cambridge I am greatly indebted to the veteran historian of Cambridge, Rev. Lucius R. Paige, D.D., who has kindly assisted me in many ways, and without whose aid and encouraging words the writer would never have consented to venture upon what to him was an untrodden field, and for the performance of which he would gladly have yielded the task to some one more fitted for the work. Dr. Paige has not only given much verbal information, but has permitted large quotations from his elaborate and valuable work. I am also indebted to Walter W. Pike, Esq., the present City Clerk of Cambridge, for his assistance in enabling me to peruse the ancient records of the town, now in his custody. My only apology for what I have furnished for this work is my great interest and affection for the place where I was born and where I have always resided.

Newton

Charlestown and Watertown had been already settled soon after the arrival of Winthrop in 1630. Between these two towns a place was selected which seems to have been designed as a "fit place for a fortified town," and what is now part of the city of Cambridge was the chosen spot. Houses were erected here in 1631 by Deputy-Governor Thomas Dudley and his associates. They called it New Towne, by which name it was known until May 2, 1638, when the General Court "Ordered that New Towne shall henceforward be called Cambridge." No other act of incorporation is to be found on record, but the Court, March 3, 1635, agreed that "New Towne bounds shall run eight miles into the country from their meeting-house," and an additional grant was made, June 2, 1641, of "All the lands lying upon Shawshine Ryver and between that and Merrimack Ryver are granted to Cambridge." This included the present town of Billerica, and parts of Bedford and Carlisle. The township had now attained its full size. In shape it was somewhat like an hour-glass, about thirty-five miles in length and wide at each extremity, and very narrow at its central part, where the original settlement was made, and where most of the inhabitants then resided.

Such was its shape and size in 1651, but, in 1655, Cambridge lost a part of its enormous length, for in that year an amicable arrangement was made between the town and those of its people who had erected houses at Shawshine for a separation, which was confirmed by the General Court, and Shawshine was incorporated as a town by the name of Billerica.

In March, 1696, the "Farms," so-called, in the northwesterly part of the remaining territory, organized a church and parish, and in March, 1713, they were incorporated as a separate and distinct town by the name of Lexington, upon terms already agreed upon with the town of Cambridge. From this period Cambridge lost none of its territory for nearly a century. The northwesterly part of what was left of the ancient town was made a separate precinct in 1732, and styled the Second Parish, or, more generally, Menotomy, and was subsequently incorporated, in 1807, as a town under the name of West Cambridge, which name was changed, in 1867, to Arlington.

At the same time that the Second Parish was made a township, the Third Parish, then called Little Cambridge, was set off from the parent town, by the name of Brighton, and is now the Twenty-fifth Ward of the city of Boston, having been annexed to that city by act of the Legislature, May 21, 1873, to take effect January 1, 1874. Since that time several attempts have been made for a further division, but its incorporation as a city in 1846 has removed most of the difficulties which previously existed, and there is no reason to expect any further changes in its boundaries.

Cambridge, the original shire-town of Middlesex County, has been always a place of great interest, and

has played an important part in the history of our country. It is not too much to say that there is not, on this continent, a place of more historical interest, or one that has been the home of more illustrious persons, than this old town of Cambridge.

It was here that Harvard College, the first institution of learning in the country, was founded in 1636, and it has maintained its high standing for more than two centuries and a half as the leading university of the land. Coming down to later days, we find that Cambridge has always borne an important part in the history of the nation. The limits of this article will not admit of more than a glance at the many interesting events that took place here during the American Revolution. The march of both divisions of the Royal army on the memorable 19th of April, 1775, was through the limits of this town. In West Cambridge the Royal convoy of provisions was, the same day, gallantly surprised by the aged citizens, who stayed to protect their homes while their sons pursued the foe. Here the first American army was formed, and from this place was detached that Spartan band, on the 17th of June, that immortalized the heights of Charlestown, and consecrated that day with blood and fire to the cause of American liberty. The venerable elm still shades the southwestern corner of our Common, where Washington first unsheathed his sword at the head of an American army, and there are still standing, in a good state of preservation, some of the rural redoubts that formed the simple lines of circumvallation, within which a half-starved militia held the flower of the British army blockaded in Boston. But the plough has done what the English batteries could not do, and leveled some of them to the earth; but the ancient house where were Washington's headquarters, and which was so long the home of the poet Longfellow, is still standing in all its ancient grandeur, and is held in high veneration at the present day.

Among the many distinguished persons who have had their residence in Cambridge, a few only can be named:

Elbridge Gerry, Governor in 1810-11, and Vice-President in 1813-14, resided in what is now called Elmwood (the home of the poet James Russell Lowell), William Bostis, Governor in 1825, Richard Dana, Richard H. Dana, the poet, Richard H. Dana, Jr., Margaret Fuller, (Countess D'Ossoli), George Livemore, the merchant and scholar, Alvan Clark, Oliver Wendell Holmes, Thomas Dowse, James Russell Lowell, Alfred Lee, Thomas Wentworth Higginson, Frederick Henry Hedge, D.D., and many others.

When General Burgoyne surrendered his army as prisoners of war, in October, 1777, they were ordered to Cambridge, where they arrived during the following month. Burgoyne was quartered in the Borland House, General Riedesel in the Lechmere House, and the soldiers occupied barracks on Prospect and Winter Hills, within a mile of Washington's head-

quarters. Here they remained as prisoners of war for more than a year, when General Burgoyne was sent to Rhode Island on the 5th of April, 1778, and the troops were marched to Virginia on the 10th of November of the same year. While these troops were quartered in and about Cambridge, vexatious collisions were of frequent occurrence, and these two, of a serious character, produced painful excitement.

In January, 1778, Colonel Henry, who was in command at Cambridge, being treated insolently by a British soldier, pricked him with a sword or bayonet. General Burgoyne presented a complaint against Colonel Henry. A spicy correspondence ensued, and the case was duly examined by court-martial, and Colonel Henry was acquitted.

A British officer was shot by an American sentinel while attempting to pass contrary to orders. A jury of inquest, consisting of fourteen good and lawful men of Cambridge, was held, and rendered their verdict "that the said Richard Brown was shot with a firearm by a sentinel in attempting to pass the sentinel with two women after being properly challenged by said sentinel, and so came to his death."

The War of 1812 was unpopular in Cambridge, as it was in New England generally. A certificate is on file that the Cambridge Light Infantry were in camp fifty-one days, commencing September 10, 1814. To Cambridge rightfully belongs the honor of organizing the first company of militia in the United States which was enlisted expressly for the defense of the government in the War of the Rebellion. Two days after the President's proclamation calling for 75,000 volunteers to serve for three months, and the next day after the Governor issued his orders, this company responded on the morning of April 17, 1861, having in its ranks ninety-five men, some of whom had joined on the march to Boston. It was under the command of Captain James P. Richardson, a great-grandson of Moses Richardson, who was slain on the day of the battle of Lexington—April 19, 1775.

As has been already stated, "The New Town," or Cambridge, was originally established for the purpose of building a fortified place, about six months after the arrival of Winthrop and Dudley with the fleet of emigrants in 1630. As early as February 3, 1631, it was ordered by the Governor and Assistants that "there should be three score pounds levied out of the several plantations within the limits of this patent towards the making of a pallysade aboute the new towne."

The line then established was substantially the same as that which now divides Cambridge from Somerville. The line between Cambridge and Watertown was not definitely established until April 7, 1635, and, in the mean time, on complaint of "straitness for want of land," at the court held May 14, 1634, leave was granted for the inhabitants of "Newe Towne" "to seek out some convenient place for them, with promise that it shall be confirmed unto them,

provided they doe not take it in any place to prejudice a plantation already settled." After examining several places, they accepted the territory which embraced Brookline, Brighton and Newton. Brookline, then called Muddy River, was granted, on condition that Mr. Hooker and his congregation should remain there. They removed, however, to Connecticut, and this grant was forfeited, but the grant that was afterwards named Brighton and Newton held good.

Newton was called *Cambridge Village* until the year 1679, when it was set off from Cambridge, and made an independent township. The doings of the Court are missing in this case, and, therefore, the conditions upon which the separation took place are unknown, but the town record is sufficient to establish the fact of a separation. In 1691 Cambridge Village was given the name of Newton, twelve years after it had been made an independent town.

The "Newe Towne," as *Cambridge*, seems never to have been incorporated by specific act. The first transaction recorded bears date March 29, 1632, when the town book of records was opened, since which time an unbroken record has been preserved. The first record was the "agreement by the inhabitants about the paling in the neck of land." The next record in order, December 24, 1632, provided for regular meetings for the transaction of business, which were to be held "the first Monday in every month in the afternoon within the meeting-house, and within half an hour of the ringing of the bell, and that every one that makes not his personal appearance and continues there until the meeting is ended shall forfeit for each default 12 pence, and if not paid before the next meeting, then to double it, and so on until it be paid." At the next meeting, January 7, 1633, several votes were passed to secure the beauty and safety of the town, to wit: "Ordered that no person whatever shall set up any house in the bounds of this town, without the consent of the major part thereof," and it was "Further agreed by joint consent that the town shall not be enlarged until all the vacant places be filled with houses;" and "Further it is agreed that all the houses within the bounds of the town shall be covered with slate or boards and not with thatch," and "Further it is ordered that all the houses shall stand and range even on each man's own ground, six feet from the street." After this meeting, January 7, 1633, no other is recorded until August 5, 1633, from which date there is a consecutive record of the monthly meetings, and a few selections from the orders which were adopted at these meetings may serve to illustrate the primitive condition of the town. August 5, sundry lots were granted for cow yards. September 2, it was "Ordered that whosoever hath a tree lying across a highway and doth not remove it within seven days, or whosoever shall hereafter fall any tree and let it lie across a highway one day shall forfeit the tree." November 3, 1634, it was "Ordered

that every inhabitant shall keep the street clear from wood and all other things against his own ground, and whosoever shall have anything lie in the street above one day after the next meeting shall forfeit five shillings for every such default."

Up to this time all the legal voters of the town had met from month to month to manage their public affairs. Power was now delegated to a few individuals, at first styled "Townsmen" and afterwards Selectmen, to transact the whole business of the town until the next November, when a new election might be had. It was further "Ordered that whatsoever these Townsmen thus chosen shall do in the compass of their time, shall stand in full force, as if the whole town did the same, either for making of new orders, or altering of old ones," and it was "Ordered that whosoever they shall send for, to help in any business, and he shall refuse to come, they shall lay a fine upon him and have power to gather it."

At the annual town-meeting, November 20, 1648, it was "ordered that there shall be an eight penny ordinary provided for the Townsmen every second Monday of the month upon their meeting day, and that whoever of the Townsmen fail to be present at the ringing of the bell (which shall be half an hour after eleven of the clock) he shall lose his dinner and pay a pint of sack or the value to the Townsmen present, and the like penalty shall be paid by any that shall depart from the rest without leave. The charges of the dinner shall be paid by the Constable out of the town stock." This practice, thus inaugurated, of dining or partaking of other refreshments at the public expense, seems to have been very generally observed by the selectmen for nearly two hundred years, not indeed at every meeting, nor was the expense always limited to eight pence each. In 1660 there came as passengers in a ship which arrived from London at Boston, Colonel Whalley and Colonel Goffe (two of the late King's judges). The next day, without trying to disguise themselves, they came and resided in Cambridge from July 28, until the 26th of the following February, when they went to New Haven where they arrived March 7. The particular reason why they selected Cambridge for their temporary residence does not appear. A principal citizen of the town, Edward Goffe, was the namesake of one of the regicides, and it is presumed was a relative, but of this there is no positive proof.

At a very early period after the settlement of Cambridge the question of licensing taverns or ordinaries was as difficult to settle as it is at the present day. Great caution was manifested in the appointment of "grave and respectable persons to keep and sell intoxicating drinks." The first person licensed by the General Court, September 8, 1636, to keep a house of entertainment at Cambridge was Thomas Chisholme, a deacon of the church, and afterwards steward of Harvard College. He was licensed to draw wine May 13, 1640, and his place of business was situated on the

corner of Winthrop and Dunster Streets, adjoining the lot where the first meeting-house was erected, so that the first church edifice and the first tavern in Cambridge stood side by side.

The first person allowed to sell wine and "strong water" in Cambridge was Nicholas Danforth, a selectman, a representative in the General Court and one of the most active and honored citizens. He died about a month after the date of his license.

The next year Mr. Nathaniel Sparhawk was permitted to draw wine and strong water for Cambridge. He also was a deacon of the church and highly respected.

We come next to the establishment of an ordinary long known as the Blue Anchor Tavern, December 27, 1652. The townsmen granted liberty to Andrew Belcher to sell beer and bread for entertainment of strangers and the good of the town. Mr. Belcher was a trustworthy man and very respectably connected, and the General Court granted him a license June 20, 1654, to keep a house of public entertainment in Cambridge. Mr. Belcher was licensed for the last time in April, 1673. The same year he died and the following year his widow was granted a license, which was continued from year to year until she died, June 26, 1680. She was succeeded by her son, Andrew Belcher, Jr., who continued the business until he sold the estate to his brother-in-law, Mr. Jonathan Remington, who performed the duties of host until his death, in 1700. His widow, Martha Remington, carried on the business until 1705, when she sold out to Joseph Hovey the estate, commonly known as the Blue Anchor. In 1737 the sign of the Blue Anchor was transferred to an estate on the westerly side of Brighton Street, midway between Harvard Square and Mount Auburn Street. In 1796 it was sold to Israel Porter, who is well remembered by many now living, and who died May 30, 1837, aged ninety-nine years, according to the town records.

A part of the old tavern-house remains standing. At this house the selectmen met for the transaction of public business and probably paid for their room by their patronage of the bar. Among the bills remaining on file is the following:

"THE SELECTMEN OF THE TOWN OF CAMBRIDGE,
To Eben^r Bradish, Tr.

	£	s.	d.
March 29, 1769, to dinners and drink	0	17	8
April, 1769, to flip and punch	0	2	0
May 1, " to wine and eating	0	6	8
" " to dinners, drink and suppers	0	18	0
" " to flip and cheese	0	4	0
July, " to punch	0	2	8
August, " to punch and eating	0	4	0
October, " to punch and cheese	0	3	7
" " to dinners and drink	0	12	0
Dec., Jan. and Feb., to sundries	0	12	0"

Besides innkeepers the County Court licensed others to sell liquors by retail. Two of these retailers in their old age found it necessary to appeal to the County Court for relief, and their petitions are still preserved on file, to wit:

"To the honored Court assembled at Cambridge: 'all prosperity wished.' These are to inform you that I was brought up in an honest collige in cild England, where we sold all sortes of goodes and strong waters without offence. I have bine now in forty-nine yerres and upward in this towne and have payed to the magistrate and ministrate and to town charges and all willingly, that I have helped to bear the burthen and heate of the daye, and now I am 74 yerres and upward, yet I can abide in my shope and attend to my collinge, though but little is to be gotten by any thinge I can by, that my trade will not maintain my family and other charges of the towne and countrey and ministrie. There being so many sellers that never served for a trade, I desire that it be no offense to any that I continue in that collige I was brought up to and may have your leave to sell rome, it being a commodity salla-bell and allowed to be brought to this country, and many that was formerly a commodity is not now. Hoping me my request, I rest yr servant,

"EDMUND ANGER.

"April 7th, 1686."

In 1740 an epidemic prevailed in Cambridge, called "throat distemper," similar to the influenza, which was recently prevalent. The disease was thus described by Thacher: "The amazing rapidity with which it spread resembled more a storm than the natural progress of a disease from any contagious source, and as it did not incapacitate from pursuing their ordinary avocations, a constant coughing and wheezing was heard in the streets and in public assemblies little else was heard or attended to." It proved so serious here, however, that the students were dismissed from college and the following vote was passed:

"WHEREAS, by the holy Providence of God, several families in Cambridge are visited with the throat distemper, and the President and Stewards are under very afflicting circumstances by reason of that mortal sickness, and whereas we apprehend that there is danger of the distemper spreading as it hath done in other places and that the Students are much endangered thereby, therefore,

"*Resolved*, that they be immediately dismissed from College and that the vacation begin from this time, and that the Commencement for this year begin from this date or from the expiration of the vacation."

In 1721 Cambridge was visited with the small-pox, and there were many deaths from this scourge. In January of that year the General Assembly of this Province met at Cambridge, but there was not a quorum, and they adjourned to meet a few miles from this place on account of the small-pox being now in the heart of the place. The town records show that a committee was appointed January 29, 1721, "to provide for the relief of those persons and families as may stand in need thereof in case the small-pox continues to spread among us." Inoculation for the small-pox was first introduced at this time in Boston by Dr. Boylston, who encountered much opposition, but out of 286 persons inoculated only six died. In 1739 Cambridge was again visited by the same disease, when it raged with alarming violence. Nine town-meetings were held between March 20th and April 3d to devise means for its extermination. The college studies were broken up for a time, but the students were recalled by an advertisement dated May 2, 1739, and published in the *Weekly Journal*: "The small-pox having been lately at Cambridge, which occasioned the dispersion of the scholars, to escape danger, but now through the Divine goodness

that distemper having utterly ceased here, it is agreed and ordered by the President and Tutors, that the undergraduates forthwith repair to the College to follow their studies and stated exercises." Benjamin Wadsworth, Pres.

Again, in 1752, the small-pox caused the cessation of study in college from April 22d until September 2d, and the corporation voted May 4th "that there be no public commencement this year," and in October voted to have no winter vacation. The town appointed a committee May 18th to devise measures to prevent the spread of the disease, and on the 3d of October voted "that a public contribution be in the three parts of the town next Lord's day, come seven night, for the speedy raising of money to defray the charges the town have been at in the support of sundry persons lately visited with the small-pox belonging to this town."

Rev. John Cotton, in a letter dated November 7, 1717, and preserved in the library of the Massachusetts Historical Society, says that at the funeral of Hon. Andrew Belcher "All the ministers there had scarves and gloves. They say 50 suits of cloaths were made. All first cousins, Remington, Blowers, etc., were put into mourning. John Coleman, Caswell, etc., all that had been apprentices to him also. Ninety dozen of gloves were bought and none of any figure but what had gloves sent 'em." When the practice of furnishing mourning and paying all the funeral expenses was abolished is not clear, but in 1764 we find this record: "Died, in Cambridge, in the 78th year of her age, Mrs. Hannah Burrill, relict of the late Theophilus Burrill, Esq., and sister to the Rev. President Holyoke, at whose house she had for a long time resided. Her remains were interred without the expense of mourning apparel, agreeable to the laudable practice in Boston. As this is the first example of the kind in this town we doubt not it will acquire imitation, as it was introduced by a gentleman of so worthy and respectable a character." It is to be regretted that the efforts made by President Holyoke and others to abolish such extravagant and useless customs were ineffectual, for we find it prevailed some years later.

Bill of expenses for the funeral of Edmund Goffe, October, 1740, now on file at the Probate Office, East Cambridge:

	£	s.	d.
" To 5 pairs of gloves at 7s. 6d. and a mourning weed	1	17	6
" 1 pair of shoe buckles 1s., knee buckles 4s. 6d., black studs 1s. 3d.	0	11	9
" a hat 6s., mourning wig 25s.	8	0	0
" a pair of gloves, black silk 25s.	1	5	0
" a suit of mourning for the widow and a pair of shoes	30	0	0
" another pair of black silk gloves 25s.	1	5	0
" ten rings of Mr. Hurd, as per account	23	14	0
" mourning for my Aunt Barnard	33	6	0
" the same for my Sister Dana	33	6	0
" pair of gloves for her husband	0	8	0
" cash paid the taylors for making the cloths	3	19	0
" two gallons of wine 3s., a dozen of pipes and two papers of tobacco 5s.	1	15	0

To cash paid for bricks and bricking the grave . . . 1 10 0
 " stones to cover the grave 0 10 0
 " November 8, 1671."

This bill was allowed by the judge, though the estate was soon afterwards rendered insolvent.

At a town-meeting held in connection with the church, July 17, 1671, an earnest call was given to Uriah Oakes to come over to this country and to settle over the church in Cambridge. Mr. Oakes accepted the call, and the town voted "that the deacons be furnished and enabled to provide for the accommodation at the charge of the church and the town, and to distribute the same seasonably for the comfort of Mr. Oakes and his family, and that half a year's payment be made forthwith by every one, and the one-half of it be paid in money and the other half in such pay as may be suitable to the end intended." The church and town united in keeping the 17th day of January, 1676, as a day of thanksgiving, that the loss sustained by the death of Mr. Mitchell (their former pastor) was thus supplied.

A glimpse of the customs of that period is obtained from the following account of the disbursements for the ordination of Mr. Oakes as pastor of the church of Cambridge, which took place Nov. 8, 1671:

	£	s.	d.
" 3 bushels of wheate	0	15	0
2½ " malt	0	10	0
4 gallons of wine	0	18	0
for beefe	1	10	0
" mutton	1	4	0
" 30 lbs. butter	0	15	0
" foules	0	14	0
" sugar, spice and fruit	1	0	0
" labour	0	6	0
" washing table lining	0	7	0
" woode	0	7	0
" suit, bread &c.	0	9	0
	9	17	3

" Paid by contribution the Sabbath before ordination."

Cambridge was very early designated (and before the establishment of counties) as one of the four towns where judicial courts should be held, and when the Colony was divided into counties, May 10, 1643, the courts continued to be held in Cambridge, as the shire-town of Middlesex; but as the business increased it was ordered, October 19, 1652, that two additional sessions should be held for this county in each year, both at Charlestown. These courts were continued for many years, and a court-house and jail were erected in that town, and at a still later date courts were established and similar buildings were erected in Concord. These places were regarded as "half-shires," but the county records were never removed from Cambridge, excepting temporarily during the usurpation of Sir Edmund Andros, who appointed Capt. Laurence Hammond, of Charlestown, clerk of the courts and register of probate and deeds, who removed the records to Charlestown. In 1689 the General Court ordered Capt. Hammond to surrender and deliver to the order of the county of Middlesex the records of that county and all books of record

and files belonging to said county in his custody; and he not obeying the order, the marshal-general was ordered to arrest him forthwith, with power to break open his house if necessary. The records were at length surrendered. By the records of the General Court it appears that on the 8th of June, 1716, Colonel Goffe complained that no office for the registry of deeds was open in Cambridge, it being the shire-town of Middlesex; a hearing was ordered, and on June 13, 1717, it was resolved by the whole Court that Cambridge was the shire-town of said county, and on the following day it was voted in concurrence "that the public office for registering of deeds and conveyances of lands for the County of Middlesex be forthwith opened and kept at the shire-town, Cambridge." The order was immediately obeyed. When or where the building erected in which the judicial courts were first held in Cambridge is uncertain, but it was destroyed by fire during the year 1761, and the Court passed this order: "Upon information that several records belonging to this county were casually burned in the burning of the house where the court was usually kept, this Court do order that the Recorder take care that out of the *foul* copies and other scripts in his custody he fairly draw forth the said records into a book and present the same to the County Court when finished; and that the Treasurer of the County allow for the same." The first court-house of which we have any definite knowledge was erected about 1708, in Harvard Square, nearly in front of the present Lyceum Hall. Deacon Nathaniel Hancock, Jason Russell and Lieut. Amos Marrett were the building committee. The County Court had previously ordered "that there be allowed out of the County Treasury the sum of thirty pounds towards the erecting a suitable Court-House for the use of the County in the town of Cambridge, one-half to be paid at the raising and covering, and the other half at the finishing of the same; the said house to be of not less than four-and-twenty foot wide and eight-and-twenty foot long, and of height proportionable." This house, diminutive as it now appears, was used by the courts for about a half a century. In 1756 the Court of Sessions appointed a committee to provide better quarters, either by enlarging the old house or erecting a new one. The town "voted, Nov. 2, 1756, to pay its proportion of the cost, provided the materials of the old meeting-house, now being taken down, be given and applied to that use, together with the town's proportion of the present Court-House." A lot of land was purchased where Lyceum Hall now stands, and a house was erected more spacious than the former one, and was occupied by the courts for more than fifty years. An ineffectual attempt was made in 1806, by prominent men in Cambridgeport, to erect a court-house on the easterly side of what was long called the "*meeting-house lot*," bounded by Broadway and Boardman, Harvard and Columbia Streets. Andrew

Cragie and his associates were more successful. Having given ample grounds and erected a court-house and jail at an expense of \$24,000, they were rewarded by the removal of the courts and records, in 1816, to the edifices prepared for them at what is now East Cambridge, where they remain to this day. The old court-house, having been abandoned by the county, was used for town and parish purposes until April 19, 1841, when the town quit-claimed all its rights and interest in the house and lot for the nominal sum of one dollar, in trust for the use of the proprietors of the Lyceum Hall to be erected on the premises; provided, nevertheless, that the grantees "do and shall forever grant and secure to the Town the right of the inhabitants of the First Ward, in said Cambridge, to the use of the Hall for all necessary meetings of the Voters of said Ward." The old court-house was removed to Palmer Street, where it still remains, being occupied for secular purposes. The town protested most earnestly against the removal, but all in vain.

CAMBRIDGE AS A CITY.—After several attempts to divide the ancient town of two or more centuries, and in consequence of the rapid increase of its population, it was found imperatively necessary that some change should be made in the management and administration of its municipal affairs, and as every attempt to divide the town had been defeated, at a town-meeting January 5, 1846, several citizens, before leaving the town-house, signed a petition requesting the selectmen to appoint a legal meeting to see if the town would ask for a city charter, and accordingly the inhabitants met January 14, 1846, and voted that the selectmen be instructed to petition the Legislature for the grant of a city charter, and Simon Greenleaf, Owen S. Kieth, Abraham Edwards, Sidney Willard, Thomas Whittemore, Isaac Livermore, William Parmenter, Ephraim Buttrick, Thomas F. Norris and the town clerk were appointed a committee to draft a bill in conformity to the preceding vote, and to use all proper means to procure its passage, and an act to establish the city of Cambridge was approved March 17, 1846, by the Governor, and on March 30th the inhabitants in town-meeting voted to adopt the act by a vote of 645 in the affirmative and 224 in the negative, whereupon the result was announced by the moderator and proclamation was made that the town of Cambridge had accepted its charter, and become a city.

The new government was organized May 4, 1846, James D. Green having been chosen mayor; the City Council consisted of six aldermen and the Common Council of twenty; the mayor and aldermen chosen by the inhabitants of the city at large voting in their respective wards. The Common Council were appointed among the several wards giving Ward One, five members; Ward Two, nine members, and to Ward Three, six members.

Isaac Livermore was the first president of the Com-

mon Council, and Charles S. Newell, clerk; Lucius R. Paige, the historian of Cambridge, was chosen city clerk, and Abel W. Bruce, treasurer; Roland Litchfield, Jr., messenger.

Mayors.—The following is a list of mayors from 1846 to 1890: James D. Green, from May, 1846, to April, 1848; Sidney Willard, April, 1848, to April, 1851; George Stevens, April, 1851, to April, 1853; James D. Green, April, 1853, to April, 1854; ¹ Abraham Edwards, April, 1854, to January, 1855; Zebina L. Raymond, January, 1855, to January, 1856; John Sargent, January, 1856, to January, 1860; ² James D. Green, January, 1860, to July 24, 1861; ³ Charles Theo. Russell, July 31, 1861, to January, 1863; George C. Richardson, January, 1863, to January, 1864; Zebina L. Raymond, January, 1864, to January, 1865; J. Warren Merrill, January, 1865, to January, 1867; Ezra Parmenter, January, 1867, to January, 1868; Charles H. Saunders, January, 1868, to January, 1870; Hamlin R. Harding, January, 1870, to January, 1872; Henry O. Houghton, January, 1872, to January, 1873; Isaac Bradford, January, 1873, to January, 1877; Frank A. Allen, January, 1877, to January, 1878; Samuel L. Montague, January, 1878, to January, 1880; James M. W. Hall, January, 1880, to January, 1881; James A. Fox, January, 1881, to January, 1885; William E. Russell, January, 1885, to January, 1889; Henry H. Gilmore, January, 1889, present incumbent.

Since the organization as a city, Cambridge has increased rapidly in wealth and population, and is now the second city in valuation in the Commonwealth, and from fourteen thousand inhabitants in 1846, it has now upwards of seventy thousand, and is still increasing, and with its schools and other institutions it presents many attractions to those seeking a residence near the metropolis of New England.

Here is located Mount Auburn, the first extensive rural cemetery in the country (second only to the celebrated Père Lachaise, of Paris), where repose the remains of many of our illustrious dead, and which is much visited by strangers from all parts of the world.

The Agassiz Museum of Zoology is open at all times for visitors, where can be seen the largest collection of objects of natural history to be found on this continent, if not in the world, and the Peabody Museum also possesses many objects of great interest not to be found elsewhere. The Botanical Garden, although belonging to and connected with the University, is accessible to visitors at all times, and contains many rare specimens of plants and flowers not to be found elsewhere. The Harvard Gymnasium is also a place of much interest; Memorial Hall, with its portraits of many distinguished persons, and the Sanders Theatre, connected with it, are places of much interest and visited by strangers, while the ante-Revolutionary relics about the town, such as Washing-

¹ Municipal year changed.

² Resigned.

³ First elected by the City Council.

ton's headquarters and the many residences in Tory Row, as well as the homes of Longfellow, Lowell and Holmes, make it an attractive spot for the visitors from all parts of our country, as well as the travelers from foreign lands.

The extensive manufacturing industries will be alluded to in another chapter.

Since the establishment of Cambridge as a city many public improvements have been made which have added greatly to its prosperity and importance, both as a place of residence, as well as a desirable location for manufacturing purposes.

The city is well supplied with an abundance of pure water from Fresh Pond, which has recently been connected with Stony Brook, and the supply is abundant for many years to come, and the quality of the water is excellent. The drainage has been much improved and is now all that can be desired.

After the opening of West Boston Bridge in 1793 that part of the town called Cambridgeport increased rapidly and was in a highly flourishing condition, but the political disturbances of the country were very disastrous to its prosperity. The Embargo proclaimed in December, 1807, and the war with Great Britain in 1812 paralyzed the commercial interests of the whole country. Cambridge felt this the more keenly because it involved so many of her citizens in distress; many were thrown out of business and some were reduced to absolute want, and a rapid depreciation in the value of real estate followed, and many of the owners of land purchased while the country was prosperous were financially ruined. The general stagnation which ensued was so great that it did not recover for many years and the hope of making it a great commercial centre seems to have been given up and abandoned. In common with many towns in New England, Cambridge earnestly protested against the Embargo. A town-meeting was called August 25, 1808, when a committee consisting of Francis Dana, Royal Makepeace and Samuel P. P. Fay reported an address which was adopted "almost unanimously," and the selectmen were directed to forward it to the President of the United States, and to which a reply was very soon received from the President, which is still preserved in the office of the city clerk and signed "Th: Jefferson," September 10, 1808. This protestation and hundreds of similar character by the people of New England were in vain. With a very decided majority of voters opposed to the war and smarting under the losses resulting from it, the town did not enter with enthusiasm into its support, and, in fact, no reference to the war during its continuance is found on the town record; but a few

months after its close, May 8, 1815, the town voted that four dollars be allowed to the militiamen drafted and called out to the defence of the State.

When the news of peace arrived in February, 1815, there was a general outburst of joy in Cambridge, and meetings were held for prayer and praise, and on February 23d a great celebration took place, on which occasion an address by President Kirkland was delivered and then other services appropriate to the occasion. A procession was formed and a large handbill announcing the order of services and the order of the procession is now on file with the Massachusetts Historical Society, presented by the Hon. John Davis.

Order of Procession.

The procession will be formed at University Hall and move at 11 o'clock in the following order to Rev. Dr. Holmes' meeting-house:

Military Escort,

Music,

Chief Marshal,

Strangers,

Resident Graduates,

Students,

Citizens of Cambridge,

Marshal.

Order of Exercises.

Anthem,

Prayer by Rev. Dr. Ware,

Reading of the Holy Scriptures,

Hymn written for the occasion,

Address by the President,

Poem by Mr. Henry Ware,

Prayer by Rev. Dr. Holmes,

Anthem,

Benediction.

In looking backwards two hundred and fifty years to the time when Winthrop and Dudley began to organize a colonial settlement here for the purpose of building a fortified town for security from the Indians and wild beasts, we cannot fail to see that all the way down is *one broadening path, from the beginning until now*; venerable and honorable as is the past, our faces should be set toward the future; we would not go backward if we could. Religion is still the same, but its garment of doctrine and formula has been renewed more than once, and in all that makes life worth living we are far in advance of our fathers. Our food is better, our clothing is better, our health is better, our children are healthier, our books are better, our homes are more comfortable, and although our fathers were giants and we but pigmies, we are taller than they, for we stand upon their shoulders, and while we honor their memories, let us hand down to those who shall come after us, the opportunity and the purpose for a gain and a growth greater than our own.

CHAPTER XII.

CAMBRIDGE—(Continued).

BANKING AND INSURANCE.

BY JOHN LIVERMORE.

Cambridgeport National Bank—Middlesex Bank—Charles River Bank—Cambridge Market Bank—Cambridge City Bank—Cambridge National Bank—Howard Bank—Cambridge Savings Bank—East Cambridge Five Cent Savings Bank—North America Savings Bank—Cambridge Mutual Fire Insurance Company.

CAMBRIDGE, although a wealthy town and a place of considerable business, had no banking facilities of its own until the year 1826, but transacted all its financial affairs in Boston, through the agency of the Suffolk Bank.

In March, 1826, the CAMBRIDGE BANK was chartered with a capital of \$100,000, and was organized by the choice of the following persons as directors: James B. Chaplin, Samuel P. P. Fay, Newell Bent, William Fisk, Levi Farwell, William Hillard, Charles Everett, Isaiah Bangs and John Trowbridge. Judge Fay declined, and the vacancy was filled, March 31st, by the election of Professor Asahel Stearns. The brick store owned and occupied by Luke Hemmenway, now numbered 587 Main Street, Cambridgeport, was purchased for the sum of \$4000 and fitted up for a banking-room, and used as such until the new building, which they now occupy and own, was erected in 1873.

The bank began business in June (simultaneously with the establishment of hourly coaches from Cambridgeport to Boston). Martin Lane was chosen cashier, with a salary of \$1400, and Alphonso Mason messenger, with a salary of \$450.

Dr. James Prescott Chaplin was the first president, and remained in office until his death, in October, 1828, when Deacon Levi Farwell was chosen to fill the vacancy, and who remained until he resigned in 1832, upon the opening of the Charles River Bank, of which he was the first president, and remained such until his death, in 1844.

Dr. Chaplin, the first president of the Cambridge Bank, was a man of great influence, and possessed a very strong personality, which gave to the institution a high standing from the start, and it has always been highly favored with an efficient and able board of directors.

The following persons have been presidents: James P. Chaplin, Levi Farwell, Samuel P. P. Fay, Thomas Whittemore, Benjamin Tilton, Lucius R. Paige, Robert Douglass and Asa P. Morse, who holds the office at the present time.

The capital of the bank originally was \$100,000, but was increased in 1830 \$50,000; but upon the chartering of the bank at Old Cambridge the capital was reduced to its original amount of \$100,000, which it now is, and it is now known as the Cambridgeport National Bank, having been reorganized in 1865.

This institution, the oldest bank in Cambridge, has always been, and still is, in a sound and flourishing condition, and its present board of directors is a sufficient guarantee for its continued prosperity and success, and has now a surplus of \$47,000.

The office of president has been filled by men of ability, not alone in financial matters, but in the various walks of life, including two clergymen, one judge, one professor in Harvard College, besides others distinguished for their integrity and business qualifications.

The venerable Dr. Lucius R. Paige, the historian of Cambridge, who has been connected with this institution for more than forty years, as cashier, president and director, is still a member of the board of directors and attends its meetings at the advanced age of eighty-eight years.

MIDDLESEX BANK.—This bank was chartered in 1832, and was located at East Cambridge, with Hon. William Parmenter as president and William Whitney, cashier, and was one of the "Pet Banks," so called at that day on account of its being made a depository of government funds after the closing up of the United States Bank and before the establishment of the sub-treasury system for doing the same business for the government. This bank, although *honestly* and *otherwise* well managed, failed after a very short existence, as did most, if not all, the banks which had any connection with the "surplus revenue," and the Middlesex wound up its affairs, redeeming its circulation and paying its depositors in full, the loss falling only upon its stockholders, who received forty-two per cent., and as a bank was not needed in that locality at that time, there was none until the year 1853, when the LECHMERE BANK was chartered, with a capital of \$100,000.

Its first board of directors consisted of Lewis Hall, Francis Draper, Samuel Slocomb, Amory Houghton and K. S. Chaffee. Lewis Hall was chosen president, and holds the same office at this time (1890).

There were two parties that claimed the organization of this bank, viz., the petitioners for the charter and the subscribers to the stock, and it was not until after considerable delay that the Supreme Court decided the question in favor of the petitioners, and they organized by the choice of the board of directors as given above—Lewis Hall, president, John Savage, Jr., cashier. This bank has been successful from the start, paying regular dividends, and it has now a large surplus, and its stock commands a handsome premium, although it is rarely in the market.

The question of which party was entitled to the charter, the petitioners or the subscribers to the stock, was considered at the time a very important one, and was ably argued by eminent legal talent on both sides, the late Hon. Richard Fletcher for the petitioners, and the case was heard in Chambers before the full bench, etc. This bank has a surplus of \$82,000.

CHARLES RIVER BANK.—This bank, located in

Harvard Square, Old Cambridge, was chartered as a State bank in 1832, with a capital of \$100,000, with Levi Farwell as president and John B. Dana as cashier, and a board of nine directors, viz., Levi Farwell, J. Coolidge, C. C. Little, James Brown, A. Stearns, W. Brown, William Watriss, O. Sparhawk and Robert Fuller.

The bank began business in the room now occupied by them at an annual rent of \$150; cashier's salary, \$900, and all other expenses extremely moderate.

The steward of Harvard College had his desk in the banking-room, and here the students of those days came to pay their college dues, and the Savings Bank, whose treasurer was the cashier, transacted all the business of that institution in the same room.

Although the capital of the bank has never been increased, its growth has been very marked. Its depositors now number more than 1100, with deposits averaging half a million dollars, and its business with the clearing-house for the last year was more than \$10,000,000. The bank has been highly fortunate in its cashiers, having had but two persons holding that office during its existence of fifty-eight years, Mr. John B. Dana, the first cashier, holding the office from 1832 until 1858, a period of twenty-six years, and Eben Snow from 1858 to 1890, more than thirty-two years.

The bank was reorganized in 1864 as the Charles River National Bank, and has a surplus of \$67,495 and is in a highly flourishing condition, and the stock is seldom sold.

CAMBRIDGE MARKET BANK.—This bank was incorporated in May, 1851, with a capital of \$100,000, and the first meeting of the subscribers to the stock was held July 8, 1851, when the following persons were chosen directors: George W. Lewis, George Meacham, Henry Potter, Jacob F. Taylor, Z. L. Raymond and Calvin Dimick. George W. Lewis was chosen president, and Chester W. Kinsley cashier. The bank opened for business October 29, 1851, in the brick building erected for the purpose near Porter's Hotel, then the headquarters of the butchers and drivers on market days, and for whose particular accommodation the bank was got up and located in close proximity to the "Cambridge Cattle Market," then held in that immediate vicinity. Although the local business was very light and the deposits merely nominal, its circulation was always large, and upon that they depended mainly for success, and by it in April, 1852, a dividend was declared and paid, after which time regular semi-annual dividends were paid during its existence of fourteen years, when, owing to the cattle market being removed to Brighton and Watertown, and as there was no local business where it was located, the stockholders decided to surrender their charter, and on the 1st day of October, 1865, the Cambridge Market Bank closed its doors for business, having paid all its depositors, redeemed its circulation, and paid its stockholders in full and above

the par value of the shares. The building was sold, and was some years used as a chapel by the St. James Protestant Church, then in its infancy, but is now occupied by the North Avenue Savings Bank and for other purposes.

CAMBRIDGE CITY BANK.—A charter was granted for this bank in March, 1853, simultaneously with the one for the Lechmere Bank at East Cambridge. Its first board of directors were George T. Gale, Eliphalet Davis, Henry M. Chamberlain, William P. Fisk, Samuel P. Heywood, George W. Whittemore and John Livermore. The bank began business in what is now the City Hall, September 1, 1853. John Livermore was chosen president, Edward Richardson, cashier, and R. Litchfield, messenger; the capital was \$100,000. At the time the charter was obtained for this bank, a petition was pending from the Cambridge Bank for an increase of \$50,000 to its capital, but after a full hearing before the committee on banks and banking, leave to withdraw was given to the Cambridge Bank, and a charter was granted to the petitioners for a new bank with a capital of \$100,000, which it now is, and it is now, and ever has been, in a sound and flourishing condition. Mr. Livermore, one of the original directors—and its first president—is the only one of the number now living. This bank was reorganized in 1865 as the National City Bank of Cambridge, and has a surplus of \$77,122.

CAMBRIDGE NATIONAL BANK was organized June 1, 1864. Commenced business August 1, 1864. The first board of directors were: Daniel R. Sortwell, president, Joseph H. Tyler, John N. Meriam, Thomas Cunningham, Charles J. Adams, Israel Tibbetts, Joseph A. Wellington, John C. Bullard, cashier. Authorized capital, \$300,000; paid up capital, \$100,000; undivided profits, \$37,000. Daniel R. Sortwell, president; John C. Bullard, cashier. Directors, Daniel R. Sortwell, Joseph H. Tyler, Charles J. Adams, Thomas Cunningham, Alvin F. Sortwell, Gustavus Goepper, John C. Bullard.

HARVARD BANK.—This was one of the few banks organized under the General Laws of the State in 1860, and begun business March 5, 1861, and was located in Cambridgeport.

Its capital was \$200,000, and its first board of directors were: Newell Bent, Alanson Bigelow, D. U. Chamberlain, Lewis Colley, Edward Hyde, George Livermore, Z. L. Raymond, Charles Wood, Benjamin Tilton; and the board organized by the choice of Benjamin Tilton as president. Willard A. Bullard was appointed cashier, which position he holds at the present time, 1790.

Mr. Tilton retained the office of president until his death, in November, 1882, and Daniel U. Chamberlain was chosen as his successor and still holds the office, and is the only one of the original board now living.

This bank, starting almost alone under the General

Banking Laws of Massachusetts, and at a time of great embarrassment in the financial as well as political condition of the country, was looked upon and watched with a good deal of interest, not to say anxiety, but after successfully passing through the trying and perilous days of the last war, making no losses, but paying regular dividends, it was the first bank in Cambridge to adopt the National system and became what its present name indicates, the First National Bank of Cambridge, and continues to be in a sound and flourishing condition and has a surplus of \$82,000.

The directors at the present time are: Daniel U. Chamberlain, Dana W. Hyde, Joseph A. Holmes, Henry Endicott, Henry N. Tilton; Willard A. Bullard, cashier.

CAMBRIDGE SAVINGS BANK.—This institution was incorporated April 2, 1834, with only three corporators, viz.: William J. Whipple, William Hilliard and Levi Farwell; and at the first meeting of the original three Levi Farwell was chairman and William J. Whipple clerk, and they elected as corporators: Eliab W. Metcalf, Abel Willard, William Watriss, William Brown, John B. Dana, Charles C. Little.

The first meeting was held November 24, 1834, and was organized by the choice of Joseph Story, president; Simon Greenleaf, Samuel King, Charles Everett, Sidney Willard, vice-presidents.

December 19th, Judge Story declined serving as president, and Simon Greenleaf was chosen chairman in his place. James Hayward was chosen treasurer, and on January 5, 1835, Asahel Stearns was elected president by ballot, and was the first acting president.

The first loan made was \$600 to the First Parish in Cambridge, March 3, 1835, and the second loan was to the First Baptist Society in Cambridge, April 1, 1835.

The first report of the treasurer was July 23, 1835, and is recorded as follows: To amount of deposit, \$6351; deposits withdrawn, \$455; expenses, \$64.81; note of First Parish, \$600; Baptist Society, \$500; Charles River Bank stock, \$816; deposit in Charles River Bank, \$3915.19.

The first dividend was paid the fourth Thursday of July, 1835, amounting to \$28.12, which was at the rate of four per cent. per annum. Since this time the growth of the bank has never been very rapid until quite recently. For this year, ending March 31, 1890, the deposits have been upwards of \$200,000, and at the close of business March 31, 1890, the deposits were \$2,612,132. Guarantee fund, \$72,300; surplus, \$28,910; undivided profits, \$24,308.

The present board of officers are: Charles W. Sever, president; Edwin Dresser, William Kimball, vice-presidents; Oscar F. Allen, treasurer; James H. Wyeth, secretary; Arthur H. Boardman, book-keeper. The institution is in a sound and flourishing condition and has the confidence of the community in which it is located.

CAMBRIDGEPORT SAVINGS BANK.—Incorporated

1853. Present number of corporators, seventeen. Joseph A. Holmes, president; Henry W. Bullard, treasurer; Joseph A. Holmes, Daniel U. Chamberlin, Benjamin R. Tilton, board of investment; J. F. Lane, clerk of the corporation. This bank is open for business every business day from 8 30 A.M. to 1 30 P.M. Deposits due to 9230 depositors, \$3,217,070.95.

EAST CAMBRIDGE FIVE CENT SAVINGS BANK.—Incorporated April 29, 1854. Rev. F. W. Holland, president; George Stevens, Lewis Hall, John Taylor, vice-presidents; John Savage, Jr., treasurer. Its first dividend declared March, 1857, of three per cent., amounting to \$775.62. October 10, 1859, George Stevens was chosen president and has continued in that office to the present time (1890). In March, 1873, Samuel Slocumb was chosen treasurer and continued to hold the office until his death, in 1887, when his assistant, Mary Lowell Stone, was appointed, who died while holding the office, and William E. Lloyd was appointed, who is the present treasurer. The bank is in a sound condition and has an able board of officers. On the 1st of April, 1890, it had deposits, \$1,514,912. Liabilities—Guarantee fund, \$65,868; profit and loss, \$22,859. Assets—Mortgage Loans, \$988,557; loans on personal security, \$401,248; bonds, town note, etc., \$47,001; bank stock, \$137,916; real estate, \$18,300; deposits in banks, \$39,652.

NORTH AVENUE SAVINGS BANK.—Incorporated 1872. Samuel F. Woodbridge, president; Milton L. Walton, treasurer; George W. Park, clerk. This bank is open for business on Monday, Wednesday, and Saturday, from nine to one o'clock, also Saturday evening from six to nine o'clock. On April 5, 1890, the deposits were \$259,030; undivided profits, \$6540; guarantee fund, \$4200.

THE CAMBRIDGE MUTUAL FIRE INSURANCE CO.—was organized in 1833 and began business in January, 1834. The preliminary meetings were held during March, April and May, and the organization perfected June 7, 1833, at Sevey's Tavern.

The names of some of the incorporators were those who were then the principal business men of the town—Phineas B. Hovey, Nathan Childs, William Fisk, Walter R. Mason, Aaron Rice, Samuel Pond, Jabez Fisher, Joseph Abbott, Charles Valentine, William H. Odiorne, Robert Fuller, Josiah Mason, Joseph Burridge, Newell Bent, I. A. Cooledge and others, all of whom have died except William H. Odiorne.

The first officers of the company were William H. Odiorne, president, and Henry M. Chamberlin, secretary.

The following persons have held the office of president during the fifty-six years: William H. Odiorne, Levi Farwell, Robert Fuller, Isaac Fay, Rufus Lamson, and Josiah W. Cook, the present incumbent, who has held the office for thirty-one years.

The office of secretary and treasurer has been held by but five persons during the fifty-six years of its existence—Henry M. Chamberlin, eighteen years;

Abraham Lansing, seven years; Henry Thayer, seven years; John A. Smith, seven years; and Alfred L. Barbour, the present secretary, seventeen years, all of whom have passed away except the latter person.

The directors had hard work to get the company fully established upon a solid basis, and it was several times thought that they would have to abandon the enterprise. After a few years, however, they succeeded, and just as they believed they were in a strong position, calamity came—a seeming fatality in church property—so that the company lost over \$35,000 by the destruction of meeting-houses in 1842–43. This was a great blow to the company and nearly crippled it.

The directors, however, gave their personal notes, raised the money, and paid the losses.

The company then being upon the assessment plan, *i.e.*, assessing each policy-holder for their proportion of the losses, many were compelled to retire from the company as the assessment became burdensome, but the company gradually increased in strength and members until, a few years later, it was decided to change the plan from an assessment to a full premium company and then at the end of the term of policy return such an amount as dividend as the directors deemed prudent and consistent with safety to the company. This system has continued ever since, and is the method adopted by all the Standard Mutual Companies of Massachusetts.

The dividends began with ten and twenty per cent. and have steadily increased until now they are paying seventy per cent.

The business of the Cambridge Mutual was for many years mostly confined to Cambridge, and the amount transacted was small, but under the management of the present officers it has scattered its risks all over New England, taking insurance only on the safer class of property. Its amount at risk at the present time, 1890, is over \$10,000,000, while its assets have reached the sum of nearly \$220,000.

The officers and directors of the company had long looked to the time when they should have a "Home Office," and in 1888 they selected the site of the present magnificent building, a part of the old Murdock estate, on Main, corner of Inman Streets, and proceeded to erect a building which should alike be a credit to the company and to the city.

The present officers of the company have long been residents of Cambridge, Mr. Cook, the president, having been born in West Cambridge in 1805, and Mr. Barbour in Cambridgeport, in 1837. The directors are mostly Cambridge men and counted among its prominent residents. Several of the directors are from other cities, representing the interests of the policy-holders in their localities.

The Cambridge Mutual may be classed as one of the substantial business corporations of the city.

CHAPTER XIII.

CAMBRIDGE—(Continued).

MANUFACTURING AND INDUSTRIAL.

BY JOHN LIVERMORE.

CAMBRIDGE, although not laying claim to being a large manufacturing centre, has within its borders some very important establishments which have a world-wide reputation. It was in Cambridge that printing had its birthplace in this country. More than 250 years ago Stephen Daye set up at the corner of Dunster Street and Harvard Square, in the house of the president of the college, the rude and clumsy printing-press which for nearly half a century was the only one in all British America, and now there is no other city of anything like equal population in which there is such extensive printing of the highest grade as at the *Riverside Press*, owned and conducted by the enterprising firm of Houghton, Mifflin & Co.

First in magnitude among the printing establishments of Cambridge is the *Riverside Press*, owned and operated by the above-named firm, and it is not too much to say that not only in the printing, but in everything that pertains to bookmaking from its manuscript to its delivery to the reader, they stand in the foremost rank, both in the magnitude of its business and the high mechanical and artistic quality of its productions. The firm consists of five members—Mr. Henry O. Houghton, George H. Mifflin, Lawson Valentine, Thurlow W. Barnes and Henry O. Houghton, jr.

The premises of the *Riverside Press* are situated on the banks of Charles River, Cambridgeport, about two and a half miles from State Street, Boston. This establishment occupies an irregular piece of ground about 450 feet in length by 350 in breadth, beautifully laid out, a spacious and well-kept lawn occupying the northeast corner. In the middle of the lawn is the handsome fountain which was dedicated on Mr. Houghton's fiftieth birthday, April 30, 1873. The main building has a frontage on the east of 170 feet, and is four stories in height and is surmounted by a tower. In the rear are various buildings for warehouses, store-houses, engine-house, sheds, stables, etc. A magnificent Corliss-engine of 100 horse-power operates the entire machinery in all the buildings. All of the buildings are connected by automatic fire alarms and also with the city Fire Department. The Grinnell automatic sprinkler is in place throughout, and a fire brigade composed of sixty-five men employed at the *Press* is kept in constant training. The entire premises are as neat and tidy as a Shaker sitting-room. The employes of the *Press* number about 600, half of whom are men and boys and half women and girls. The old-time custom of apprenticeship is still in vogue, with some modifications. Long service is the rule, and several members of the force were with

Mr. Houghton when the *Press* was founded. The concern have offices in Boston, New York and Chicago, and their business is constantly increasing. We have very briefly sketched some of the prominent features and appliances of this concern and in closing we can only say that the influence of the *Riverside Press* has been felt far and wide, and it is hard to exaggerate the good it has exerted on the world of letters and the world of men, and a special incitement to young men to make the most of themselves in whatever department of life they are placed. Pluck, prudence, perseverance and the progressive spirit harnessed to the mechanical appliances of the age will work wonders. This is the lesson the young men may learn from the history of the *Riverside Press* whose motto has ever been, "Do your work well or not at all."

UNIVERSITY PRESS, John Wilson & Son (proprietors, John Wilson, C. E. Wentworth).—This concern was established in 1639, and, with only a lapse of about twelve months, has been running ever since. They employ about three hundred hands with a weekly pay-roll of \$3000. They do a large printing business, setting up and electrotyping nearly four hundred pages per diem and print over 100 reams of paper every day. They occupy the large building which was erected by Harvard College for a hotel (the Brattle House), but was soon given up for that purpose and has been remodeled and is in every respect a well-appointed establishment. This firm is well known and is celebrated for the excellency of its workmanship and fair dealing with its numerous patrons.

THE MASON & HAMLIN ORGAN AND PIANO CO.—In 1854 Mr. Henry Mason and Mr. Emmons Hamlin formed a partnership for the manufacture of melodeons in Boston. They began with a small imperfect instrument, which they have continued to improve till, in its present perfected state, it commands the indorsement of the first artists of the world.

In 1861 a new form was given to the melodeon and the cabinet-organ introduced by that firm.

A stock company was formed in 1868, and in 1882 the present company was organized under the title of the Mason & Hamlin Organ and Piano Co., with branch houses in New York and Chicago.

The manufacture was commenced in Cambridge Street, Boston, in a small way, and as the business increased adjoining dwelling-houses were bought up, and a new and substantial factory erected, but it was not long before the manufacturing facilities were found to be inadequate and land was bought and the present extensive factory on the corner of Broadway and Brewery Street, in Cambridgeport, erected. Of the character of the buildings an idea may be formed when it is known that the solid and conservative Manufacturers' Mutual Insurance Companies of Boston insure this factory, which is the only wood-work-

ing establishment in the country they have ever taken in.

As organ-makers Mason & Hamlin have become famous all over the world, having carried off highest honors at all important International Exhibitions where their instruments were in competition during the last twenty-three years.

Eight years ago the company added to their extensive organ business the manufacture of pianos on a new and improved method. From present appearances it would seem that their reputation in this branch will be as world-renowned as that which they have achieved as manufacturers of organs.

They, too, have been remarkably successful from a financial point of view. The Mason & Hamlin stock is one of the best paying investments and hard to get hold of.

HENRY THAYER & CO., manufacturing chemists.—In 1847 Henry Thayer began in a very small way to manufacture fluid extracts, an entirely new business in this country. Dr. Thayer was then the proprietor of a retail apothecary store on Main Street, Cambridgeport, and, although he had studied medicine and received a degree as M.D., he did not confine his labors to the practice of his profession, but chose the more extensive field of "manufacturing chemist," for which he was peculiarly fitted and to which he gave his whole time and talents. Beginning in a small room, not more than ten or twelve feet square, in the rear of his store, the business rapidly increased, and he very soon had to seek for more extensive and convenient quarters. A rather small two-story wooden building was erected, where the business was carried on for a year or two, but very soon there was a call for more commodious quarters, and having associated with him Mr. John P. Putnam and Mr. Francis D. Hardy, they removed to the large brick building known as Douglass Block, where they remained until 1870, when they erected the premises on Broadway, which they now occupy as a laboratory and which, for complete appointment and adaptation for what it is intended, is a model establishment. The main building is four stories with a basement and sixty by eighty, with an annex sixty by forty, containing the engine and "drug-mill"—the latter fitted with the requisite machinery for grinding and powdering all the articles used, thus preventing the adulteration either by accident or design. The arrangements for labeling and putting up their goods is such as to render a mistake or error almost, if not quite, impossible, and is very ingenious. The firm enter this year, 1890, on their forty-third year of continued business under the same firm-name uninterrupted by any business disaster whatever. The members of the firm are recognized as among the leading pharmacists and manufacturing chemists of the day, and it is not at all surprising their goods rank high among the medical faculty as well as by the business community all over the world, as their

goods have a world-wide reputation and have made a mark in the history of the world's commerce.

CHARLES RIVER IRON WORKS.—In 1860 Deacon Edward Kendall began the manufacture of boilers and steam-engines on a small scale, and very soon associated with him Mr. Roberts, under the firm-name of Kendall & Roberts, and as the business increased very rapidly they extended their works from time to time, and the concern was soon known as one of the most thriving, prompt and successful establishments of its class in this vicinity, celebrated alike for the honesty of its dealings and for the excellency of its workmanship. Mr. Kendall has now with him his sons, and the firm is at the present time Edward Kendall & Sons, and in addition to the large and substantial new buildings they have lately erected, they are now engaged in extending their limits by filling up the flats adjacent to their works, part of the material for which they obtain from the excavation which is being made for the extension of the State-House in Boston, about a mile distant.

When this work is completed they will have one of the most extensive and well-appointed plants for the class of work in their line in this vicinity. They now employ more than 200 men, and use 1000 tons of iron and steel, and 1200 tons of castings.

THE CAMBRIDGE ROLLING-MILL is an industry that occupies a very important place among the varied manufacturing interests of Cambridge. It was formerly known as the Boston Rolling-Mill, established in 1864 by Lyman Kinsley and Edward Paige. It was originally built for the rolling of Swedish iron, but this was abandoned on account of the excessive duties imposed on this iron. Attention was afterwards given to the handling of domestic ores, which, increasing in volume, led to the addition of capacity for the manufacture of refined iron. The premises coming into the possession of the above-named company, Henry H. Gilmore, present mayor of Cambridge, was chosen president and James A. Werton, of Manchester, N. H., treasurer. The business is conducted under the names of Gilmore & Eustis, and is known in the iron trade far and near. While considerable Swedish iron is used, the bulk of the materials consists of scrap-iron, from which the higher grades of wrought-iron are manufactured. The capacity of the productions amounts to twenty-five tons per diem, with eighty men employed, and the same quantity when run at night, with 140 men employed. The annual manufacture represents in value from \$200,000 to \$500,000, according to the market price of iron. The original buildings were destroyed by fire in 1884, but the structures erected in their places were larger in dimensions and better adapted to the uses for which they were built. At the beginning supplies were received by water through Broad Canal, a waterway leading from Charles River, but in later years the enterprising company have found a new avenue through or over which their coal and iron are received

and shipments made. Three spur-tracks leading from the Boston and Albany Railroad branch, enter the premises, and cars laden with coal and other supplies are run directly into the sheds and unloaded. The same cars or others receive shipments and deliver them anywhere in the country or in the Provinces.

Wages are paid at this establishment which will compare favorably with those paid in mills of this description. The sum of \$1.50 is the lowest grade, while as high as \$4.50 and \$6 are paid. This latter is of course paid for skilled labor. The goods manufactured by this house have a reputation and a standing in the market which is highly commendable to the gentlemen who conduct the business, which is constantly increasing.

THE AMERICAN RUBBER COMPANY operate an extensive plant for the manufacture of boots and shoes and rubber coats. Twelve hundred persons find employment and turn out an immense amount of goods annually. The factory is located at Sixth and Potter Streets, East Cambridge.

The corporation which carries on the business is officered by Mr. R. D. Evans, who holds the dual position of president and treasurer. The factory buildings are enclosed in a land area of five acres, and the floor surface of the buildings is of immense capacity.

The corporation also manufacture the best grades of oil clothing in a large factory building located on Clark Street, Cambridgeport, where a great many operatives are employed. The entire industry is of vast proportions and the business transactions are equal to other factories of a similar character in the United States.

F. H. HOLTON & Co.—A rapidly-increasing mechanical business is that of F. H. Holton & Co., who have extensive copper and brass works on Harvard Street, near the branch tracks of the Boston & Albany Railroad, Cambridgeport. This business was formerly conducted in Boston on a much smaller scale, but in 1887 it was removed to this city, where larger facilities were secured for an increased addition to the business. Commodious workshops were erected to furnish accommodations for the manufacture of copper and brass goods, and for the introduction of a new line of work, that of the manufacture of bath-tubs and copper boilers.

The making of bath-tubs has now become a remunerative occupation, there not being a similar manufacture in New England.

The firm has also facilities unequalled for the rolling of sheet copper, and a large business is done in brass work of every description. The factory is situated on the line of the railroad, which enables the firm to receive supplies and to make shipments, a convenience which is highly appreciated.

A new feature is now being introduced, that of the manufacture of galvanized boilers for ranges. Metal

roofing is also conducted by the firm, and very large contracts are made for the supplying of this line of work. The establishment occupies a ground area of 57,000 feet. The workshops are conveniently arranged for the prosecution of the business, and the machinery, of the most improved pattern, is operated by an engine of 350 horse-power. The employees of every grade number 260 men and boys, and the annual receipts from sales amount to \$750,000.

THE GEORGE G. PAGE BOX COMPANY occupies a leading position among the manufacturers of Cambridge. They are successors of the late George G. Page, a native of Wentworth, N. H., who came to Cambridge when nineteen years of age, finding employment as a carpenter. In 1884 Mr. Page began the making of packing-boxes by hand, in a shop on Magazine Street, and in the following year he erected a small factory building on Hampshire Street, the site of the present vast establishment. Success attended his venture, and after a time he introduced horse-power and put in machinery to aid him in the manufacture of boxes and packing-cases. His business was going along swimmingly when his entire establishment was destroyed by an incendiary fire in 1857. He soon recovered from this disaster by replacing the burned buildings with more substantial ones, better fitted for the prosecution of the business. Improved machinery and steam-power were added, which made the new plant more effective in the production of the various manufactures. Fire again visited him in 1873, but the line of insurance he carried assisted him in rebuilding, this time with substantial brick buildings, which now, with several additional ones, afford excellent facilities for the conduct of a business which has reached immense proportions. Mr. Page was assisted by his sons, Ovando, deceased, and Wesley L. Page, whom he admitted as partners under the firm-name of George G. Page & Co. On the decease of Mr. Ovando Page, in 1882, the present corporation was formed with Mr. Wesley L. Page as president, Mr. Franklin P. Stewart as treasurer and Mr. Clarence M. Howlett as clerk, who constituted the Board of Directors. In January, 1886, Mr. George G. Page, the founder of the business, deceased at the advanced age of seventy-nine years. The factory buildings are as follows: factory No. 1 is a brick building 130x50 feet of three stories; factory No. 2 is a frame building 100x50 feet, three stories high.

A store-house, sixty feet square and two stories in height, stands in the rear of factory No. 1, while on the outside of factory No. 1 stands a brick boiler and engine-house, in which are located boilers having a capacity of 150 horse-power and an engine of 125 horse power. The fullest provisions against fire, in the form of fire hose and automatic sprinklers, are provided, and especial care is taken to remove the collections of sawdust and shavings so that the accumulations are swept up several times during the day and placed in the chute leading to the fire-room,

this being the only fuel used under the boilers. The most improved planers, dressing both sides of the boards at the same time, saws of every description, nailing machines and sandpapering apparatus, find place in this well-conducted establishment.

A special feature of the factory is the printing department, where any form of inscription or device is printed upon the wood in set colors of ink or in a combination of colors. The presses used are especially made for the purpose, and are of the well-known Universal pattern. This work is admirably done and is highly favored. Nearly 10,000,000 feet of lumber is annually used, which is brought to the factory by vessels from the East, the rear of the factory premises abutting on Broad Canal. The company have storage-yards on the line of the railroad, where thousands of feet of lumber are stacked to be seasoned.

Employment is found in this vast establishment by hundreds of men and boys, and the weekly pay-roll is very large.

Mr. Page, the president, is an active and thorough business man and holds the confidence of the hundreds of patrons who give the company their orders.

BARBOUR, STOCKWELL & COMPANY, No. 316 Main Street, successors to Morrill & Allen, general machinists, carry on a very large business, employing many hands and operating the most improved machinery, including a steam trip-hammer. The firm manufactures to a large extent the Pingree Switch, a device used on street railways, which works automatically by the pressure of a horse's foot. It is far superior, in the opinion of railway managers, to any other device used for such purposes. The firm has a great demand for them from all parts of the country. This establishment has had a long existence and is well known to manufacturers and the trade everywhere.

WILLIAM CAMPBELL & COMPANY.—Boiler-making in this city is an industry of considerable importance, and affords occupation for scores of skilful workmen. This firm has a reputation of furnishing only the best work produced from guaranteed materials. The shop from which the work is delivered is located at No. 354 Main Street, and embraces all modern facilities for the fabrication of warranted products in steel and iron. The business of the firm is excessively large and with a constantly increasing demand. Iron tanks, for the holding of water and for manufacturers' uses in other ways, are also made to order. The Messrs. Campbell have been located in their present premises for a number of years, and whatever is wrought by them may be depended upon as being first-class in every particular.

THE AMERICAN NET AND TWINE COMPANY occupy premises located at the foot of Second Street. The land area embraces 11,200 feet, upon which stands a brick factory building of four stories.

In this building 250 male and female operatives

find employment. The machinery used to operate the business is of the latest and most improved pattern. A large amount of the manufacture of nets is done by hand, as no machinery has been invented to take the place of deft, female fingers. Netting for hammocks, seines and for other uses are produced here.

The annual product represents 1,000,000 pounds of raw material. A ready market is always found for the goods, not only in the United States, but in South America, to which country large shipments are made. Large factories are run by the company in Canton, Mass., for the manufacture of all kinds of twine, principally of the kind required in the making of nets.

The business was established in Boston in 1842, and removed to Cambridge fifteen years ago. The business is the largest of the kind conducted in the country, and is known far and near. The building is well guarded against fire, as automatic sprinklers are placed freely about it. Regulations of the most positive character are in force throughout the establishment against the careless handling of matches or other agents likely to cause accidents of this description. The business is a remunerative one, and affords a handsome revenue to those connected with it.

CARRIAGE MANUFACTURE.—Cambridge has been more or less noted for its industry of carriage-building. Fifty years ago, at least, Mr. Walter M. Allen did a large business in the manufacture of carriages of the then prevailing style. His factory, of modest pretensions, stood in Allen Street at the corner of North Avenue, where now stands the factory of Francis Ivers & Son.

Mr. Allen confined himself to the making of plain but substantial vehicles, which found ready sale because of the reputation of their maker.

Mr. Ivers began business early in 1861, but when the shot was fired at Sumter he closed up his place and enlisted in the army. Upon returning from the war he began business again, and from that time until now he has prosecuted a thriving business.

He makes a specialty in the manufacture of the "Ivers buggy," a design of his own, which is patented. This vehicle is noted nearly the world over for its symmetry and beautiful pattern, its lightness and durability. No gentleman's carriage-house is complete without one, as is attested where a nice turnout is desired.

Mr. Ivers does not wholly confine himself to this specialty, for he also builds light pleasure wagons, which find ready sale on account of the reputation of the builder.

Quite recently he has admitted his only son, Mr. Frank H. Ivers, to the business, and the result is that the firm is constantly pressed for every variety of vehicle, more especially the celebrated buggy.

A vast amount of fine repairing gives employment to skilled workmen. The premises cover a large

amount of territory, the several workshops and ware-rooms embracing thousands of feet of floor room. Quite near the factory of Messrs. Ivers, on North Avenue, is located the carriage factory and mart of the Brothers Henderson, who began business in a modest manner in 1856.

The Messrs. Henderson do not confine themselves to any special line of work, as they manufacture every possible style of vehicle, from the modest express wagon to the more pretentious landau.

The firm manufactures beach wagons, buckboards, omnibusses and every other conceivable vehicle for which there may be a demand.

The brothers employ about sixty men the year round, and they effect sales amounting to \$150,000 per annum. They occupy 70,000 feet of land, and their buildings have a floor capacity of five acres. Their products are shipped to most remote places, so well known have their manufactures become. They deal fairly and have no hesitation in warranting their goods.

Messrs. Charles Waugh & Co., at Nos. 442 to 450 Main Street, Cambridgeport, rank in a very high order as builders of carriages, light wagons, heavy caravans and drays. They also give their attention to the building of sleighs, pungs, etc., and deal largely in horse clothing and stable equipments. The firm was originally known as Waugh Brothers. They began business in 1873 on premises which had long been occupied for blacksmithing and carriage-building. The present company was formed in 1884, since which time the business has greatly increased.

The buildings occupied by the firm are of ample dimensions, covering thousands of feet of land and having a large area of floor-room. The most modern machinery is used to expedite the work, the power being furnished by an electric motor of five horsepower, which runs a saw, planer drills, blower and other attachments. The finest work is produced by skillful workmen in the several branches, and nothing in the shape of new work or in the form of repairs leaves the establishment without the closest inspection and with the fullest guarantee.

The firm has recently built police patrol wagons for the Cambridge police service, and for that of the town of Revere. It is needless to say that the work was first-class in every particular.

The Messrs. Waugh & Co. have also built a wagon of their own design, for the chief of the Boston Fire Department, which is pronounced an excellent piece of work. The company consists of Mr. Chas. Waugh and Mr. Chas. E. Pierce, both young men full of energy, and holding a high position in the community.

An industry of considerable note and pretentious in character is that carried on by Mr. Charles E. Pierce and Mr. Chas. Waugh; it is the manufacture of tin cans and boxes for the storage of various commodities, such as crackers, confectionery, etc. Their place of business is at Nos. 446 and 448 Main street,

Cambridgeport, next adjoining the carriage works of Charles Waugh & Co.

The productions of tinware here alluded to are of various designs, but all have a setting of glass in order that the contents may be exposed to view. The demand for this line of goods is very great, and the firm is pushed to keep pace with it, notwithstanding the large number of hands employed. These goods are principally made to order, and find their way all over New England. Mr. Pierce is a practical tinsmith, and all the work produced by the firm is warranted. A large annual revenue is derived from the business.

THE REVERE SUGAR REFINERY, established in 1872 as successors of the Eagle Sugar Refinery, employs 150 men to handle the yearly out-put.

The firm-name of the proprietors is, Nash, Spaulding & Co. The factory premises embrace a large territory, and the establishment in which the sugar is refined, and in which the superior syrup is made, is an extensive building of six stories.

The annual receipts from the sales are from \$600,000 to \$1,000,000. This represents the manufacture of about 1200 barrels of sugar per diem, and 10,000 barrels of syrup annually. The industry is one of the leading ones in this community. The refinery is situated on Water Street and Miller's River, East Cambridge.

LUMBER.—The lumber business of Cambridge has always stood at the forefront, because of the excellent water facilities afforded by the Charles and Miller's Rivers. On those streams several extensive lumber plants have been established during the past seventy-five years. At present there are but few left of those in existence twenty-five years ago, the business having been abandoned. Those who occupy premises on the water-front above the Canal, or Craigie Bridge, on the Charles, are greatly hampered in the receipts of freights, because of the railroad bridges crossing the stream at the eastward of Canal Bridge. Delays are frequent in the passage of vessels through the railroad drawbridges, which occasion great inconvenience to wharf owners. In view of these drawbacks, Mr. George W. Gale, the largest retail lumber dealer in Cambridge, retired his business from the water to premises at the corner of Main and Portland streets, numbered from 326 to 342 on Main Street. The premises occupied by Mr. Gale embrace a territory of 75,000 feet, upon which he has erected storage buildings of large dimensions, and so arranged as to admit of the reception of supplies directly from cars bringing them from the East, West, North and South, from which points of the compass he has large shipments. The branch tracks of the Boston and Albany Railroad, running from the trunk line to tide-water in East Boston, enable Mr. Gale to have freights delivered in his yards, over a spur track, from the most remote places. This feature, of which Mr. Gale is the originator, has been an innovation in

the transaction of the lumber business, and it has been found to far supersede the old custom of receiving freights by water. In the storage buildings referred to Mr. Gale has provided pockets or independent spaces in which dressed lumber is stood on end, instead of being piled up. This lumber is of various dimensions, and when stored is easily selected by length and width. Upon receipt of the various grades of domestic lumber, they are stored in a building in which a temperature of 70° is constantly kept up through steam pipes leading from an eight-horse-power Campbell boiler. This continuous temperature tends to thoroughly season every board, thus making them superior to kiln-dried lumber. Builders who want first-class lumber patronize Mr. Gale, on account of this feature of preparing the stock for immediate use. Spruce boards and timber find storage out-of-doors, when not dressed. Mr. Gale deals largely in supplying building frames direct from the mills in the East, so that the purchaser only pays for what he receives, there being no waste, every timber being cut and fashioned according to the plan of the building, which is forwarded with the order. This unique trade is constantly growing, and many builders prefer to give their orders in this way, than to be subjected to the old fashion of framing the building themselves. Mr. Gale deals largely in lime, plaster, cement and hair, all of which come to him by rail. Now he can order a car-load of lime fresh from the kilns, but when he occupied the wharf he was obliged to have a cargo of this commodity sent to him in the fall of the year, before the rivers were closed by ice, when he would store it in his sheds to slacken by the atmosphere, and to become less valuable for plastering or mortar-making. Builders appreciate this, and, therefore, Mr. Gale has a large patronage in this direction. From boyhood until 1885 Mr. Gale was associated with the lumber business on the water-front, but since he established himself on his present premises, no inducement could prevail upon him to change places by returning to the waterside. Mr. Gale does strictly a retail business, and would not undertake to wholesale under any circumstances. He now handles about 10,000,000 feet of lumber per annum, and the business is constantly increasing. Every appointment on his premises is first-class in character, as Mr. Gale does not believe in doing anything that bears the semblance of being slipshod or devoid of system.

JOHN P. SQUIRE & Co.—The extensive and celebrated pork-packing establishment of John P. Squire & Co. is located at East Cambridge, and the land and buildings cover about twenty acres, and is the largest business concern in the city. Their business amounts to more than fifteen millions of dollars annually, and they employ about one thousand men. The number of hogs slaughtered is about seven hundred and fifty thousand. The capacity of their ice-houses is about 42,000 tons. The firm consists of John P. Squire,

Frank O. and Fred. P. Squire and was started in 1842 by the senior partner alone in a comparatively small way, but has been constantly growing in magnitude until the present time, and the amount of their business for the year ending in April of this year (1890) was over \$15,000,000.

KENNEDY'S BAKERY—This establishment, now so well-known all over the country from Maine to Georgia, was originated by the late Artemas Kennedy, in 1839, when he came to Cambridgeport and began business in the brick building on Main Street, where he remained for six years, when he built a dwelling-house and bakery on the adjoining lot, and for ten years he baked only four barrels of flour daily into crackers, all rolled and docted singly by hand, and pitched into the oven one by one. In 1855 steam was introduced and the product was increased so that nine barrels of flour were turned out daily. In 1861 the business had so increased that an office was opened in New York City, and it was found necessary to run night and day, and in 1869 the first reel or mechanical oven was built, capable of baking twenty barrels of flour a day, and from time to time more reel ovens have been added, and in 1875 a large brick building was erected on Green Street with four large mechanical ovens, which were subsequently increased to eight, and in 1887 another factory was added on Franklin Street, and now there are ten reel and nine tile ovens constantly in use, and employment is given to three hundred and seventy-five persons. Branch stores have been established in various cities and every part of the United States canvassed by salesmen.

The Chicago branch became so important that in 1881 a factory was built, but in two years it was entirely destroyed by fire. Another factory was at once erected, having six ovens of the very largest capacity, and now this plant is producing as many goods as the Cambridge house, the output averaging \$5,000 per day. A few statistics will give some idea of the amount of business done by this concern, which figures can be relied upon, being taken from their books. Sixteen hundred tons of coal were burned last year; from two hundred to two hundred and fifty barrels of flour are a day's work at present, varying according to the class of goods baked; of eggs the daily average is 6000, but on special occasions 1000 dozen have been used in one day. Fourteen hundred pounds of butter and thirty-four hundred pounds of lard are used daily, or nearly two tons and a half daily for shortening. One hundred and seventy gallons of milk, two tons of sugar and one hundred and fifty gallons of molasses are used every day. These are among the principal ingredients used, but others might be mentioned, such as raspberry jam, of which twenty-nine tons were used last year, besides soda, raisins, currants, cocoanuts, spices, etc., all of which are bought by the ton and often by the carload. One hundred and forty tons of butter are, during the month of June, bought and placed in cold storage for

next winter's use, it being much superior to any made later in the year. In the tin can department thirty-eight hands are constantly employed, and tin of special sizes is imported in lots of five hundred boxes. Over fifty thousand of the one and two-pound cans are packed and sold every month.

Pure cold water from artesian wells is used, thereby assuring the most healthy results, as well as the even quality of the goods. All the factories are supplied with the automatic fire alarm system and automatic sprinklers, and an electric plant of four hundred and fifty lights. There are branch houses in New York City, Philadelphia, Washington, Albany, Troy, in the East, and Minneapolis, St. Paul and Kansas City, in the West. Thirty-four horses are in use in expressing goods to the depots in Boston, and the various branches use as many more. The output at present is \$4500 per day and the gross business for the year 1889 was over a million dollars, and the Chicago house was about the same. The Cambridge pay-roll is \$3400 a week; two men have been employed with this house forty-seven and forty-five years, respectively, and others from fifteen to twenty years.

EARTHEN-WARE—Earthen-ware manufacture occupies a prominent position in the industries of Cambridge. The potter, whose occupation dates from nearly the earliest period, plies his trade here in a manner far superior to his prototype of the remote era. Then his craft were few in number and the facility of doing the work was meagre when compared with the processes now employed. Thousands of years have passed since the first work from clay was wrought in its simplicity.

Specimens of pre-historic work have been exhumed from the ruins of ancient cities, which bore the impress of indestructibility, the clay having been so prepared as to resist the inroads of time upon it. The potter's wheel then employed to aid in the fashioning of earthen vessels has been but slightly improved upon, but the preparation of the material used is vastly superior to the means employed by the ancient potter. Then the work was slowly forwarded by hand, while now machinery has been introduced of the most approved pattern to expedite the work. The clay is taken from the ground and after having been properly handled is run through different graded mills to secure a proper consistency to be wrought into suitable and artistic shapes. Steam-power, a motor unknown to the early potter, is now employed to operate the appliances required in the business. The wheel upon which so much depends is moved without the treadle as of yore.

Primitive genius has been superseded by the inventive mind of the present potter, so that now his work is more easily performed and to better and more remunerative advantage. The pottery of the Messrs. A. H. Hews & Co., of North Cambridge, is a model establishment because of the fact that the firm is com-

posed of energetic men, who are so far progressive in the conduct of the vast business transacted as to introduce every labor-saving apparatus which may be presented.

The business to which the firm has succeeded was established in 1765, in the town of Weston, Mass., by Abram Hewes, grandfather of the senior member.

An entry in the journal of the founder of the business reads as follows:

"April 19, 1775.

"Lemuel Sonos to Ware, Dr., 2. 8."

Then again:

"WESTON, August 15, 1780

"Then Rec'd of Mr. Hewes one pound in full of all accompts and demands.

"I say Received by me.

"JOHN KINGMAN."

"Jan'y 1st, 1790.

"Then Balanced accompts with Abram Harrington.

"ABRAM HEWES,

"DANIEL EATON."

The business of which the present company are the proprietors was conducted in Weston for over a century, when it was transferred to Cambridge by Mr. A. H. Hewes, the senior partner of the firm, in 1870.

The annual transactions exceed the gross earnings of the parent industry for a period of half a century.

The buildings in which this vast business is carried on consist of a three-story brick structure and several outbuildings of suitable dimensions, all covering an area of two acres. The floor-room has an area of 60,000 feet, on which the manufactures, in their several branches, are forwarded.

On these floors flower-pots are turned out, and the Albertine vase, highly ornamented, is developed in the art department. The art pottery is marvelous in design and ornamentation, and finds a ready market in art circles. Probably nowhere in this country can be found a prettier exhibition of the potter's skill than is displayed here. Copies from the most antique productions, with original designs, are arranged with taste in the exhibition room, making a museum of clay productions unequalled.

Four kilns are used, which have a capacity of holding 35,000 pieces of medium-sized pottery, and which are placed with care and precision for the baking process.

The factory is on the line of the Fitchburg Railroad, over which the firm receives its coal and forwards its wares to all parts of the country.

New and improved machinery, of great cost, has just been introduced, so that now the establishment ranks with any other in the country.

Ninety employes find steady employment at this establishment. Mr. Wm. P. Brown is the book-keeper, and Mr. George H. McKee is the art designer and foreman of the works.

SOAP MANUFACTURES.—Cambridge has for many years been noted for the manufacture of this important article, and it is now and has been for nearly a century more extensively engaged in it than any

other place in New England, and less than fifty years ago more soap was shipped from Cambridge than from any other port in this country. The chief places to which it was exported were the West Indies and South America. Hardly a vessel left Boston for either of these places with less than a thousand boxes, and frequently with five times that number, receiving in return either gold or coffee. That trade has almost entirely ceased, and the manufacture is now chiefly confined to the home market, and grades and qualities for domestic purposes, and the business has increased largely in amount and it can now be reckoned as one of the large and important industries of Cambridge. The business commenced in a small way. In 1804, Nathaniel Livermore came from Waltham to Cambridgeport in search of business and also to benefit his health, which at that time was thought to be in a very critical state tending towards, and by some physicians thought to be, a confirmed case of consumption. Mr. Livermore found a person who understood the business and another who could furnish a small amount of capital and a co-partnership was formed under the name and style of Livermore, Crane and Whitney.

The business began in a very small way in a building in the rear of Main Street, and in the *Columbian Centinel* of December 22, 1804, they advertise that they are ready to furnish brown soap, dipt candles and groceries. This was the origin of soap-making in Cambridge. Mr. Livermore, who was then twenty-five years old, continued in the business on the same spot until he died, in 1862, at the advanced age of ninety years.

There are in Cambridge at the present time five large factories making in the aggregate many million pounds per annum, and all finding a ready market for their goods at remunerative prices. Among the longest in business is the well-known firm of Curtis, Davis and Company. Since the death of Mr. Davis, in 1877, the business has been continued by his son-in-law, James Mellen, under the same name and style, and the quality of the goods made is too well known all over the country to need any words of commendation. The area of land upon which the factory, store-houses, stables and other out-buildings stand is about 66,000 feet, floor area 44,500 feet and daily product is 35,000 pounds of different grades of laundry a very large per cent. of which (nine-tenths) is the celebrated "Welcome Soap," of which they manufactured and sold in the past year (1889) one hundred thousand boxes of seventy-five pounds each, and for which they require daily twenty thousand pounds of tallow, four thousand pounds of alkali, two tons of coal and a variety of other supplies, including borax and perfumes. The alkali is imported from England, the borax from California, the perfumery from China, Germany, France, Florida and the State of New York. The number of hands employed is very large.

James C. Davis & Son, Soap Manufacturers.—This

concern started business in 1840, and since the death of the senior Mr. Davis two years ago the business has been continued by his sons and his son-in-law, Mr. J. H. Spaulding. The factory, situated on Broadway, Cambridgeport, has been greatly enlarged and improved within the last few years and is now supplied with all the late improvements and machinery, and is in every respect a well-appointed establishment with all the means and appliances for doing a large and increasing business. Their warehouse and salesroom is at No 3 Chatham Street, Boston.

C. L. Jones & Co., Soap.—Business started about 1830 by Charles Valentine, who was succeeded in 1845 by the present firm. Buildings consist of main factory, 175x60; connected with this is an ell 60x30, where are the kettles in which the boiling is done; the latter are ten in number, with a united capacity of 400,000 pounds. In the rear of the main building is the boiler-house, which contains four boilers of fifty horse-power each. The motive-power is furnished by two engines of twenty-five horse-power each. The weekly output is about 150,000 pounds—about thirty-five men and boys are employed. The goods are sold principally in New England and New York State.

John Reardon & Sons use about 8,000,000 pounds of fats per year, from which they make in oleo oil about 4,000,000 pounds, butterine about 600,000 pounds, stearine about 1,500,000 pounds, tallow about 1,000,000 pounds, soap about 3,000,000.

WILLIAM L. LOCKHART'S MANUFACTORY.—This large and commodious establishment for the furnishing of funeral supplies is located on Bridge Street, East Cambridge, and is fully equipped with all modern appliances and machinery, and is thus always ready to furnish every article in his line, either by night or by day. The business was established in 1849 by Mr. Lockhart, who is, and has been, the sole proprietor, and who has built up a large and extensive business in all sections of the United States and Canada, and keeps constantly employed at the factory about 150 skilled operatives. Besides the factories at Cambridge, Mr. Lockhart has large ware-rooms in Boston, where are kept the largest, finest and most complete stock of undertakers' supplies in the country. The ware-rooms are situated in the business portion of Boston, and are readily accessible from all parts of the city, being within five minutes' walk of the northern and eastern depots and ten minutes' car ride to the southern depots, in the extreme parts of the city. The building used, warehouse and salesroom, is six stories high, at the junction of three streets, and was erected by Mr. Lockhart for the express purpose for which it is used, and for which it is admirably adapted; no pains or expense has been spared in any of the details of arrangement. The different floors of the building are divided as follows (each floor containing about five thousand square feet): Second floor, offices and salesroom, and casket hardware department; third floor, show-rooms; fourth floor, for packing

and shipping; fifth and sixth floors, storage. The show-room is filled with everything of a miscellaneous nature that is required by a funeral director's use. Mr. Lockhart carries a complete duplicate line of all his goods, so that telegraph or telephone orders may be sent immediately on receipt, by day or night. It has ever been his desire to obtain every facility for the prompt execution of all orders that may be entrusted to his care, and he guarantees prompt service in all cases. Funeral directors are cordially invited to make his office their headquarters while in the city of Boston, and he feels confident that they will find his rooms to be the most complete of any in America for the purposes and business for which it is designed. Mr. Lockhart has lived in Cambridge for the last forty-five years, and is highly esteemed for his enterprise, geniality of disposition and inflexible integrity.

THE TELESCOPE MANUFACTORY OF CLARK & SONS is the most celebrated institution of its kind in the world. Here was completed in 1887 the largest telescope ever made. This was for the Lick Observatory. The contract was made in 1880, and the telescope was finished and mounted in 1887. Its cost was \$53,000. The contract was given to them by the Lick trustees after several years spent in finding a concern willing to undertake the work of making an instrument of the size and power required, which was to be larger and superior to any one ever made. The Clarks had four times been called upon to construct "a telescope more powerful than any now in existence,"—first in 1860, one for Chicago 18½ inches aperture, which was 3½ inches larger than any then known; in 1879 one for the Russian Government for a 30-inch objective (3 inches larger than the Vienna telescope); one in 1870 with the United States Government for a refractor of 26-inch aperture, and in 1880 the Lick estate for a 36-inch telescope, all of which contracts they fulfilled to the satisfaction of all the parties concerned. They stand to-day at the head of the telescope-makers of the world, and are ready to undertake the construction of instruments of still greater capacity if ordered. The factory, or workshop, where the firm do all their work is a small, unpretentious building on Brookline Street, Cambridgeport, near the banks of the Charles River. The work was all done by Mr. Alvan Clark and his two sons, George B. and Alvan G., and, with the exception of a few day-laborers, these constitute the whole force employed. Mr. Clark, senior, was for many years a member of the American Academy of Arts and Sciences, and his eldest son, George B., now enjoys the same honor.

In 1867 Mr. Alvan Clark was awarded the Rumford medal of the American Academy of Arts and Sciences for the perfection of his optical surfaces. The completion of the 30-inch Russian object-glass brought the Clarks the signal honor of the golden medal of the Empire, conferred for the first time by Alexander III. The Clarks have built eleven instruments

of the type known as the "horizontal photo-heliograph," with 5-inch aperture and 40 feet focus, appropriately mounted and moved by clock-work of their own construction.

In the reprint of the appendix of the 23d volume of the "Encyclopædia Britannica," Prof. David P. Todd says, "Of all the makers of telescopes the most celebrated are Alvan Clark & Sons, of Cambridge, Mass., U. S. A." As a fitting close to this brief notice, we append a few words of an autobiographic nature written to a friend by Alvan Clark without any idea of publication. "I have never held any office nor attended a party caucus, but have always voted with the Republicans since they came into power, altho' up to that time I was a Democrat. I have never been a church-member, but my faith in the universality of God's Providence is *entire and unswerving*. My grandfathers died, one at 87 and the other at 88, and they were both good men. I have never heard of one of my progenitors as being a *bankrupt*, or *intemperate*. I never sued but one man, and that was Collector Austin, of Boston, and I gained my case. I never studied music or attended an opera in my life, and know nothing of chess or card-playing. I never learned to dance, but was a good swimmer, though lacking in the points which go to make an expert gymnast. I was born in Ashfield, Franklin County, Massachusetts, on the eighth of March, 1804. When I was about 12 years of age I thought that I would be a millwright, but when I was 17 years old I began to think that perhaps I might be better fitted for some other calling, and I went into a wagon-maker's shop and worked about a year, when I put myself at work in good earnest to learn alone engraving and drawing, and in 1824 I visited Boston carrying with me specimens of my work to show my proficiency, which, though not great, was sufficient to secure me a living employment for the time. Supplying myself with some of the most needed materials, I returned to Ashfield and spent the summer with no settled plans farther than the acquisition of skill. While I was learning the art of engraving I offered my services in the vicinity of Ashville in making small portraits, some in India ink and some in water-colors, and with pretty satisfactory measure of success. One little incident I will mention which tends to show what small matters will change the course of a human life. Wanting some fine sable hair brushes I sent to Boston for them, and upon looking over a scrap of newspaper in which they were wrapped my eye fell on an advertisement, headed '*Engravers Wanted*,' and I was not long in making up my mind to apply for a situation, which I was delighted to get, and where I went to work in the engraving shop of the Merrimac Co., at East Chelmsford (now Lowell), for the wages of eight dollars per week for one year, and nine dollars per week for the three succeeding years. I was to work nine hours per day in summer and eight hours in winter.

"I was the first person married in the then Town

of, now the City of, Lowell, on the twenty-fifth of March 1826, by the Rev. Theodore Edson, who was living and present at *our* 'golden wedding.' I have received the degree of A.M. from Amherst, Chicago, Princeton and Harvard. I have read much on Astronomy, but in its mathematics I am lamentably deficient.

"Lives as changeful and varied as mine has been, are frequently troubled in their finances, but I have always been able and fortunate enough to meet my money promises, and I have a fair reserve for a rainy day."

This brief and modest narrative of the life and pursuits of Alvan Clark is the best *history* of the manufacture as well as of the beginning of telescope-making in this country that can be given, and that is enough in its teachings to encourage and stimulate the young men of this day to manly effort in their callings.

CHAPTER XIV.

CAMBRIDGE—(Continued).

MISCELLANEOUS.

Transportation, Bridges, Press, Societies, etc.

TRANSPORTATION.—Before the erection of any bridge across Charles River connecting Cambridge with Boston there was no method of access to the capital excepting by boats or the circuitous route through Charlestown, four and one-half miles, or Roxbury, eight miles, but soon after the opening of West Boston Bridge in 1793, there was a public conveyance from Cambridge to Boston once a day, afterwards changed to two trips daily, going in at eight o'clock in the morning and returning at noon and again going in at two o'clock in the afternoon and returning at five or six. Fare, twenty-five cents from Old Cambridge and eighteen and three-fourths cents from Cambridgeport. Passengers were called for at their residences in Cambridge by booking their names the night before and were left at their place of destination in Boston as far south as Summer Street.

The coach used up to the year 1826 was a large, heavy, old-fashioned, stage-coach, similar to such as were then used on all the mail and stage routes, and had seats for nine passengers inside and could pile on as many more on the outside. This old Cambridge stage was quite an institution in days gone by, and many illustrious men and women were its patrons and many anecdotes might be told of the warm discussions, both theological and political, that took place in the old coach while on its way from Cambridge to Boston.

The veteran driver for many years and up to the days of the omnibus, was Cyrus Morse, who will be long remembered by students of Harvard all over the country. Morse was a good specimen of the old-time

stage-driver. He was a handsome man, courteous to every one, but dignified in his deportment and respected by all.

In 1826 Captain Ebenezer Kimball, the then landlord of the farmers' inn formerly known as Cutler's Tavern, located at the corner of Pearl and Main Streets, Cambridgeport, started the "Hourly," so called, which was to leave Cambridgeport on the even hours and Boston on the alternate hours, the first coach leaving at eight o'clock in the morning, and during the first year they omitted one or two trips in the middle of the day. The wise ones of that day predicted speedy failure of the enterprise, as it was thought and believed that Cambridge could not possibly support a coach once an hour; but the enterprising proprietor went on, and after the first season doubled the number of trips and increased the capacity of the coaches, and in less than five years was running a coach every thirty minutes from Cambridgeport.

When the first long omnibus was built with the door behind, and named the "Cyrus," in honor of the old veteran, Mr. Morse was taken to view the new coach, and after looking it over carefully, expressed his opinion that it was a failure and would never answer the purpose for which it was intended, as the exit for the passengers being so far off they would run away before he could leave the box to collect the fares, as he always did on the old coach. The writer of this article has more than once been kept from school to stop the old stage for his mother, who visited the city twice a year to do all the shopping for a family of twelve persons, a proceeding quite in contrast to the custom of the ladies of the present day.

In 1835 Capt. Kimball bought out the old Cambridge line and started the then bold enterprise of running a four-horse coach from old Cambridge once an hour, and this was kept up until the opening of the horse railroad in March, 1856.

When Mr. Kimball started the "hourlies" it was considered the great event of the day for Cambridge and was celebrated in various ways by the people of Cambridge.

Cambridge Railroad.—After a good deal of talk on the subject a charter was applied for, and in March, 1853, an act was passed incorporating Gardner G. Hubbard, Charles C. Little and Isaac Livermore as the Cambridge Railroad Co.

After obtaining the charter no one could be found willing to risk any money in the enterprise, and it lay dormant for three years, when Gardner Warren, a bold, enterprising man (but a poor financier), was willing to take the contract for building the road if \$30,000 in cash could be guaranteed, taking the rest in stock at par. A very few persons in old Cambridge became responsible for \$20,000 and one individual in Cambridgeport pledged himself for the other \$10,000, and the contract was signed the same day and work was begun at once, but before the track was finished it was suspended on account of a severe snow-storm, and the

road-bed was not uncovered until about the 1st of March, 1856, when, in less than twenty days, the cars were running as far as Chambers Street, Boston. The writer rode over in the first car that crossed the bridge, and in speaking of the circumstance to one of the proprietors of the stage company he remarked that they would never be able to go up the hill to Bowdoin Square or if they did they never could come down in safety. Before the return track was laid through Green Street the cars went only as far as Bowdoin Square, and the horses were taken off and hitched to the other end of the car for the return trip, and as there was but a single track up the hill the incoming cars were obliged to wait at the foot of the hill for the outward bound cars to pass. The first directors were Gardner G. Hubbard, Charles C. Little, John Livermore, T. B. Bigelow and Estes Howe. The stockholders were not very sanguine that the enterprise would be profitable and preferred to lease the property, which they did to a company chartered for that purpose, called the Union Railroad Company, the first directors of which were Williard Phillips, Charles C. Little, Gardner G. Hubbard, Moses M. Rice and J. C. Stiles.

This company, the first horse railroad in New England, continued to operate the road successfully until the opening of the Charles River Railroad, when the dividing of the business and the lowering of the fares caused them to give up their lease, as they had a right to do if it ceased to be profitable, and the Cambridge Railroad alone run the road until they bought out the Charles River road, and they in turn sold to the West End Company, who are now the owners, not only of this, but of all the suburban street railroads in this vicinity and are rapidly adopting the *electric system* for running the cars, so that it can hardly be called a horse railroad at the present time. What the next move will be no one can foretell, but when we look back and see what a great advancement has taken place within the last fifty years from the days of the old lumbering stage-coach, there can be no doubt but that the future will show as great and important changes as the past. Even now the project of establishing an *elevated road* is being agitated, hoping thereby to solve the problem of rapid transit through our crowded streets and thus save a few minutes in the time now occupied by our people in going to and from their places of business to their suburban homes.

In addition to the various modes of conveying passengers from Cambridge to Boston allusion should be made to the "Harvard branch," although it had but a brief existence. This was a spur from the Fitchburg Steam Railroad and terminating near the northerly bounds of the Common in Old Cambridge. This route was abandoned after a short trial, as it failed to meet the needs of the people or to be remunerative.

The business of the Cambridge Division of the West End Railroad Company for the year 1889 was as follows: Number of horses, 1502; number of cars,

153; miles run, 3,308,027; passengers, 18,545,409; cost of road and equipment, \$3,291,175. Of the above cars 53 are electric.

BRIDGES.—Cambridge owes much to its bridges; some account, therefore, cannot fail to be of interest to those who have received, and will continue to receive from them, great and permanent benefits. The first bridge ever built over Charles River was called the Great Bridge, connecting "Old Cambridge with Brighton." It was erected in 1660, and was ordered to be laid in "*oyle and lead*," and the town ordered that the Selectmen "should improve the timber that was brought for the fortification," for the repairing of the Great Bridge; and when it was rebuilt in 1690 by Cambridge and Newton, they received aid from the *public treasury*. At the time this bridge was built, what are now the towns of Newton, Arlington and Lexington were parts of Cambridge, and they were required to share with Cambridge the expense of maintaining the bridge in proportion to the respective valuation of their several towns, which they continued to do until they were released from that obligation, March 25, 1860, by the General Court. All other corporations having been released from liability, the General Court made a final disposition of the matter by an act passed March 11, 1862, by which the city of Cambridge and the town of Brighton were authorized and required to rebuild the Great Bridge over Charles River, the expense to be borne in proportion to the respective valuation of said city and town; and it was also provided that a draw not less than thirty-two feet wide, should be constructed at an equal distance from each abutment, and that the middle of the draw should be the dividing line between Cambridge and Brighton at that point, and that thereafter each corporation should maintain its half of the structure at its own expense.

The *West Boston Bridge* was the second toll-bridge built over Charles River, the one connecting Charlestown with Boston, called the Charles River Bridge, having been erected in 1785, and the West Boston Bridge in 1793, and opened for travel in November of the same year (November 23d). Dr. Abiel Holmes, who witnessed the building of the bridge, and who was familiar with the details, describes it as a "magnificent structure." Elbridge Gerry, afterwards Governor of Massachusetts and Vice-President of the United States, who then resided in "Elmwood," now the home of James Russell Lowell, the poet, was the first one allowed to pass over the bridge on the day of opening, starting from his home at sunrise, on horseback, with his wife, who was said to be the most accomplished and attractive lady in the land.

The first officers of the corporation were Hon. Francis Dana, president; Mungo Mackay, treasurer; and Harrison Gray Otis, clerk.

At a meeting of the directors, March 23, 1792, an assessment of ten dollars a share was laid, and it was voted "That the sum of seven hundred pounds be,

and hereby is offered to Mungo Mackay and Henry Prentiss, jointly, as a consideration to superintend the whole labor of building the bridge, to procure laborers and make contracts for materials of all kinds, submitting, however, all contracts to the sub-committee of Directors for confirmation." It being understood that the said Mackay and Prentiss (if they undertake the business) shall devote their *whole time*, or the *whole time* of one of them to the business. And they shall have liberty to *resign* their appointment at any time if it interferes with their private concerns." Messrs Mackay and Prentiss accepted the appointment and made the contracts, and engaged Zenas Whiting as master-workman. The work was begun on the 8th of April, 1793, and in seven months and a half from the laying of the first pier the work was completed at a cost of \$76,700, and "for elegance of workmanship and the magnitude of the undertaking" was pronounced "*unequaled in the history of enterprises*." The *Boston Chronicle*, of November 27, 1793, says: "This bridge, for length, *elegance* and *grandeur* is not exceeded by any in the United States, if in any part of the world." The *Columbian Centinel* of the same date says, that "for elegance of workmanship and *economy* in the construction it is thought to be the greatest masterpiece of mechanical ingenuity that was ever executed in this country;" and adds that "the proprietors have a claim on the liberality of the public and the patronage of the government; and hope to these claims government will not be *inattentive*."

There is a peculiarity in the mode of paying the tollmen. The directors voted that the annual salary of the principal tollmen should be \$333.33. Afterwards it was voted that a grant be made to them of \$166.66, in addition to this salary, and frequently it would be ordered, "that in consideration of their faithful services and the high prices of provisions and fuel," the sum of \$50 were given them as a gratuity.

About the time of closing the accounts for constructing the bridge were settled, the following vote was passed: "That the Treasurer pay to Messrs. Shed & Page three Pounds, and make no charge against them for *Rum* furnished them when they had no beer for the workmen, and for the breaking of crockery and other utensils, in full compensation for their demands against the Proprietors, and take their receipt in full."

The affairs of the corporation were managed with the strictest economy. For instance, on one occasion it was "voted that William Spooner and Mungo Mackay be appointed a committee for the purpose of contracting with Lamplighters, and to make a calculation of the quantity of *Oyl* necessary for lighting the lamps, and to secure the unnecessary waste of oyl."

In the year 1828 the Legislature considered the subject of purchasing all the bridges over Charles River,

for the purpose of making them free before their charters would legally expire. This led to a prolonged controversy, in which the doctrine of "vested rights" was strongly assailed and nearly (if not completely) overthrown. In the year 1846 the Hancock Free Bridge Corporation received a charter empowering them to purchase the two bridges between Cambridge and Boston of the corporations which owned them, and to maintain them as toll-bridges until a fund of \$150,000 should be raised, which sum was to be paid to the State, and for which sum the State was to keep them free forever. This act was amended in 1857 to allow the city of Cambridge to take the fund and maintain them as free avenues forever. The bridges were made free on Saturday, January 31, 1858, and the event was celebrated on the following Monday, viz., February 2, 1858. The price paid for West Boston Bridge was \$75,000, and for Canal, or Cragie's Bridge, \$60,000. So thorough and universal was the joy and satisfaction of the people in the freedom of the bridges that they evinced their delight by turning out *en masse* in a procession got up in very short notice, and, escorted by the National Lancers, they paraded through the principal streets of Cambridge and over both bridges. The public buildings and the houses of private citizens were decorated, and many of them were illuminated in the evening, when there was a display of fireworks. On each of the bridges the procession halted, and the president of the Hancock Free Corporation, the Hon. Isaac Livermore, formally surrendered them respectively to the mayor of Cambridge. When the custody of the bridges was placed in the hands of the city, and the Hon. John Sargent, as mayor, accepted the charge, and in the name of the good city proclaimed them free forever, the multitude shouted with an enthusiasm which indicated that their delight was heartfelt and sincere.

Canal or Cragie's Bridge.—This bridge, connecting Boston with Lechmere Point (now East Cambridge), was opened for travel in August, 1809, and at that time there was but one dwelling-house in what is now the populous Third Ward of the city. It was occupied by two brothers, named Russell, who improved nearly all the land for farming purposes. The opening of the bridge made a perceptible influence on the growth and prosperity of the place, and very soon large manufactures were established there, the most prominent of which was the New England Glass Works, so well known and celebrated all over the country, and now, in the year 1890, East Cambridge is the seat of many large and important industries.

Prison Point Bridge.—This bridge was built in 1815 for the benefit of Canal Bridge by virtue of a charter granted in 1806 for building a dam from Prison Point, in Charlestown, and Lechmere Point, in Cambridge, and erecting mills on the same. No dam was constructed nor mill erected, and it was laid out as a county road in January, 1839.

River Street Bridge was built for the advantage of the West Boston Bridge and the owners of real estate in Cambridgeport in 1810, and in 1832 the town assumed the care of the bridge and roadway leading to it.

The Western Avenue Bridge was built by the West Boston Bridge Corporation, under authority granted by an act passed June 12, 1824, empowering them to build a turnpike from Cambridge to Watertown, and it was maintained by that corporation until they sold their whole franchise to the Hancock Free Bridge Corporation.

The Cambridge and Brookline Bridge was built in 1850 for the benefit of and at the expense of persons owning real estate in the immediate vicinity, and was a toll-bridge until 1869, when, by permission of the General Court, it was transferred to the city and became free, and since that date Cambridge has no toll-bridges.

The act incorporating the proprietors of the *West Boston Bridge* gave them power to open, construct, and maintain ditches, canals, and drains, over, through, and across the marsh or upland on each side of the way or road which they were obliged to take by a previous act; but, provided, with great care for the settlement of damages which might result to those from whom the corporation took land, making the "Bodies" of the proprietors liable to be taken on execution of judgment against. If that liability was attendant upon the members of corporations in our times who fail to meet their engagements, it might lead to some unpleasant results, and it certainly must have been considered very good security for a debt where the "Bodies" of Chief Justice Dana, Governor Sullivan, Oliver Wendell and Christopher Gore "would be taken on execution" in default of payment.

THE PRESS.—The *Cambridge Chronicle* was the first regular "subscription paper" in Cambridge, and was started almost simultaneously with the organization of the City Government, in 1846, by Andrew Reid, a practical printer, and who continued to print, publish and edit it until his death, which took place in less than two years from the time he commenced the enterprise, when he was succeeded by Mr. John Ford, another practical printer, who continued to print and publish the paper for about ten years, since which time it has changed ownership several times, and is now owned and published by Mr. Butlum, and is in a very flourishing condition, and has probably the largest circulation of any paper in the city.

The Cambridge Press.—This paper was originated by Mr. James Cox, a practical printer, in the year 1866, and is still published and printed by him, assisted by his sons. This paper has always been ably edited and well conducted, and is at the present time the official organ for the city printing.

Cambridge Tribune.—This paper was started by D. Gilbert Dexter in the year 1862, and continued to be

conducted solely by him until his removal from Cambridge, in the year when it passed into the hands of William B. Howland, under whose ownership it was very ably conducted with fairness and impartiality, and pure in its moral tone and character as well as in its literary department. Mr. Howland has lately removed to New York where he continues his literary work, and Mr. F. Stanhope Hill has become the editor and proprietor.

The Cambridge News, owned, edited and published by Mr. D. A. Buckley, has a large circulation, and is considered a good medium for the advertising of real estate.

SOCIETIES, LODGES, ETC. — *Masonic*. — Amicable Lodge, chartered 1805; Putnam Lodge, chartered 1854; Cambridge Royal Arch Chapter, chartered 1864; Mount Olivet Lodge, chartered 1863; Mizpah Lodge, chartered 1867; Charity Lodge, 1870.

Odd-Fellows. — Mount Moriah Lodge, No. 21; New England Lodge, No. 4, instituted 1827; Charles River Encampment, No. 22, instituted 1846; Friendship Lodge, No. 20, instituted 1843; New England Encampment, No. 34, instituted 1865; Mount Auburn, No. 94, instituted 1870; Amity Lodge, D. of R., No. 15, instituted 1871; Olive Branch Lodge, D. of R., No. 21, instituted 1874; Mount Sinai Lodge, No. 69, instituted 1874; Cambridge Lodge, No. 13, instituted 1874; Odd-Fellows' Relief Association, organized 1871; New England Provident Association, organized 1871; Harvard Lodge, G. U. O. O. F., No. 1549, instituted 1873; American Legion of Honor, instituted 1880.

Other Societies. — Amicable Fire Society, instituted 1810; Cambridge Humane Society, instituted 1814; Cambridge Police Aid Association, instituted 1863; Civil Service Reform Association, instituted 1881; University Press Relief Association, instituted —; Cambridge Veteran Firemen's Association, instituted 1885; Newtowne Club, instituted 1883; Union City Mission Sewing-school, instituted —; Avon Place Home, instituted 1874; Sons of New Hampshire, instituted —; Associated Charities of Cambridge, instituted —; Catholic Young Men's Gymnasium, instituted —; Cambridge Woman's Suffrage League, instituted 1886; Cambridge Fireman's Relief Association, instituted 1869; Cambridge Y. M. C. Association, instituted 1882; Cambridgeport Flower Mission, instituted —; Dowse Institute, instituted 1860; Mason & Hamlin Benefit Society, instituted —.

Harvard Societies.¹ — Fraternity of Phi Beta Kappa, 1776; The Classical Club, 1885; La Conférence Française, 1886; Deutscher Verein, 1886; Harvard Natural History Society, 1857; Boylston Chemical Club, 1887; Harvard Electrical Club, 1888; Harvard Historical Society, 1880; Harvard Finance Club, 1878; Harvard Free Wool Club, —; Harvard Philosophi-

cal Club, 1878; Harvard Art Club, 1875; English Club, 1889; Harvard Y. M. C. A., 1802; The St. Paul's Society, 1861; Harvard Total Abstinence League, 1888; O. K., 1858; The Signet, 1870; The Hasty Pudding, 1775; Institute of 1770, 1770; Alpha Delta Phi, Harv. BIOGRAPHICAL.

CORNELIUS CONWAY FELTON.²

Cornelius Conway Felton, the eldest son of Cornelius Conway and Anna (Morse) Felton, was born in Newbury, Mass., November 6, 1807. His parents gave their children the heritage of their own superior intelligence and moral worth, but were able to bestow on their higher education little beyond their hearty sympathy and encouragement. While Cornelius was still a little child they removed to Saugus, and lived in the near neighborhood of Dr. Cheever, grandfather of the present Professor of Anatomy in Harvard University.

The Doctor, finding young Felton a boy of excellent promise, gave him his first lessons in Latin, and furthered his advancement by every means within his power. Felton was fitted for college under the tuition of Simeon Putnam, of North Andover, who had high and well-merited reputation as a classical teacher.

He entered Harvard College as a Freshman in 1823. He took at once, and maintained through his college course, a foremost place in his class, and was second to none in the department of ancient languages, and manifested the power of rapid acquisition of the scholarly tastes that distinguished him through life. At the same time he won the cordial friendship of all who were brought into intimate relations with him, and they were such friends as he was glad to hold ever afterwards in the dearest regard. No one can have ever passed through the ordeal of student life with a character more transparently pure. Temptation, indeed, had for him no meaning. He loved society, but only the best, and his own influence was from the first refining and elevating. He had an elastic spirit, and bore the burdens of his early life easily and cheerily—yet they must have been heavy.

¹ Date given is that of incorporation.

² By Rev. A. P. Peabody, D.D.

G. C. Felt.

He was dependent mainly on his own industry, with the very slender aid then given by the college to meritorious students, and he worked in the library in vacations, taught school, and resorted to every honorable means for replenishing his scanty resources, all the while practicing a more rigid economy than would seem credible to a student of the present day.

Immediately on graduating he went to Geneseo, New York, with two of his classmates, to take charge of an academy founded by Mr. James Wadsworth, well known as a munificent patron of learning. He remained there two years, and then returned to Cambridge as a tutor in Latin.

In 1830 he was appointed a tutor in Greek; in 1832 College Professor of Greek, and in 1834 Eliot Professor of Greek Literature. He had in these successive offices the occupation most congenial with his taste, and one for which no man could have been more eminently fitted, by the cast of his mind, the direction of his studies, and his enthusiastic love of the literature of which he was the teacher and expositor. He was by no means rigid or exacting in the class-room, and an indifferent scholar was put by him under no compulsory pressure, but those who were ready to learn received from him the most ample aid and derived from their intercourse with him the strongest stimulus to persevering industry. At the same time his genial disposition and his fellow-feeling with young life, which never waned, made him a favorite teacher with all who came under his charge.

The only important episodes in this period of his life were European tours and sojourns in 1853 and 1856. On both these occasions he not only visited Greece, but traveled in the country extensively, and with close observation; made himself acquainted with the leading men, especially with those concerned in the revival of letters and the diffusion of knowledge, and became conversant with the institutions and the public life of the kingdom. What a man gains by travel depends mainly on what he carries with him, on his knowledge of the fit topics for research and inquiry, and probably no American has ever been in Greece who was more thoroughly versed than he in all that could be known of the past, or better qualified to form an accurate judgment and estimate of the present and the future of a people so long depressed and down-trodden, yet with so rich a heritage of ancestral fame. In 1855 Mr. Agassiz established in Cambridge a school for young ladies, and Mr. Felton, though with his full tale of college duties, became a teacher and lecturer in that institution and contributed very largely to its success and prosperity.

When, on the resignation of Dr. Walker, in 1860, the presidency of Harvard University became vacant, Mr. Felton was elected as his successor, and in their votes the governing boards simply ratified the unanimous choice of the whole community. In this office it can hardly be said that he met the expectations of his friends, but their disappointment was one of sur-

prise and admiration. He had previously led the quiet life of a scholar, absorbed in his books and literary labor, with few relations of business with the outside world and with no opportunities for testing his executive ability, and it was anticipated that he would adorn the headship of the college by the rare grace and beauty of his spirit, character and culture rather than that he would take upon himself the unnumbered prosaic details of duty and service which then made the presidency of Harvard College as arduous and as multifarious a charge as could well be devised or imagined. But with an intense feeling of responsibility as for a most sacred trust, he entered upon a thoroughly energetic administration, giving his personal attention to all concerns that could rightfully come under his cognizance, seeking full knowledge of the work of the teachers, exercising a watchful vigilance over the students, and making himself felt not merely as a gracious and kindly presence, but as an active and action-compelling force in every department of the university. He even became a strict disciplinarian when it was his duty to be so, though it was manifest that in the infliction of penalty he suffered more than those who deserved and needed it. His labors were rendered more severe and exhausting by the growing discontent with the stereotyped and obsolescent methods of our New England colleges and the movement towards a broader culture and a higher intellectual life, in which he was in the front rank of the leading minds. With his unrelenting assiduity, he was oppressed by a painful sense of the vast interests devolved upon his discretion and ability, and by the constant accumulations of demands upon his time and strength, which grew more and more numerous and urgent from his habit of giving heed to every claim and of assuming every burden that he was asked to bear. But his over-taxed vigor of body yielded under the incessant strain and tension. Symptoms of heart-disease, which had already given his friends some uneasiness, became more decided and alarming from the time that he exchanged his sedentary habits for a more active life. Early in 1862, during the winter vacation, he was induced to seek relief and recreation by a change of scene and surroundings, and he visited his brother at Thurlow, Penna. Here his disease advanced rapidly to a fatal issue. After an attack in which his death was expected from moment to moment he seemed for a little while convalescent.

On the 26th of February, the first day of the new term, I received a letter from him dictated when respiration and utterance were intermittent and laborious, telling me that he had been at the point of death, but now began to hope for prolonged life, expressing fervent gratitude to the Divine Providence, and asking me to beg the College Faculty, in the name of the Infinite Love, to be lenient and merciful in certain cases of discipline that had been laid over from the preceding term. That same evening I read the

letter to the Faculty, obtained the desired vote, and had hardly reached my home when I received a telegram announcing his death.

Mr. Felton filled a very large and in some respects a unique place in our world of letters. It is seldom that an adept in one department is a proficient in all the essential branches of liberal culture. This, however, was true of him. While as a classical scholar he had no superior, he was versed in the languages and familiar with the best literature of modern Europe, was largely conversant with natural science, and had a highly educated and nicely critical taste in the entire realm of art. The ability that he showed in many and diverse directions, had its scope been narrower, would have been accounted as genius of a very high order; but in its breadth and versatility it was more than genius. Within the largest bounds of a liberal education no demand was made upon him that found him incapable or unprepared, and whatever he did he did it so well that he seemed to have a special adaptation for it. As a writer he was easy and graceful, brilliant in metaphor, rich and apt in illustration, and whenever his subject permitted, affluent in wit and humor. He often wrote too rapidly to do himself full justice, but when the occasion required and leisure served he had at his command a style of finished elegance and beauty. He was often false to his own reputation in his unstinted kindness to others. No one ever applied to him for aid in literary labor of any sort without receiving all and more than all the assistance he desired. He would put aside work of his own that he was anxious to finish to look up authorities, to furnish working material, to revise manuscripts, to correct proof for those whose only claim upon him was their need, and, of course, the report of his generosity was constantly multiplying his would-be beneficiaries. Had he converted to his own use all the time, thought and study that he contributed to fame in which he had no share, posterity might have admired him more, but his own co-evals would have loved him less. Indeed, those who knew him best feel that no man could have been more lovable than he. He can never have made an enemy or forgotten or lost a friend.

In society he was genial and mirthful, full of anecdote, talking so admirably well that his friends would have been content to bemoan listeners, yet never willing to assume more than his due share in conversation. There was a native refinement and unstudied delicacy in his manners and his social intercourse, indicating an inward life on a high plane, and by unobtrusive example and influence constantly tending to elevate the prevailing tone of sentiment and feeling around him. To those most intimate with him it was impossible that he could be replaced. We have not seen, and may not hope ever to see his like in this world.

With a temperament that might have seemed pliant and ductile, no man was ever more strongly in-

trenched than he within the defences of a true, quick, sensitive and discriminating conscience. No unworthy compliance ever cast a transient shadow even on his early youth. We, who knew him from boyhood, could recall, when he went from us, not an act or a word which we would wish to forget.

He was firm in the right, and no power on earth could make him swerve from his conviction of duty. His force of character, hidden on ordinary occasions by his gentle, sunny mien, showed itself impregnable when put to the test. He never shrank from the most painful duty, and in prompt decision and fearless energy for difficult emergencies he seemed no less worthy of supreme regard than for those amiable qualities which made his daily life so beautiful.

It can hardly be needful to say that a character like his could have had no other foundation than matured Christian faith and principle. He was unfeignedly reverent and devout. He loved the worship and ordinances of religion, and gave them the support of his constant attendance, his unflinching interest and his earnest advocacy. He took from Jesus Christ the law of his life, breathed in His spirit, trusted in His gospel of salvation and immortality, and looked to Him for guidance through the death-shadow into the everlasting light.

Mr. Felton's literary activity was incessant, but he seems to have had very little ambition to appear before the public in his own name and on his own sole account. It may be doubted whether he ever published anything, except at the solicitation of others, and he was thus often led into partnerships in which his share of the labor far exceeded that of the revenue, whether of fame or material recompense.

In 1844 he published an edition of the "Iliad," with very valuable English notes and with Flaxman's illustrations. In 1849 he prepared a Greek Reader, with English notes and vocabulary. This continued long in use, perhaps is not yet out of use, and is, probably, to be preferred to any other similar text-book in the fitness and range of its selections, in the facilities which it furnishes and in those which it wisely fails to furnish for the student. In the same year he contributed to Ripley's "Specimens of Foreign Literature" a translation of Menzel's work on "German Literature," in three volumes. In 1841 he published an edition of "The Clouds" of Aristophanes, with an introduction and notes. This has been republished in England. In 1843 he contributed very largely to a work on "Classic Studies," edited by Professors Sears and Edwards, and also to Professor Longfellow's "Poets and Poetry of Europe." In 1844, in connection with Professor Beck, he made a translation of Munk's "Metres of the Greeks and Romans." In 1847 he published editions of the "Panegyricus" of Isocrates, and of the "Agamemnon" of Æschylus, each with introduction and notes. In 1849 he translated Professor Guyot's work entitled, "The Earth and Man." In the same year he issued an edition of

212
- 200 -

"The Birds" of Aristophanes, with introduction and notes, which was reprinted in England. In 1852 he published a selection from the writings of his predecessor, Dr. Popkin, with a most happily-written memoir. In the same year he issued a volume of selections from the "Greek Historians." In 1856 he published a series of selections from modern Greek writers in poetry and prose. He contributed to Sparks' "American Biography" a "Life of General Eaton."

In addition to these works, he published many lectures and addresses. His aid was constantly sought by the editors of various periodicals, to which he was a large contributor. If we remember aright, his earliest writings of this sort were literally labors of love for the *American Monthly Review*, edited by the late Professor Sidney Willard, a work designed to give a fair and truthful statement and estimate of current American literature, which had an early death, solely because it was too honest to live. He was a frequent contributor to the *North American Review* and to the *Christian Examiner*. He wrote for Appleton's "New American Cyclopædia" several long and elaborate articles, particularly in his own special department.

But the works most characteristic of his mind and heart, of his ability, scholarship, taste and sentiment, were not designed for publication, and were not issued till after his death, when they appeared under the editorship of the writer of this memoir. They are "Familiar Letters from Europe," and "Greece, Ancient and Modern." The former was a small volume of letters of travel written to his family with no ulterior purpose, yet with a fidelity of description, a vividness of comprehension and a charming spontaneity of graceful diction that not only needs no revision, but would have suffered damage by any endeavor to improve them. The latter comprises four courses of Lowell "Lectures on Greece," in two large octavo volumes.

We doubt whether there exists in our language any other work on Greece that comprehends so much and is at the same time so entirely the outcome of the author's own study, thought and observation. As the lectures were hastily written, many of them on the eve of delivery, it was thought desirable to verify references and translations, but this labor proved to be almost needless. There was in his manuscript the strange blending of a chirography bearing tokens of hot haste, and a minuteuess and accuracy showing that his materials were at his command at momentary notice, though a large portion of them were such as seemed to require elaborate research. There is no reason why these volumes should not live and last, as at once of profound interest to the general reader and of essential service for the special study of the Greece that was and the Greece that is.

Mr. Felton was an active member of the Massachusetts Historical Society and of the American Academy of Arts and Sciences. He was also a member of

the New England Historic Genealogical Society and of various literary and scientific bodies, in all of which he bore as large a part as his busy life rendered possible. He was for several years one of the regents of the Smithsonian Institution and a member of the Massachusetts Board of Education, while he manifested equal efficiency and diligence in the less conspicuous office of a member of the School Committee of Cambridge, where his services are commemorated in a school-house that bears his name.

He was a corresponding member of the Archaeological Society of Athens. He received the degree of Doctor of Laws from Amherst College in 1848, and from Yale College in 1860.

Mr. Felton was twice married—April 12, 1838, to Mary, daughter of Asa and Mary (Hammond) Whitney, and in September, 1846, to Mary Louisa, daughter of Thomas Graves and Mary (Perkins) Cary. He left two sons and three daughters.

ANDREW PRESTON PEABODY, D.D., LL.D.

Dr. Peabody is descended from Lieutenant Francis Peabody, who was born in 1614 in St. Albans, Hertfordshire, England, and came to New England in the ship "Planter" in 1635, settling in Lynn, and later, in 1638, in Hampton, Old Norfolk County, subsequently to which time he became an inhabitant of Topsfield, where, in 1657, he married Mary Foster, dying February 19, 1697-98. He is the American ancestor of a numerous and honorable posterity in Essex County and elsewhere, among whom the distinguished philanthropist, George Peabody, of London, is especially to be named. Lieutenant Francis Peabody's son Joseph, born in 1644, who lived in Boxford, was the father of Zerubabel, born February 26, 1707, who lived in Middleton, married Lydia Fuller February 21, 1733, and was the father of Andrew, born July 21, 1745, married Ruth Curtis December 13, 1769, lived in Middleton, and died October 14, 1813. His son Andrew, born February 29, 1772, married Mary Rantoul, sister of Hon. Robert Rantoul, Sr., of Beverly, at Salem, May 30, 1808; lived in Beverly, where he kept the grammar school, and was a teacher of repute, and died December 19, 1813. The subject of this sketch was born in Beverly March 19, 1811. In a reminiscence contributed to a series of autobiographical articles by eminent men (published in the *Forum* for July, 1887) he has himself unconsciously disclosed the dominant chord in his own character while describing the Spartan educational methods of the earlier years in this century:

"I learned to read before I was three years old, and foremost among the books that have helped me I must put Webster's spelling-book. I knew the old lexicographer. He was a good man, but hard, dry, unsentimental. I do not suppose that in his earliest reading-lessons for children he had any ulterior purpose beyond shaping sentences composed of words consisting of three letters and less. But, while I believe in the inspiration of the prophets and apostles, I agree with the Christian fathers of the Alexandrian school in extending the theory of inspiration far beyond the (so-called) canon of Scripture, and I cannot

but think that a divine afflatus breathed upon the soul of Noah Webster when he framed as the first sentence on which the infant mind should concentrate its nascent capacity of combining letters into words and which thus, by long study and endless repetition, must needs deposit itself in undying memory: 'No man can put off the law of God.' When I toiled day after day on this sentence I probably had no idea of its meaning, but there is nothing better for a child than to learn by rote and to fix in enduring remembrance words which thus sown deep will blossom into fruitful meaning with growing years. Since I began to think and feel on subjects within the province of ethics this maxim has never been out of my mind. I have employed it as a text for my experience and observation. It is a fundamental truth in my theology. It underlies my moral philosophy. It has molded my ethical teaching in the pulpit and the class-room, in utterance and print."

From his sixth year until he entered college he supplied himself "with books from a library of several hundred very good books, the proprietors of which were assessed fifty cents a year." His earliest teacher, to whom he owed much, was Miss Joanna Prince, who later married Ebenezer Everett, of Brunswick, Me., and was the mother of Professor Charles Carroll Everett. He was also a pupil of Miss Hannah Hill in the first Sunday-school in the United States, which these two ladies had gathered in Beverly, and had the satisfaction later of teaching Miss Hill Greek in her old age in fulfillment of her desire to read the New Testament in the original tongue. A child of precious promise, he was on the point of being sent to Exeter Academy when the wise minister, Dr. Abbot, persuaded his mother to have him prepared for college at home under the teaching of Mr. Bernard Whitman, who was then pursuing his studies for the Unitarian ministry with that distinguished clergyman, and he was fitted for college in a year, passing the examinations for the Freshman Class in 1823, and returning to live in Beverly under the same teaching another year, in which he went over the studies of the first two years of the college course, returning again to Cambridge to join the Junior Class in August, 1824, and graduating in 1826 in the same class with his cousin, Hon. Robert Rantoul, Jr. No less than fourteen members of his class entered the Christian ministry, among them the theologian Oliver Stearns, the eloquent preacher George Putnam, and Nehemiah Adams, the Calvinistic divine. His father had set him apart for the ministry, as far as it could be done, by a request on his death-bed; but the boy, who had graduated at fifteen, finishing his academic course at an earlier age than any other graduate of Harvard College, with the possible exception of Paul Dudley and Cotton Mather, was too young to begin his theological studies, and the following three years were spent—the first in study at Beverly, teaching in the winter the same district school in Middleton where his father had first taught; the second as private tutor in the family of Mr. Huidekoper, of Meadville, Pa., where not a few eminent men have both given and received much in a home of patriarchal simplicity and manorial beauty, and the third in teaching in the academy at Portsmouth, N. H. In 1829 he entered the Cambridge Divinity School, graduating from it in 1832. The next year was spent as college tutor of Hebrew

and Mathematics at Cambridge. At this time his first publication appeared, "Address on Taxation," being No. 1, vol. i., of the "Workingmen's Library."

President Quincy desired to secure Mr. Peabody for permanent academic service. He had, however, been preaching in various places during the year, being called to settle over churches in Fall River and Framingham, and accepted an invitation to become minister of the South Parish in Portsmouth, N. H., as colleague with the Rev. Nathan Parker, D.D., one of the most honored clergymen of his time in New England, whose lofty character, distinguished alike for wisdom and goodness, has left an abiding mark upon that intelligent Christian community. Mr. Peabody took charge of that pulpit September 1, 1833.

His previous year spent in Portsmouth as a teacher had brought him into such personal relations with Dr. Parker as to make him appreciate as a special privilege the opportunity of laboring in such companionship, but the hope was sadly disappointed, as Dr. Parker's rapidly-failing health did not even permit him to take part in the ordination of his colleague and successor in October, 1833, and his death a few days later left the young clergyman alone in charge of a most important parish.

The South Church, which was the second in Portsmouth, had its origin, as was the case in many of the older parishes in New England, in a dissension about the best locality for a new meeting-house. It early leaned to Arminianism, while the North Church, long under the ministry of the elder Buckminster, held fast to the more strict theology, and at the separation of the Congregational body, in the earlier years of this century, the former had become a leading parish in the Unitarian movement. Under the serious evangelical preaching of Dr. Parker it had been strengthened and increased in numbers till, not long before his death, it had built one of the most beautiful and costly stone churches of the time in New England, which was filled with worshipers. This responsible charge was borne by the young minister and prospered in his hands. The further increase of the congregation to the number of two hundred and fifty families made it necessary to enlarge the church. A handsome chapel was built for the large and flourishing Sunday-school, and all the signs of professional success in a high degree were evident.

On September 12, 1836, Mr. Peabody was married to Catharine Whipple, daughter of Edmund Roberts, of Portsmouth, who, as Envoy of the United States Government, negotiated the first treaty between this country and Siam and Cochin-China, the journal of whose travels in remote Eastern lands was published after his death in 1837, while abroad on public business. Of the eight children of this marriage two sons and two daughters died in early childhood and four daughters are living. Mrs. Peabody died in November, 1869.

The Portsmouth pulpit as filled by Mr. Peabody

was metropolitan to New Hampshire. The calls to public services outside his parish multiplied upon him in the educational and charitable duties which fall in such a community to the minister of a prosperous and influential congregation. He was a trustee of Exeter Academy for forty-three years. One of the earliest of the many addresses which he gave on academic occasions, "Conversation, its Faults and its Graces," delivered before the Newburyport Female High School, and first printed in 1846, became a classic on the subject. In 1844 he published "Lectures on Christian Doctrine," which became a handbook of the belief of the evangelical portion of the religious body to which he belonged, while a wider congregation than his Portsmouth parish was addressed by his "Christian Consolations, Sermons Designed to Furnish Comfort and Strength to the Afflicted," of which the first of many editions was published in 1846, and by his "Sermons to Children," published in 1867. He also was an editor of the *Christian Review* for two years.

In 1852 he received from Harvard College the degree of Doctor of Divinity. He was a frequent contributor to the *Christian Examiner* and the *North American Review*, and in 1852 he became proprietor and editor of the latter publication, which place he filled until 1863. The invitation to the Plummer Professorship of the Heart and of Christian Morals in Harvard College found Dr. Peabody in a happy and successful ministry at Portsmouth, over a parish to whom he was bound by ties of mutual attachment such as no other call could have been strong enough to break.

On September 1, 1860, he assumed the Plummer Professorship, and the new work on which Dr. Peabody now entered, as successor to the Rev. Frederick Daniel Huntington, D.D., was waiting to be shaped by him into a large and unique opportunity of service and influence. The wise munificence of Miss Caroline Plummer, of Salem, had been led to endow the "Professorship of the Heart and of Christian Morals" by the conviction that the "dry light" and unsympathetic methods of college training needed to be suffused with the warmth and glow of a personal influence exerted by a Christian minister of wide and ready sympathy, hearty interest in young men, and belief in them—not a teacher only, nor a preacher only, but one who should find what possibilities existed in Harvard College for the function of pastor to the most difficult class of persons in the world to reach—youths of the student age. No one could have ventured to anticipate the way in which Dr. Peabody was to grow into the place, or the degree in which his influence was destined to pervade the Cambridge atmosphere like sunshine, doing more, perhaps, than any other single cause to soften and change the temper of mutual antagonism and mutual distrust, which largely affected the relations of the Faculty and the students.

The years of Dr. Peabody's incumbency of the one position which was created to be mediatorial between the two elements witnessed a change for the better, greater than had been wrought in the two previous centuries.

The proper official work of the Plummer Professorship had included the duties of preacher to the university and some slight teaching of each class at the beginning of the Freshmen and at the end of the Senior year, while the pulpit services were lightened by being assumed by the president (when he was a clergyman) on one Sunday of each month. Except during the presidency of Dr. Hill, however, the burden of the university pulpit now fell wholly upon Dr. Peabody, and for twenty-one years was so borne as to keep that distinguished place at the height of its reputation as the voice in sacred things of the mother and chief of American colleges.

The degree of Doctor of Laws was conferred on Dr. Peabody by the University of Rochester in 1863.

The publications of Dr. Peabody during the period after his removal to Cambridge may be noted here. In 1861 he delivered and published a course of lectures before the Lowell Institute, entitled, "Christianity the Religion of Nature," and in 1873 a volume of sermons on "Christian Belief and Life." Besides a multitude of single sermons, lectures, orations, discussions in the reviews of great questions of public interest and memoirs of distinguished persons, the following volumes have also been given to the public by him: "Manual of Moral Philosophy," 1872; "Christianity and Science," a series of lectures delivered in New York in 1874 on the Ely foundation of the Union Theological Seminary, 1874. The Baccalaureate sermons, which he preached to successive classes on the Sunday before Commencement, and which were long a marked feature of academic life, were gathered up in a volume, embracing those preached in successive years from 1861 to 1883, when the emeritus professor might well have supposed that his long service in the interesting duty was ended; but in 1885 and 1886 the graduating classes still felt that from no other could they ask the farewell word in behalf of their *alma mater*. A part of the fruit of his ethical instruction in the divinity school and in the college appeared in his translations of "Cicero's De Officiis De Senectute, De Amicitia and the Tusculan Disputation," published in 1883-4-6, and of "Plutarch's De Serâ Numis Vindicta," published in 1885. In 1887 he published further fruits of his college teaching in the valuable work on "Moral Philosophy," which embodies a portion of the lectures given by him to the Senior Class in college and in the divinity school at Meadville, Pa.

The Cambridge life devolved upon Dr. Peabody, beyond the duties of his professorship, not a few such obligations as seek a public-spirited citizen with heavy demands upon his time. On the School

Committee he gave many years of service, and in other matters which furthered the cause of good government of the city he was never backward. Only an exceptional endowment of health and a bodily frame strong as iron, which was able to bear habitual labor far into the small hours of the night, could have endured the toil.

As a teacher the work which fell into his strong and willing hands naturally broadened more and more. The subject of ethics belonged strictly to his department as religious teacher, but in addition he taught logic and political economy until the appointment of Professor Dunbar, and had the care of the Senior forensics for some years, also filling gaps when they occurred in the college and in the divinity school. A portion of this labor bore fruit in several of his printed works.

Meantime, the friendly and fatherly relation in which he stood to the students had beneficent results. When the wise generosity of Mr. Nathaniel Thayer provided the means for reviving in a better form the old "Commons," furnishing good food to the great mass of the students for a moderate sum, the task of organizing this large enterprise was undertaken by Dr. Peabody, until he had proved that it was a wise experiment and had established it on a permanent basis at the public tables of Memorial Hall. The thoughtful and abounding private charities which sought his aid as almoner in finding and relieving needy students—a form of college benefit which escapes all public record—were very great in amount, and were alone sufficient to occupy much of the time of a busy man. It would be impossible to overstate the quantity and quality of his service in personal and private relations, as adviser and confidential friend to the multitude of young men who sought his help in any kind of trouble, and never sought in vain. For all this, the unsolicited reward of a love and veneration such as it is the privilege of few to win was poured forth upon him. No one can have heard without a thrill the cheers, ringing with the enthusiasm of youth and of personal affection, which greeted the mention of his name, or welcomed his presence on all public occasions of the university. The Plummer Professorship also offered an opportunity to bring the university into religious relations with the whole community by making its pulpit not the property of a single sect, but hospitable to all branches of the Protestant Church, which Dr. Peabody's large and sympathetic Christian temper fulfilled to the utmost. While himself recognized as a leader in his own denomination, he had the gift of winning the Christian fellowship and conciliating by his own reconciling spirit the friendly respect of churchmen of all names, welcoming them to the College Chapel and being welcomed as a preacher in their pulpits, while he was sought to give addresses on the public days of the theological schools of Newton, Bangor and Andover, representing various Christian

bodies, and the Catholic system of administration of religion in Harvard University, introduced in 1885, in which a group of the ablest preachers of different churches are associated in the care of spiritual interests, which are recognized to be so large and various as to demand their united care, is the legitimate outgrowth of the spirit in which Dr. Peabody admitted this great religious opportunity. The most important part of Dr. Peabody's public services at Cambridge still remains to be mentioned. The death of President Felton, in February, 1862, not only removed his closest personal friend in the college, but devolved upon him the most laborious and responsible duties as head of the university, being appointed by the corporation acting president, and discharging the duties of that office until the installation of President Hill, late in the following autumn. On the resignation of Dr. Hill, in September, 1868, he was again called to the same responsibility, and continued to preside over the university until the inauguration of President Eliot. The success of Dr. Peabody as an administrator was marked, and it seemed natural that he should have been elected to the permanent incumbency of the office which he adorned. The strong secular tendency in college affairs had, however, predetermined that the office should not be held in any event by a clergyman.

In these very important duties Dr. Peabody remained at his post for twenty-one years, with an interval of travel in Europe from June, 1867, to March, 1868, which he accomplished by compressing the work of two terms into that of a single one after his return, and of which he published, in 1867, a record in his "Reminiscences of European Travel." A briefer visit to Russia and the neighboring countries, in which he shared the hospitalities enjoyed by General Grant, was made by him in the summer of 1876, and a longer sojourn in Europe with his family after resigning the Plummer Professorship, from June, 1881, to September, 1882.

His resignation had gone into effect after the Commencement of 1881, but he was at once appointed professor emeritus, retiring from the burdens of his official position, but in no sense from his place in the heart of the college, nor from the opportunities of service which awaited him. The key-note of Dr. Peabody's public services is given in the paper already quoted, where he mentions three biographies to which he has been specially indebted. The first is that of Niebuhr:

"If I have been able in things secular and sacred as to reports of current and records of past events to steer a safe way between credulity and scepticism I owe it in great part not to Niebuhr's 'History of Rome,' but to the virtual autobiography that gives shape and vividness to his 'Memor.' If I remember aright he expressed his confidence in the substantial authenticity of our canonical gospels, and I owe largely to him my firm faith and trust in them.

"I would next name the 'Life of Thomas Arnold.' When I read it I was pastor of a large parish, with many young persons under my charge and influence, and I was at the same time chairman of a school board. I had no need of Arnold to awaken my sympathy with young

Alexander McKissick

life, but he has helped me to understand it better and to minister more intelligently and efficiently to its needs and cravings. His 'Rugby Sermons' have a great charm for me, and while I have not been guilty of the absurd and vain attempt to imitate them, I have felt their inspiration both in the pulpit and in the lecture-room. My third biography is that of Dr. Chalmers' fruitful and beneficent example in more directions than could be easily specified, but to me of peculiar service in his relation to poverty in Glasgow, with its attendant evils and vices. In his mode of relieving want in person and in kind, of bringing preventive measures to bear on the potential nurseries of crime and of enlisting the stronger in the aid and comfort of the feeblers members of the community, I found many valuable suggestions for the local charities which came under my direction while I was a parish minister."

It is allotted to few men to fulfill with conspicuous ability so many and various kinds of public service as have fallen to the lot of Dr. Peabody. As a parish minister, building up his church in the prosperity of numbers and in the better welfare of a spiritual growth, never stronger in his hold on the affections of his people than when he parted from them, and always remaining the pastor of their affectionate regard—as a preacher, devout, earnest, persuasive, a powerful expounder of the truth of the gospel, and never more effective or listened to with more interest than in the years after he had passed threescore and ten—as a theologian strong in his grasp and luminous in his statement of the central verities of Christianity—as an ethical and moral teacher, lucid, eloquent and convincing—as the incumbent of the most difficult position in Harvard College, turning its difficulties into unrivaled opportunities, and creating an exceptional work—as a successful administrator, numbered among the honored heads of the university, it has been his to win the love and reverence of the successive generations among whom his work has been wrought from youth to age.

REV. ALEXANDER MCKENZIE, D.D.¹

Alexander McKenzie, son of Daniel and Phebe McKenzie, was born in New Bedford, Mass., December 14, 1830.

Passing through the public schools of New Bedford, he fitted for college at Phillips Academy, Andover; was graduated at Harvard College in 1859; entered Andover Theological Seminary in 1859, graduating therefrom in 1861; was ordained in Augusta, Me., August 28, 1861, and installed as pastor of the South Church of that city, where he remained till January, 1867. He was installed pastor of the First Church, Cambridge, Mass., January 24, 1867, where he still labors.

Previous to his entering Harvard he was engaged a short time as a clerk in a store in New Bedford; also four years with Lawrence Stone & Co., manufacturers and commission merchants, Milk Street, Boston. Mr. McKenzie was married, January 25, 1865, in Fitchburg, to Ellen H., daughter of John Henry and Martha Hoiman Eveleth. Of this union are two children, Kenneth and Margaret. He received the

degree of D.D. from Amherst College, 1879. Of the various offices he has held the following are the more prominent: Trustee of Bowdoin College, 1866-68; member of Cambridge School Committee, 1868-74; overseer of Harvard College, 1872-84; secretary of overseers of Harvard College, 1875; trustee of Phillips Academy, Andover, 1876; trustee of Cambridge Hospital, 1876; president Congregational Club, Boston, 1880; member of Massachusetts Historical Society, 1881; lecturer at Andover Theological Seminary, 1881-82; lecturer at Harvard Divinity School, 1882; trustee of Hampton Institute, Hampton, Va., 1885; trustee of Wellesley College, 1883; preacher to Harvard College, 1886; president of Boston Port and Seamen's Aid Society, 1886. Mr. McKenzie is a preacher and a lecturer of national reputation. The list of his publications is long and varied. Among his books the most extensively read are, perhaps, "History of the First Church in Cambridge," "Cambridge Sermons," "Some Things Abroad." A few of his pamphlets are, "Addresses at the Dedication of the Soldiers' Monument in Cambridge" (1870), "Oration at the Centennial of Phillips Academy" (1878), "Sermon before the Legislature of Massachusetts" (1879), "Oration at the Commencement at Smith College" (1881), "Sermon at the 250th Anniversary of the First Church in Charlestown" (1882), "Sermon at the 250th Anniversary of Cambridge" (1886), "Sermon at the 20th Anniversary of his Installation" (1887), and "Sermon in Memory of Professor Asa Gray" (1888).

JOHN LANGDON SIBLEY.

John Langdon Sibley was born at Union, Maine, December 29, 1804, and was the eldest child of Jonathan and Persis (Morse) Sibley. The name Sibley is supposed to be compounded from the word *sib*, which denotes kindred and also peace, and *lea*, which means field. Peace-field is, therefore, not an improbable signification; and like many English surnames, it may have originated in some incident of local history of which there remains no other memorial. The arms of the family, according to Burke, are "Per pale azure, and gules a griffin passant between three crescents argent." The name is found in records of several counties in England as far back as the thirteenth century. The first person of the name who is known to have come to America was John Sybley, who arrived at Salem in 1629 and became a citizen of Charlestown. Richard, the ancestor of the subject of this sketch, is supposed to have been the son of John. In the fourth generation from Richard was Jonathan, who was born in Hopkinton, New Hampshire, in 1773, studied medicine with Dr. Carrigan, of Concord, New Hampshire; in his time a man of high and extended reputation; received in 1799 the earliest diploma given by the New Hampshire Medical Society. In the autumn of 1799 he settled in Union in the

¹ From Rand's "One in One Thousand."

then Di-strict of Maine, a town at that time of less than six hundred inhabitants, and was the first, and for nearly forty years the only physician resident there.

In 1803 he married Persis Morse, of Sherburne, Massachusetts, who had two brothers already residents of Union. She was born in 1772 and died in 1847. Dr. Sibley had a practice more extensive than lucrative, his patients being scattered over a large and very sparsely-settled rural district. While successful and justly prized as a physician, he was favorably known as an occasional contributor to the principal medical journal in Boston. He occupied a prominent place in the life of the little community that grew up around him, held for many years a commission as justice of the peace under the governments, successively, of Massachusetts and of Maine, and took a leading part in all enterprises for the general good. He was in every respect a man of exemplary character, and is especially remembered for his inflexible integrity. As a father he was affectionate and self-sacrificing, yet at the same time a rigid disciplinarian of the earlier type, and especially strenuous in exacting of his sons the maximum of study and of school-work.

We append the following from the pen of Rev. A. P. Peabody, by permission of Houghton, Mifflin & Co. :

"No form was more identified with Harvard College in the memory of hundreds of graduates than that of John Langdon Sibley. Of the eighty-one years of his life, sixty were spent in Cambridge, forty-four as a member of the University, and thirty-seven in its official service; while with the title of Librarian Emeritus conferred on him when he could no longer perform the active duties which were his delight, his name appeared in fifty annual catalogues. His father was a physician in Union, Me., with excellent reputation, both professional and personal, and with a practice more extensive than gainful. He craved a liberal education for his eldest son, and learning of the beneficiary provisions at Exeter for students of promise, he sought this aid to supplement his own slender resources. Of the sacrifices that he made in his son's behalf, some estimate may be formed from his having postponed the purchase of his first pair of spectacles, after he had begun to need them, in order to furnish his son with the means of buying a Greek lexicon.

"Young Sibley must have maintained a blameless character and a high standard of scholarship at Exeter, else he would have been dropped from the foundation, which, from the first, has never given a foothold to youth who could not or would not do it honor. He entered college at the age of seventeen, was a close student, held a high rank in his class, and received honorable appointments at both junior and senior exhibitions, and on graduating. At the same time he provided in various ways for his own support, in his first year as president's freshman, with the duty

of carrying messages and notes on college business from the president to officers and members of the college; in subsequent years, probably by keeping a winter school, in accordance with the general custom of all the students who were not from the South, or from rich families; certainly by giving instruction in sacred music, and by working in the library. Immediately after graduating, Mr. Sibley entered the Divinity School, and was, at the same time, appointed assistant librarian, on a salary of \$150, (his principal receiving only twice that sum), and serving at the same time as instructor in Italian. At the end of a year the librarian's salary was doubled on the appointment of a man who was to devote his whole time to the office, and to dispense with the services of an assistant. Mr. Sibley pursued his course of theological study, and in 1829 was settled as a minister at Stow, Massachusetts, where he remained four years. With a strong home-love for Cambridge, and especially for the library, on leaving Stow he hired a room in Divinity Hall, which he occupied for thirty-three years; and, though he was engaged in editorial labor, he rendered such aid to the librarian as his other pursuits permitted. In 1841, when the library was removed from Harvard to Gore Hall, the old office of assistant librarian was necessarily revived, and he was appointed to fill it. In 1856, on the death of Dr. Harris, he became librarian-in-chief, and so remained till, in 1877, age and infirmity compelled his resignation. During his administration, and mainly through his agency, the number of books in the library, and the funds available for its increase, were fully quadrupled. Very many sources of supply for old books and pamphlets, local histories and rare editions, were discovered by his enterprise; and not a few of the most valuable benefactions were elicited by such friendly attentions and kindnesses on his part as gave good promise of fruitful returns. He also edited the Annual Catalogue of the College for twenty years, and prepared no less than ten Triennial Catalogues, which required constant vigilance and extensive correspondence throughout the years intervening between each and the following issue, and which, under his hands, attained a degree of accuracy entirely unprecedented. For fifteen years, too, he issued on Commencement week a complete Harvard Necrology, including under each name such salient dates and facts in the life record as reached him by means of information, which he kept in constant employment, and from which he made and preserved copious minutes. But Mr. Sibley's greatest and most enduring service to the college is his 'Biographical Sketches of Graduates of Harvard College.' Of this work he completed three large octavo volumes, the third volume including the class of 1689 and brought to a close with the last remnant of working power which remained to him from the incessant toil of nearly four-score years. This labor was performed under what to many men would have seemed physical inability.

John Langdon Sibley.

He was operated upon for cataract in both eyes at different times, and, though these operations were reckoned as successful, his restoration was by no means so complete as to render the consulting of unfamiliar manuscripts, ill-printed documents, and matter sometimes almost illegible, otherwise than painful and intensely wearisome. Yet he left no source of information without drawing from it all that it could furnish, and was careful to reproduce whatever he transcribed, in all the minutiae of spelling, punctuation and *italics*, with literal exactness. The work could not have been better done, nor so well by any other man, nor yet at a later time; for the memorials, written and traditional, of our Colonial days are constantly dropping out of sight and out of mind, and so fast an age as ours is as prone to forget, as our fathers were solicitous to remember, the past. The time is not far distant when these volumes will be the sole extant authority for a large proportion of their contents, and, sent down to coming generations with the seal of authenticity which our own impresses upon them, they will have a growing interest and value as long as the college shall stand. In 1860 Mr. Sibley's father died, leaving to him, his only surviving child, the entire savings of his long life of self-denying industry, with the one exception of a legacy of \$100 to Phillips Exeter Academy. The property thus left amounted to less than \$5000. Mr. Sibley gave the whole of it to the academy and subsequently added more than twice that sum, creating a fund which, by his provision, was to accumulate under certain prescribed conditions and limitations. A part of the income of this fund is already in use, while the capital amounts to more than \$40,000. Mr. Sibley directed that his name should be strictly concealed, but was induced, in the hope that other benefactors might be won by his example, to permit the secret to be divulged at an academic festival in 1872. On that occasion Dr. Palfrey presided. Mr. Sibley was present, and, when the announcement was made, was forced upon his feet by shouts of applause. In a speech of rare *naïveté*, pathos and unstudied eloquence, with a modesty and filial piety that disclaimed all praise for himself, and won from all who heard him the most reverent regard for his parents, he told the story of his early life, of his native home and of the patient and loving toil and sacrifice of those to whose memory he wished to dedicate the Sibley fund. Of his gift he made small account; but this speech, probably the only speech of any length that he ever made, remained with him the great event of his life; and he never ceased to congratulate himself on its success.

"In Mr. Sibley's character integrity bore a conspicuous part; and by this I do not mean mere honesty in the narrower sense of the word, but also conscientious accuracy, truthfulness and justice in all the details of thought, word and deed. He would be lavish of time and of money, if need were, in determining an obscure date, or the proper orthography of an un-

important name, simply because he deemed it wrong to state what he did not know, or to omit, in any work which he undertook, the full statement of all that he could know. Closely economical in personal expenditure, Mr. Sibley was generous to every one but himself. Many poor students owed to him their ability to remain on college ground. There were persons who for years depended on such subsidies as he gave them to eke out their slender income. From his home and table, poor homes and meagrely-spread tables received liberal supplies. His hospitality was often extended for weeks and months to those whose only claim was their need. Without parade or ostentation he welcomed every opportunity for doing good; and I doubt whether there was ever a year, for the last half of his life, when he did not spend more for others than for himself. It was a characteristic trait that he gave special directions that his funeral should be as simple and inexpensive as was consistent with propriety, and that the amount thus saved should be given to the poor. In his home life, which began not till 1866, he accounted himself, and with good reason, pre-eminently happy; his wife, having been in full sympathy with him in his benevolent purposes, and still deeming it her happiness to employ the income of his estate in precisely the offices of kindness and charity which it was his joy to render!¹ As a friend he was true and loyal.

"In dress, manners, appearance and personal habits he preserved to the last much of the simplicity and many of the unconventional ways of his rural birth-place and his early life; but there was in him the very soul of courtesy, and those who knew him best had often fresh surprises in his fineness and delicacy of feeling, his tenderness for the sensibility of others, and his choice of such modes of performing kind acts as might best keep himself in the background and ward off the painful sense of obligation. The last few months of Mr. Sibley's life were a season of debility and suffering, with few and brief intervals of relief. In the early summer of 1885 there was a slight improvement, and he cherished a strong hope that he might be able to officiate as chorister in the singing of St. Martin's at the Commencement dinner, an office which, as the successor of Dr. Pierce, he had filled for thirty-six years. But, as the day approached, he became himself aware, as those about him had been previously, that such an effort was beyond his ability. From that time he was confined for the most part to his room, and gradually lost his hold on passing events and his interest in the outside world. The closing hours often seemed very near, but with a natively strong constitution, unimpaired by luxury, indulgence or indolence, he resisted and overcame repeated paroxysms of disease that threatened an

¹ Mrs. Sibley, who has become a resident of Groton, on leaving Cambridge, gave the house and estate in Phillips Place, bought by her at the time of her marriage, and thus her own separate property, to Cambridge Hospital.

immediately fatal issue. His illness had every alleviation and comfort that could be afforded by the most assiduous, skillful and loving care, and if death was ever thus kept at bay, it was so in his case for weeks and months. He died near the close of the year 1885. It was a matter of universal surprise that Mr. Sibley died a rich man. No one could have been more surprised than he would have been, for his property was worth at least three times what he supposed it to be. When he gave the last instalment of his Exeter fund, he had less property remaining than he had bestowed on the academy. But about that time he put all that he possessed into the hands of a friend, under whose prudent care and lucrative investments there was a marvelously rapid increase, entirely beyond his knowledge or anticipation. He left all his property to his wife, with the provision that whatever she might not expend or dispose of in her lifetime should pass into the fund of the Massachusetts Historical Society, and that a suitable portion of the income should then be employed in the continuation of his great biographical work."

WILLIAM PARMENTER.

William Parmenter, a direct descendant of John Parmenter, who was one of the original proprietors of Sudbury, Middlesex County, was born in Boston, March 30, 1789. He was educated in the public schools and graduated at the Boston Latin School, where he received a Franklin medal. He completed a mercantile education with the firm of Pratt & Andrews, merchants, in Boston; was in trade a few years; and during the War of 1812 and for some years afterward was the chief clerk of Amos Binney, Navy Agent. While in this employment he acquired a knowledge of the navy, and an acquaintance with many of its leading officers, enabling him to furnish articles on naval topics for the press which were extensively copied. In 1824 he removed to East Cambridge, a part of Cambridge, having been appointed agent and manager of the New England Crown Glass Company, a corporation established at that place for the manufacture of window-glass. He continued in this business until 1836; and meanwhile, from time to time, was elected to public offices, those of selectman of the town, Representative and Senator in the Massachusetts Legislature. He was also president of the Middlesex Bank from its organization until 1836. In that year he was elected a member of the United States House of Representatives, and by re-election remained in Congress four terms, ending March, 1845. He had early taken an interest in politics and was known as an influential member of the Democratic party. For most of his Congressional life he was the only Democratic member from Massachusetts. Among his colleagues were John Quincy Adams, Robert C. Winthrop, Leverett Saltonstall and Caleb Cushing. He sometimes departed from the party policy; for

example, on the tariff question he favored protection, and he was alluded to by Mr. Webster, in a speech in Faneuil Hall, as having by his vote secured the passage of the tariff act of 1842. He served chiefly on the Committee on Naval Affairs, of which he was for several terms a member, and when his party was in the ascendancy, the chairman. For this duty his experience had given him an especial qualification. He was a ready and practiced speaker, and took share in debate. Then, in that part of the duty of a member of Congress which includes attention to the interests which his constituents may have at the Capitol, there was occasion for service on the part of Mr. Parmenter beyond his own district, inasmuch as the nearness of his residence to Boston and his position as a manufacturer had so identified him with the business men of that city, that his correspondence with them was almost as frequent and extensive as if he had been their immediate representative.

On leaving Congress he was appointed Naval Officer of the port of Boston, and held that office four years. On his retirement he still kept his residence in Cambridge, but was not engaged in business or office other than in official supervision of some of the county institutions until his decease, which occurred February 25, 1866. He was mainly occupied with his private affairs, and took but little action in politics. The outbreak of the Civil War in his advanced years seriously affected his health and spirits, but he was outspoken in support of the Federal administration and the prosecution of the war.

He was a man of impressive bearing and presence, of intelligence and wide information, conservative in opinions, cautious in judgment. He was at times called to preside as moderator at the large and occasionally excited town-meetings which preceded the constitution of Cambridge as a city, and for this duty he had an unusual aptitude.

He married, in 1815, Mary Parker, a daughter of Thomas Parker, of Boston, and from this marriage there were eight children—three sons and five daughters—of whom three, one son and two daughters, are now living. His youngest son, Dr. Ezra Parmenter, born March 20, 1823, died January 31, 1883, was a resident of Cambridge, and held the offices of overseer of the poor, member of the City Council, mayor, and for a number of years bridge commissioner. He was also for two terms a Representative and two terms a Senator in the General Court.

JAMES AUGUSTUS FOX.

Hon. James Augustus Fox, of Cambridge, is a prominent and public-spirited citizen of Middlesex County, who has placed his impress upon society in several of its more important interests—civil, military, literary or benevolent.

He is the son of George Howe and Emily (Wyatt) Fox, and was born in Boston, August 11, 1827. Mr.

Alfred Hermann

James A. Roy

Fox traces his ancestry on the paternal side to the ancient family of his name in Lincolnshire, England, in which is included the renowned Oxford scholar—the author of the famous “Book of Martyrs;” and on the maternal side to the eminent Scottish family of Forbes.

In his youth he attended the Mayhew school of Boston, and subsequently finished his academical education at the classical school of Mr. Amos Baker, which was then located in the “old South Chapel,” on Spring Lane, where he acquired “little Latin and less Greek.”

Owing to the connection of his father in a business capacity with the old Tremont Theatre, his earliest recollections are associated with the dramatic art. At first being carried upon the stage as an infant-in-arms, next as Cora's child, with Edwin Forrest and others as “Rolla,” then lisping the pathetic lines of one of the little “Children in the Wood” in a dramatic adaptation of the well-known nursery story, and later as the youthful Duke of York, one of the unfortunate princes who were smothered in the Tower of London, as illustrated in Shakespeare's tragedy of Richard III., he filled out two of the immortal bard's “Seven Ages,” playing many parts, through the entire range of juvenile characters incident to the dramatic productions in vogue half a century ago.

His interest in the histrionic profession continued until his twentieth year, during which period he enacted a large and varied number of prominent parts—“from grave to gay, from lively to severe”—as that of *Mercutio* in Shakespeare's “Romeo and Juliet,” and one of the grave-diggers in “Hamlet;” from *Jagges* in “As You Like It,” to one of the witches in *Macbeth*; from young *Wilford* in Colman's “Iron Chest” to *Sergeant Austerlitz* in “The Maid of Croissey,” and from the youthful *King Charles* in “Faint Heart Never Won Fair Lady,” to the ancient *Philip Gadois* in the drama of “One Hundred and Two;” and in this wide diversity of characters evincing a rare genius and capacity for one so young.

Subsequent to this time he prepared himself for his life profession at the Law School of Harvard University, and in the office of the late Hon. John C. Park. In the year 1854 he was admitted to the Suffolk bar, and commenced practice in the courts of the State.

In 1848 he married Julia Elizabeth, daughter of Col. James and Julia (Serry) Valentine, of Providence, R. I., and the granddaughter of William and Elizabeth (Borden) Valentine, of Fall River. Her grandfather was one of the original projectors of the extensive manufacturing enterprises of that city. She died in 1872, leaving three daughters, viz.: Henrietta (Fox) Macdonald, Julia (Fox) Webber, and Lillian Valentine (Fox) Wakefield. The eldest married Mr. William Macdonald, of Cambridge, and has five children, viz.: Elfrida Valentine, William Valentine, James Fox, Jessie Valentine and Malcolm Valentine McDonald. The second married Dr.

George A. Webber, of Manchester, Mass., and the youngest was united in marriage, in 1889, to Horace Wakefield, M.D., of London, England.

The opening of the War of the Rebellion in 1861 found him in the active practice of his profession. During the six years previous he had an extended experience in the regular militia of the State, having risen from the ranks to the command of the Boston City Guards—an excellent school of the soldier.

This company was the nucleus of the Thirteenth Regiment of Massachusetts Volunteers during the war; and as captain of Company “A” of that regiment, he left Boston for the front on July 29, 1861. Captain Fox served in the perilous campaigns of Virginia during the remainder of that year, and in 1862 receiving the commendation of his superior officers and the respect and love of the entire regiment.

Since the war he has been elected president of the Thirteenth Regiment Association for several terms; and he is also a member of the Military Order Loyal Legion of the United States.

He early identified himself with the Grand Army of the Republic, and has continued an interested member of that organization as a comrade of John A. Andrew Post, No. 15, of Boston, since 1868, and in 1890 was its commander.

His addresses given on several Memorial Day occasions, and especially one entitled “The Two Civilizations” (which has been published), and another delivered upon the decisive battle-field of Gettysburg at the dedication of the color-bearer's statue of the Thirteenth Massachusetts Regiment, are scholarly and eloquent productions which have attracted marked attention.

He was commander of the Ancient and Honorable Artillery Company of Massachusetts in 1864-65, as also one of the appointed delegates of that corps at the 350th anniversary of the Honorable Artillery Company of London—the parent of the American corps—celebrated during the jubilee season of Queen Victoria, in June, 1887, on which occasion he enjoyed the hospitality of that organization, including the distinguished honor of a presentation at the Court of St. James.

In several of the prominent beneficial orders of the country, so benign in their operations, he occupies a prominent and deserved position, being a member of the Independent Order of Odd-Fellows, in an advanced rank in the Improved Order of Red Men, and having been at the head of the Knights of Pythias, serving with much acceptance as Grand Chancellor of Massachusetts. In this organization he is one of the two representatives to the Supreme Lodge, and judge-advocate-general upon the staff of Major-General Carnahan, of Indiana, the commander of the Uniform Rank Knights of Pythias. In the world-wide institution of Free Masonry he has attained the very highest grade. Commencing with the “blue lodge,” he has advanced through all the series of degrees of

the York and Scottish rites—the chapter, cryptic masonry, the 'commandery (K. T.), the consistory, unto the sovereign grand inspector-generalship of the thirty-third and last degree, and in many of these he had served as the presiding officer.

In civil life and service Mr. Fox has had a somewhat extended experience. Commencing as a member of the School Committee of Boston, upon which he served three years, he was next elected to the House of Representatives of Massachusetts, in 1867 and '68, representing one of the districts of the city. In 1870 and '71 he was a member of the Honorable Senate in which he served upon the Committees on Probate and Chancery, Military Affairs, and the joint select committee to investigate the State constabulary. While a member of this body he established a reputation (previously given promise of) as a graceful and proficient orator, especially by delivering a glowing tribute to Major-General George H. Thomas, then lately deceased.

Removing to the university city in 1872, he was called to serve in the Aldermanic Board, and subsequently as mayor of Cambridge for four consecutive terms, in all a merited tribute to the ability with which he has discharged the duties of these positions.

His knowledge of parliamentary proceedings, his dignity and tact as a presiding officer, his power to grasp the salient points of a question under discussion, his correct judgment in financial matters, all these attest a clear and comprehensive mind and decided executive ability.

In the varied relations of life, as a legislator, soldier, orator, officer of potential beneficent organizations, and as the chief magistrate of a large and cultured municipality, he has ever performed his duties with fidelity and general acceptance.

COLONEL AUSTIN C. WELLINGTON.

Austin C. Wellington, son of Jonas Clark and Harriet E. (Bosworth) Wellington, was born in Lexington, Mass., July 17, 1840. He was educated in Lexington, where he remained until 1856, when he removed to Cambridge and entered the employ of S. G. Bowdler & Co., flour merchants, of Boston, as book-keeper.

In August, 1862, he enlisted in Company F, Thirty-eighth Massachusetts Volunteers, and participated in the following battles: Bislard, sieges of Port Hudson, Cane River Ford, Mansura, Opequan, Fisher's Hill and Cedar Creek. As a soldier he was respected and beloved by his comrades in the field, and at a very early day was selected for promotion. He was mustered out June 30, 1865, being, at that time, acting adjutant of his regiment.

Upon his return to private life he engaged in the coal business, which he continued with success until his death, which occurred September 18, 1888.

June 30, 1869, he united in marriage with Carolina L. Fisher, daughter of George and Hannah C. (Teale)

Fisher, of Cambridge. Ten years later his wife died, and November 29, 1887, he married Sarah Cordelia Fisher, a sister of his first wife.

Colonel Wellington was public-spirited and of a social temperament. He was fond of reading and declamation. He was secretary of the Irving Literary Society, of Cambridge, in 1861; was a member of the Cambridge Shakespeare Club from 1865 to his death; director in the Mercantile Library Association, of Boston, in 1871, and later its president. He was a member of the House of Representatives in 1875 and 1876 and on the Military Committee. He was a member of the Art Club, of Boston; of the New England Club, Electric Club, and vice-president of the Central Club. He was treasurer and general manager of the A. C. Wellington Coal Co., chairman of the Boston Coal Exchange and president of the Charles River Towing Company.

Colonel Wellington was fond of music and had a fine, sympathetic baritone voice. He was a member of the Handel and Haydn Society, also of the Cecilia Club, both vocal musical associations in Boston.

Notwithstanding the prominent position Colonel Wellington occupied in social, musical and business life, the distinguishing feature, doubtless, of his career was his brilliant record in the Massachusetts volunteer militia. May 2, 1870, he entered the service as captain of the Boston Light Infantry, otherwise known as the famous "Tigers," being Company A of the Seventh Regiment. While captain of this company his command rendered efficient service at the great Boston fire in 1872, and he brought his company to such a state of perfection that in 1873 he was elected major of the First Battalion, known later as the Fourth Battalion, which, under his leadership, became widely known as one of the crack organizations of the State, and at the general inspection of the militia forces of Massachusetts, in 1878, this battalion ranked the highest for general military excellence among the regular military organizations. February 24, 1882, he was elected colonel of the First Regiment, and the record of this regiment from the time Colonel Wellington assumed command until his untimely death was brilliant and unparalleled, and what it accomplished at home and abroad was due almost wholly to the untiring zeal of its gallant commander, who instilled into the regiment an *esprit de corps* which had not before existed. Its record at the funeral of General Grant in New York in 1885, and at the Constitutional celebration in Philadelphia in 1887 will long be remembered. At the Grant funeral, with Colonel Wellington at its head, it was not second to any military body in the line.

One of the greatest achievements of Colonel Wellington was his brilliant management of the Soldiers' Home carnival five years ago. That was a work of great magnitude, requiring tireless attention and great executive ability.

Colonel Wellington was also deeply interested in

Austin C. Wellington

Edw W. Hinckes

Grand Army matters. He was a comrade of Post 15 in 1867, commander of Post 30 in 1873 and of Post 113 in 1887-88. He was also inspector-general of the Grand Army for the Department of Massachusetts. He was also a trustee of the Massachusetts Soldiers' Home.

Colonel Wellington had a dauntless, martial spirit, a gentle heart, unmindful of self-considerate of others, and at his death passed away one of Massachusetts' most honored citizens.

EDWARD WINSLOW HINCKES.

Edward Winslow Hincks was born in Bucksport, Me., May 30, 1830. He was the son of Captain Elisha Hincks, who was born in Provincetown, Mass., September 28, 1800, and who was lost at sea January 14, 1831. In 1802 the father of Elisha removed with his family to Buckstown (now Bucksport), and there Elisha was brought up, and married, October 9, 1824, Elizabeth Hopkins, daughter of Ephraim and Hannah (Rich) Wentworth, of Orrington, Me., and had the following children: Temperance Ann, April 23, 1826; Elisha Albert, May 1, 1828; Edward Winslow, May 30, 1830.

The father of Elisha was Elisha Hinckes, who was born in Truro, Mass., July 14, 1774, and died in North Bucksport, Me., March 15, 1851. In early life he followed the sea, but in April, 1802, he, with his family and brothers—Winslow and Jesse—removed from Provincetown, where they then lived, to Buckstown (now Bucksport), Me. There he bought wild land, which he cleared and improved, and on which he died. He married, first, in March, 1796, Temperance, daughter of Sylvanus and Hannah (Cole) Smith, of Eastham, Mass., and had Anna, born in Provincetown, January 11, 1797. He married, second, December 22, 1799, Mary, daughter of Nathaniel and Anna (Rich) Treat, of Truro, and had Elisha, September 28, 1800; Temperance Smith, born in Bucksport June 24, 1803; Mary, July 30, 1805; Sarah, January 30, 1807; William Treat, March 30, 1809; Sylvanus Treat, November 21, 1810; Hannah, August 5, 1812; Naomi, May 16, 1816; Ezekiel Franklin, August 10, 1820.

The father of the last Elisha was Samuel Hinckes, who was born in Portsmouth, N. H., about 1718, and shortly removed with his father to Boston, and there lived until 1753. He afterwards taught school in Truro, where he married, about 1756, Susanna, daughter of Jonathan Dyer, of Truro, and where he continued to live until 1795, when he removed to Bucksport, and there died in 1806.

The father of Samuel was Captain Samuel Hinckes, who was born in Portsmouth, N. H., at an unknown date, and graduated at Harvard in 1701. In 1716, while a resident in Portsmouth, he was sent as a representative of the Province of New Hampshire to the Indians at the eastward, was a captain in the Indian

Wars and commanded Fort Mary, at Winter Harbor, from 1722 to 1727, when he removed to Boston. He died in Portsmouth shortly after 1753. He married Elizabeth (Winslow) Scott, a widow, previous to 1715. Elizabeth Winslow was a daughter of Edward and Elizabeth (Hutchinson) Winslow, and granddaughter of John Winslow, who married Mary Chilton, one of the passengers in the "Mayflower."

The father of the last Samuel was John Hinckes, who came from England about 1670, who was Counselor for the Province of New Hampshire, and assistant in the Court of Chancery from 1683 to May 25, 1686, when he became a Counselor in the government of President Joseph Dudley, having been named for the office by James the Second, in his commission to Dudley, dated October 8, 1685. He was also chief justice of the Court of Pleas and General Sessions in New Hampshire from 1686 to 1689. In 1692 he was named as Counselor of New Hampshire and made president of the Council. In 1699 he was appointed chief justice of the Superior Court, and remained in office as Counselor and chief justice until 1707. He was living in New Castle, N. H., in 1722, and had deceased April 25, 1734. He married, at an unknown date, Elizabeth, daughter of Nathaniel and Christian Fryer, and had Samuel, a daughter who married a Gross, Christian, Barbara Sarah and probably Elizabeth.

Edward Winslow Hincks, the subject of this sketch, having received the rudiments of his education in the public schools of his native town, in 1845, at fifteen years of age, removed from Bucksport to Bangor, Me., where he served as an apprentice in the office of the *Bangor Daily Whig and Courier* until 1849, when he removed to Boston, where he was engaged in the printing and publishing business until 1856. He was a Representative from the city of Boston in the Legislature of 1855, and in the same year was a member of the City Council from the Third Ward. Early in 1856 he was appointed a clerk in the office of the secretary of the Commonwealth of Massachusetts, and prepared for publication the State census of 1855. He remained in the secretary's office until the firing upon Fort Sumter, employing his leisure hours in the study of law, with the intention of making that his profession, being encouraged and assisted in his purpose by Hon. Anson Burlingame, of whom he was an ardent friend and supporter. Having removed to Lynn in 1856, he was chosen librarian of the Lynn Library Association, and until the outbreak of the war actively promoted the interests of that organization, whose collection of books subsequently became the nucleus of the present Public Library in that city. He was also prominently connected with the Sabbath-school of the First Baptist Church in Lynn. On the 18th of August, 1859, he was appointed adjutant of the Eighth Regiment of Massachusetts militia—the Essex County regiment.

This appointment, trivial as it no doubt seemed at

the time, proved the turning-point in his life, and was the opening door to a military career in which he won lasting fame.

At the outbreak of the war he was placed by this appointment in a position whose duties he had performed with enthusiasm, and from which he could reasonably hope to receive advancement. On the 18th of December, 1860, he wrote to General Anderson, then stationed at Fort Moultrie, the following letter, which shows him to have been the first volunteer of the war:

"BOSTON, December 18, 1860.

"MAJOR ANDERSON, U. S. A., *Commanding Fort Moultrie*:"

"Major—In case of attack upon your command by the State (or would-be nation) of South Carolina, will you be at liberty to accept volunteers to aid in the defence of Fort Moultrie?

"I am confident that a large body of volunteers from this vicinity can be put afloat at short notice to aid in the defence of the post entrusted to your command, if necessity shall demand and the authorities permit it.

"Indeed, the men who have repeatedly responded to the call of the authorities to protect the officers of the law in their work of securing to the owners, from whom it had escaped, the chattel property of the South, will never hesitate to respond to a call to aid a meritorious officer of our Federal Republic, who is engaged, not only in protecting our national property, but in defending the honor of our country and the lives of our countrymen.

"I have the honor to be, sir, your obedient servant to command,

"EDWARD W. HINCKS,

"1st Lieut. and Adj. 8th Regt. Mass. Vol. Mil."

"FORT MOULTRIE, S. C., December 21, 1860.

"LIEUTENANT ED. W. HINCKS, *Adj. 8th Regt. Mass. Vol. Militia*:"

"Sir—I thank you, not only for myself, but for the brave little band that are under me, for your very welcome letter of the 18th inst., asking whether, in case I am attacked, I would be at liberty to accept volunteers to aid in the defence of Fort Moultrie.

"When I inform you that my garrison consists of only sixty effective men; that we are in a very indifferent work, the walls of which are only about fourteen feet high, and that we have within one hundred and sixty yards of our walls sand-hills which command our work, and afford admirable sites for batteries and the finest covers for sharpshooters; and that, besides this, there are numerous houses, some of them within pistol-shot, you will at once see that if attacked by a force headed by any one but a simpleton, there is scarce a possibility of our being able to hold out long enough to enable our friends to come to our succor.

"Come what may, I shall ever bear in grateful remembrance your gallant, your humane offer.

"I am, very sincerely yours,

"ROBERT ANDERSON,

"Major 1st Artillery, U. S. A."

"24 ST. MARK'S PLACE, July 5, 1866.

"GENERAL E. W. HINCKS.

"Dear Sir—Your letter, which I received two days before I moved over to Fort Sumter, was the first proffer of aid which was made me whilst in Charleston Harbor.

"Respectfully your obedient servant,

"ROBERT ANDERSON.

"Major-General U. S. A."

On the 15th of April, 1861, when the news was received of the attack on Fort Sumter, he hastened to Boston, and tendered his services to Governor Andrew, and at the same time urged the acceptance of the Eighth Regiment as a part of the contingent of fifteen hundred men called for by the President. His offer of service was accepted, and his request at once complied with. Under orders promptly issued he, that evening, rode to Lynn, Salem, Beverly and Marblehead, and despatched messengers to Newbury-

port and Gloucester, notifying the various companies of his regiment to rendezvous in Boston for instant duty. The next morning (April 16th) he marched into Faneuil Hall with three companies from Marblehead—the first troops in the country *en route* for the seat of war.

On the 17th of April he was commissioned lieutenant-colonel of the Eighth Regiment, which marched on the 18th for Washington. At Annapolis, Md., on the 21st of April, a detachment from the regiment, under command of Colonel Hincks, boarded the frigate "Constitution," then lying aground, and first lightening her of her guns, floated her and worked her to sea. Leaving the ship at midnight, he learned the next morning from General Butler that Colonel Lefferts, of the New York Seventh Regiment, had, after consultation with his officers, declined to advance his command and take possession of the Baltimore and Washington Railroad, through apprehension of an overpowering rebel force. He at once said to General Butler: "Give me the selection of two companies for the purpose and I will perform the duty." He was at once placed in command of a detachment consisting of Captain Knott V. Martin's Marblehead company, Captain George T. Newhall's Lynn company and several picked men, engineers and mechanics from other companies under command of Lieutenant Hodges, of Newburyport, and marched to the station, of which he took possession, with the rolling stock, materials, books, papers, etc., there found. Without delay he began the work of repair on the engines and track, the former having been disabled and the latter seriously broken up. During the first day an advance of five miles was made, and after a night's bivouac the work was resumed and continued until the road was in running-order. For this service the regiment received the thanks of Congress in the following resolve:

"THIRTY-SIXTH CONGRESS, FIRST SESSION.

"CONGRESS OF THE UNITED STATES IN THE HOUSE OF REPRESENTATIVES,
July 31, 1861.

"On motion of Mr. Lovejoy:

"Resolved, That the thanks of this House are hereby presented to the Eighth Regiment of Massachusetts Volunteers, for their alacrity in responding to the call of the President, and for the energy and patriotism displayed by them in surmounting obstacles upon sea and land, which traitors had interposed to impede their progress to the defence of the National Capital.

"GALUSHA A. GROW,

"Speaker of the House of Representatives.

"Attest: EM. FETHERIDGE, Clerk."

Reaching Washington on the 26th of April, Colonel Hincks was that day appointed a second lieutenant of cavalry in the regular army, the only rank in which, at that time, an officer could enter the regular service. From the date of his entrance into the regular army his military history is borne on the records of the office of the adjutant-general, as follows:

"Appointed second lieutenant Second Cavalry April 26, 1861; colonel Eighth Massachusetts Volun-

teers May 16, 1861; colonel Nineteenth Massachusetts Volunteers August 3, 1861; brigadier-general United States Volunteers November 29, 1862; brevet major-general United States Volunteers March 13, 1865, for gallant and meritorious services during the war; resigned volunteer commission June 30, 1865; appointed lieutenant-colonel Fortieth United States Infantry July 28, 1866; transferred to the Twenty-fifth United States Infantry March 15, 1869; breveted colonel United States Army March 2, 1867, for gallant and meritorious services at the battle of Antietam, Md.; and brigadier-general United States Army for gallant and meritorious services in the assault of Petersburg, Va.; retired from active service for disability resulting from wounds received in the line of duty December 15, 1870, upon the full rank of colonel United States Army.

Service.—With Regiment Eighth Massachusetts in the State of Maryland until August 1, 1861; with Regiment Nineteenth Massachusetts in the Army of the Potomac from August, 1861, to June 30, 1862, when wounded in action at White Oak Swamp, Va.; absent, wounded, to August 5, 1862; commanding Third Brigade, Sedgwick's division, Army of the Potomac, to September 17, 1862, when twice severely wounded in the battle of Antietam, Md.; on leave of absence, wounded to March 19, 1863; on court-martial duty as brigadier-general at Washington, D. C., April 2 to June 9, 1863; and under orders of War Department to July 4, 1863; commanding draft rendezvous at Concord, N. H.; acting assistant provost marshal, general and superintendent of the Volunteer Recruiting Service for the State of New Hampshire to March 29, 1864; commanding district of St. Mary's and camp of prisoners of war at Point Lookout, Md., April 3 to 20, 1864; commanding Third Division, Eighteenth Army Corps, to July, 1864, when wounded; on court-martial duty to September 22, 1864; commanding draft depot and camp of prisoners of war at Hart's Island, New York Harbor, to February, 1865; on duty at New York City as acting assistant provost marshal general, superintendent Volunteer Recruiting Service, and chief mustering and disbursing officer for the Southern Division of New York to March, 1865; and on the same duty at Harrisburg, Pa., for the Western Division of Pennsylvania to June 30, 1865; governor of the Military Asylum to March 6, 1867; *en route* to, and in command of, Fort Macon, N. C., until April 13, 1867; on special duty at headquarters Second Military District at Charleston, S. C., to April 27, 1867; provost marshal general Second Military District North and South Carolina to January 16, 1868; commanding Fortieth Regiment and the sub-district and port of Goldsboro', N. C., to July 13, 1868; on sick leave of absence to December 4, 1868; commanding regiment in North Carolina and Louisiana until April 20, 1869, when he assumed command of the Twenty-fifth Infantry, and remained in command of

that regiment and the post of New Orleans, La., until August 14, 1869; on sick leave of absence to December 1, 1869; and in command of regiment in New Orleans and *en route* to and at Fort Clark, Texas, from that date to December 15, 1870."

Such is the record borne on the pages of the army books, and no narrative could set forth the military life of General Hincks so clearly and eloquently as these authoritative words. Aside from the leading well-known generals of the war, few officers can boast of a more varied and gallant and useful career.

In concluding the narrative of the war experience of General Hincks, while the repeated testimony of his superior officers in their general orders to his gallantry will be omitted, the list of battles in which he was engaged must not fail to be mentioned:

Battle of Ball's Bluff, Va., October 21, 1861; siege of Yorktown, Va., April, 1862; affair at West Point, May 7, 1862; Fair Oaks, June 1, 1862; Oak Grove, June 25, 1862; Peach Orchard, June 29, 1862; Savage's Station, June 29, 1862; White Oak Swamp, June 30, 1862; Glendale, June 30, 1862; Chantilly, September 1, 1862; South Mountain, September 14, 1862; Antietam, September 16 and 17, 1862; Baylor's Farm, June 15, 1864; assault at Petersburg, June 15, 1864.

The services of General Hincks after the war were only less important than those during its continuance. Under General Sickles and General Canby the aid he rendered in perfecting and carrying out the reconstruction measures of the government in North and South Carolina, forming what was called the Second Military District, was recognized by his superior officers as efficient and valuable.

On the 15th of December, 1870, the general was retired from active service upon the full rank of colonel in the United States Army on account of wounds received in battle, and on the 7th of March, 1872, he was appointed, by the Board of Managers of the National Homes, deputy-governor of the Southern Branch of National Homes, at Hampton, Va. On the 1st of January following he was transferred to the Northwestern Branch, near Milwaukee, Wis., and resigned October 1, 1880.

After the resignation of his position as deputy-governor of the National Home at Milwaukee, General Hincks remained in that city until June, 1883, and was largely influential in the organization of the Milwaukee Industrial Exposition, a corporation then formed and still in existence, having for its object the promotion of the industrial interests of Milwaukee and the State of Wisconsin. Since 1883 he has lived in Cambridge, Mass., enjoying a period of well-deserved peace and comfort. He occupies a stately old mansion, said to be more than two hundred years old; and the books and pictures, and quaint old family china and furniture with which it is replete, reveal the culture and taste of its occupants.

In the autumn of 1862, after having been severely wounded in the battle of Antietam, General Hincks was urgently requested by many independent Republicans, to run for Congress in the Sixth District, then represented by Mr. John B. Alley, but he positively

declined to be a candidate for any office that would prevent his return to the field as soon as he should sufficiently recover from his wounds. He was sergeant-at-arms of the National Republican Convention at Philadelphia in 1872, when General Grant was nominated for a second term; and again at Cincinnati, in 1876, when General Hayes was nominated for President. In the Cincinnati Convention he was nominated by the chairman of the Michigan delegation "for his many wounds received in battle," and was unanimously elected.

General Hincks is a Knight Templar in the Masonic Order, a companion in the National Commandery of the Loyal Legion and a member of the New England Historical Genealogical Society; commander of Wisconsin Commandery of Military Order of the Loyal Legion in 1876, 1877, 1879 and 1880, and commander of Massachusetts Commandery in 1889-90; was a member of the Cambridge Board of Aldermen in 1886, 1887 and 1888, and during the year last named was president of the Board and occasionally acting mayor; is (1890) president of the Reliance Co-operative Bank in Cambridge.

General Hincks has been twice married—first, January 25, 1855, to Annie Rebecca, daughter of Moody and Clarissa (Leach) Dow, of Lynn, who died in Lynn, August 21, 1862. Her only child was Anson Burlingame, who was born in Lynn, October 14, 1856, and died in Rockville, Md., January 27, 1862.

He married, second, September 3, 1863, Elizabeth Pierce, daughter of George and Susan (Treadwell) Nichols, of Cambridge, whose only child, Bessie Hincks, born in Cambridge, April 11, 1865, died in Cambridge, July 5, 1885.

The death of this daughter was peculiarly sad. She had graduated in 1883 from the Milwaukee College, and had entered the Harvard Annex full of hope and promise. While walking in the street her dress took fire from a burning cracker, and she was burned to death. Her sweet and loving character, blended with high literary attainments, lent a joy and grace to her parents' home, since shadowed in perpetual gloom. It is only necessary, before closing this sketch, to add a word of explanation concerning the family name of General Hincks.

The common ancestor of the Hincks family in this country, Councilor and Chief Justice John, uniformly wrote his name Hincses, but when copied by clerks it was usually written Hinks, and so frequently appears in the Council Records of Massachusetts and the Archives of New Hampshire. Captain Samuel, who graduated at Harvard in 1701, and his son, Samuel, Jr., the schoolmaster on the Cape, uniformly wrote their name Hineks; but Elisha and his son, Captain Elisha, Jr., the father of the general, appear to have dropped the c, and to have written their names Hinks; and in early life the general also wrote his name without the c (Hinks), and it so appears in the Army Register and the official records of the war,

although other branches of the family wrote their names with a c; but in 1871, under authority of law, the general restored the letter c to his name, and has since written it Hineks, and all the branches of the family descended from Chief Justice John now conform to this style. It will be noted that all of this family in this country bearing the name of Hineks are descended through the Winslows from Mary Chilton, who came in the "Mayflower," and Anne Hutchinson, the Quakeress.

HON. J. WARREN MERRILL.¹

This prominent citizen was an inhabitant of Middlesex County, Mass., for some fifty years. During almost thirty-eight of the final years of this period and of his life of seventy years, his home was in Cambridge, of which city he was the ninth mayor, and, previously, a representative in the General Court of Massachusetts.

His earliest ancestor in this country was Nathaniel Merrill, who came from Salisbury, England, to Newbury, Massachusetts, in 1633. The family tradition is that the English progenitors were of French extraction, through an official of the exchequer, who, by friendly aid, escaped the massacre of St. Bartholomew, in August, 1572, and crossed the Channel for refuge.

Joseph Warren Merrill, the oldest son of Nathan and Sarah (Page) Merrill, was born in South Hampton, N. H., Dec. 13, 1819. His father, who was a teacher, removed his family to Portsmouth in 1825, and about eight years later to Boston. The youth was for some time a pupil at the English High School. He became an apprentice to Mr. Joshua P. Preston, apothecary, on Federal Street, about the 1st of June, 1835. Six years later, June 15, 1841, at the age of twenty-one years and a half, he engaged in the same business for himself, at the corner of Salem and Richmond Streets. He found that he could not conscientiously do, on Sunday, the most profitable business of the week, in the sale of luxuries. The pecuniary effect of confining himself to the sale of medicines on that day was so discouraging that he gave up the business, and a meeting with his old employer, who had retired, resulted in a partnership in the business of fancy goods, including domestic, imported, and some proprietary articles, the latter pertaining to manufacturing chemistry. Thus was formed, in 1845, the firm of Preston & Merrill, whose name has been so familiar throughout our country, if not the world. A venture in the shipment to California of a culinary compound which they manufactured, proved a most successful mini-stration to the comfort and luxury of settlers rushing to the land of gold, and also to the fortunes of the proprietors. Mr. Merrill divided his share of the gain between his wife and some benevolent institution. Thenceforward his business success was secured.

¹ By George H. Whittemore

John Warren Corvill

On the 13th of June, 1848, he had been married to Miss Hannah B. Wattson, of Philadelphia, and to them were born six children, two of whom were removed by early death. In the morning of his prosperity, Mr. Merrill looked about for a home for his wife and infant son, and selected Cambridge, to which he removed from Charlestown, June 11, 1852. He first owned and occupied, for fifteen years, an attractive estate on Harvard Street, upon the eastern slope of Dana Hill; and then built a mansion upon the summit of the hill, facing Broadway, which was finished in 1868, and was his home for the remaining twenty-one years of his life.

The nearly forty years of Mr. Merrill's residence in Cambridge witnessed a great change in it from rural to urban aspect and characteristics; and as a property-owner, public-spirited citizen, and municipal officer, he was no small factor, directly and indirectly, in the process. His first official service was as a member of the Common Council, in 1861, from which he went to the Board of Aldermen the following year. He was long a member of the Water Board of the city, part of the time as its president. He was a representative in the legislature of Massachusetts in 1864, and he was mayor of Cambridge in 1865, including the closing months of the war, and was re-elected for 1866. In view of the demands and rewards of his profitable business—in view, also, of his growing family and strong domestic tastes, it was not strange if, after these six years of strenuous service, embracing the peculiar exigencies of the war, he should not encourage the suggestion of a congressional term upon the broader stage at Washington. Besides the business of the firm with which he was so long identified, Mr. Merrill was interested in other enterprises, notably that of the Boston and Colorado Smelting Company, of which he was one of the founders, in 1867, and the treasurer.

Even this imperfect glance at some of his principal activities will show that Mr. Merrill was pre-eminently a man of affairs. As such he was marked by ability, energy, diligence, integrity and success. But he not only had a vocation in life, he had also avocations. One of these, the original impulse to which came to him in a time of physical and mental exhaustion, through the affectionate agency of his wife, was the study and collection of ferns; another was photography; and a third was research into his family history. His skill and interest in croquet, with its undoubted benefit to his health, almost entitle it to mention as a pursuit as well as pastime.

Mr. Merrill was an ardent patriot. The writer recalls how he entered into the spirit of that great meeting under the Washington elm, in April, 1861, within two weeks of the first gun of the war—a meeting addressed, among others, by Palfrey and Banks, Hillard, Judge Russell and the Hon. John C. Park, to which marched the First Massachusetts Regiment, soon to depart for the seat of war. He was at this

time, as has been said, a member of the City Council; and a published letter, of the very date of the meeting just referred to, from Captain J. T. Richardson, of that famous earliest band of volunteers from Cambridge, attests how early and strong was Mr. Merrill's zeal as a citizen and an official in the uprising of the loyal nation. The following are the first two paragraphs of the letter:—

“FORTRESS MONROE, 27th April, 1861.

“J. WARREN MERRILL, Esq.

“*Dear Sir:* Yours of the 19th inst. is received, and has been read to the company, and was received with the greatest enthusiasm. It cheers the heart and nerves the arms of the soldier to know that his sacrifices and toils and dangers are appreciated by his fellow-citizens at home, and that the dear family he has left behind him is to be cared for in his absence.

“I am requested by the company to return their grateful thanks to you and the gentlemen associated with you, and through you to the City Government and citizens of Cambridge for their generous action towards them.”

His sense of public obligations as a citizen was habitual and not confined to emergencies, either in war or in peace. Upon the bed of final illness, three weeks before his death, on the day of the State election, he spoke, in the morning, of being taken to vote, but was advised by his physician to wait until afternoon. The pleasing thought of citizenship in Heaven, where they go no more out forever, is here suggested, and forms a natural transition to Mr. Merrill's character as a Christian, which was, to a noteworthy degree, the basis and principle of his private and public life, the vital source of that useful civic career which rightly causes him to be noticed in an historical work like the present.

At the age of eighteen years he embraced the duty and privilege of a religious life, being baptized in the Baldwin Place Baptist Church, Boston, April 8, 1838, by the late Rev. Dr. Baron Stow, his parents' friend and his own; and at once addressing himself to the Christian and missionary endeavor for which his life was to be so remarkable. Upon removing from Charlestown, he united with the Old Cambridge Baptist Church, where, as in the wider field of the country and the world, he soon came to be known as a lover of the church; a man of effort for the salvation of others; a man of prayer; a liberal man that devised liberal things. The erection of this church's second house of worship went on at the same time with that of his own home, and he probably devoted about equal amounts of money to each. The catalogue would be long of the institutions and societies to which he made large and habitual gifts in life, supplemented by the bestowal upon them, in his will, of what would once have been regarded as, in itself, a very extensive fortune. His beneficence, too, in numberless and constant instances, was tender and personal, as well as systematic and general in religious, educational, patriotic and philanthropic channels. Sometimes the personal and institutional directions of his bounty found most manifest and felicitous

itous combination, as in the Baldwin Place Home for Little Wanderers.

Decided in his religious, political and other convictions, Mr. Merrill was, at the same time, able to take broad and Catholic views. There was something in the man akin to the great State in which he was born and the great sons whom it has begotten. This magnitude, commingled with refinement, was observable in his person, nature and tastes. Of large stature and portly habit, he was of delicate health in youth, and always evinced traits of nice physical constitution. He was fond of the mountains and the ocean, of being abroad upon his grounds at Cambridge or Manchester-by-the-Sea, and was versed in woodcraft and horticulture, as well as ingenious, orderly and efficient in mechanical and practical devices. His home and library, favorite associations and pursuits, his written or spoken addresses, both in substance and expression, showed that he was a lover of great and good and fine men and things. The majestic eloquence of Webster and the elegant and finished oratory of Everett were alike his life-long admiration. On account of such traits as these, and the impressiveness, dignity and grace of his bearing, as well as because he had been mayor of the city, it was appropriate, when Cambridge celebrated her two hundred and fiftieth anniversary, with the oration of Colonel Higginson, the address of President Eliot, the presence and participation of one distinguished native poet, Holmes, and the proud remembrance and mention of another, Lowell, then at the court of St. James—it was fitting that Mr. Merrill should have been designated, in the order of ceremonies, as the companion of Longfellow, and never, it may be observed, did the gracious poet offer a more striking and regal figure than on that December day of 1880, erect, with flowing, whitened hair and beard, and clad in an ample fur-trimmed overcoat.

J. Warren Merrill was, indeed, a large man by nature, enlarged by New England education, by Christianity accepted as personal religion, by living heroically in a heroic time, by seeing much of men and manners in his own country, and in prolonged tours of foreign travel, and by sitting (as he did for years in the missionary organization of his communion) at a council-board for the world's evangelization.

It is a pleasant office to furnish for these records of this good old county of Middlesex, some account of this life and character. Such men are the best of citizens. Happy the Commonwealth which has its quiver full of sons whom wealth, ability and position animate, not to aggrandize self and to ignore others, but rather to seek by all good living in church and state and society to follow Him who came "not to be ministered unto, but to minister." This was the motto of a commemorative discourse in the Cambridge Church, which is so largely a Merrill memorial, on Sunday, November 24, 1889. Within the same

walls had been held a brief and simple funeral service, followed by interment at Mount Auburn, on November 15th. He died, one month before the age of seventy years, November 12, 1889.

ERASMUS D. LEAVITT.¹

Erasmus Darwin Leavitt, of Cambridge, son of Erasmus Darwin and Almira (Fay) Leavitt, was born in Lowell, Mass., October 27, 1836. He was educated in the Lowell Public School, entered the machine-shop of the Lowell Manufacturing Company in April, 1852, and served three years as apprentice, at the close of which time he worked under instruction for a year at the works of Corliss & Nightingale, of Providence, R. I., the birthplace of the Corliss engine. From 1856 to 1858 he was engaged in developing some inventions in steam engineering for which a patent had been granted to him in 1855. In 1858 and 1859 he was assistant foreman at the City Point Works, South Boston, and had charge of building the engines for the flagship "Hartford." From 1859 to '61 he was chief draughtsman for Thurston, Gardner & Company, of Providence, R. I., leaving there to enter the United States Navy in the summer of 1861, as third assistant engineer. He served through the War of the Rebellion, and during his term of service was detailed to the Naval Academy at Annapolis as instructor in steam engineering. Resigning in 1867, he resumed the practice of mechanical engineering, making a specialty of pumping and mining machinery.

In 1872 Mr. Leavitt designed and patented a novel pumping engine, which was first used at Lynn, Mass., and on account of its remarkable performance it became celebrated in Europe as well as in this country; similar engines were subsequently erected at Lawrence, Mass., Louisville, Ky., and the sewage station of the city of Boston.

In 1874 he became connected with the famous Calumet and Hecla Copper Mine as an adviser on mechanical matters, and has been consulting engineer of the company since 1878, furnishing the designs and plans for the immense plant required.

He has also acted as consulting engineer to the cities of Boston and Louisville, and to the firm of Henry R. Worthington, of New York, the celebrated builders of pumps.

He is a member of the American Society of Civil Engineers, American Institute of Mining Engineers, American Society of Mechanical Engineers (and past president of same), Boston Society of Civil Engineers, American Society of Naval Engineers, life member of British Association for Advancement of Science, member of American Academy of Arts and Sciences, the Institution of Civil Engineers and the Institution of Mechanical Engineers of Great Britain. In 1884 he received the honorary degree of Doctor of Engineer-

¹By George H. Cox.

E. D. Leavitt

Curtis Davis

ing from Stevens Institute of Technology, of Hoboken, New Jersey.

Mr. Leavitt was married, June 5, 1867, to Annie Elizabeth, daughter of William Pettit, of Philadelphia, who was a pioneer in locomotive building in the United States, and long connected with the Baldwin Locomotive Works. Mrs. Leavitt died December 28, 1889. Their children were Mary Alford, Hart Hooker, Margaret Almira, Harriet Sherman and Annie Louise. Of these, three are living: Mary, Margaret and Annie.

Mr. Leavitt's life has been one of close application to his chosen profession, and to-day he occupies a leading position among the most eminent engineers of this country and of Europe, his ability being recognized by all his contemporaries. During his several trips abroad he has received marked attention from the leading men of his profession, and from the various engineering societies.

He is a man possessed of the strictest ideas of honor, and an unswerving fidelity to his own convictions. Of quiet, unassuming manner, he has been ever ready to assist the young engineer, listen with courtesy and deference to his opinions, and give him advice when desired.

CURTIS DAVIS.

The prosperity of New England is largely indebted to her self-made men, who have continually added to the wholesome wealth of the community by their persistent and unwearied efforts, have been workers, producers, and not mere consumers, obeying the ancient law of our race, "By the sweat of thy brow shalt thou gain thy bread."

Conspicuous among these and worthy of special mention was Curtis Davis, the son of Daniel and Mary (Brown) Davis. He was born in the town of Bradford, New Hampshire, February 11, 1814, and was the grandson of Isaac Davis, whose eight children were: Betsy, born December 29, 1760; Mollie, born May 31, 1762; James, born February 24, 1764; Daniel, born February 4, 1766; John, born December 24, 1768; Susan, born January 7, 1770; Sally, born April 17, 1772; and John, born August 14, 1774.

Daniel married Mary Brown and had eleven children: Samuel, born March 19, 1799; Enoch, born August 27, 1791 (died in infancy); Enoch, born January 6, 1793; Dorcas, born January 25, 1795; Eliphalet, born December 16, 1796; Lydia, born January 4, 1799; Diamond, born April 25, 1802; Hiram, born February 24, 1807; Lyman, born October 11, 1809; Isaac, born January 18, 1811, and Curtis.

Curtis was the youngest of his family, and although his father was a well-to-do farmer, yet with such a large family to support, frugality, economy and industry were essential characteristics for the development of the resources of the farm, and these children were well grounded in the principles which lead to success, and formed those habits of perseverance and

diligence that have ever been their prominent traits. In 1832 Curtis left his pleasant home, a poor boy unacquainted with the ways of the world, his education being only that afforded by the common schools of the period, but his courage and determination were strong and his ambition was to engage in some business and follow it. He came to Cambridgeport, Massachusetts, then comparatively a small place, and engaged for a very moderate compensation with a firm in the soap business, of which his brother Eliphalet was a partner.

He continued in their employ for a short time and then returned to Bradford, where he remained for a year, and in the fall of 1833 he removed to Cambridgeport and resumed his former position, where he worked faithfully, and devoted himself to acquiring the details of the manufacture with a view to establishing himself on his own account which he did in 1834, by purchasing the business of Hiram Davis.

This establishment he sold in 1835, when he bought another factory of greater capacity, and in 1837 took into partnership Alexander Dickinson, with whom he was connected until 1854.

Mr. Davis then bought and enlarged the buildings now known as the Curtis Davis Soap Works, and the plant, covering an acre of ground, is the most noted and the largest of its kind in New England.

In 1864 Mr. Davis took into partnership his son-in-law, James Mellen, who took the superintendence of the sales-rooms in Boston, and who, since the death of Mr. Davis, January 13, 1887, has succeeded to the business of the firm and is now busily engaged in carrying on this large enterprise in an efficient manner.

Mr. Davis married, November 29, 1835, Martha Kemp, who was born in Pomfret, Vermont, April 1, 1818. From this union there were five children: Christina Van Ness, born April 15, 1840, and married James Mellen; Ermina Francis, who died December 25, 1854, aged twelve years; Curtis Rockwell, died Feb. 24, 1876, aged thirty-one years; Mary Lizzie, born Dec. 7, 1846, married Samuel Noyes, Jr.; Edwin Alberto, died July 8, 1851, aged twenty-two months.

For nearly fifty-two years Mr. Davis and his beloved wife lived together, experiencing many joys and many sorrows, each a help-meet to the other and each living lives eminently worthy of imitation.

Mr. Davis passed from the scenes of his activity and usefulness here to his reward beyond January 31, 1887, and his wife followed him April 20, 1889.

With all his devotion to business Mr. Davis did not neglect his civil relations towards the place which had been his home from boyhood.

He kept pace with the growth of Cambridgeport, having been identified with its manufacturing interests for half a century and was one of the solid men of this city.

High-minded and honorable, he possessed the respect and esteem of her citizens. Of a retiring disposition, he never sought for political preferment.

His integrity and honesty of purpose were ever shown in his business methods and as a director in the Citizens' Insurance Company and also in one of the Cambridge banks for several years he proved himself qualified for important public trusts.

His political affiliations from boyhood were with the Democratic party, and the principles and methods of that party as indorsed and carried out by President Cleveland found in him hearty support.

He has been a member of the Common Council, has served as alderman two years and represented Cambridge in the General Court for three terms.

Mr. Davis exemplified those qualities which distinguish those whom we call self-made men.

He commenced life with no vices; he was prudent, economical and temperate; business success he preferred to pleasure and to his work he carried enterprise, energy and will. He was essentially a moving force in his work, and this review of his life is of value to our young men, who can see what may be accomplished by industry, fidelity and honesty of purpose.

Up to the time of his death his heart held a firm grasp of his native town, and the home of his parents was ever tenderly cherished.

He had a pride in its scenery, its associations, and in the noticeable men it has produced, and Bradford has never had a native who more loyally prized her worth or who, in the far-reaching realm of business, has done her greater honor.

SAMUEL BAKER RINDGE.

Daniel Rindge, who is believed to be the ancestor of all of the name in America, came from England to Massachusetts Bay in 1638, settling first at Roxbury, but soon removing to Ipswich, where descendants of his name remained for five generations. He appears to have owned land on Heart Break Hill (a name which is variously explained, but probably due to its difficult ascent), also one house on the Turkey Shore and another in High Street, and his farm was within the present limits of the town of Hamilton.

The Portsmouth family of Rindge was an offshoot from that at Ipswich. One Daniel Rindge, of that branch was a successful merchant there and another, John Rindge, became a prominent man in the New Hampshire Colony and a member of the Colonial Council, in which capacity he signed bills of credit, as appears by a specimen still preserved in the museum at Plymouth, Mass. He was chosen to represent the Colony before the King in England in relation to the disputed boundary line on the Massachusetts side and the town Rindge in New Hampshire was named in honor of him.

Daniel Rindge, the first settler, had a son Roger; Roger a son Daniel; this Daniel a son also Daniel; this last Daniel a son John; and John a son Samuel—all of these except the first being natives of Ipswich.

Samuel Rindge, born January 29, 1791, went from

Ipswich to Salem and thence to East Cambridge, then known as Craigie's Point, where he was employed for many years by the New England Glass Company as overseer and purchaser of supplies. Previous to this he had been engaged in the manufacture of furniture, which was shipped to the South and sold there. He married, February 17, 1820, Maria Bradlee Wait, and he died February 1, 1850.

His oldest son, Samuel Baker Rindge, was born December 26, 1820; married, April 29, 1845, Clarissa Harrington, of Lexington, Mass., and died May 3, 1883. Of six children only one, Frederick Hastings Rindge, survived his parents.

Samuel B. Rindge, after the brief but solid schooling of his time, began his business life with no capital except a sound body and a willing mind. At the age of sixteen (1836) he entered the employment of Parker & Blanchard, which was the first firm in Boston that engaged in and relied solely upon the business of selling American-made textile fabrics on account of the manufacturers. The manufacturing business itself was then in its infancy and giving no sign of its later wonderful development. The boy's position was one that called for much hard work and yielded small remuneration. He was expected to be the first to come and the last to go, and in the time between was expected to make himself generally useful. In such a place a shirk would have found himself unhappy, but the lad Rindge was no shirk: his own work was always done promptly, and it was always his inclination to reach out for a share in the duties of those above him. When he was "the boy" he was always ready to fill a gap in the book-keeping, and when he became himself a book-keeper he managed, by working out of hours, to get time to act as a salesman in the busier portion of the day. He was abstemious in his habits and recognized alcoholic beverages and tobacco as his enemies. His powers of observation and his memory were alike remarkable; he saw everything and forgot nothing. As an accountant he was thorough and exact; as a salesman he was active and popular; he made himself an excellent judge of the qualities of manufactured goods and an expert in wool and other raw materials.

Such a man could not but rise, and in the year 1847 he was admitted a partner in the firm, then styled Parker, Wilder & Parker, and when he died he was the senior member of the house, then Parker, Wilder & Co.

He grew with his business, opening his mind and enlarging his scale of action as manufacturing developed and the times changed. Losses never discouraged, but simply instructed him, and the end of a season of panic which swept away a large fraction of his capital found him full of confidence in himself, not bewailing the past, but looking forward cheerily to the future.

It was a fault in his mercantile character that he took upon himself too much, and that as his work

Paul B. Pinney

.

.

.

.

grew he did not devolve more upon his employees. It has been said of him that he did the work of ten men; certainly he loved work, but it would have been wise and it would probably have prolonged his life if he had been willing to limit himself more closely to the navigation of the ship, leaving others to trim the sails and keep the watch.

He was a stalwart-looking man to the last and his cheeks kept a ruddy hue of health. His powerful physique was illustrated by his interference in one instance to put a stop to a brutal fight between two men in a country town, where, as they were struggling on the ground, he grasped one of them by the collar of his coat and raised him to his feet as if he had been a child. But even the stoutest of men may be overloaded and Mr. Rindge, although warned of his danger, preferred apparently to incur the risk rather than deny himself the exhilaration of earnest occupation.

Nor was he content to confine his work to his own especial avocations. To be a director in the manufacturing concerns in which he was interested was to make but little addition to his cares, for he would have felt the same responsibility as their buying and selling agent; but as his reputation for business sagacity increased he was induced to assume additional duties. For two years he was an alderman of Cambridge. He was the director in two banks—the president of one; trustee in the Cambridge Savings Bank, president of the Union Glass Company, director in the Cambridge Railroad Company and in other corporations. Besides all these, when consulted by friends he was not content to limit his advice to generalities, but was apt to make a study of their interests as if they were his own; and it was said by an eminent lawyer of Boston that he had never known Mr. Rindge's equal in ability to grasp the deepest questions of business and the complicated problems often connected therewith.

One can only wonder that such a man should have lived so long. His strong constitution may explain in part his ability to bear a heavy strain, and his readiness to enter into any passing recreation, to enjoy travel and to be easily diverted may explain the rest. He found but little diversion in books—men and things were more interesting to him.

Mr. Rindge was fortunate, too, in his wife, a woman of remarkable kindness and charity—everywhere revered for her many amiable qualities, and nowhere better appreciated than in her own home. Socially she was connected with many charitable societies in Cambridge, and being a strict church-goer she exerted a wide-spread influence upon the morals of the city. She died in less than two years after her widowhood, leaving by her will charitable foundations to commemorate her husband.

At a union meeting of officers of the various corporations with which he was connected, resolutions were passed in memory of Mr. Rindge, and it was said that every eye was dimmed by tears.

As showing the general esteem in which he was held, these few extracts from many public notices may suffice.

"As a merchant," says a Boston paper, "he leaves a character above reproach, as a citizen he was universally respected and he will be greatly missed by the mercantile communities of Boston and New York, where he was widely known and wherein he was accorded a position second to none."

"As a business man," writes a Cambridge editor, "he was held in the highest esteem, as is evidenced by his associations in this city. For many years he was a director in the Charles River National Bank and later became its President. He was also a director in the Lechmere National Bank and a trustee of the Cambridge Savings Bank. Mr. Rindge was always identified with projects for the good of the city, and was a liberal giver to worthy causes."

"With an ambition to work and win," says another notice, "but always jealous of his character, nothing could wean him from the path he had chosen. As he grew in years so grew his reputation for probity and commercial ability. . . . With advancement he assumed the burdens following such promotion with a degree of modesty equaled only by the diligence and uprightness exercised in the execution of all trusts committed to his care. And thus half a century of years in business life was passed, the experience of each year adding to the fullness of a mind already admired for the display of such superior qualities."

In the last few years of his life Mr. Rindge passed the summer seasons by the sea at the old town of Marblehead, at first as the tenant of others, but finally in the beautiful home which he built at Little-Top Hill, near Peach's Point. From the first he "took to" the town and its people, and his life here was one of unrestrained enjoyment. Here he threw off all business cares and immersed himself in healthy country living. His regard for the people was warmly returned, as is testified by the deep feeling which marked his obituary in the local press.

"It was with saddened faces and heavy hearts," says the *Marblehead Messenger*, "that our people heard of the death of Mr. Samuel B. Rindge last week. No person ever died in our midst who was more universally respected than was he.

"From the first he seemed to love our people and they in turn had learned to love him. Unlike a great many others who have sojourned in our community as summer residents, he could see nothing strange in our dialect or behavior that would excite ridicule or comment. Our crooked, narrow streets and quaint old houses called forth from him no disparaging remarks, but he could only see in those he met men, women and children created in the image of God like himself and that he was commanded to love them; and this he did most earnestly and his love was reciprocated by them.

"He did not seem to be over-anxious to form an

acquaintance with the *élite*, so called (although he treated all courteously), but rather the men of the people, the day laborers. He never passed one on the street without a kindly salutation and friendly greeting, and if one was burdened with a bundle or had a long walk to and from his work, he was invited to a seat beside him in his carriage to enjoy a ride and also the pleasure of his entertaining and genial conversation. . . .

"But above all he was a friend to the needy and down-trodden. No one who ever asked alms for himself or others, or a favor of any kind from him, was ever refused; but he never published it to the world, for quietly and without display he gave generously of his ample wealth. His 'creed' seemed to be more than an empty form for, like the Master, he went about doing good. He was in every sense a true Christian gentleman. . . .

"The world is made better by such lives. It would be well for some of our wealthy men to stop and consider if it is not better to make friends instead of enemies of their fellow-men who have less means than themselves. Let them study the life of this good man whose deeds are so enshrined in all our hearts as never to be forgotten. . . ."

Akin to the feature of character above commended, is the interest which Mr. Rindge took in the persons employed in mills under his direction. He remembered and recognized men and women, and enjoyed talking with them; and this not as *de haut en bas*, but placing himself and them on precisely the same level.

It was the desire of the family that the funeral services should be private and their wish was respected; but most unexpectedly a great throng attended at the burial. Neighbors and business friends, official associates and employees and many persons whom he had befriended were there, bearing witness by their attendance to their esteem and his worth.

JAMES MELLEN.

The general verdict of a man's contemporaries would be a truer estimate of his real worth than the glowing memorials which find their way into the obituary columns of the newspapers when a good citizen dies. Tried by this standard, the quiet, genial and unassuming traits of James Mellen would call forth a practically unanimous tribute of good will and esteem from his fellow-townsmen, and a hearty assent from a widely-scattered host of friends and business associates. His is an open record of an honorable and successful business man whose original stock in trade consisted chiefly in that old-fashioned family legacy—personal industry, honesty and brains. With such an equipment it is not strange that he has earned a large measure of success, and is easily classed among the substantial citizens of Middlesex County. In brief outline, the record of his early years is that of the typical New England-bred boy. Born in Charlestown April 9, 1838, his childhood, until the

age of seven years, was passed there, when the family then moved to Cambridge. His father, James, Sr., was born November 1, 1815, and married, September 10, 1837, Sarah Ann (Hilton) Mellen, the widow of his brother, David Mellen, Jr., who was born March 15, 1804, who died November 11, 1836. The children of this last marriage were James, the subject of this sketch, and David, Jr., who was born November 24, 1839. David died September 18, 1852. The children by the marriage with David were Louisa Maria, born March 21, 1829; William Otis, born February 17, 1831; and Ellen Celinda, born May 8, 1833. The grandfather of Mr. Mellen was David, and his grandmother was Grace Beals.

The educational advantages of Mr. Mellen were those afforded by the public schools of Charlestown and Cambridge, which he attended until he was old enough to be of assistance to his father in his business as a contractor and mover of buildings. He entered heartily into this work with the vigor born of his sturdy Scotch ancestry, and became efficient in the details of this business. He was occasionally employed by Mr. Curtis Davis, who was then coming into prominence as the manufacturer of soap in a large way, and such was the aptness of young Mellen that he soon became a valuable acquisition to this (to him) new business, and in 1864 was taken into partnership by Mr. Davis, and became thoroughly identified with this industry, which had become, prior to the death of Mr. Davis, in 1887, of very large proportions, and to the accomplishment of which fact Mr. Mellen had contributed his full meed of energetic work with hands and brains. Nor was Mr. Davis alone of his family the one to be attracted by his manly and vigorous personality to this comely young man,—Cupid must have "had a hand in it," for November 1, 1860, Mr. Mellen, was married and the happy bride was Christana Van Ness, eldest daughter of Curtis Davis, and for over thirty years they have together enjoyed the fruitage of his intelligent business abilities in yearly increasing measure.

A beautiful home on Washington Avenue, in Cambridge, and a lovely summer cottage on the North Shore, are among the incidents of this companionship. Mr. Mellen, while not taking any active part in politics, is interested in public affairs, and while in the main acting with the Republican party, he considers himself an Independent. He represented his section of the city in the Council, has had to do with the management of financial affairs, and is a safe adviser and a whole-souled, benevolent friend. The children of Mr. and Mrs. Mellen are: Edwin Davis, born Nov. 23, 1861; Mary Lizzie, born Aug. 19, 1863; Louisa Maria, born Sept. 18, 1865; Martha Davis, born Nov. 13, 1868; Sarah Agnes, born Nov. 20, 1869; Nettie Christana, born July 15, 1870, died July 14, 1871.

Of these children, Edwin Davis, Sept. 5, 1883, married Adele Lods, and they have one child, Lucile Christana, born July 5, 1886.

James Mellen

C. H. Horsford

Mary Lizzie, Nov. 1, 1886, was married to Frederick L. Cunningham, and they have one child, James Mellen, born Jan. 16, 1888.

Mr. Mellen has provided for his children more extended educational advantages than were common in his boyhood days. His son, Edwin D., having taken high rank as a scholar, has been taken into partnership with his father, and it is to be reasonably expected that this business will in the future be carried to greater degrees of perfection by the light of science and chemical analysis.

EBEN NORTON HORSFORD.

Eben Norton Horsford was born at Moscow, Livingston County, New York, July 27, 1818. His father was Jerediah Horsford, from Charlotte, Chittenden County, Vermont; and his mother, Charity Maria Norton, from Goshen, Litchfield County, Connecticut. She was in direct descent from Thomas Norton of the Colony of 1639, which came first to New Haven and afterwards went to Guilford.

The son enjoyed the rare advantages of a home in which good books were common, and the parental training was refined and vigorous. He attended the district schools and select schools until he was thirteen, when for three years he was a student in the Livingston County High School. While yet a boy he was employed in the extemporaneous surveys of the New York and Erie, and the Rochester and Auburn Railroads. Then followed a course of study at the Rensselaer Institute, where he graduated as civil engineer in 1837. He was for two years engaged in the geological survey of the State of New York, as an assistant to Professor Hall. For four years he was connected with the Albany Female Academy as Professor of Mathematics and the Natural Sciences, and during this time he lectured on chemistry in Newark College, Delaware. For two years after this he was a student of chemistry under Liebig, at Giessen, Germany. On his return to this country he was appointed Rumford Professor of Applied Sciences in Harvard University, and he filled this professorship for sixteen years. Since his resignation of that office he has been engaged in chemical manufactures based on his own inventions. He has taken out some thirty patents, most of them connected with chemistry.

In 1847 Professor Horsford was married to Mary L'Hommedieu Gardiner, daughter of the Hon. Samuel Smith Gardiner, of Shelter Island, N. Y. She died in 1855, leaving four daughters, one of whom is the wife of Andrew Fiske, Esq., of Boston, and one the wife of Judge Benjamin R. Curtis, of Boston.

In 1857 he married a sister of his former wife, Phoebe Dayton Gardiner, who has one daughter. His home is still in Cambridge.

Besides the professional career of Professor Horsford, he has engaged in many works of general utility and interest. His first work on his return from Germany was on the proper material for the

service-pipes of the Boston Water-Works, in view of which the city of Boston presented him with a service of plate. He was appointed by Governor Andrew, soon after the opening of the late war, on the Commission for the Defence of Boston Harbor, and prepared the report of the plans to be pursued in the event of the approach of Confederate cruisers. He devised a marching ration for the army, reducing transportation to the simplest terms. Of this ration General Grant ordered and there were prepared half a million.

In 1873 he was a commissioner of the United States to the World's Fair at Vienna, and he published an elaborate report in connection with his official duties. In 1876 he was a commissioner at the Centennial Exposition at Philadelphia.

As the intimate friend of Henry F. Durant, Esq., the founder of Wellesley College, Professor Horsford has been the constant and munificent friend of that institution. He has been from its organization the president of the Board of Visitors, and has devoted much time to the interests of the college. He has endowed the college library and founded the system of the "Sabbatical Year," as it is called by which the professors are allowed the seventh year for rest and study in Europe, and a system of pensions for the professors.

Of late years he has given much time to geographical studies. His attention was turned to New England Cartography and especially to the finding of the lost city of Norumbega. His investigation led him to believe that the ancient city was not in Maine, but in Massachusetts. His first research led him to the Old Fort of Norumbeg, at the mouth of Stony Brook, in the town of Weston. When he had decided from the literature and geography where its site must have been, he drove to the spot, but a few miles from his own house, and there found the remains of extensive ditches and walls. Five years later he announced the discovery of the site and walls of the ancient city of Norumbega at Watertown. It was a startling discovery. His conclusion was inevitable. The maps, the books, the ancient walls, the results of his studies in the field, combined to convince him that this was the place which had been named in history and song, but had long ago been lost to sight. In the summer of 1889 he erected a tower of stone to mark the site of the ancient fort, and commemorate the discoveries of Vinland and Norumbega. In connection with this historical enterprise he found other extensive remains of Norse settlements on the banks of Charles River. Following the old sagas, he found that Leif Erikson after his landfall on Cape Cod, sailed up the Charles, in the year 1000. The coincidences between the sagas and the river and its banks were striking, and as one point after another became clear to his mind he saw where Leif and his companions had come ashore and where they had built their houses. He has issued monographs in which his in-

vestigations have been described at length with maps and photographs. When the statue of Leif Erikson was erected in Boston in 1887, the historical address on the day of its unveiling was given in Faneuil Hall by Professor Horsford.

In 1889 he gave a public address in Watertown, Massachusetts, before a large gathering, upon his discovery of Norumbega. The American Geographical Society was represented on the occasion.

By the invitation of the authorities of Boston, he delivered the memorial address upon the life and work of Prof. Samuel F. B. Morse, the inventor of the electric telegraph.

In 1886 he gave an address in connection with the library festival at Wellesley College. He has for many years conducted, as an expert, investigations in chemistry and physics. He has published numerous chemical researches in the scientific publications of Europe and America.

Professor Horsford is still busily engaged in professional and philanthropic work whose influence is extended and helpful.

CHAPTER XV.

ACTON.

BY REV. JAMES FLETCHER.

The hope of rescuing from the wreck of oblivion some of the precious relics of the past has been the solace of care in the preparation of this work.

Hearty thanks are here expressed and acknowledgments made to those who have contributed with the pen and the memory in aid of the sketch. William D. Tuttle, Esq., the town clerk, and his son, Horace F., have rendered important assistance in gathering facts from the town records.

The historical map prepared by Horace F. Tuttle for the history, and which it was hoped could be published in the same, is a valuable acquisition for future reference. Its important items are given. It should be printed and doubtless will be soon. Rev. Dr. Knowlton, Rev. F. P. Wood, Rev. Mr. Heath, A. A. Wyman, Esq., Horace Hosmer and his daughter Bertha, Deacon Samuel Hosmer, Mrs. John Hapgood, Mrs. Lottie Flegg, Luther Conant, Esq., Moses Taylor, Esq., and Luke Smith have rendered essential service in gathering up the fragments that nothing be lost.

The Centennial address of Josiah H. Adams, Esq., Shattuck's "History of Concord" and the "Colonial History" of Charles H. C. Walcott have been freely consulted in the compilation.

The history of Acton seems to the writer in the review like a romance dropped freshly from the skies. It is in reality a plain tale of persons and events which have consecrated for all time this locality.

JAMES FLETCHER.

COLONIAL PERIOD.—Acton, twenty-four miles northwest of Boston, has on the north Littleton and Westford; on the east Carlisle and Concord; on the south Sudbury, Maynard and Stow; and on the west Boxboro' and Littleton.

Acton at its incorporation, July 21, 1735, was bounded by Sudbury, Concord, Billerica, Chelmsford, Westford, Littleton and Stow, which then included Boxborough. The principal part of what is now Carlisle, then belonging to Old Concord, was set off as a part of the new town, Acton.

The Carlisle District of Acton was incorporated as a separate town in 1780; the easterly part of Old Concord was incorporated in the new town of Bedford in 1729; and the southerly part of Old Concord was incorporated in the new town of Lincoln in 1751,

so that from 1754 to 1780 the township of Acton was larger than that of Concord, though much behind in wealth and population. At the time of Concord's incorporation, in 1635, what is now the Acton territory was not a part of Concord, but was granted to Concord a few years after by the name of the "Concord Village," or the new grant covering nearly the present boundaries of Acton. The Willard Farms included in the act incorporating Acton in 1735 had, previous to that act, been granted to Concord.

When Acton was made a town the statute bounded it on the east by "Concord old Bounds," from which it appears, as before stated, that it includes no part of the original Concord and that the dividing line between the two towns is a portion of the old Concord on that side.

The Acton boundary extended leads to a heap of lichen-covered boulders, surmounted by a stake.

This ancient monument is near the top of a hill in the southwesterly part of Carlisle, and undoubtedly marks the old northwest corner of Concord.

It was identified and pointed out to Chas. H. Walcott, of Concord, on the ground by Major B. F. Heald, of Carlisle, who says that he has often heard his father and other ancient men, long since deceased, speak of this bound as marking the old Concord corner.

Everything goes to corroborate this testimony. The place was commonly known by the name of "Berry Corner," and was the original northeast corner of Acton, but in 1780 (statute passed April 28, 1780) a portion of that town near this point was included in what was then constituted the District of Carlisle, and subsequently formed a part of the town of the same name (Carlisle did not acquire all the legal characteristics of a town until February 18, 1805—3 Special Laws, 497).

Thomas Wheeler and others who came to Concord about 1639, found the most convenient of the lands already given out, and in 1642 petitioned for a grant of land on the northwest, which was conceded on condition that they improved the grant within two years. Most of the lands were granted to Concord for feeding.

They were not very accurately defined, being found upon actual survey to contain a greater number of acres than nominally specified in the grants.

A settlement was begun on these grants as early as 1656 and possibly a few years earlier. The Shepherd and Law families were among the first settlers.

Many of the meadows were open prairies affording, with little or no labor, grass in abundance.

Some of the uplands had been cleared by the Indians and were favorite places for feeding. In those days the "new grant" was familiarly called, and with some reason, "Concord's sheep pasture."

In 1666, in pursuance of an order from the General Court, Richard Beers, of Watertown, and Thomas Noyes, of Sudbury, laid out the new grant, or Concord Village, as it was called, comprising the present

territory of Acton and portions of Carlisle and Littleton, and made their return in the following year.

On January 12, 1669, a lease was made by Concord to Captain Thomas Wheeler, for the term of twenty-one years, of two hundred acres of upland and sixty acres of meadow, lying west of Nashoba Brook, in consideration of which he agreed to pay a yearly rent of £5 after the expiration of the first seven years, and to build a house forty feet in length, eighteen feet wide and twelve feet stud, "covered with shingles, with a payer of chimnes," also a barn forty feet long, twenty-four feet wide, and twelve feet stud. These buildings were to be left at the end of the term for the use of the town, with thirty acres of land in tillage and sufficiently fenced.

He agreed further, and this was the main purpose of the lease, to receive and pasture the dry cattle belonging to the town's people, not to exceed one hundred and twenty in number nor to be fewer than eighty.

The cattle were to be marked by their owners and delivered to Captain Wheeler at his house, and the price was fixed at two shillings a head, payable one-third in wheat, one-third in rye or pease, and one-third in Indian corn.

The owners were to "keep the said herd twelve Sabbath dayes yearly, at the appointment and according to the proportion by said Thomas or his heirs allotted."

The number of cattle received under this agreement fell below the lowest limit, and, in January, 1673, the terms of the contract were so modified that Captain Wheeler was entitled to receive one shilling per head.

The town of Concord laid out a road to Thomas Wheeler's mill, the first grist-mill in Acton, located on the present site of Wetherbee's mill, as is proved by the foundations of the old mill found when digging for the present mill.

The canal now used is essentially the same as then used.

The mill was tended for the most part by women. A Mrs. Joseph Barker had charge among the last.

Going up from that site to the present saw-mill we find on the east side of the dam, near the road, the abutments of what were old iron works, called at the time a forge.

Here they had a trip-hammer and other implements and conveniences for working in iron. Joseph Harris made the latches and the iron-work from this forge for the first meeting-house.

The ore, which was smelted with charcoal, was bog iron ore found in the vicinity, some rods southwest. The building for the storing of the charcoal was a little distance up the old road going west, beyond the old walls. The charcoal bed is easily determined by striking a spade into the ground.

The old road went south of the present saw-mill and wound around near the old wall up to the brook

at the foot of the hill, and there followed up the stream on the right side.

Captain Thomas Wheeler's house, supposed to be the first dwelling-house deserving the name, was west of the brook, not far from the wall where the old lilac bushes still stand, which belonged to his garden plot.

The spring near the brook, now enclosed in a barrel, was Captain Wheeler's well. There are evidences of an old orchard opposite on the south side of the brook. The Canadian plum-trees near by are said to have come from the stones of plums which the soldiers brought on their return from Canada in the French and Indian War.

Mrs. Joseph Barker, who tended the mill, lived at one time in Captain Wheeler's house. John Barker's house was a little to the right, on the east side of the stream, and farther west of Thomas Wheeler's house and barn.

Captain Thomas Wheeler died in 1676, from wounds received in his fight with the Indians at Brookfield. He was born a leader of men in war and peace. The narrative of the expedition of Captain Edward Hutchinson, after hostilities had begun at Plymouth, written by Captain Thomas Wheeler, is the epic of Colonial times. He was so associated with the first start in the settlement and business activities of Acton, before its incorporation, that we give space to the excellent synopsis of his narrative, by Charles H. Walcott, the Colonial historian of Concord:

"Captain Hutchinson was commissioned by the Council at Boston to proceed to the Nipmuck country, so called, in what is now Worcester County, and confer with the Indians there for the purpose of preventing, if possible, any extension of Philip's influence in that direction.

"Captain Thomas Wheeler, of Concord, who was already advanced in years, and had commanded the western troop of horse ever since its organization, was ordered to accompany Hutchinson with an escort of twenty or twenty-five men of his company. Accordingly they set out from Cambridge and arrived at Quabaug, or Brookfield, on Sunday, August 1st. Here they received information that the Indians whom they expected to meet had withdrawn to a place about ten miles distant towards the northwest. A detachment of four men was sent forward to assure them of the peaceable character of the expedition, and a meeting was agreed upon for the next morning, at eight o'clock, on a plain within three miles of the town.

"There was some apprehension of treachery, but prominent citizens of Brookfield not only expressed confidence in the good intentions of the savages, but declared their own willingness to be present at the conference, and Hutchinson decided that the appointment must be kept. The Indians, however, did not appear, and this fact, together with other suspicions

circumstances, led the sagacious Wheeler to think that to venture further would be unwise. But Hutchinson was unwilling to abandon his mission with nothing accomplished, and, in deference to his wishes, the order was given to advance towards a swamp where the savages were supposed to be lurking.

"As they proceeded the narrowness of the path, with the swamp on one side and a rocky hill on the other, forced men and horses to march in single file.

"Suddenly the war-whoop resounded, and the advancing column was assailed by a volley of arrows and bullets discharged from behind trees and bushes, killing eight men, wounding five, and throwing the line into disorder, which was materially increased by the difficulty of turning about or passing by in the straitened passage-way.

"Captain Wheeler spurred his horse up the hill-side, when, finding himself unhurt and perceiving that some of his men had fallen under the fire of the enemy, who were now rushing forward to finish their work, he turned about and dashed boldly forward to attack them.

"The movement separated him for a few moments from his men. A well-directed shot killed his horse and brought the old man to the ground wounded, and it would soon have been all over with the brave captain, had not his son Thomas, who was also wounded, come to his rescue.

"Quickly dismounting, he placed his father in the saddle, and ran by his side until he caught another horse that had lost his rider, and so the two escaped with their lives, but suffering severely from their wounds.

"This was merely the beginning. Hutchinson had received a wound that caused his death in a few days, and now the task of extricating the command from its perilous situation devolved upon Captain Wheeler. It was performed in masterly fashion. Keeping to the open country and avoiding the woods, they retraced their way, with the assistance of friendly Indian guides, to the village of Brookfield, took possession of one of the largest and strongest houses, and fortified as best they could.

"They had not long to wait before the enemy appeared in superior numbers, and attacked the stronghold with vigor.

"The captain's disability brought to the front Lieutenant Simon Davis, another Concord man, who fought and prayed with a fervor that reminds one of the soldiers of Cromwell. To him, associated with James Richardson and John Fiske, of Chelmsford, the direction of affairs was entrusted.

"Two men, dispatched to Boston for assistance, were unable to elude the vigilance of the besiegers, and were obliged to return.

"The Indians piled hay and other combustibles against the side of the house and set fire to them, thus forcing the English to expose themselves in their

efforts to extinguish the flames. Their bows shot arrows tipped with 'wild fire,' which alighted on the buildings within the enclosure and set them afire.

"To get their combustible materials close to the walls, a remarkable engine, fourteen rods long, was constructed by the savages of poles and barrels, which they trundled forward on its menacing errand. For three days and nights this horrible warfare continued.

"The besieged were compelled to witness the mutilation of their dead comrades who had fallen outside, and to endure as best they could the jeers and taunts of the foe.

"Rain came to the assistance of the little band by putting out the fires of their assailants and rendering it difficult to kindle new ones. Davis, who is said to have been of a 'lively spirit,' exhorted his men to remember that God was fighting on their side, and to take good aim before firing.

"The prayers and hymns of the soldiers, borne out on wings of fire and smoke, were answered by cries of the unregenerate heathen, who gave utterance to hideous groanings in imitation of the singing of psalms.

"Twice did brave Ephraim Curtis attempt to make his way through the enemy's line to go for succor. Twice was he compelled to return baffled. The third time, by great exertion and crawling for a considerable distance on his hands and knees, he succeeded in reaching Marlborough, where he gave the alarm, and on the evening of the 4th the garrison was overjoyed at the arrival of their old neighbor and friend, Major Willard, with a force of forty-six soldiers and five Indians, who, hearing at Marlborough of their distress, had altered his course to come to their relief.

"Towards morning the Indians departed, having set fire to all the houses, except that which sheltered the whites.

"It has already been stated that Captain Wheeler was severely wounded, and his son was detained at Brookfield for several weeks by the injuries he had received.

"It is easy to believe that the Captain and the remainder of his troop received a hearty welcome on their return home. The town kept the 21st day of October, 1675, as 'a day of praise and thanksgiving to God for their remarkable deliverance and safe return.' It was a battle in which Concord men were foremost in the display of courage and the rarer qualities that constitute good leadership.

"The Indians appear to have behaved very badly from the beginning. They were guilty of an unprovoked and treacherous assault upon a party whose purpose was one of peace and friendship. The mission was an honorable one and faithfully discharged; and Wheeler and his men are deserving of praise for all time as brave soldiers who acquitted themselves nobly under the most trying circumstances."

Nathan Robbins appears to be the first owner of the land after Wheeler, and the land has passed from father to son ever since.

ACTS OF INCORPORATION.—An act to incorporate the town of Acton, passed July, 1735.

"Whereas the inhabitants and proprietors of the Northwestern part of Concord, in the County of Middlesex, called the Village or New Grant, have represented to this court that they labor under great difficulties by reason of their remoteness from the place of public worship and therefore desire that they and their estates, together with the farms called Willard Farms, may be set off a distinct and separate township for which they have also obtained the consent of the town of Concord :

"Be it therefore enacted by his Excellency the Governor, Council and Representatives in General Court assembled, and by the authority of the same, that the said Northwestern part of Concord, together with the said farms be, and hereby are set off, constituted and erected into a distinct and separate township by the name of Acton, and agreeably to the following boundaries, namely, beginning at the Southwest corner of Concord old bounds, then Southwesterly on Sudbury and Stow line till it comes to Littleton line, then bounded Northerly by Littleton, Westford and Chelmsford, then Easterly by Billerica till it comes to the Northwest corner of Concord old bounds and by said bounds to the place first mentioned.

"And that the inhabitants of the lands before described and bounded be and hereby are vested with all the town privileges and immunities that the inhabitants of other towns within this Province are or by law ought to be vested with.

"Provided that the said inhabitants of the said town of Acton do, within three years from the publication of this Act, erect and finish a suitable house for the public worship of God and procure and settle a learned orthodox minister of good conversation and make provision for his comfortable and honorable support."

This vicinity was called Concord Village in those days.

Here was a happy, independent, industrious community, owning their lands, worshiping God in their own way and educating their children.

For seventeen years all went well, till Sir Edmund Andros appeared in Boston and tried to overthrow the charter which was served by the people as their safeguard and protection.

He prohibited town-meetings except once a year to choose officers.

Puritan flesh and blood could not stand this. Their town-meetings meant business, and now they were ordered to give them up. Taxes were laid without consulting those who were to pay them, and, worst of all, Andros declared all land titles null and void.

When the people showed their deeds from the Indians he said he cared no more for an Indian's signature than he did for the scratch of a bear's paw.

Then they pleaded what we in late days have called squatter sovereignty. But he said that no length of possession could make valid a grant from one who had no title.

Then the people rose to defend their homes and the rights of Englishmen.

On the 19th of April, 1689, the Concord Company, commanded by John Heald, the first selectman of Acton after its incorporation, marched to Boston to assist in the revolt which overthrew the Andros government.

In this way the men of Concord and Acton antedated the original 19th of April, which has since become the red-letter day in our history.

THE FIRST MEETING-HOUSE.—We will retrace our steps by the old Brooks tavern, to the spot opposite

where now stands the stately school building of the Centre District.

We will have to pause a long time here before comprehending the situation. It is the spot where stood for seventy years that old landmark of the past—the first meeting-house of the town of Acton.

If you have seen the striking picture in the pamphlet of the centennial celebration, you will have been helped to an impression of the house and its surroundings.

You must stand yourself on that hill of Zion, for such it was to our early forefathers, and view the landscape o'er. On the south is the road that leads through the woods to the resting-place of the dead. On the east rises Annursneak Hill, hiding from view the peaceful homes of Mother Concord.

To the north of Annursneak is Strawberry Hill, whose brow strikes but eight feet below the brow of the former, having a view more commanding and more accessible. To the north and west are the delectable Hills, and towering above them all in the distance, Watatuck, Monadnock and Wachusett, old, familiar faces to every Acton boy and girl.

The building of this meeting-house is associated with the organization of Acton as a separate incorporated town. (See act of incorporation.) The location and erection of a meeting-house soon began to agitate the people. In October of the year of incorporation it was voted not to build that year, but "to set the meeting-house in the Center." By the centre was meant the point of intersection of lines drawn to the extreme limits of the town. This decision was not satisfactory to all the inhabitants.

At a meeting holden November 10, 1735, it was propounded whether the town would not reconsider their vote to have the meeting-house in the centre, and "agree to set it at some place near the center for convenience." It was voted not to reconsider. It was also voted not to do anything towards building the meeting-house the ensuing year.

At a meeting on the first Monday in December the same year it was again proposed to the town to reconsider the previous action, with reference to the location. The article was dismissed. But the minority had another meeting warned for December 29th, "To see if the Town will reconsider thar vote that they will set thare meeting-house in the Center, and agree to set it on a knowl with a gra'e many Pines on it, Laying South Easterly about twenty or thirty Rods of a black oak tree, whare the fire was made the last meeting, or to se if the Town will agree to set thare meeting-house on a knowl the North of an oak tree whare they last met, or to see if the Town will chuse two or three men to say which of the places is most convenient, or to se if the Comitty think that knowl whereon stands a dead pine between the two afore-said knowls, or to say which of the three places is most convenient."

At this meeting the location was changed to the

first "knowl" mentioned in the warrant. The site of the first meeting-house (a little to the south of where the Centre School-house now stands, near the two elms) was twenty or thirty rods southeast of the geographical centre of the town, as it was before the incorporation of Carlisle.

At the meeting which finally decided the location of the house, it was voted to begin that year and the dimensions were fixed upon.

The house was to be forty-six by thirty-eight feet in length and width and twenty feet in height.

At the next meeting (January 2, 1736) the former vote was reconsidered, and the vote was to have the house forty-six by thirty-six and "21 feet between joynts."

Voted, "That all the inhabitants of the town should have the offer to work at giting the timber for the house by the Commity."

Voted, "That Samuel Wheeler, Jonathan Parlin, Simon Hunt, John Shepherd and Daniel Shepherd be a Commity to manage ye affair of giting the timber for ye meeting-house."

Voted, "That the Commity should have six shillings per day for thar work, and the other Laborers five shillings per day."

Voted, "That there should be a Rate of seventy pounds made and assessed on the inhabitants of the town of Acton towards setting up the frame of the house."

May 10, 1736, it was voted "That the Selectmen should agree with Madam Cuming for ye land for ye meeting-house to stand on."

The deed of the land of the first meeting-house in Acton was dated January 25, 1737, signed by "Anne Cummings, wife of Mr. Alexander Cummings, Surgeon, now abroad, and attorney of said Alexander Cummings, being empowered and authorized by him."

This deed is written in a bold, large-lettered style, and is very plain to read—as but few specimens of penmanship seen in ancient or modern times.

It is in a fine state of preservation in the keeping of the town clerk.

The style of it reminds one of John Hancock's signature to the Declaration of Independence.

September 15, 1736, the town voted "To frame and Raise thar meeting-house before winter, and John Heald, Thomas Wheeler and Simon Hunt were chosen a Commity impow'ered to Regulate and Inspect and order ye framing and Raising ye meeting-house in Acton and like wise to agree with Carpenter or carpenters to frame ye house."

At the same meeting it was decided to do nothing about preaching for the ensuing winter.

November 1, 1736, *Voted*, "That they would board and shingle ye roofs and board and clap-board ye sides and ends, make window frames and casements and make ye door and crown of doors and windows, put troughs round, build ye pulpit and lay ye lower

floor, ye work to be done by ye first of November next."

May 30, 1737, *Voted*, "To underpin the meeting-house by working each man a day."

Those who were delinquent were required to work a day "at high ways, by order of ye surveyor, more than thare equal part other ways wood have been."

"The work of pinting the underpinning was let out to Jonathan Billings for 2£ 10s., which work he engaged to do speedily and Do it Wel."

Public worship was first held in the meeting-house in January, 1738.

At the time of Mr. Swift's ordination, November, 1738, it was far from being finished.

May 15, 1745, *Voted*, "To raise twenty pounds, old tenor, for finishing the meeting house that year."

Not till two years after this was the house completed. One should read the several dates in order to get a full impression of the slowness and difficulty of building a meeting-house in those colonial times.

There is a tradition that Lord Acton, of England, for whom the town may possibly have been named, offered a bell for the house of worship, but, having no tower, and the people feeling too poor to erect one, the present was declined.

When the house was finished (so-called), in 1747, there were no pews, except on the lower floor adjoining the walls of the house, and these were but sixteen in number. The four pews which were under and over each of the gallery stairs were built at intervals some years after. Several of the pew-holders from time to time obtained leave of the town to make a new window for their own accommodation and at their own expense. Each seems to have consulted his own fancy, both as to size and location. Little windows, in this way, of different sizes and shapes, came to be placed near the corners of the building.

In the body of the house, on each side the broad aisle, were constructed what were then called *the body seats*, and these together with the gallery were occupied by all who, through poverty or otherwise, were not proprietors of a pew.

Both in the body seats and in the gallery the men were arranged on the right of the pulpit and the women on the left, so that while the pew-holder could sit with his wife at church, all others were obliged to keep at a respectful distance.

The custom of "seating the meeting-house," as it was called, was found necessary, and was well calculated to prevent confusion and to insure particularly to the aged a certain and comfortable seat.

To give the better satisfaction the committee were usually instructed to be governed by *age* and the amount of *taxes* paid for the three preceding years. In the year 1757 they were also instructed to be governed by "other circumstances," at their discretion.

The report of that committee was not accepted and a new committee was chosen with the usual instructions. What the "other circumstances" were does

not appear. But it should have been known that any circumstances which depended on the estimation and discretion of a committee would fail to give satisfaction in a matter of such peculiar delicacy.

The new committee, however, seem to have restored harmony, and the same practice was continued during the existence of the old meeting-house.

Special instructions were given in favor of negroes, who were to have the exclusive occupation of the "hind seat" in the gallery.

How the youthful eyes lingered on the heels of Quartus Hosmer as they disappeared in his passage up the gallery-stairs, and how eagerly they watched the re-appearance in the gallery of his snow-white eyes, made more conspicuous by the eel-skin ribbon which gathered into a queue his graceful curls!

He lived at the house then occupied by Mr. Hosmer, near the turnpike corner on the way from the Centre to the South, midway between the two villages.

In 1769 "the hind parts" of the body seats were removed and four new pews were erected in their place. They were occupied by Thomas Noyes, Daniel Brooks, Joseph Robbins and Jonathan Hosmer. In the same year the house was new covered and glazed. In 1783 four other other pews were built and another portion of the body seats was removed. Three of these were sold and the fourth was "assigned for the use of the clergyman. It was through the banisters of this pew "old Mother Robbins," who sat in the body seats, used to furnish the centennial orator, Josiah Adams, Esq., the son of the pastor, those marigolds, peonies, and pink roses, decorated and perfumed with pennyroyal, southernwood, and tansy. She was indeed a most interesting old lady. No other public building has existed in the town so long as this stood. It was the house in which the first minister, Mr. Swift, preached during the whole of his long service of thirty-seven years, and in which Mr. Moses Adams, the second minister, officiated during the period of thirty years.

It was used not simply for religious worship, but for town-meetings. Here the money was voted for the first public schools, here the roads were laid out, here the poor were provided for, here Acton took its municipal action preliminary to the Revolutionary War, and here the first vote was passed recommending the Continental Congress to put forth the Declaration of Independence. The house stood and was used for these public purposes until 1808, when it was forsaken and after a few years torn down.

It would be a novel and impressive service could the persons of the present generation be transferred just for one day and witness the scene in that old meeting-house on the "knowl." We would like to catch just one look at that venerable row of the deacons' seat. We would like to see them there, each in his turn reading the psalm, a line at a time, and tossing it up for the use of the singers in the front gallery. We would like to hear the peculiar voices of James Bil-

lings and Samuel Parlin coming back as an echo. This practice of reading a line at a time, which, doubtless, had its origin in a want of psalm-books, became so hallowed in the minds of many that its discontinuance was a work of some difficulty.

In 1790 the church voted that it should be dispensed with in the afternoon, and three years afterwards they voted to abandon the practice.

On the Sabbath previous to the dedication of their second meeting-house, the people of Acton came from all directions, a whole family on a horse, toward the old meeting-house, to bid farewell to the place where their fathers had worshiped. After the whole town had come, entered the church, taken their seats in the old-fashioned square pews, sung some of Watts' hymns, and listened to a long and fervent prayer, their beloved minister, the Rev. Moses Adams, eloquently discoursed from the following text (Micah 2: 10): "Arise and let us depart, for this is not our rest." "Let us sing in his praise," the minister said. All the psalm-books at once fluttered open at "York."

A sprig of green caraway carries me there to the old village church and the old village choir.

"To the land of the dead they have gone with their song,
Where the choir and the chorus together belong,
Oh! be lifted ye gates: let me hear them again,
Blessed song: blessed Sabbath. Forever. Amen."

REV. JOHN SWIFT, THE FIRST PASTOR.—We come to the fine mansion now owned and occupied by Deacon William W. Davis. Since its recent improvements it has become an important addition to the structural adornment of the Centre. It is near enough to the main avenue of the village to be easily seen, and, with its elevated front and majestic elm towering above the whole, it makes a fine perspective view on approaching the town from either road.

Mr. Eliab Grimes, who formerly occupied the place, was a successful farmer who filled the land in the warm months of the year, and taught the schools in the winter, and had important trusts of service from the town as selectman and representative. Joash Keyes, David Barnard, Esq., in 1800; Deacon Josiah Noyes, in 1780; and Rev. John Swift, in 1740. One dwelling-house on this site was burned. Here is where Mr. Swift, the first pastor of Acton, for so long a period lived. Here we must pause long enough to get affiliated to the historical atmosphere, which seems to pervade the whole region around.

At a meeting of the town October 4, 1737, while the first meeting-house was being built, a committee was selected to supply the pulpit. The meetings were to begin the first Sunday in January. At a meeting on January 25, 1738, it was voted "to raise thirty pounds to glaze ye meeting-house, to raise fifty pounds to support preaching, and Joseph Fletcher should be paid for a cushion for ye pulpit out of the tax money." In the warrant for a meeting holden on March 28th was this article: "To se if ye town will appint a day for fasting and prayer to God, with

the advice and assistance of sum of ye Neighboring Ministers for further directions, for the establishing ye gospel among them, as, also, who and how many they will advise with, as, also, to chose a commett to mannig ye affaire and provide for ye Pulpit for ye time to come."

Voted "to appint ye last Thursday of March for fasting and prayer."

Voted "that they will call in five of ye Neighboring Ministers for advice in calling a Minister, viz.: Mr. Lorin, of Sudbury; Mr. Cook, East Sudbury; Mr. Gardner, of Stow; Mr. Peabody, of Natick; and Mr. Rogers, of Littleton. Also, voted ye Selectmen be a Committ to Mannig ye affaire, and provide for ye pulpit for ye futnr." At this meeting John Cragin was appointed to take care of the meeting-house, and thus he became Acton's first sexton.

May 9, 1738, the town invited Mr. John Swift, of Framingham, to settle with them as minister. It was voted to give him £250 as a settlement, and an annual salary of £150, to be paid in semi-annual instalments in Massachusetts bills, which at the time was equivalent to about £117 settlement, and £70 salary. The contracting committee were John Heald, Samuel Wheeler, John Brooks, Ammiramah Faulkner, Simon Hunt and Joseph Fletcher. The salary offered was to rise or fall with the price of the principal necessities of life. In the year 1754, the following list of articles considered as principally necessary for consumption in a minister's family were reported by a town's committee, with the current prices in 1735 annexed, and were adopted as a basis for regulating the amount of Mr. Swift's salary.

The signatures of the parties on the record show their entire satisfaction.

"30 b. Corn, at 6s.; 20 b. Rye, at 10s.; 500 lb. Pork, at 8d.; 300 lb. Beef, at 5d.; 25 lb. wool, at 3s. 6d.; 15 lb. Cotton, at 4s. 6d.; 50 lb. Flax, at 1s. 3d.; 56 lb. sugar, at 1s. 4d.; 20 gals. Rum, at 8s.; 80 lb. Butter, at 1s. 4d.; 2 Hats, at £3; 10 pr. shoes, at 15s."

The contract and agreement between Rev. John Swift and the town of Acton is here copied as an instructive chapter on the times:

"Where-as the Town of Acton at a Town Meeting duly warned May 19th, 1738, did invite ye Rev. John Swift into ye work of ye ministry among them, and did all so pass a vote to give him two hundred and fifty Pounds towards a settlement, and a hundred and fifty Pounds Salary yearly and since, at a town meeting October ye 10th, 1738, did vote that said Salary should be kept up to ye value of it and paid in every half years End yearly, and did also chose John Heald, Joseph Fletcher, John Brooks, Samuel Wheeler and Simon Hunt as a Committ to contract with the Said Mr. Swift about ye said Salary, the contract and agreement between said Mr. Swift and said Committ is as follows

"1st That said salary shall be paid According to ye old tenure of the Massachusetts Bills or in an equivalency of such bills of pr. cent or lawful currency as shall pass from time to time.

"2^d That the value of said salary be kept up from time to time according as when it was voted on May afore according to ye prise of the necessary provisions of life.

"3^d That the payment of said salary continue so long as said Mr. Swift shall continue in ye work of ye ministry in said Acton and to witness her of said Mr. Swift and said Committ have here-

unto set their hands this 30th day of October A. D., 1738. John Swift, John Heald, Joseph Fletcher, Ammie Faulkner, Simon Hunt, John Brooks.

"Ordered on this book of Records,

"Attest SIMON HUNT, Town Clerk."

The contract was faithfully kept by the people of Acton, and the pastorate of Mr. Swift continued till his death, November 7, 1775, thirty-seven years lacking one day, at the age of sixty-two years.

The small-pox prevailed as an epidemic in Acton that year. Mr. Swift took the disease and never afterwards was able to preach.

Mr. Swift was ordained on the 8th day of November, 1733. No particulars of the ordination can be gathered either from the town or church records, except that "the Council had entertainment at the house of Mr. Joseph Fletcher."

Mr. Swift was the only son of the Rev. John Swift, of Framingham. He was born in Framingham, in 1713; graduated at Cambridge in 1733, and at the time of his ordination was twenty-five years of age. He was little above the common height, rather slender, his manners and address agreeable and pleasant. He was somewhat economical in the management of his affairs, but kind to the poor and a good neighbor. He was opposed to excess and extravagance of every kind and to promote peace and good feeling was his constant care. He had some singularities of character, but led an exemplary life, and retained the affections and respect of his people through a ministry of thirty-seven years. His preaching was practical, plain and serious, though it is said he had occasionally some unusual expressions in the pulpit which were rather amusing.

As was the custom of many clergymen of his day, he used to receive lads into his family for instruction in the studies preparatory to college. In one year five young men were presented by him at Cambridge, and all passed the examination and were admitted. There are a few scraps in his handwriting which appear to discover considerable ease in the use of the Latin language, and in his church records there are many similar instances, but they are so attended with abbreviations and characters that it is not always easy to discover their import. Some extracts from his church records are given. The volume is a very small one. It begins without caption or heading, and there is nothing to indicate what the contents are to be.

The first entry is in the following words: "Nov. 8, 1733. I was ordained pastor of the church in Acton." He speaks of himself in the same manner in all parts of the record.

Under date of June 14, 1739, is the following record, "It being lecture day, after the blessing was pronounced I desired the church to tarry, and asked their minds concerning the remainder of the elements after communion and they voted 'I should have 'em.'"

"Sept. 11, 1744. I made a speech to the church thus: 'Brethren, I doubt not but you have taken

notice of the long absence of brother Mark White, Jr., from the ordinances of God in this place. If you request it of him to give us the reasons of his absence some time hence, I desire you would manifest it by an uplifted hand. Whereupon there was an affirmative vote.' June 7, 1749 notations of sacraments ceased here, because I recorded them in my almanac interlineary."

The book is a curious intermixture of Latin and English accounts of admissions to the church, baptisms, administrations of the Supper and dealings with delinquents, and it is evident that Mr. Swift had little more in view than brief memoranda for his own use. He writes: "I regret that I did not at the beginning of my ministry procure a larger book, and keep a more particular and extensive record. I hope my successor will profit by this hint." Rev. Mr. Swift lived to see the opening of the Revolutionary War. His preaching, prayers and influence at the time doubtless helped in the preliminaries of that eventful struggle.

Thomas Thorp, in his deposition given in 1835 to the selectmen and committee of the town, says: "On the morning of the 19th of April, 1775, I had notice that the regulars were coming to Concord. I took my equipments and proceeded to Capt. Davis's house. I passed the house of Rev. Mr. Swift. His son, Doctor John Swift, made me a present of a cartridge box, as he saw I had none. I well remember there was on the outside a piece of red cloth in the shape of a heart."

On that memorable morning Capt. Davis marched his company by Mr. Swift's house to the music of fife and drum. The blood in the pastor's veins quickened at the sight and sound, and he waved his benedictions over the heroic company as they passed on to the scene of action. He helped to sustain the widow in her first shock as Davis came lifeless to a home he had left but a few hours before, strong and vigorous. Mr. Swift did not see the end, only the beginning of the struggle.

In November of the same year a funeral cortege was seen wending its way to the old cemetery in Acton. They were following the remains of their first pastor. A mound and a simple marble slab mark his grave. Four pine trees of stately growth sing their requiem over his precious dust as the years come and go. All honor to the dear memory of him who laid the foundation stones of this goodly church of Acton, and did so much to form the peaceful, frugal character of its inhabitants.

"Honor and blessings on his head
While living—good report when dead."

We do not easily part from a spot so suggestive of the stirring events, parochial, ministerial, civil and military, which centralized in the early days of Acton, on these very acres. We will leave the homestead in the care of Deacon Davis, who has spent the

best energies of his life in improving and adorning the premises, and whose sympathies are in full accord with all the memories of the past and with all the prospects of the future.

MUSIC IN THE FIRST CHURCH.—In 1785 the singers were directed, for the first time to sit together in the gallery.

In 1793 the practice of performing sacred music by reading the line of the hymn as sung was discontinued. A church Bible was presented in 1806 by Deacon John White, of Concord.

In the church records, as far back as March 23, 1797, is found the following vote: 1st. "It is the desire of the church that singing should be performed as a part of public worship in the church and congregation.

"2d. It is the desire of the church that the selectmen insert an article in the warrant for the next May meeting to see if the town will raise a sum of money to support a singing-school in the town and that the pastor apply to the selectmen in the name of the church for that purpose.

"3d. Voted to choose five persons to lead the singing in the future.

"4th. Voted to choose a committee of three to nominate five persons for singers."

Deacon Joseph Brabrook, Deacon Simon Hunt and Thomas Noyes were chosen this committee. They nominated Winthrop Faulkner, Nathaniel Edwards, Jr., Simon Hosmer, Josiah Noyes and Paul Brooks, and these persons were chosen, by vote, to lead the singing in the future.

Voted, "It is the desire of the church that the singers use a Bass Viol in the public worship, if it be agreeable to them.

Voted, "It is the desire of the church that all persons who are qualified would assist the singing in the public worship."

Deacon Simon Hosmer played for thirty years.

DEACONS IN THE FIRST CHURCH.—Joseph Fletcher, chosen December 15, 1738, died September 11, 1746, aged 61; John Heald, chosen December 15, 1738, died May 16, 1775, aged 82; Jonathan Hosmer, died 1775, aged 64; John Brooks, died March 6, 1777, aged 76; Samuel Hayward, chosen September 29, 1775, died March 6, 1795, aged 78; Francis Faulkner, chosen September 29, 1775, died August 5, 1805, aged 78; Joseph Brabrook, chosen September 29, 1775, died April 28, 1812, aged 73; Simon Hunt, chosen April 19, 1792, died April 27, 1820, aged 86; Josiah Noyes, chosen March 27, 1806, dismissed and removed to Westmoreland, N. H., October 16, 1808; Benjamin Hayward, chosen March 27, 1806, excused June 15, 1821; John Wheeler, chosen April 18, 1811, died December 17, 1824, aged 64; John White, chosen April 18, 1811, died April 3, 1824, aged 54; Phineas Wheeler, chosen June 15, 1821, died in 1838, aged 65; Daniel F. Barker, chosen June 15, 1821, died in 1840; Silas Hosmer, chosen June 15, 1821.

WOODLAWN CEMETERY.—This is now a very old and extensive burying-ground, pleasantly located, with a slight natural grade descending from the north to the south—the new portion towards East Acton being level and of light, dry soil adapted to burying purposes. It has two pumps, a bearse-house and receiving-tomb, and a beautiful pine grove shielding from the summer's sun where public services can be held. Many ornamental monuments and slabs have been erected in later years.

The original deed to the town for the opening of Woodlawn Cemetery was given by Nathan Robbins January 16, 1737, and contained one-half an acre. The second deed was given by Joseph Robbins December 11, 1769, a small tract adjoining southeast corner. The third deed was dated November 2, 1812; the fourth deed was dated January 1, 1844; the fifth deed was dated August 22, 1862. The present area (1890) is between eleven and twelve acres. The oldest date noticed upon any of the slabs is 1743.

In earlier times slabs were not erected—a simple stone marking the place of burial. Many have been buried here whose graves have no outward token of their locality. A recent careful count of the graves in this cemetery makes the number 1671, showing that here lie the remains of a population nearly if not quite equal to those above ground on the present limits of the town. The location is about midway between East Acton and the Centre, and easily reached by good roads leading from all the villages and the other portions of the town.

Within the memory of some now living, before the new road from the Centre was laid out and the only passage was by the present site of Mr. Moorhouse, winding through a continuous line of woods, growing darker till the gurgling waters of Rocky Guzzle were heard just as the grave-stones struck the eye, it required more nerve than most boys and girls had in those more superstitious times to travel that way alone in the night or even in day-time. The hair would stand on end in spite of one's self as one reached the sombre retreat. Few were brave enough to pass that way to mill unattended unless necessity or the calls of love impelled.

With the more cheery aspect of the thoroughfares in later years and with the mind cleared of the ghost-stories, which, if heard, are discredited on the spot and expelled at once from the memory, one can travel that way and sing or whistle as he goes by, conscious of none but helpful companionship.

A few epitaphs on the tomb-stones are here given, which may be of interest. The oldest slabs of unique design have at the top the Latin words *Memento mori*, which means, remember that you must die.

Erected in memory of Mr. Josiah Hayward, who departed this life May 6, 1783, aged 76.

He was a gentleman of worth and integrity, lived much respected for his private, social and public virtues; sustained divers civil offices with honor to himself and benefit to the community and particularly that of

a representative for this town in the General Assembly, where he showed himself a warm friend of his country.

His memory is precious with the friends of virtue, religion and mankind.

He had life in his imagination and a good judgment, was a humble, patient Christian, ever ready to do good when he saw an opportunity.

Whoever you be that see my bearse,
Take notice of and learn this verse,
For by it you may understand,
You have not time at your command.

Bless'd are the dead that die in the Lord from henceforth, yea, saith the Spirit that they may rest from their labors and their works do follow them.

On the marble slab at the tomb of Rev. John Swift:

Rev. John Swift died November 7, 1775, aged 62 years.

He was ordained as the first pastor of the Congregational Church of Acton, November 8, 1738, and continued in this relation until death. He was a plain, practical and serious preacher and a faithful minister.

Memento Mori.

In memory of Major Daniel Fletcher, who departed this life December 15, 1776, in the 59th year of his age.

'Tis dangers great he has gone through
From enemies' hands his God him drew
When fighting for that noble cause,
His country and its famous laws.
But now we trust to rest his gone
Where wars and fightings there is none.

Here lies buried the body of Deacon Joseph Fletcher, who departed this life September 11, 1746, in the 61st year of his age.

Memento Mori.

This stone is erected to preserve the remembrance of Deacon Samuel Hayward, and to remind the living that they must follow him. He died March 6, 1791, aged 78.

For many years he commanded the militia in this town. He was a kind husband and father, neighbor and a lover of his country, of good men, of religion and of the poor. The memory of such a man is blessed.

Erected in memory of Captain Stevens Hayward, who died October 6, 1817.

In memory of Deacon John White, who died April 3, 1821, in his 53d year.

Erected in memory of James Fletcher, who died December 9, 1815, aged 57, whose death was caused by the falling of a tree.

The rising morning don't assure,
That we shall end the day,
For death stands ready at the door,
To snatch our lives away.

The following inscription is upon a large slab mounted in a horizontal position:

Sacred to the memory of Rev. Moses Adams, who was born in Framingham, October 16, 1719, graduated at Cambridge in 1771; was ordained in 1777, minister of the Church and congregation of Acton, and continued such till October 13, 1819, when he died on the 16th, which was the 70th anniversary of his birth.

His remains were placed beneath this stone. In his person he was dignified and modest, in his intellect vigorous and sound, in his heart benevolent and devout. His preaching was plain and practical, and his example added greatly to his power. The Scriptures were his study and delight, and while he exercised the protestant right of expounding them for himself, his candor toward the sincere who differed from him was in the spirit of the Gospel.

The good being whom he loved with supreme devotion was pleased to grant him many years of prosperity and gladness, and to add not a few of affliction and sorrow.

The first he enjoyed with moderation and gratitude, and in the last he exhibited the power of religion to sustain the practical Christian.

To his people and his family he was ardently attached and spent his life in exertions and prayers for their welfare, and they have placed this inscription to testify their reverence for his character and their love for his memory.

We cannot mourn the venerable shade whom angels led in triumph to the skies while following sorrow lided at the tomb.

THE NORTH ACTON CEMETERY.—Its location is between three and four miles from Acton Centre, on the road to Carlisle on the left hand. It is a very old burying-ground of small area and contains about 100 graves.

A few of the epitaphs are given :

Sacred to the memory of Captain Samuel Davis, who died July 4th, 1800, aged 89.

Retire my friends,
Dry up your tears,
Here I must lie
Till Christ appears.

In memory of — Davis, who died September 16, 1815, aged 72.

Beneath this stone
Death's prisoner lies,
The stone shall move,
The prisoner rise,
When Jesus with Almighty word,
Calls his dead saints
To meet the Lord.

Memento Mori.

Here lies buried the body of Deacon John Heald, who departed this life May 16, 1775, in the 82d year of his age. His wife Mary died September 1, 1758, aged 61.

MOUNT HOPE CEMETERY, West Acton.—The West Acton Cemetery is gracefully located on elevated dry ground on the southern border of the village to the right as one passes from West to South Acton. It was opened in 1848. It is regularly laid out; has a new receiving-tomb and many modern slabs and several costly monuments of artistic design. It contains 271 graves and will have an increasing interest as the years go by.

THE BROOKS TAVERN.—Many now living can recall the gambrel roof two-story house at the foot of the hill, near where Mr. Moorhouse now lives, owned and occupied for many years by Mr. Nathaniel Stearns, the father of Mrs. Moses Taylor.

In the earlier days, before the present avenue and village at the Centre had been laid out, it stood as a conspicuous centre-figure facing the old meeting-house on the knoll, near where the school-house now stands.

The space between these two buildings was the Acton Common of ye olden time. Here were the military drills. Here were the town-meeting gatherings. This Stearns house was the hotel of the surrounding districts, and was known as the "Brooks Tavern," from Daniel Brooks, who occupied it in 1762, and Paul Brooks afterwards.

When the new meeting-house of 1807 was raised it was necessary to send to Boston to engage sailors accustomed to climb the perilous heights of a sea-faring life. They assisted in raising and locating the frame of the steeple. After the deed was accomplished they celebrated the exploit in feasting and dancing at the "Brooks Tavern."

Could the walls of this tavern be put upon the stand, and could they report all they have seen and heard in the line of local history, we would have a chapter which would thrill us with its heroic, humorous and tragic details.

THE FLETCHER HOMESTEAD.—As we leave this enchanted spot we notice the old stepping-stone of the meeting-house which Mason Robbins has erected in the wall at the right, and inscribed upon its broad face the memorial tablet of the bygone days. As we reach the house now owned and occupied by Mrs. Jonathan Loker, we see a lane to the left leading into the vacant pasture and orchard.

Pass into that lane for a few rods, and we reach the marks of an old cellar on the left. Here stood for many years, from 1794 on, the Fletcher homestead, where James Fletcher, the father of Deacon John Fletcher, and his brother James and Betsey, the sister, lived during childhood up to the years of maturity. A few feet from this ancient cellar-hole to the west is the site of the first Fletcher russet apple-tree. Childhood's memories easily recall the ancient unpainted cottage, the quaint old chimney with the brick-oven on the side, and the fire-place large enough for the burning of logs of size and length, and in front to the southeast a vegetable garden unmatched at the time for its culture and richness, and a large chestnut-tree to the south, planted by Deacon John, in early life.

The farm and homestead of Potter Conant, where Herbert Robbins now lives, on the cross-road, near Mr. Thomas Hammond's, was originally owned and occupied by James Fletcher, the father of Deacon John, and the birth-place of the latter. It was sold in exchange to Potter Conant, when Deacon John was four years old.

Thomas Smith, the father of Solomon Smith, died here in 1758. Solomon Smith, who was at the Concord fight, lived here at the time. His son, Luke Smith, was at Baltimore with his knapsack and gun, when the rioters mobbed the old Sixth on the 19th of April, 1861. Silas Conant lived here later. Betsey married a Mr. Shattuck, who moved to Landaff, N. H. and was the mother of Lydia Shattuck, the noted teacher at Mount Holyoke College. For forty-one years she was connected with the institution, as a pupil in the fall of 1818, and of late years has been the only in-structor who had studied under Mary Lyon. She began to teach immediately after graduation. She made a specialty of natural history studies and was an enthusiastic botanist. She was associated with Professor Agassiz and Guyot in founding the Anderson School on Penikese Island, and was largely instrumental in awakening the interest which led to the founding of Williston Hall at South Hadley. Last summer she was made professor emeritus and granted a permanent home at the college. She died at the college November 2, 1889, aged sixty-seven years and five months.

THE SKINNER HOUSE.—This structure, of which the artist has given a genuine and beautiful sketch, is located in the southeast corner of Acton. It stands on rising ground, just off the main road, facing a striking landscape towards the west, which includes

the Assabet River, with its picturesque scenery of banks, foliage and bridge. The artist stood with this view all in his rear, with what is embraced in the sketch in front. The house was built in 1801, by Mr. Simeon Hayward, the father of Mrs. Skinner. It was at the time one of the most costly and tasteful residences in the whole town and held that rank for years. Even at this late date it will stand criticism with many dwelling-houses more modern and expensive.

That majestic elm which towers above the house on the right is a hundred years old, and is a fair specimen of its cotemporaries distributed in all parts of the town. Without them Acton would be shorn of its distinguishing beauty. To the left is the carriage-house and in the background the barn.

This house took the place of the old one which stood just in the rear of this when Mrs. Skinner was born, August 14, 1796. Her grandfather, Josiah Hayward, moved on to this site in 1737, and had prominence in the early history of the town. He and his wife were allowed a seat in the first meeting-house in 1737, which was considered at the time a marked compliment to their intelligence and rank. On the south and east sides of the house are many thick trees to prevent accident in case of explosion at the powder-mills which are built a short distance away on the banks of the Assabet River.

Do not pause too long on the outskirts of this delightful homestead. A knock at the door will give you a welcome within. Here lives the oldest person in town,—Mrs. Mary Skinner. On meeting her, she takes you by the hand with a genial welcoming expression of the face which puts you at ease and makes you glad that you came.

One needs not the painted miniature done on ivory when she was twenty-one years old to assure the beauty of her youth. There are in her aged countenance no doubtful traces of that early charm, which made her a most attractive maiden. This interesting old lady never tires in telling of the frolics and festivities of her girlhood days, and the doings of the beaux and belles.

The young people for miles around used to meet at the wayside inn, where many a grand ball and party was given in honor of the lovely Jerusha Howe, the beauty of the town of Sudbury. Mrs. Skinner went to the dancing-school when eight years old.

Do not miss the kind offer of Miss Dole, the faithful attendant for years of the venerable Mrs. Skinner, to visit the spare parlors. Here, one may fairly revel among the old-fashioned portraits, curious-shaped dishes and antique furniture. In a corner of the parlor is a tiny piano of rosewood, with gilded finishing and ornaments made eighty years ago. It still has the clear sweet tone of ye olden time. Underneath the key-board are three drawers to hold music, each with little gilded knobs. There is some

exquisite music-copying which Mrs. Skinner did years ago. Also many pictures which she painted; but the most interesting of all are the white satin shoes which she wore when she was married. On a little printed slip neatly pasted inside of one of them the maker's name is given, mentioning that he kept a variety store, and also that at his establishment customers could have "rips mended gratis."

At the age of twenty-eight she married and removed to Andover, Mass., where her husband, Mr. Henry Skinner, was in business. She lived there about four years, but after the death of her husband and two children, who died within eleven days of each other, she returned to her home, which she left as a bride, and here she has lived ever since. At the age of sixty-four she found it necessary to wear glasses, but only for a short time, and now has remarkable eye-sight. She keeps well informed through the daily papers, and sits up until a late hour to have the news read to her.

All her near relatives are dead. Her father, Simeon Hayward, died June 5, 1803, when she was seven years old. Her son, Henry Skinner, born two months after the decease of her husband, graduated from Harvard College before he was eighteen years old, in 1846—a civil engineer—died February 18, 1867. Her sister Betsey, who lived in the same house with her, with her husband, Rev. Samuel Adams, have both been dead for years. Betsey, when a young maiden, by the election of the ladies of Acton, presented to the Davis Blues an elegant standard and bugle. The address on that occasion was marked with sentiment and culture. It closes in these words,—“Should ever our invaded country call you to the onset you will unfurl your banner and remember that he whose name it bears sealed his patriotism with his blood.”

Her attendant for years says Mrs. Skinner has a most lovely disposition. You allude to the many changes and trials her of life, and she says, “My life has been a favored one.” She never speaks an unkind word, is never out of patience with persons or things. No matter what happens, it is always right—all right. She has been kind to so many. No one knows how many she has helped. No matter who comes with a subscription paper she listens patiently and gives cheerfully. When subscribing to bear the expense of her husband's portrait and of the sketch of her historic homestead, she said, “I may not be alive when the picture is taken, but it may do some one some good.”

In sickness her aim seems to be to relieve the care of attendance. Only yesterday she quoted the remark: Every person has three characters: 1. The one which their neighbors give. 2. The one which they themselves give. 3. The one which they really are. They all seem to be blended in one in Mrs. Skinner.

Mrs. Skinner has been for the larger portion of her

life a consistent member and liberal patron of the Acton Church. She gave the pulpit to the new meeting-house. Sitting in her cosy room, with its quaint ornaments and substantial furnishings, her white hands resting on her lap, she is a never-to-be-forgotten picture of serene, happy old age, while all about her there appears a peace above all earthly dignities—a still and quiet conscience.

THE OLD PARSONAGE.—Town Records, January, 1780 :

"*Voted*, that the select men appoint a town-meeting Tuesday, Jan. 25th, 1780, at one o'clock P.M., to see if the town will raise a sum of money to make good that part of the Rev. Moses Adams' settlement that is to be laid out in building ~~in~~ a dwelling-house, and pass any other votes that may be thought proper when met Relating to settlement or the pay of the workers that have Don Labour on said house.

"Acton, Jan. 31, 1780."

The town being met according to adjournment by reason of the severity of the weather adjourned the meeting to the house of Caroline Brooks, in order to do the business, and proceeded as follows: On the second article it was voted "to allow the artificers that worked at Rev. Mr. Adams' house 15 dollars per day and ten Dollars for common Labour, 24s. per mile for carting."

"*Voted*, three thousand Pounds to make good the one Hundred Pound of Rev. Mr. Adams' settlement.

"*Voted*, three Thousand five hundred and sixty to Pounds to the Rev. Mr. Adams for his salary this present year."

These figures show the depreciation of the currency during the Revolutionary period.

We proceed in our historic ramble, reluctant to part from the ancient "Knowl" where stood the First Church of Acton for threescore years and ten.

We drift on this tidal-wave of past reminiscences, and the drift takes us at once down the road a few rods to the northwest, where sits to-day so gracefully the old parsonage of our fathers and grandfathers and mothers and grandmothers of ye olden time. It faces the gentle slope in front to the southeast, looking towards the Hill of Zion on the "Knowl" and ye old Acton Common and the Brooks Tavern just beyond, now all gone to rest. It is a quaint old mansion, with a stately elm standing over it in all the majesty of years. The structure was built five years after the Concord Fight, 1780.

The side of the house faces the street and is three stories. Its front, built on a hillside, is half three and the other half two stories. A long flight of steps leads up to a large portico, which makes the front entrance overlooking the green fields and orchards just beyond. The chimney rises in the centre of the roof some three feet high and six feet wide. Its four flues answer all household purposes. The lilac bushes and the yellow lily bed on the roadside, just outside the wall, are still flourishing as in the earliest recollection of the oldest persons now living.

Moses Taylor, Esq., has done a great service to the future public by purchasing this estate and restoring the faded tints of early days—green blinds, light yellow, the main color of the house, with white trim-

mings. It is now presentable to the eye of the antiquarian, and even to the modern critic.

When laying out the new sidewalk leading up to the village, Mr. Taylor said: "Spare the lilac bushes and lily-bed. They shall remain for old memory's sake. I used to go by these loved relics in school-day times, and they are to me now even dearer and sweeter than when a boy."

Mrs. Adams, the wife of Rev. Moses Adams, the second minister, a very energetic lady and a notable housekeeper, kept store in the basement story. Keeping store, added to her maternal duties, as the mother of three sons and three daughters, house-work, spinning, weaving, knitting and cheese-making, to say nothing of parish duties, must have made for her a busy life, and this part of the house at least must have been a lively centre for the earthly activities of the parsonage. The upper part of the house was the scene of the pastor's private study, and contained rooms neatly furnished for those times and ever ready to receive guests from abroad.

Rev. Moses Adams, the first pastor occupying this house, had been selected with great care. In May, 1776, the town chose a committee to take advice of the president of the college and the neighboring ministers and to engage four candidates to preach four Sabbaths each in succession. One of the four was Moses Adams. He, like his predecessor, Rev. Mr. Swift, was a native of Framingham. He was born October 16, 1749, and graduated at Cambridge, 1771. On the 29th of August, 1776, it was voted "to hear Mr. Moses Adams eight Sabbaths longer on probation," and on the 20th of December "to hear Mr. Moses Adams four Sabbaths longer than is agreed for."

In the mean time the church had appointed the 2d day of January for a fast, and had invited the neighboring ministers to attend on the occasion. On the 8th day of January they made choice of Mr. Adams to take the oversight and charge of the church. The choice was confirmed by the town on the 15th of the same month. At an adjournment of that meeting, on the 17th of March, an offer was made of £200 settlement and £80 salary in lawful money, according 6s. 8d. per ounce. It was also voted to provide him with fire-wood the first year after his settlement. The invitation was accepted, and Mr. Adams was ordained on the 25th day of June, 1777, then in his twenty-eighth year.

He was the only child of respectable but humble parents. By the death of both parents he became an orphan at the age of seven years. The property left him was sufficient, with economy, to defray the expense of a public education. The first years of his ministry were attended with considerable pecuniary embarrassment, for, although precaution was taken to make the salary payable in silver, yet the value of that compared with the necessities of life very considerably decreased.

The promptness and spirit with which the people of Acton met the calls of the Government for the support of the war rendered them less able to pay their minister. His settlement had been relied on to meet the expenses of building a house, which a young and increasing family made a matter of necessity. The settlement was not wholly paid for several years. The subject was agitated at two meetings in 1781, and in February, 1782, the selectmen were directed to pay the remaining balance.

In 1783 Mr. Adams, in a communication which is recorded, made a statement of £123, which he considered his due for balances unpaid of his three first years' salary, accompanied by an offer to deduct £43 if the remainder should be paid or put on interest. It is not certain whether this was a legal or merely an equitable claim, but the town promptly acceded to the proposal. In justice to the town it should be observed that so far as it regards their pecuniary dealings with their two first ministers a liberality and sense of justice is manifest, with few exceptions, from the beginning to the end of the records. There were other negotiations in regard to the salary. It was all, however, in perfect good feeling and in accordance with the respect and affection which existed between Mr. Adams and his people through the whole period of his long ministry of forty-two years.

He died on the 13th of October, 1819, and was buried on the 16th, which was the seventieth anniversary of his death.

In consequence of his request in writing—which was found after his decease—no sermon was delivered at his funeral. To anticipate the silent tear was more to him than the voice of praise. He had days of prosperity and he knew how to enjoy them. He witnessed seasons of sorrow and bore them with rare equanimity. In public duties, in social intercourse, in the schools, in the transactions of private life, he carried himself with a genial but serene self-poise commanding universal confidence, veneration and love.

The house where such a man lived and died, whose walls witnessed the mental struggles of his closet and study, the composition of his four thousand sermons, the training and education of his children, and of those from abroad, fitting for college under his care, is a hallowed retreat calling for a tender appreciation by all who shall hereafter gaze upon this memorial structure. The following items have been copied from the town records, in regard to his children: Moses, son of Moses and Abigail Adams, born November 28, 1777; Mabby, daughter, born January 21, 1780; Josiah, born November 3, 1781; Joseph, born September 25, 1783; Clarissa, born July 13, 1785.

We must not leave the site too hastily; still another chapter of records opens upon our vision right here and now.

The pulpit was constantly supplied by the town during the last sickness of Mr. Adams, and after his

decease. In the next month a committee was chosen to procure a candidate. They engaged Mr. Marshall Shedd, who was graduated at Dartmouth in 1817, and was then a member of the Rev. Mr. Greenough's church in Newton, Massachusetts, which was his native town.

On the 20th of February, 1820, Mr. Shedd was unanimously invited by the church to become their pastor, and on the 13th of March the town unanimously voted to give him a call. Five hundred dollars was offered as a settlement, which was increased by subscription and the salary was fixed at six hundred dollars, with fifteen cords of wood. In case of permanent inability the salary was to be reduced to two hundred dollars. This liberal offer was accepted, and on the 10th of May Mr. Shedd was ordained pastor of the church and minister of the congregation in Acton.

The ordaining council consisted of Mr. Willard, of Boxborough; Mr. Newell, of Stow; Mr. Greenough, of Newton; Mr. Litchfield, of Carlisle; Dr. Ripley, of Concord; Dr. Homer, of Newton; Mr. Foster, of Littleton; Dr. Holmes, of Cambridge; Mr. Blake, of Westford; Dr. Pierce, of Brookline; Mr. Noyes, of Needham; Mr. Hulbert, of Sudbury, with delegates from their respective churches. Such a combination of religious opinions in an ordaining council obtained by a unanimous vote of both church and congregation was very remarkable at that period, and discovers a liberality of Christian feeling which is worthy of all imitation.

Mr. Shedd was a pious, peaceable and exemplary minister, with more than ordinary talents and industrious in the discharge of duty. It was a time of great religious conflict. The heat of controversy became intense in all this vicinity of towns, resulting in the division of churches and congregations.

Parochial difficulties multiplied in all directions. Acton began to feel the irritations of the epoch. Mr. Shedd labored to harmonize the colliding elements, but the lines of divergence were too sharply drawn, and he bowed to the inevitable and gracefully retired.

Providence opened to him, as he thought, a more hopeful field for himself and family in what was then the new settlements in Northern New York, he decided to enter it, and in May, 1831, the corporation, which was now called a parish, concurred with the church in granting Mr. Shedd's request that his connection might be dissolved, and in the same month that agreement was confirmed by an ecclesiastical council.

Mr. Shedd came to Acton a married man, his companion having been born in Newton, like himself a Miss Eliza Thayer, daughter of Obadiah Thayer. He resided with Mr. Shedd in Acton at the parsonage.

He is still remembered by some of the oldest inhabitants of Acton as a man of great excellence of character, a rare mingling of refined and positive traits, an unswerving advocate of truth and righteousness. He died in Hill-borough, N. Y., in 1834.

The first year of Mr. Shedd's pastorate was eventful. On the 10th of May he was ordained. On the 21st of June he became the father of one of the most notable and worthy men now living. It is no ordinary honor for the parsonage and the town to be the birth-place of Rev. Prof. William G. T. Shedd, D.D.

The simple surface record of the man runs thus: born in Acton, June 21, 1820; graduated at the University of Vermont, Burlington, in 1839; at Andover Seminary in 1843; pastor of Brandon, Vermont, 1843-45; Professor of English Literature in the University of Vermont, 1845-52; Professor of Sacred Rhetoric and Pastoral Theology in Auburn Seminary, 1852-54; Professor of Ecclesiastical History and Pastoral Theology in Andover Seminary, 1854-62; co-pastor of the Brick Presbyterian Church, New York City, 1862-63; Professor of Sacred Literature in Union Theological Seminary, New York City, 1863-74; Professor of Systematic Theology in Union Seminary since 1874.

His publications are: *History of Christian Doctrine*, *Theological Essays*, *Literary Essays*, *Homiletics and Pastoral Theology*, *Sermons to the Natural Man*, *Translation of Guericke's Church History*, *Translation of Theremin's Rhetoric*.
